For Cream or Liquid Lotion to be Applied to the Body to Prevent Sunburn on Exposure.
Claims use since Apr. 1, 1930.

283,284. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FABRIK CHEM. PHARM. PRÄPARATE DALLMANN & CO., Wiesbaden-Schierstein, Germany. Filed May 31, 1930. Serial No. 302,265.

KOLA
DALLMANN

For Pharmaceutical Preparations—Namely, Tablets and Pastilles for Use as Stimulants for Physical and Mental Fatigue.
Claims use since Jan. 1, 1915.

283,285. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PABST CORPORATION, Milwaukee, Wis. Filed May 29, 1930. Serial No. 301,690.

'Old Country'

For Malt Syrup.
Claims use since Apr. 4, 1930.

283,286. (CLASS 37. PAPER AND STATIONERY.) THE MENASHA PRODUCTS COMPANY, Chicago, Ill. Filed Nov. 2, 1929. Serial No. 291,924.

CAMBRAY

For Paper Napkins.
Claims use since June 12, 1929.

283,287. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE KAWNEER COMPANY, Niles, Mich. Filed Sept. 30, 1929. Serial No. 290,416.

EASYSET

For Show Cases, Metal Show Cases, and Metal Constructional Parts of Show Cases.
Claims use since Feb. 28, 1913.

283,288. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CALIFORNIA ORCHARD CO., Los Angeles, Calif. Filed Apr. 22, 1930. Serial No. 299,253.

THE ORIGINAL KING CITY PINK

For Dried Beans.
Claims use since Mar. 29, 1930.

283,289. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CALIFORNIA ORCHARD CO., Los Angeles, Calif. Filed Apr. 22, 1930. Serial No. 299,252.

KING CITY PINK BEANS

For Dried Beans.
Claims use since Mar. 29, 1930.

283,290. (CLASS 32. FURNITURE AND UPHOLSTERY.) COWDIN COMPANY, Portland, Oreg. Filed Apr. 10, 1930. Serial No. 298,617.

Cowdin

For Tables for Office and Household Use.
Claims use since Feb. 10, 1930.

283,291. (CLASS 20. LINOLEUM AND OILED CLOTH.) ARMSTRONG CORK COMPANY, Lancaster, Pa. Filed Apr. 7, 1930. Serial No. 298,480.

STERLING

For Felt-Base and Similar Floor Coverings, Both Piece Goods and Rugs.
Claims use since Dec. 17, 1929.

283,292. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CLEVELAND FRUIT JUICE COMPANY, Cleveland, Ohio. Filed Feb. 24, 1930. Serial No. 296,396.

IMPROVED BITTERSWEET

For a Prepared Chocolate Sirup Used as a Flavoring for Ice Cream and Food Beverages and as a Sundae Dressing.
Claims use since Oct. 1, 1929.

283,293. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) KELSEY HEATING COMPANY, Syracuse, N. Y. Filed Feb. 15, 1930. Serial No. 296,064.

CONDITIONAIRE

For Steam and Hot-Water Boilers and Hot-Air Furnaces.
Claims use since Jan. 15, 1930.

283,294. (CLASS 37. PAPER AND STATIONERY.) CATERINA SAGE IN BOURBON DEL MONTE PRINCIPESSA DI SAN FAUSTINO, Genoa, Italy. Filed Jan. 21, 1930. Serial No. 295,016.

CLIP-ALL

For Holder for Loose-Paper Leaves, Paper Pads, Score Cards, Billing Sheets, and the Like.
Claims use since Dec. 31, 1929.

283,295. (CLASS 2. RECEPTACLES.) THE MENASHA PRODUCTS COMPANY, Chicago, Ill. Filed Dec. 21, 1929. Serial No. 293,981.

FOOD SHOP

For Paper Food Pails and Cartons.
Claims use since Nov. 7, 1929.

283,296. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELEVATOR SUPPLIES COMPANY, INC., Hoboken, N. J. Filed Apr. 25, 1929. Serial No. 282,983.

FLASH-SET

For Elevator Signaling Apparatus of a Character Involving the Use of Electric Lights, Circuits to Said Lights, and Electromagnetically Controlled Means for Closing Said Circuits.
Claims use since December, 1928.

283,297. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WEBSTER ELECTRIC COMPANY, Racine, Wis. Filed Feb. 28, 1931. Serial No. 311,587.

Webster

For Audio-Frequency Amplifiers Comprising Assembled Units for Amplifying Electric Signals, Audio-Frequency Transformers, Choke Coils, Electric Pick-Up Tone Arms, Electric Pick-Up Voltage Controls, Electrical Sockets and Plugs, Electrical Phonograph Pick-Ups, Power Transformers, High-Voltage Ignition Transformers, Energizing Transformers for Electric Signs, and Voltage and Current Regulating Devices of the Moving Coil Type.
Claims use since 1920.

283,298. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) EAGLE ELECTRIC MFG. CO., INC., Brooklyn, N. Y. Filed Feb. 24, 1931. Serial No. 311,371.

GLOCOIL

For Electric Heating Elements for Radiant Heaters.
Claims use since January, 1923.

TRADE-MARK REGISTRATIONS RENEWED

36,638. MEDICINAL REMEDIES. Registered June 25, 1901. B. S. MCKEAN & CO. Renewed June 25, 1931, to B. S. McKean, Inc., New York, N. Y., a Corporation of New York, assignee by mesne assignments.

36,703. CERTAIN NAMED PAPER. Registered July 9, 1901. FORT ORANGE PAPER COMPANY, Castleton, N. Y. Renewed July 9, 1931, to Fort Orange Paper Company, Castleton-on-Hudson, New York, a Corporation of New York.

36,727. WIRE FENCING. Registered July 9, 1901. UNION FENCE CO., De Kalb, Ill. Renewed July 9, 1931, to The American Steel and Wire Company of New Jersey, Cleveland, Ohio, a Corporation of New Jersey, assignee.

36,747. TONIC. Registered July 16, 1901. KNOLL & CO., Ludwigshafen, Germany. Renewed July 16, 1931, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a Corporation of Delaware, assignee by mesne assignments.

36,934. COFFEE AND TEA. Registered August 20, 1901. BLACK HAWK COFFEE AND SPICE COMPANY, Waterloo, Iowa, a Corporation of Iowa. Renewed August 20, 1931.

37,175. LUBRICANTS. Registered October 8, 1901. NEW YORK & NEW JERSEY LUBRICANT CO. Renewed October 8, 1931, to New York & New Jersey Lubricant Company, New York, N. Y., a Corporation of New York, assignee.

78,783. A MEAT-PRESERVATIVE. Registered July 12, 1910. FIGARO CHEMICAL CO. Renewed July 12, 1930, to The Figaro Company, Dallas, Tex., a Corporation of Arizona, successor.

81,456. COFFEE. Registered April 11, 1911. GRANGER & CO., Buffalo, N. Y., a Corporation of New York. Renewed April 11, 1931.

81,813. PAJAMAS, DRAWERS, AND UNION SUITS. Registered May 9, 1911. MARYLAND OILED CLOTHING COMPANY. Renewed May 9, 1931, to Excelsior Varsity Underwear Corporation, Baltimore, Md., a Corporation of Maryland, assignee by mesne assignments.

82,338. PLOWS. Registered June 20, 1911. LA CROSSE PLOW COMPANY, La Crosse, Wis. Renewed June 20, 1931, Allis-Chalmers Manufacturing Company, West Allis, Wis., a Corporation of Delaware, assignee.

82,423. GLUES. Registered June 27, 1911. J. & G. COX, LIMITED, Edinburgh, Scotland, a Corporation of Great Britain. Renewed June 27, 1931.

82,470. TOBACCO-PIPES. Registered June 27, 1911. R. J. REYNOLDS TOBACCO COMPANY, Winston-Salem, N. C., a Corporation of New Jersey. Renewed June 27, 1931.

82,471. SMOKING AND CHEWING TOBACCO, CIGARS, CIGARETTES, AND SNUFF. Registered June 27, 1911. R. J. REYNOLDS TOBACCO COMPANY, Winston-Salem, N. C., a Corporation of New Jersey. Renewed June 27, 1931.

82,596. ADHESIVE PASTE. Registered July 11, 1911. THE "GLOY" MANUFACTURING COMPANY, LIMITED. Renewed July 11, 1931, to Gloy & Empire Adhesives, Limited, London, England, a Corporation of Great Britain, assignee.

82,597. MASSAGE-CREAM, TOILET CREAM, TALCUM POWDER, FACE-POWDER, TOOTH-PASTE, AND A LOTION. Registered July 11, 1911. GOODRICH DRUG CO. Renewed July 11, 1931, to Velvetina Company, Inc., Omaha, Nebr., a Corporation of Nebraska, assignee.

82,621. FERTILIZERS. Registered July 11, 1911. ARNOLD OTTO MEYER, Hamburg, Germany. Renewed July 11, 1931, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a Corporation of Delaware, assignee by mesne assignments.

82,837. PERFUMERY. Registered July 25, 1911. SOCIEDAD VINICOLA, S. & L. DURLACHER, Hamburg, Germany. Renewed July 25, 1931, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a Corporation of Delaware, assignee by mesne assignments.

83,221. KID LEATHER MADE FROM HAIR SHEEPSKIN. Registered August 29, 1911. CASTLE KID CO. Renewed August 29, 1931, to Castle Kid Co., Inc., Camden, N. J., a Corporation of New York, assignee by mesne assignments.

83,417. SOAPS AND SOAP POWDERS. Registered September 12, 1911. KARL AUGUST LINGNER, Dresden, Germany. Renewed September 12, 1931, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a Corporation of Delaware, assignee by mesne assignments.

83,541. CERTAIN CHEMICALS. Registered September 26, 1911. BADISCHE ANILIN- & SODA-FABRIK, Ludwigshafen-on-the-Rhine, Germany. Renewed September 26, 1931, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a Corporation of Delaware, assignee by mesne assignments.

83,542. CERTAIN CHEMICALS. Registered September 26, 1911. BADISCHE ANILIN- & SODA-FABRIK, Ludwigshafen-on-the-Rhine, Germany. Renewed September 26, 1931, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a Corporation of Delaware, assignee by mesne assignments.

83,571. VEGETABLE-TANNED LEATHER MADE OF CALF, KIP, AND CATTLE HIDES. Registered September 26, 1911. A. F. GALLUN & SONS. Renewed September 26, 1931, to A. F. Gallun & Sons Corporation, Milwaukee, Wis., a Corporation of Wisconsin, assignee by mesne assignments.

83,572. CHROME-TANNED LEATHER MADE OF CALF, KIP, AND CATTLE HIDES. Registered September 26, 1911. A. F. GALLUN & SONS. Renewed September 26, 1931, to A. F. Gallun & Sons Corporation, Milwaukee, Wis., a Corporation of Wisconsin, assignee by mesne assignments.

83,573. VEGETABLE-TANNED LEATHER MADE OF CALF, KIP, AND CATTLE HIDES. Registered September 26, 1911. A. F. GALLUN & SONS. Renewed September 26, 1931, to A. F. Gallun & Sons Corporation, Milwaukee, Wis., a Corporation of Wisconsin, assignee by mesne assignments.

83,617. IMPLEMENTS FOR DISABLING OR KILLING INSECTS. Registered September 26, 1911. UNITED STATES WIRE MAT CO. Renewed September 26, 1931, to U. S. Manufacturing Corporation, Decatur, Ill., a Corporation of Illinois, by change of name.

83,684. CERTAIN HERB MEDICINES. Registered October 3, 1911. MONICKE HERB COMPANY. Renewed October 3, 1931, to Monicke Herb Company, Sheboygan, Wis., a firm, successor.

83,690. WHEAT-FLOUR. Registered October 3, 1911. THE REA-PATTERSON MILLING COMPANY, Coffeyville, Kans., a Corporation of Kansas. Renewed October 3, 1931.

83,693. BLENDED COFFEE. Registered October 3, 1911. WILLIAM S. SCULL COMPANY, Camden, N. J., a Corporation of New Jersey. Renewed October 3, 1931.

83,694. OXID-OF-ZINC ADHESIVE PLASTER. Registered October 3, 1911. SEABURY & JOHNSON, New York, N. Y., a Corporation of New Jersey. Renewed October 3, 1931.

83,799. WOOD-POLISHING OIL. Registered October 10, 1911. WILLIAM H. ZINSSER. Renewed October 10, 1931, to William Zinsser & Co., Inc., New York, N. Y., a Corporation of New York, assignee.

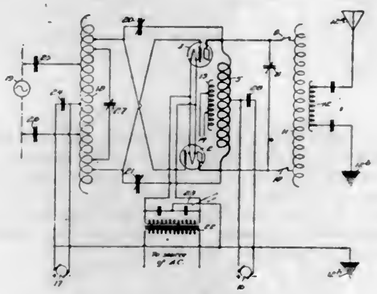
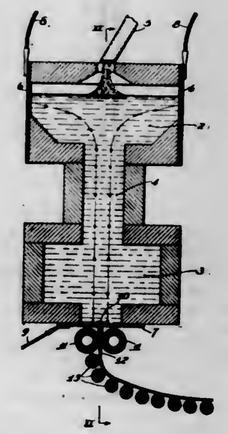
REISSUES



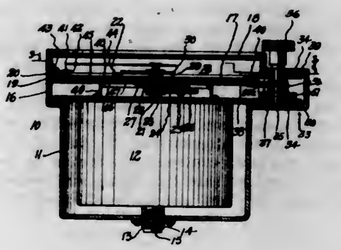
MAY 19, 1931

18,069. DETACHABLE COOKING UTENSIL HANDLE. ELMER E. DRUMM, Manitowoc, Wis., assignor to Aluminum Goods Mfg. Co., Manitowoc, Wis. Original No. 1,732,003, dated Oct. 15, 1929, Serial No. 303,795, filed Sept. 4, 1928. Application for reissue filed July 21, 1930. Serial No 469,570. 4 Claims. (Cl. 53—8.)



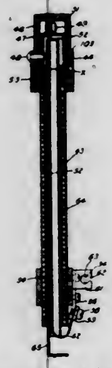
1. The combination of a utensil, a socket member carried by said utensil and provided with a vertical aperture tapered outwardly toward the bottom of said socket member, and a restricted slot between said aperture and the front of said member, a handle, an attaching block removably connected to one end of said handle a pair of webs carried by said block and projecting therefrom at an angle to one another, and tapered lugs carried by said webs for engagement in the vertical aperture in said socket member.

18,070. INDUCTANCE SYSTEM. LOUIS A. GEBHARD, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Original No. 1,753,408, dated Apr. 8, 1930. Serial No. 327,988, filed Dec. 22, 1928. Application for reissue filed Mar. 14, 1931. Serial No. 522,709. 12 Claims. (Cl. 250—17.)



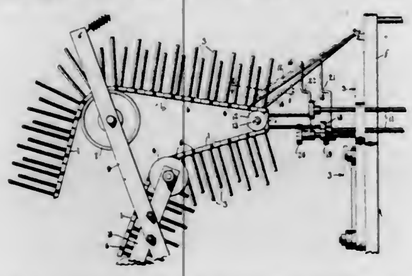
1. An inductance system comprising in combination a metallic member of helical form providing a double passage for the circulation of liquid, a load circuit inductively coupled with said metallic member, a path to ground, having low impedance to radio frequency currents, said path being connected with said metallic member intermediate the ends thereof for defining the electrical center therein and means provided at the electrical center of the inductance whereby said liquid may be admitted to said passage.

18,071. APPARATUS FOR MELTING GLASS AND SIMILAR SUBSTANCES. HARRY F. HITNER, Oakmont, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Original No. 1,761,342, dated June 3, 1930, Serial No. 337,297, filed Feb. 4, 1929. Application for reissue filed Dec. 13, 1930. Serial No. 502,232. 5 Claims. (Cl. 49—33.)



5. A tank for melting glass and similar substances, wherein the substance acts as a resistor, comprising a metal electrode constituting one of the walls of the tank, and having an opening therethrough for the discharge of melted material, a second electrode at a point remote from the said first electrode positioned so as to transmit current through the material in the tank at said point, and means for supplying electric current to the electrodes.

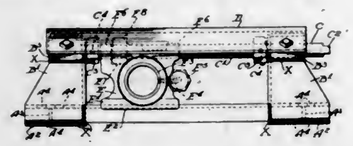
18,072. INDICATOR. PAUL KOLLSMAN, Woodhaven, N. Y., assignor to Kollsman Instrument Company, Inc., Brooklyn, N. Y., a Corporation of New York. Original No. 1,741,702, dated Dec. 31, 1929, Serial No. 383,931, filed Aug. 6, 1929. Application for reissue filed Dec. 22, 1930. Serial No. 504,188. 36 Claims. (Cl. 116—129.)



1. A device of the character described, including an indicator, said indicator having scale means, a pointer, a reference means, other means coacting with the pointer and the reference means to cause them to move relatively to each other in synchronism with respect to the scale means, and means to cause the pointer and reference means to move through equal angles in setting the device.

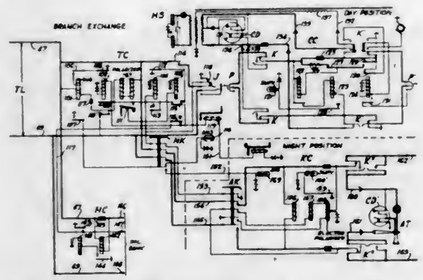
18,073. FUSE MECHANISM. MAURITS J. SANDIN, Wilkins Township, Allegheny County, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original No. 1,684,518, dated Sept. 18, 1928, Serial No. 510,280, filed Oct. 25, 1921. Application for reissue filed Sept. 17, 1930. Serial No. 482,630. 25 Claims. (Cl. 200—127.)

25. In a circuit interrupter, a housing having a bottom wall with an opening therein, spaced terminal members in said housing, a door hinged to said housing adjacent said bottom wall, a fuse receptacle having spaced contact members to engage said terminal members, said receptacle having an open end and being mounted on said door so that said open end extends into said opening in the bottom wall when the door is closed.



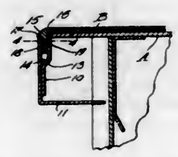
18,074. CONTROL FOR KNITTING MACHINES. HARRY WEINRUB, New York, N. Y. Original No. 1,791,989, dated Feb. 10, 1931, Serial No. 419,032, filed Jan. 7, 1930. Application for reissue filed Mar. 9, 1931. Serial No. 521,321. 4 Claims. (Cl. 66—85.)

3. In a pattern mechanism for knitting machines, a pair of bar link chains, one at each end of the knitting machine, each bar link of said chains being provided with holes to receive removable pins, control bars, actuation of which positions yarn guides to control the pattern, means for feeding said bar links successively to a position opposite said control bars, means for reciprocating said bar link chains alternatively to cause said pins to engage and move said control bars, means to reverse the direction of feed of said bar links, and removable pins carried by said bar links to actuate said reversing means.



18,075. ADJUSTABLE BEARING. AXEL K. SJOLANDER, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Original No. 1,778,231, dated Oct. 14, 1930, Serial No. 242,456, filed Dec. 24, 1927. Application for reissue filed Feb. 16, 1931. Serial No. 516,230. 10 Claims. (Cl. 308—59.)

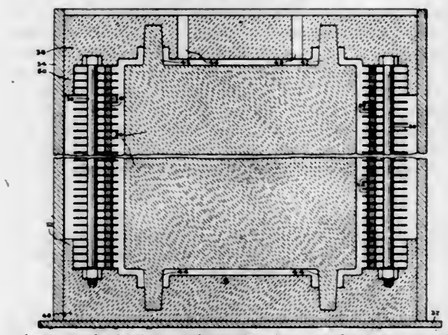
1. In combination in an adjustable bearing support member, a main base member comprising a supporting frame work and guiding track, such member provided with end portions, a bearing block formed to engage said track element and adapted to be moved therealong, a moving and controlling shaft mounted for rotation in the end portions of such base member, provided with a thread, so that rotation of the shaft causes the bearing block to



move along the base member, the bearing block being located between the track and the shaft, and a covering member, removably attached to the upward end portions, lying above and extending laterally and downwardly with relation to such threaded shaft, whereby the shaft is protected from the deposit of dirt and foreign matter in general.

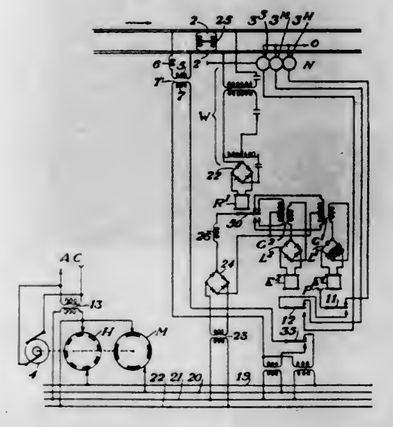
18,076. TELEPHONE SYSTEM. CLARENCE E. LOMAX, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original No. 1,658,450, dated Feb. 7, 1928, Serial No. 4,691, filed Jan. 26, 1925. Application for reissue filed Nov. 3, 1930. Serial No. 493,194. 28 Claims. (Cl. 197—27.)

1. In a telephone system, an automatic connector switch having line wipers and a test wiper, a line accessible to said connector switch, a line relay and a cut-off relay for said line, a relay in said connector switch energized responsive to the idle condition of said line when the wipers are brought into engagement with the contacts thereof to close a circuit for said cut-off relay over said test wiper, and a second relay energized responsive to the energization of said first relay to connect the line wipers to the connector switch.



18,077. BINDING MEANS FOR THE SURFACE COVERINGS OF FURNITURE. ALGOT J. E. LARSON, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y. Original No. 1,705,156, dated Mar. 12, 1929, Serial No. 592,747, filed Oct. 6, 1922. Application for reissue filed Mar. 12, 1931. Serial No. 522,115. 7 Claims. (Cl. 45—31.)

1. The combination with the top member of an article of furniture, and a surface covering for the same.

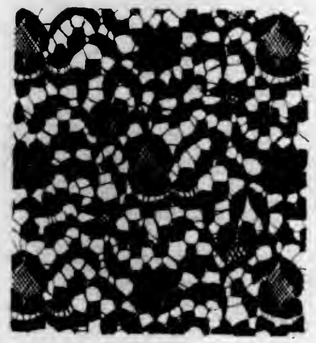


of an edge strip rigidly secured to said top member and extending along the edge face thereof, said edge face and said edge strip forming between them a groove with fixed walls which opens adjacent the edge of said covering, and a removable, unattached binding strip seated in said groove and having a protruding portion which conceals the groove and bounds the edge of said covering, said binding strip being releasably secured in said groove by engagement with rigid parts of the fixed walls of the groove.

18,078. PROCESS OF MANUFACTURING HEAT EXCHANGERS. JOHN OTTO OLSON, St. Paul, Minn. Original No. 1,742,556, dated Jan. 7, 1930, Serial No. 165,860, filed Feb. 4, 1927. Application for reissue filed Nov. 22, 1930. Serial No. 497,591. 16 Claims. (Cl. 22—203.)

1. A method of manufacturing heat exchangers provided with a multiplicity of thin fins integrally joined thereto, which consists in assembling a stack of apertured plates with the apertures in alinement, spacing said plates with forms provided with previously-fabricated metal openings adjacent the alined apertures of the plates beyond which the margins of the plates around said apertures project inwardly, inserting a core within the chamber formed by the plates and forms, and casting a hollow body of metal within said chamber and around said core and attached to said projecting margins.

18,079. RAILWAY TRAFFIC CONTROLLING APPARATUS. CLARENCE S. SNAVELY, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original No. 709,920, dated Apr. 23, 1929, Serial No. 142,162, filed Oct. 18, 1926. Application for reissue filed Nov. 25, 1930. Serial No. 498,192. 14 Claims. (Cl. 246—38.)

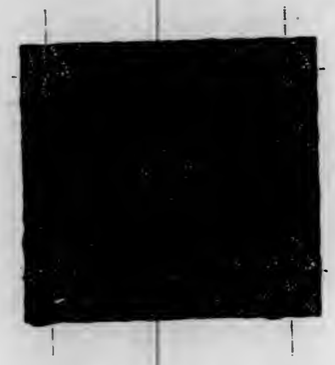


10. In combination, a stretch of railway track divided into sections, a track relay having a winding connected with the rails of each section and responsive to periodic interruptions of alternating current in such rails, a plurality of decoding relays associated with each section, means for selectively energizing said decoding relays in accordance with the rate of operation of the associated track relay, and means controlled by the decoding relays for each section for supplying alternating current to the rails of the section next in the rear periodically interrupted at different rates according to the conditions of the decoding relays.

DESIGNS

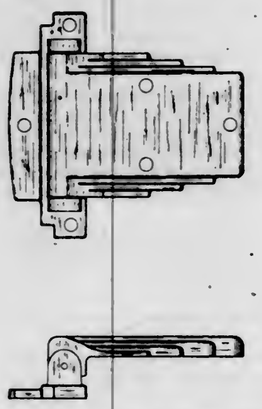
MAY 19, 1931

84,175. LACE. WILLIAM R. ADAIRE, Philadelphia, Pa., assignor to New England Lace Mills, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 19, 1931. Serial No. 39,140. Term of patent 3½ years.



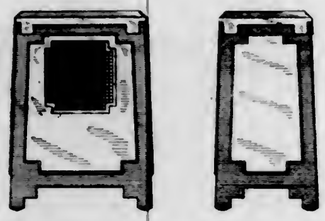
The ornamental design for lace, substantially as shown.

84,176. SPECTACLE FRAME. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 18, 1931. Serial No. 39,133. Term of patent 14 years.



The ornamental design for a spectacle frame as shown.

84,177. LACE. BEN A. BALL, Pawtucket, R. I., assignor to American Textile Co., Inc., Pawtucket, R. I., a Corporation of Rhode Island. Filed Mar. 17, 1931. Serial No. 39,130. Term of patent 7 years.



The ornamental design for lace, substantially as shown and described.

84,178. HINGE. GEBHARD C. BOHN, St. Paul, Minn. Filed Mar. 4, 1931. Serial No. 38,925. Term of patent 14 years.

The ornamental design for a hinge, substantially as shown.

84,179. ELECTRIC HEATER. EARL C. BOOTH, Indianapolis, Ind. Filed Oct. 27, 1930. Serial No. 37,394. Term of patent 7 years.

The ornamental design for an electric heater, as shown and described.

84,180. COMBINATION CURTAIN POLE AND CURTAIN SUSPENDING MEANS. JACK C. CARLTON, Southgate, Calif., assignor to A. Lipton, doing business as Allied Metal Industries, Inglewood, Calif. Filed Aug. 4, 1930. Serial No. 36,542. Term of patent 3½ years.

The ornamental design for a combination curtain pole and curtain suspending means, as shown and described.

84,181. COMBINATION CURTAIN POLE AND CURTAIN SUSPENDING MEANS. JACK C. CARLTON, Southgate, Calif., assignor to A. Lipton, doing business as Allied Metal Industries, Inglewood, Calif. Filed Aug. 4, 1930. Serial No. 36,543. Term of patent 3½ years.

The ornamental design for a combination curtain pole and curtain suspending means as shown and described.

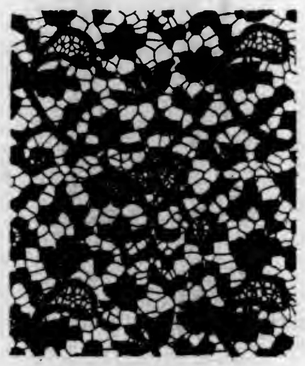
84,182. COMBINATION CURTAIN POLE AND CURTAIN SUSPENDING MEANS. JACK C. CARLTON, Southgate, Calif., assignor to A. Lipton, doing business as Allied Metal Industries, Inglewood, Calif. Filed Aug. 4, 1930. Serial No. 36,544. Term of patent 3½ years.

The ornamental design for a combination curtain pole and curtain suspending means as shown and described.

84,183. PAPER DOILY. FRED A. CONRAD, Milwaukee, Wis., assignor to American Lace Paper Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 16, 1931. Serial No. 39,099. Term of patent 14 years.

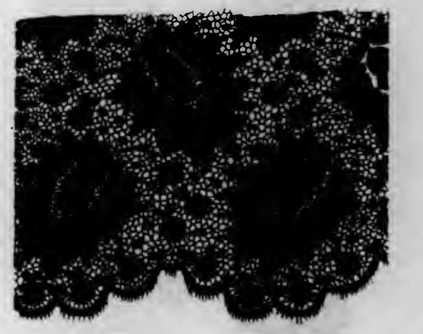
The ornamental design for a paper dolly as shown and described.

84,184. EAR RING. LOUIS A. DELAMOTHE, Oakland, Calif. Filed Mar. 6, 1931. Serial No. 38,960. Term of patent 3½ years.



The ornamental design for an ear ring as shown.

84,185. LACE. BERT EDSON, Pawtucket, R. I., assignor to New England Lace Mills, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1931. Serial No. 38,981. Term of patent 3½ years.

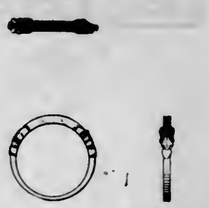


The ornamental design for lace, substantially as shown.

84,186. LACE. BERT EDSON, Pawtucket, R. I., assignor to New England Lace Mills, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1931. Serial No. 38,983. Term of patent 3½ years.

The ornamental design for lace, substantially as shown.

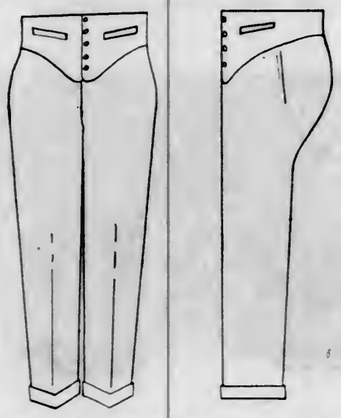
84,187. LACE. BERT EDSON, Pawtucket, R. I., assignor to New England Lace Mills, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1931. Serial No. 38,984. Term of patent 3½ years.



The ornamental design for lace, substantially as shown.

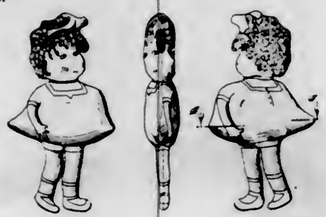
84,188. RESTAURANT BUILDING. FRANK S. FENTON, Cincinnati, Ohio, assignor to Fenton's Sandwich, Inc., Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 1, 1930. Serial No. 35,095. Term of patent 3½ years.

The ornamental design for a restaurant building as shown and described.



84,189. FINGER RING OR SIMILAR ARTICLE. ABRAHAM SUDEROV, New York, N. Y. Filed Mar. 11, 1931. Serial No. 39,025. Term of patent 3½ years.

The ornamental design for a finger ring or similar article, substantially as shown.



CARNEGIE LIBRARY OF ATLANTA

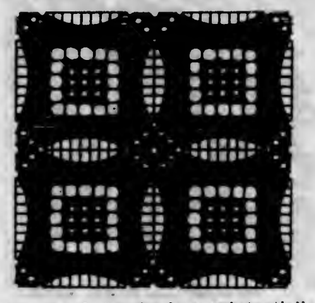
84,190. COMBINED VEST AND TROUSERS. SAMUEL GOLDSTEIN, Chicago, Ill. Filed Aug. 18, 1930. Serial No. 36,696. Term of patent 3½ years.

The ornamental design for a combined vest and trousers as shown.

84,191. DOLL. HELEN B. HEBERT, San Diego, Calif. Filed Jan. 15, 1931. Serial No. 38,313. Term of patent 7 years.

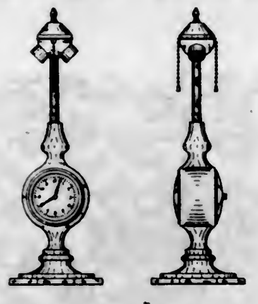
The ornamental design for a doll, substantially as shown.

84,192. CORNER CLAMP FOR STORE FRONT CONSTRUCTION. FRED HIMMEL and ISIDORE HIMMEL, New Haven, Conn., assignors to The Himmel Brothers Company, New Haven, Conn., a Corporation. Filed Apr. 2, 1931. Serial No. 39,352. Term of patent 14 years.



The ornamental design for a corner-clamp for store-front construction as shown.

84,193. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Mar. 16, 1931. Serial No. 39,109. Term of patent 3½ years.



The ornamental design for lace, substantially as shown and described.

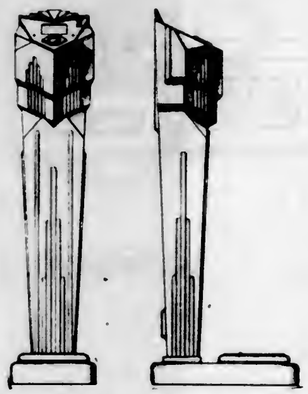
84,194. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Mar. 19, 1931. Serial No. 39,144. Term of patent 3½ years.

The ornamental design for lace, substantially as shown and described.

84,195. COMBINED LAMP AND CLOCK OR SIMILAR ARTICLE. JACOB KOHUT, St. Louis, Mo. Filed Mar. 9, 1931. Serial No. 39,008. Term of patent 14 years.

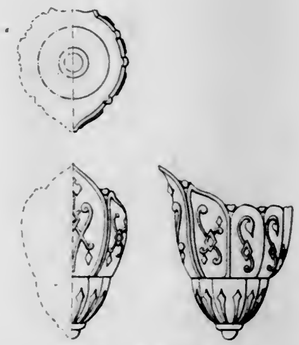
The ornamental design for a combined lamp and clock or similar article substantially as shown.

84,196. TEXTILE FABRIC. WILLIAM KREIELSHEIMER, New York, N. Y. Filed Mar. 10, 1931. Serial No. 39,019. Term of patent 3½ years.



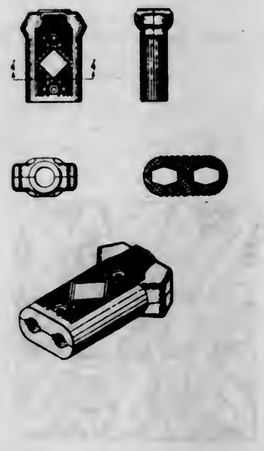
The ornamental design for a textile fabric substantially as shown and described.

84,197. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1931. Serial No. 38,805. Term of patent 3½ years.



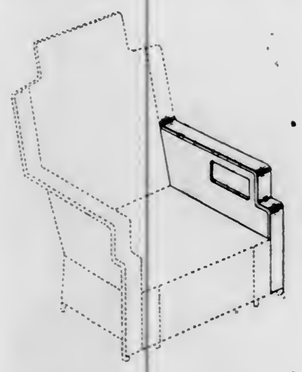
The ornamental design for a dress substantially as shown.

84,198. SCALE. THOMAS LONG, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1931. Serial No. 39,211. Term of patent 14 years.



The ornamental design for a scale as shown.

84,199. SHADE FOR AN ELECTRIC LAMP. GLENN E. MCFADDEN, Buffalo, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Mar. 17, 1931. Serial No. 39,124. Term of patent 3½ years.



The ornamental design for a shade for an electric lamp, substantially as shown and described.

84,200. ELECTRIC APPLIANCE PLUG. GEORGE J. MEUER, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 1, 1931. Serial No. 39,315. Term of patent 14 years.

The ornamental design for an electric appliance plug, substantially as shown.

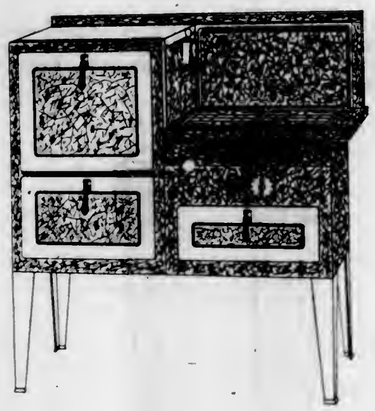
84,201. CHAIR OR THE LIKE. VINCENT OLIVA, New York, N. Y., assignor to Grand Central Wicker Shop, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 23, 1929. Serial No. 33,532. Term of patent 3½ years.

The ornamental design for a chair or the like, as shown.

84,202. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 24, 1931. Serial No. 39,227. Term of patent 3½ years.

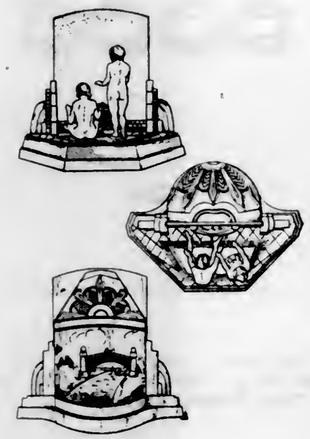
The ornamental design for a lace substantially as shown.

84,203. WALL PLATE FOR LIGHTING FIXTURES. ROSA MAY PICKARD, Wilmette, Ill. Filed Mar. 9, 1931. Serial No. 39,009. Term of patent 7 years.



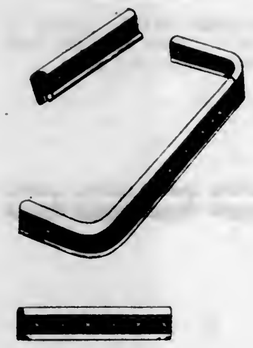
The ornamental design for a wall plate for lighting fixtures as shown.

84,204. TIE BACK FOR CURTAIN DRAPERIES. ROSA MAY PICKARD, Wilmette, Ill. Filed Mar. 9, 1931. Serial No. 39,010. Term of patent 7 years.



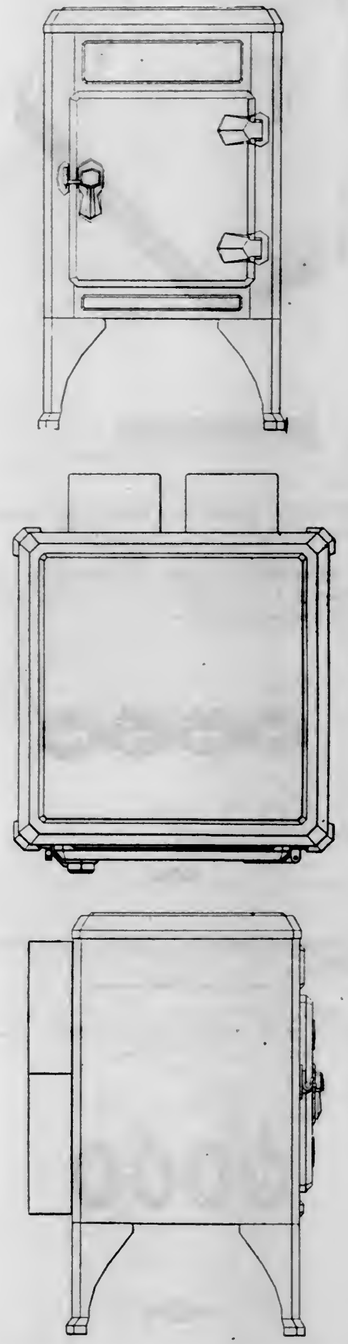
The ornamental design for a tie back for curtain draperies as shown.

84,205. GAS STOVE. ALFRED J. REEDY, Battle Creek, Mich., assignor to A-B Stove Company, Battle Creek, Mich. Filed Mar. 16, 1931. Serial No. 39,108. Term of patent 7 years.



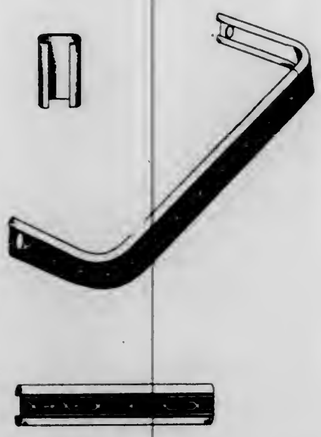
The ornamental design for a gas stove, as shown.

84,206. LAMP. WILLIAM H. SHLESINGER, Brooklyn, N. Y. Filed Mar. 25, 1931. Serial No. 39,241. Term of patent 3½ years.



The ornamental design for a lamp, as shown.

84,207. DRAPERY ROD. WALTER EDWARD SMITH, Providence, R. I., assignor to Kenney Manufacturing Company, Cranston, R. I., a Corporation of Rhode Island. Filed Feb. 24, 1931. Serial No. 38,803. Term of patent 14 years.

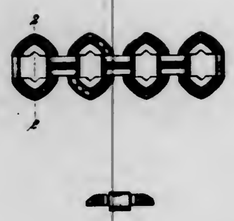


The ornamental design for a drapery rod, as shown.

84,208. REFRIGERATOR CABINET. RUSSELL T. SMITH, Greenville, Mich. Filed Mar. 23, 1931. Serial No. 39,216. Term of patent 7 years.

The ornamental design for a refrigerator cabinet, substantially as shown.

84,209. DRAPERY ROD. WALTER EDWARD SMITH, Providence, R. I., assignor to Kenney Manufacturing Company, Cranston, R. I., a Corporation of Rhode Island. Filed Feb. 24, 1931. Serial No. 38,804. Term of patent 14 years.

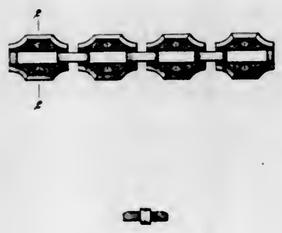


The ornamental design for a drapery rod, as shown.

84,210. BRACELET CHAIN. ALBERT E. R. SPEIDEL, Edgewood, R. I. Filed Mar. 28, 1931. Serial No. 39,274. Term of patent 3½ years.

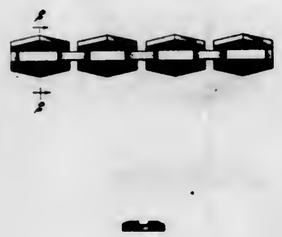
The ornamental design for a bracelet chain, substantially as shown.

84,211. BRACELET CHAIN. ALBERT E. R. SPEIDEL, Edgewood, R. I. Filed Mar. 28, 1931. Serial No. 39,275. Term of patent 3½ years.



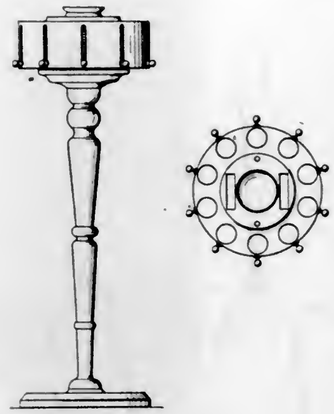
The ornamental design for a bracelet chain, substantially as shown.

84,212. BRACELET CHAIN. ALBERT E. R. SPEIDEL, Edgewood, R. I. Filed Mar. 28, 1931. Serial No. 39,276. Term of patent 3½ years.



The ornamental design for a bracelet chain, substantially as shown.

84,213. BRACELET CHAIN. ALBERT E. R. SPEIDEL, Edgewood, R. I. Filed Mar. 28, 1931. Serial No. 39,277. Term of patent 3½ years.



The ornamental design for a bracelet chain, substantially as shown.

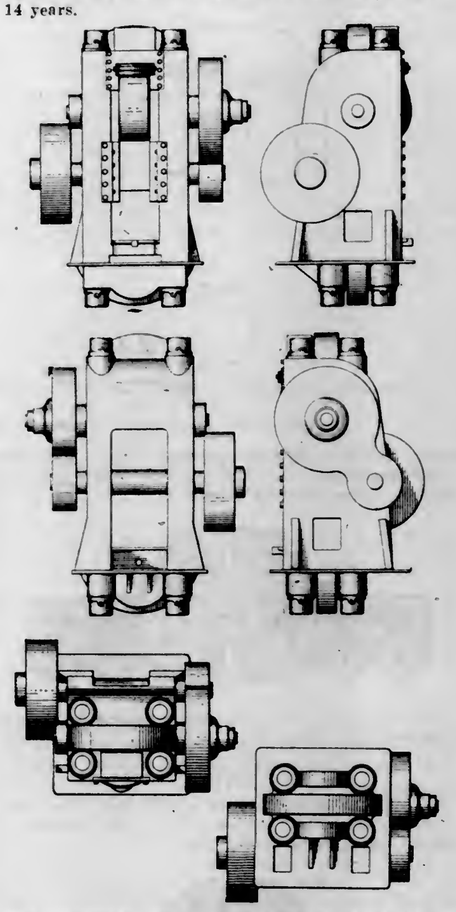
84,214. BRACELET CHAIN. ALBERT E. R. SPEIDEL, Edgewood, R. I. Filed Mar. 28, 1931. Serial No. 39,278. Term of patent 3½ years.

The ornamental design for a bracelet chain, substantially as shown.

84,215. COMBINATION CHIP RACK AND SMOKING STAND. AARON STAAT, Cincinnati, Ohio. Filed Mar. 7, 1931. Serial No. 38,992. Term of patent 7 years.

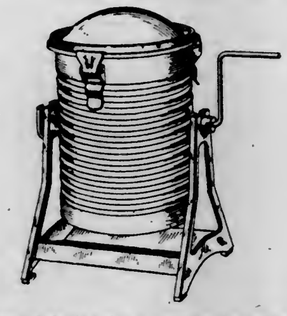
The ornamental design for a combination chip rack and smoking stand, substant'ally as shown.

84,216. FINGER RING OR SIMILAR ARTICLE. ABRAHAM SUDEROV, New York, N. Y. Filed Mar. 11, 1931. Serial No. 39,023. Term of patent 3½ years.



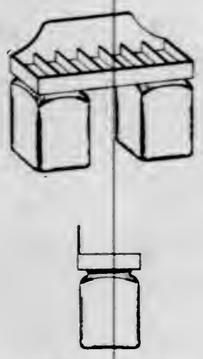
The ornamental design for a finger ring or similar article, substantially as shown.

84,217. FINGER RING OR SIMILAR ARTICLE. ABRAHAM SUDEROV, New York, N. Y. Filed Mar. 11, 1931. Serial No. 39,024. Term of patent 3½ years.



The ornamental design for a finger ring or similar article, substantially as shown.

84,218. PRESS. WILLIAM L. CLOUSE, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio. Filed Feb. 10, 1931. Serial No. 38,603. Term of patent 14 years.



The ornamental design for a press, as shown and described.

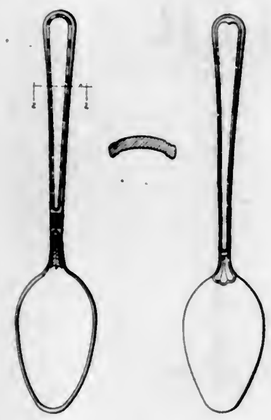
84,219. COMBINED WASHING MACHINE CASING AND SUPPORT THEREFOR. LEE B. GREEN, Lakewood, Ohio, assignor to The Globe Machine & Stamping Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 12, 1931. Serial No. 39,051. Term of patent 14 years.

The ornamental design for a combined washing machine casing and support therefor, substantially as shown.

84,220. DISPLAY STAND. RUBEN B. LUSTIG, Kansas City, Mo. Filed Mar. 9, 1931. Serial No. 39,004. Term of patent 14 years.

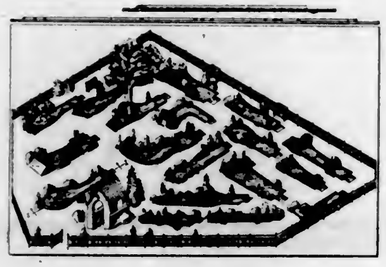
The ornamental design for a display stand, as shown.

84,221. LACE TRIMMING OR THE LIKE. MAX SADINOFF, Brooklyn, N. Y. Filed Aug. 12, 1930. Serial No. 36,634. Term of patent 3½ years.



The ornamental design for lace trimming or the like substantially as shown.

84,222. LACE TRIMMING OR THE LIKE. MAX SADINOFF, Brooklyn, N. Y. Filed Aug. 12, 1930. Serial No. 36,635. Term of patent 3½ years.

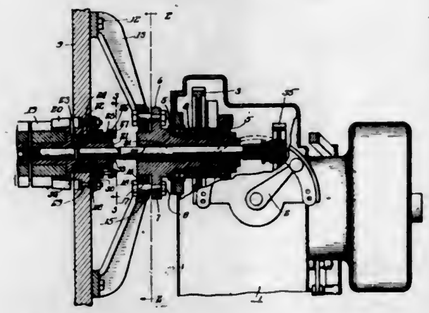


The ornamental design for lace trimming or the like substantially as shown.

84,223. SPOON OR SIMILAR ARTICLE. AXEL H. STAF, Providence, R. I., assignor to Gorham Mfg. Co., Providence, R. I. Filed Feb. 13, 1931. Serial No. 38,649. Term of patent 14 years.

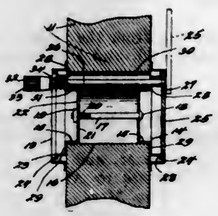
The ornamental design for a spoon or similar article, substantially as shown and described.

84,224. TOY GOLF COURSE. DOMENIC A. VALVANO, Linden, N. J. Filed Jan. 15, 1931. Serial No. 38,317. Term of patent 7 years.



The ornamental design for a toy golf course substantially as shown.

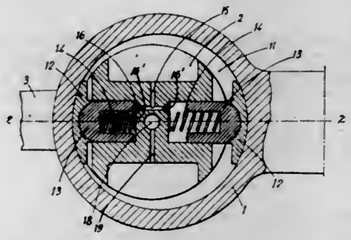
PATENTS



GRANTED MAY 19, 1931

1,805,464. POWER CHURN. ARTHUR H. BOILEAU, Cedar Rapids, Iowa, assignor to Cherry-Burrell Corporation, Cedar Rapids, Iowa, a Corporation of Delaware. Original application filed June 4, 1928, Serial No. 282,750. Divided and this application filed Feb. 26, 1930. Serial No. 431,387. 7 Claims. (Cl. 259—85.)

1. In a churn, a roll in said churn, a packing gland secured to the end of the churn and outside thereof, a roll box arranged inside of said churn and extending through said packing gland, said roll box having a square opening therein, and a shaft having a square end adapted to engage said opening for forming a driving connection between the roll and shaft.



1,805,465. SPEAKING TUBE APPARATUS. JOHN M. CLIFFORD, Providence, R. I. Filed May 20, 1929. Serial No. 364,562. 14 Claims. (Cl. 181—22.)

1. A speaking tube device for partitions, in combination, interchangeable inner and outer mouth pieces having shoulders adapted to fit securely into the ends of an opening through the partition, and a bolt passing centrally through the mouth pieces and provided with a nut adjustable on the bolt whereby the device is adapted to fit partitions of various thicknesses.

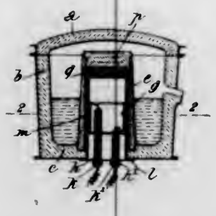
1,805,466. FRICTIONAL SHOCK ABSORBER WITH HYDRAULIC CONTROL. GEORGES HENRI ERNEST DE RAM, Boulogne-sur-Seine, France. Filed Sept. 11, 1928. Serial No. 305,271, and in France Sept. 17, 1927. 1 Claim. (Cl. 188—130.)

A suspension shock-absorber for vehicles, adapted to be interposed between the underframe and the axle of the said vehicles, comprising a body member with a cylindrical bore, caps closing the said body member at its two ends, a shaft, rotatable inside the cylindrical bore of the said body member, a chamber provided at one end of the said shaft, a piston reciprocable inside the said chamber parallel to the shaft, a friction member separating the said piston from the corresponding cap of the said body member, a friction member interposed between the end of the shaft opposite to the said piston and the other cap of the said body member, the cylindrical bore of the said body member having an eccentric groove, radial chambers

made in the said shaft, small pistons located in the said chambers and also arranged in the said eccentric groove, passages connecting the said radial chambers with the said shaft chamber, whereby the relative rotation of the said body member and shaft displaces a body of liquid inside the said body member, which liquid acts upon the said friction members, so as to brake the rotation of the said shaft.

1,805,467. TREATMENT OF CELLULOSE DERIVATIVES OR PRODUCTS MADE THEREWITH. HENRY DREYFUS, London, England. Filed Mar. 4, 1927, Serial No. 172,921, and in Great Britain Mar. 16, 1926. 15 Claims. (Cl. 8—5.)

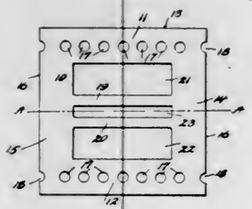
1. Process of dyeing material containing a cellulose ether, which comprises a loading operation wherein the material is swelled and impregnated with a solution of a salt of a loading metal and the metal is fixed in the material as an insoluble compound, and a subsequent operation comprising the application to the loaded material of a coloring matter that has but little affinity for the unloaded cellulose ether material.



13. As a new article of manufacture, a material comprising a cellulose ether loaded with a water-insoluble metal salt and dyed with a dyestuff which has but little affinity for unloaded cellulose ether material.

1,805,468. TREATMENT OF CELLULOSE DERIVATIVES OR PRODUCTS MADE THEREWITH. HENRY DREYFUS, London, England. Filed Mar. 4, 1927, Serial No. 172,922, and in Great Britain Mar. 16, 1926. 15 Claims. (Cl. 8—5.)

1. Process of dyeing material containing a cellulose ester of an organic acid that is a homologue of acetic acid, which comprises a loading operation wherein the material is swelled and impregnated with a solution of a salt of a loading metal and the metal is fixed in the material as an insoluble compound, and a subsequent operation comprising the application to the loaded material of a coloring matter that has but little affinity for the unloaded cellulose ester material.

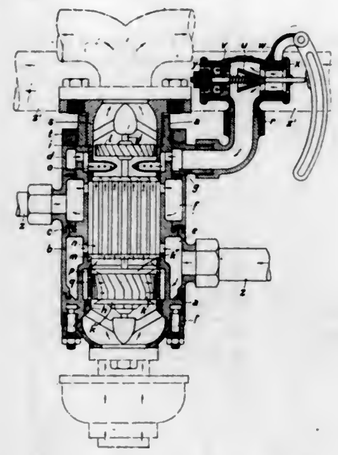


13. As a new article of manufacture, a material comprising a cellulose ester of an organic acid which is a homologue of acetic acid, loaded with a water-insoluble metal salt and dyed with a dyestuff which has but little affinity for unloaded cellulose ester material.

1,805,469. ELECTRIC FURNACE. RENÉ DUFOUR, Paris, France. Filed July 28, 1927, Serial No. 209,111, and in Belgium Aug. 4, 1926. 6 Claims. (Cl. 266—1.5.)

1. A high frequency furnace comprising a plurality of insulated chambers, a coil located inside each chamber, said coils being of the air-wound type, and a furnace chamber external to said insulated chambers, said insulated chambers being so positioned that the magnetic fields of the coils, contained therein, overlap when high frequency currents are supplied to the coil terminals.

1,805,470. BUILDING UNIT. KENNETH W. DUNWODY, Macon, Ga. Filed June 6, 1929. Serial No. 368,872. 2 Claims. (Cl. 72—41.)

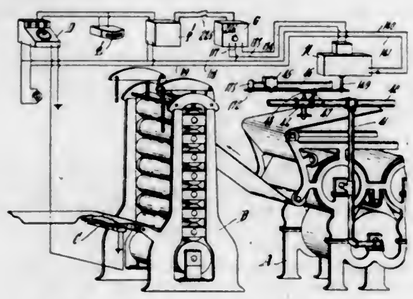


1. A hollow building unit having relatively thick stretcher and header walls, said header walls being connected by a pair of vertical hand hold webs disposed in parallel relation to the stretcher walls, each of the stretcher walls being provided with a longitudinal series of vertical openings, the end openings of each series being intersected by the header face of said unit whereby a mortar key is provided near each end of the header faces.

1,805,471. EAR SUCTION CUP. LEE R. ENGLAND, Carter, Okla. Filed Aug. 15, 1929. Serial No. 386,017. 3 Claims. (Cl. 128—300.)

1. A suction cup, comprising a substantially cylindrical hollow resilient body, a resilient dome-like head closing one end of the body, a relatively broad soft rim surrounding the edge of the body at the other end thereof, a metal reinforcing liner within the cylindrical portion of the body, and resilient means supporting the dome-like end thereof to normally force the same outwardly.

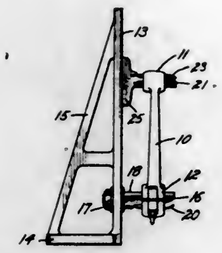
1,805,472. PROCESS AND DEVICE FOR TREATING FUEL AIR MIXTURES FOR INTERNAL COMBUSTION ENGINES. JOHANN GRIVIN, Riga, Latvia. Filed Dec. 1, 1927, Serial No. 237,094, and in Latvia Dec. 4, 1926. 3 Claims. (Cl. 48—180.)



3. A fuel air interceptor comprising a centrifugal wheel, a heating chamber round the centrifugal wheel, a superheater above the centrifugal wheel, tongue-shaped secondary air inlets above the said superheater, a mixing wheel coupled with the centrifugal wheel above the said tongue-shaped air inlets, the mixing wheel being adapted to serve as a driving element to the centrifugal wheel.

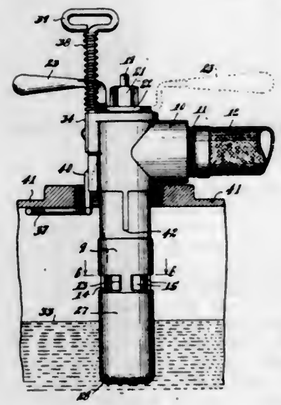
1,805,473. SYNTHETIC RESIN AND PROCESSES OF MAKING THE SAME. LESTER V. ADAMS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 1, 1928. Serial No. 274,370. 10 Claims. (Cl. 260—8.)

1. A resin resulting from the reaction of a polyhydric alcohol, a polybasic acid and an organic compound of a metal.



7. A resin resulting from the reaction of a polyhydric alcohol, a polybasic acid, and a calcium soap.

1,805,474. APPARATUS FOR CONTROLLING MOISTURE CONTENT OF PAPER OR THE LIKE. ALBERT ALLEN, Winchester, and JOHN G. CALLAN, Cambridge, Mass., assignors to Atlantic Precision Instrument Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 24, 1927. Serial No. 228,220. 6 Claims. (Cl. 34—48.)

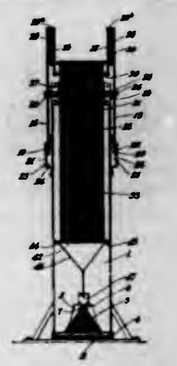


1. In combination with a drier, and a valve for controlling the supply of steam to said drier, of a lever movable to open and close said valve, a weight movable along said lever to control by its position thereon the angular position of said lever, and a device responsive to the moisture content of said material coming from said drier for controlling the position of said weight.

1,805,475. CONNECTING ROD ALIGNING GAUGE. RUSSELL T. ANDERSON, Denver, Colo. Filed Apr. 12, 1928. Serial No. 269,405. 3 Claims. (Cl. 33—180.)

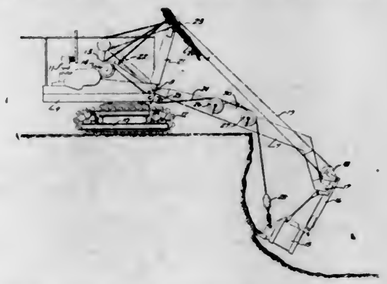
2. A connecting rod aligning gauge comprising: a T-shaped member; a straight edge along the top of the head thereof; two parallel straight edges along the stem thereof, said latter two edges lying in a common plane to which said first straight edge is perpendicular, said stem being arranged to pass into a bearing in a connecting rod; and spring means carried by said T-shaped member for forcing said latter two edges against said bearing.

1,805,476. COMBINATION HOSE END INDICATOR AND VALVE. ALFRED C. ANDREASEN, Oak Park, Ill., assignor to Air-Way Pump Company, Chicago, Ill., a Corporation of Illinois. Filed May 12, 1930. Serial No. 451,695. 7 Claims. (Cl. 116—118.)



1. A device of the character described adapted to be secured to the discharge end of a liquid dispensing conduit, comprising a supporting member provided with a liquid passageway, a portion of said device adapted to extend interiorly of a liquid receiving vessel, means operable by the liquid within said vessel for visually indicating the upper level of said liquid, valve means for controlling the supply of liquid, and means for clamping said device to said vessel.

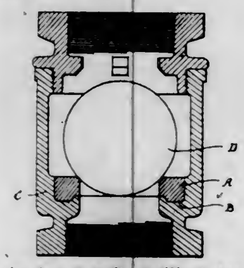
1,805,477. GRATE SUPPORT. GEORGE B. ASHWORTH, Amsterdam, N. Y. Filed June 26, 1928. Serial No. 288,316. 7 Claims. (Cl. 126—152.)



1. In a locomotive, the combination of a steam boiler firebox having inner and outer sheets; a grate support structure therein, comprising side and end members disposed within the walls of the boiler and connected to same for support; and separately formed sealing plates, located on the tops of the side and end members, and contacting with the adjoining firebox sheet.

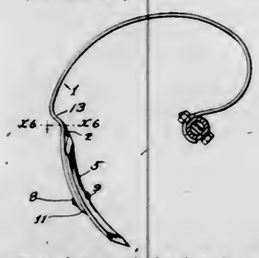
1,805,478. PROCESS OF MAKING PLAITED LEATHER. FRANK BARBER, College Point, N. Y. Filed Feb. 27, 1929. Serial No. 342,961. 16 Claims. (Cl. 139—17.)

1. The process which comprises producing a plaited sheet of leather by doubling a series of longitudinal strips of leather, supporting the doubled ends in a series and the other ends of said strips in two widely separated series with the free-end portion of the strip, which is adjacent to the free-end portion of the next strip, located in a different series therefrom, and then introducing transverse strips of leather so that successive transverse strips are located with the loops against alternating edges of the series of longitudinal strips between said longitudinal strips by inserting one free-end of a transverse strip, reversing the relative positions of the two series of ends of the longitudinal strips, and then inserting the remaining end of said transverse strip between said series.



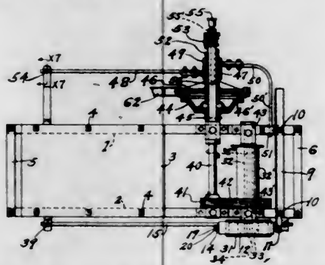
1,805,479. PULL SHOVEL. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Corporation, a Corporation of Wisconsin. Filed June 29, 1927. Serial No. 202,401. 8 Claims. (Cl. 214—138.)

1. In an excavating machine of the type described, the combination with a support, of a boom pivoted there-



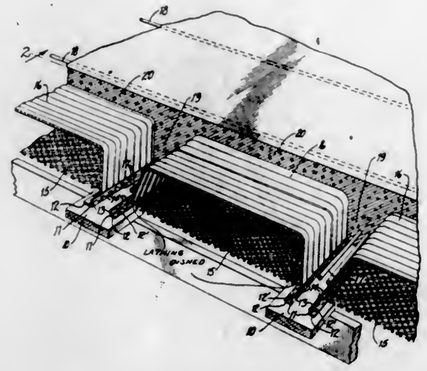
on, a dipper and dipper handle pivotally carried by the boom and movable toward said support during digging, a hoisting cable associated with the dipper and boom, and a dragline associated with the dipper and means for guiding said dragline along the boom and beneath the same reeved to produce a downward pull on the boom adjacent its pivot to produce a thrusting effort on the dipper.

1,805,480. CHECK VALVE FOR VOLATILE LIQUIDS. GORDON V. COLLINS, Hamilton, Ontario, Canada, assignor to John K. Richardson, St. Mary's, Ontario, Canada. Filed Aug. 1, 1927. Serial No. 209,964. 6 Claims. (Cl. 251—138.)



1. A valve having a soft, resilient seat formed of a congealed composition of materials and being impervious to the action of gasoline or mineral oils.

1,805,481. SPRING HARROW TOOTH. JACOB V. DYRR, Bell, Calif. Filed Dec. 26, 1928. Serial No. 328,513. 6 Claims. (Cl. 55—97.)



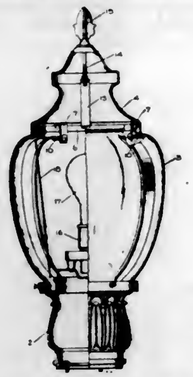
1. A harrow spring tooth having a tooth point seat provided with a countersunk bolt-hole; a tooth point having a bolt-hole countersunk at the front and a projection at the back to engage the countersink in the point seat; a bolt in the bolt-holes and a nut on the bolt adapted to hold the bolt head seated in the countersink of the tooth point.

1,805,482. REMOTE CONTROL HOIST. JACOB V. DYRR, Bell, Calif. Filed Dec. 26, 1928. Serial No. 328,515. 6 Claims. (Cl. 254—187.)

1. In a hoist, the combination of a power shaft provided with a normally released clutch; ratchet means; a windlass driven by the power shaft through the ratchet means and in one direction only; a normally set brake to hold the windlass; independent means under the control of an operator to cause engagement of the clutch; and independent means under the control of the operator to release the brake.

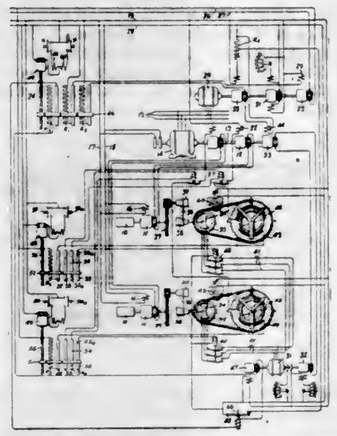
1,805,483. FLOOR CONSTRUCTION. ERNEST E. FLETCHER, Chicago, Ill. Filed Sept. 7, 1929. Serial No. 390,965. 5 Claims. (Cl. 72—66.)

2. A concrete floor comprising integral concrete beams, inverted pans between said beams, lathing material beneath said pans and receiving the edges thereof, angle irons supporting said lathing material and comprising a web extending into the concrete beam and firmly secured thereto.



1,805,484. HARROW HITCH. CAMERON H. GEMBERLING, South Bend, Ind., assignor, by mesne assignments, to Oliver Farm Equipment Company, a Corporation of Delaware. Filed June 13, 1928. Serial No. 285,180. 6 Claims. (Cl. 55—83.)

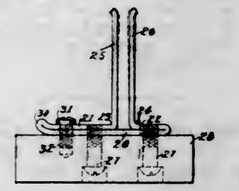
1. In a gang harrow, a drawbar, a gang of implements at the side of the drawbar, a fixed draft connection between the drawbar and the outer sides of the gang, a longitudinally shiftable draft bar pivotally connected to the inner side of the said gang, means for holding said gang in working and non-working position, a lever associated with said means and pivoted intermediate its ends to the forward end of said drawbar, said lever having the upper end thereof connected to said draft bar, and a draft clevis connected to the lower end of said lever.



1,805,485. LIGHTING UNIT. CROMWELL A. B. HALVORSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 22, 1928. Serial No. 321,196. 6 Claims. (Cl. 240—25.)

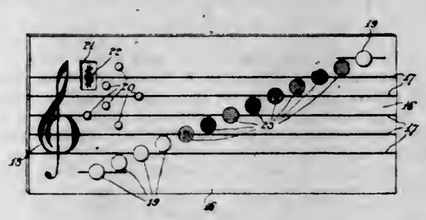
1. In combination in a lighting unit, a globe for enclosing a source of light, said globe having sides which extend at substantial angles to each other, a shield for the light located between the central axis and a side of the globe, and means for supporting the shield in place

in such relation that the edges of the shadow formed by the shield when the light is turned on fall along the edges of one of said sides.



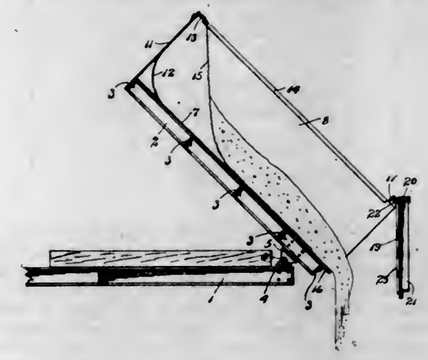
1,805,486. SYSTEM OF SPEED CONTROL. EDWARD H. HORSTKOTTE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 11, 1929. Serial No. 331,758. 5 Claims. (Cl. 172—293.)

1. In a segregated paper machine drive, a plurality of motors and a corresponding separate supply generator for each of said motors, means for simultaneously varying the voltages supplied to each of said motors to vary their speeds simultaneously over a range of predetermined values so as to maintain predetermined ratios therebetween comprising a common source of excitation for said generators and means for varying said source to vary the excitation of said generators, and means responsive to variations in the speeds of the motors for varying the excitation of said generators to maintain the speeds of said motors constant at any one of said predetermined values.



1,805,487. ELECTRICAL CONTACT JAW. ERNEST G. JOHNSON, Boston, Mass., assignor, by mesne assignments, to The Palmer Electric & Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed Aug. 13, 1924. Serial No. 731,777. 5 Claims. (Cl. 200—166.)

1. Electrical contact jaws comprising a pair of electrically connected strip contact members spaced apart to receive a conductor member therebetween, each of said contact members having an integral fixed base portion at its lower end extending initially away from the other con-



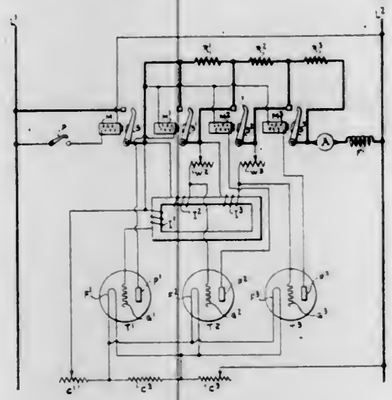
tact member, and at least one of said contact members having its free end bent downwardly and facing the other contact member to form a double prong.

1,805,488. APPARATUS FOR TEACHING MUSIC. JOHN MYRON JOLLS, Philadelphia, Pa. Filed Sept. 13, 1928. Serial No. 305,633. 6 Claims. (Cl. 84—471.)

4. In apparatus for teaching music, the combination of a plurality of charts each having designated thereon a staff, a clef signature, a particular key signature, and a plurality of notes at certain places on said staff, said notes bearing indicia of their syllable names; and a plurality of boards each having a staff designated thereon and two groups of perforations formed therein; a plurality of members having designated thereon characters indicating sharps and flats, and being provided with teats for insertion in the perforations of one group in the perforated boards; and a plurality of note indicating disks adapted to be inserted in the perforations in the other group in the perforated boards as indicated by the charts.

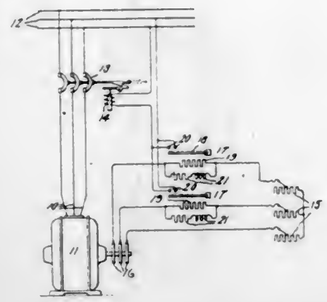
1,805,489. VEHICLE BODY. ARTHUR G. KERR, Seattle, Wash., and DONALD MERCHANT, San Francisco, Calif., assignors to Wood Hydraulic Hoist & Body Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 5, 1927. Serial No. 237,658. 3 Claims. (Cl. 296—1.)

1. A truck body comprising, an elongated substantially semi-cylindrical body member, a vertical front plate closing



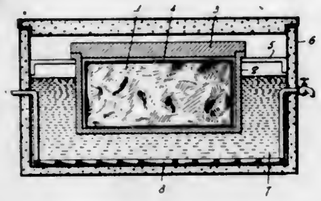
the front end thereof and permanently secured thereto, a pivotally mounted tail gate adapted to close the rear end of the body member when in one position, and an elongated fabric strip attached at its front end to the front end plate of the body near its upper end and adapted to lie within the body and against the bottom thereof, said strip being freely movable relative to the body excepting at said point of attachment.

1,805,490. MOP CONSTRUCTION. ARTHUR C. KOOTZ, Milwaukee, Wis. Filed Aug. 15, 1927. Serial No. 212,933. 3 Claims. (Cl. 15—229.)



1. In a mop, the combination with a mop body having a frame-receiving pocket, of a frame extending through said pocket and having its free ends extending inwardly of its periphery, a frame connector comprising a sheet metal member bent to provide adjacently disposed yielding channel members providing pockets receiving the free ends of said frame, a handle connector, and a pivot bolt extending through said handle connector and the inner and outer sides of said channel members above said pockets and applying pressure to draw the sides of said channel members together to clamp the ends of the frame thereto.

1,805,491. MOTOR CONTROLLER. CLARENCE W. KUHN, North Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed May 26, 1928. Serial No. 280,759. 12 Claims. (Cl. 172—288.)

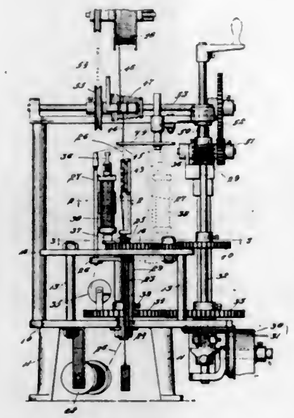


11. In a motor controller, the combination with accelerating switches to be operated in sequence, said switches each having a coil to be subjected to control by an electronic valve, of a plurality of units each including an electronic valve and an impedance to supply transient currents to said valve and commutatable connections for the impedances of said units providing for their inclusion in the motor circuit upon completion of the latter and for their exclusion progressively upon sequential closure of said accelerating switches.

1,805,492. PROTECTIVE DEVICE FOR INDUCTION MOTORS. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 23, 1928. Serial No. 314,463. 8 Claims. (Cl. 175—294.)

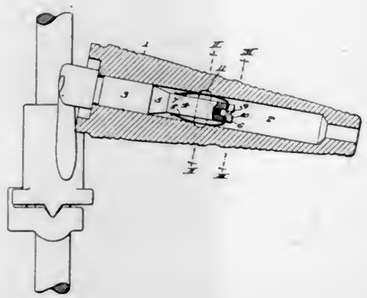
1. An induction motor having a primary winding connected to an alternating current circuit and a rotor winding, and means controlled by the frequency and current in said rotor winding for disconnecting said primary winding from said alternating current circuit in response to different values of rotor current as the frequency thereof varies.

1,805,493. REFRIGERATING APPARATUS AND METHOD. JAMES W. MARTIN, Jr., Yonkers, N. Y., assignor, by mesne assignments, to Dryice Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed May 26, 1928. Serial No. 280,740. 6 Claims. (Cl. 62—91.5.)



1. The method of automatically controlling the refrigerating effect of solidified carbon dioxide for a range of temperatures above the freezing point of freezable products to be refrigerated thereby, which method includes enclosing the solidified carbon dioxide in an insulating container in heat exchange relation with the upper portions only of a body of liquid having a desired freezing point not lower than the freezing point of the material to be refrigerated and which automatically reverses its thermo convection circulation so that the warmer liquid flows downward at a temperature substantially above the freezing point of said liquid, thereby freezing a layer of ice variably insulating the solidified carbon dioxide to compensate for variations in temperature of the unfrozen part of the liquid; and utilizing the low level portion of said body of liquid as a heat transfer medium for refrigerating the freezable product.

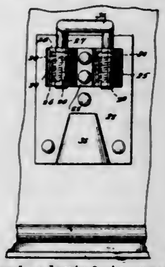
1,805,494. CORE COVERING MACHINE. GEORGE F. MCCAHEY, Providence, R. I., assignor of one-half to William C. Johnson, Providence, R. I. Filed May 20, 1929. Serial No. 364,660. 5 Claims. (Cl. 96—3.)



1. In a core-covering machine, core-feeding means, a deck plate, a pair of supply packages having strands for

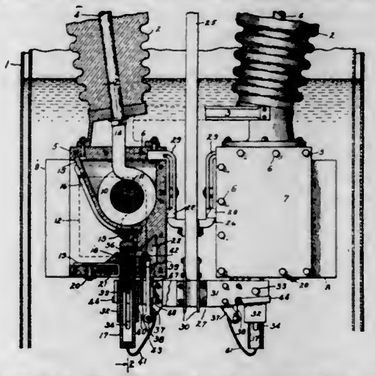
covering the core, one operatively supported below and the other operatively supported above said deck plate, and a pair of guide members for the strands of said packages one supported below and extending through said deck plate, and the other above said deck plate for guid-

ing the strands from the correspondingly located packages, and means for revolving said guide members in different paths and in opposite directions about the core, said paths being disposed to cross each other twice in each revolution to lay the covering strands alternately under and over each other upon the core.



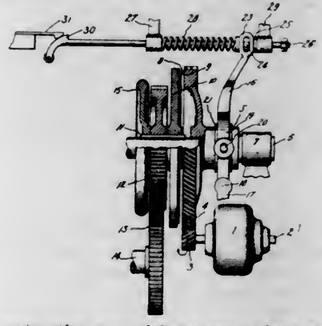
1,805,495. COP CONE HOLDER FOR CREELS. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Oct. 4, 1928. Serial No. 310,261. 3 Claims. (Cl. 242—131.)

1. A cop cone holder comprising a spindle, a screw engaging the outer end of the spindle and an expansion spring rotatably mounted on the screw and arranged to frictionally engage the interior walls of the cone.



1,805,496. HOOD CATCH. RAYMOND G. MOORE, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 3, 1928. Serial No. 274,818. 4 Claims. (Cl. 292—114.)

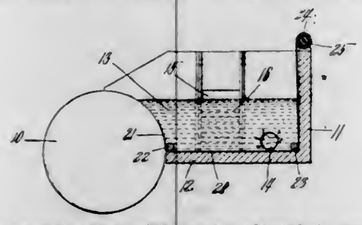
1. In a hood catch or the like, a hold down clamp, a keeper yieldable downwardly in parallel relation to the hood adapted to be engaged by said clamp and permitting lateral play between said keeper and said clamp, spring means acting to draw said clamp downwardly and move said keeper downwardly and cam means between said



clamp and the hood adapted to press the hood downwardly and inwardly under the action of said spring means.

1,805,497. ELECTRIC SWITCH. WILLIAM E. PAUL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 24, 1928. Serial No. 328,161. 16 Claims. (Cl. 200—150.)

1. Apparatus for interrupting an alternating current at or near the zero value thereof comprising cooperating fixed and movable contacts, conducting means forming a loop in circuit with the contacts including a movable portion arranged to control the separation of the contacts, and means for yieldingly opposing the electromagnetic effect of the current in said loop.

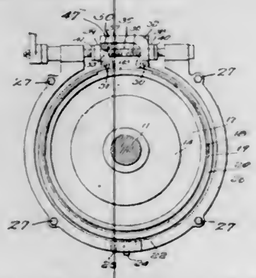


1,805,498. CLUTCH MECHANISM FOR LOOMS AND THE LIKE. IRA E. ROGERS, Marblehead, and WILLIAM C. SCOTT, Quincy, Mass., assignors to General Electric Company, a Corporation of New York. Filed July 8, 1927. Serial No. 204,381. 6 Claims. (Cl. 192—101.)

1. A construction comprising a gear wheel which forms the movable element of a clutch, a pinion meshing with

the gear wheel, a motor for driving them, and means normally holding the gear wheel in clutch-engaging position, characterized by the fact that the gear wheel and pinion are provided with helical teeth and that the normal direction of rotation is such that the axial thrust due to the helical teeth is in a direction to tend to move the gear wheel in a direction to release the clutch.

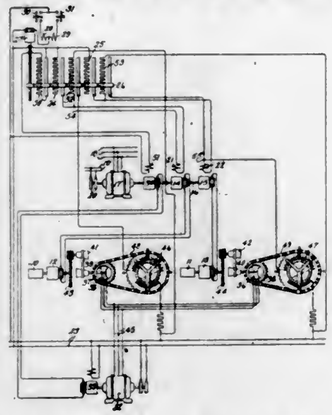
1,805,499. MASK FOR CYLINDER MOLDS. MILTON O. SCHUR, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Feb. 14, 1930. Serial No. 428,341. 6 Claims. (Cl. 92—42.)



1. In combination with a vat adapted to contain a pool of stock and a cylinder mold mounted to present a portion of its surface to a pool in said vat, a mask covering a part of said portion of surface, the arc of engagement of said mask with said surface being variable from point to point lengthwise of the mold.

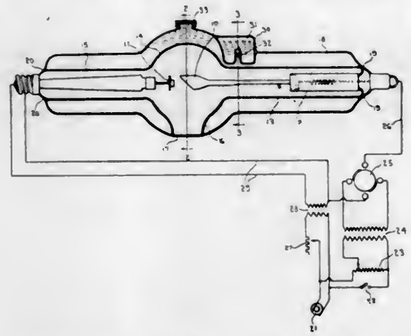
1,805,500. LIQUID TO BE USED AS HEAT TRANSFERRING MEDIUM. WILLIAM STOREY SHERMAN, Brooklyn, N. Y., assignor, by mesne assignments, to General Frigheatone Co. Inc., a Corporation of New York. Filed Jan. 9, 1930. Serial No. 419,533. 9 Claims. (Cl. 252—5.)

1. A heat transferring liquid comprising diethyleneglycol, linseed oil and a mutual solvent thereof.



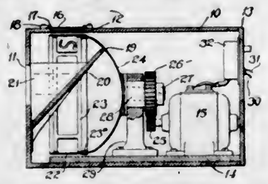
1,805,501. BRAKE BAND. JOHN W. TATTER, Chicago, Ill., assignor to Lewis Differential Company, Chicago, Ill., a Corporation of Illinois. Original application filed Nov. 3, 1926, Serial No. 145,970. Divided and this application filed June 10, 1929. Serial No. 369,842. 10 Claims. (Cl. 188—259.)

1. A flexible brake band of substantially rectangular cross section which diminishes in cross-sectional area from its central portion to the ends thereof.



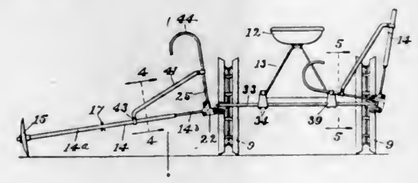
1,805,502. CONTROL SYSTEM FOR DYNAMO-ELECTRIC MACHINES. LOUIS W. THOMPSON and EDWARD H. HORSTKOTTE, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Apr. 16, 1929. Serial No. 355,554. 9 Claims. (Cl. 172—293.)

5. In combination, a motor, a generator for supplying the motor, means comprising a variable resistor in the field circuit of said generator for adjusting the basic speed of said motor, speed regulating means for said motor including a resistance device in the field circuit of said generator and means responsive to fluctuations



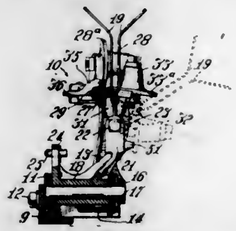
in the speed of said motor for varying said resistance device, a potentiometer resistance in parallel with said regulating resistance, and means for varying said potentiometer resistance in unison with said variable resistor.

1,805,503. X-RAY TUBE. JULIUS B. WANTZ, Oak Park, Ill., assignor to General Electric X-Ray Corporation, Chicago, Ill., a Corporation of New York. Filed June 25, 1928. Serial No. 288,166. 3 Claims. (Cl. 250—35.)



1. An electron discharge device comprising an envelope, a surrounding jacket forming with said envelope a chamber for insulating liquid, and means in said chamber for compensating for the expansion of such liquid.

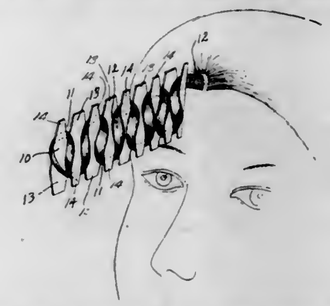
1,805,504. SIGN AND DISPLAY DEVICE. MAX WASSERBERG, Flushing, N. Y., assignor of one-half to Samuel Steinfeld, New York, N. Y. Filed Oct. 2, 1928. Serial No. 309,834. 2 Claims. (Cl. 40—130.)



1. A device of the class described comprising a casing, an opening in one wall of said casing, a reflector angularly disposed with reference to the line of vision through the opening in said casing, means admitting rays of light from a source into the casing and onto said reflector in a path angular with respect to said line of vision, a translucent panel constituting part of said last named means, means for supporting a characterized element having translucent properties adjacent said panel in said path of light, said last named means being detachable with respect to the casing, and means for moving said element to bring successive sections thereof into position relatively to said panel and reflector, said last named means involving a source of power arranged in said casing and in operative engagement with the element supporting means through a member movable around said angularly disposed reflector.

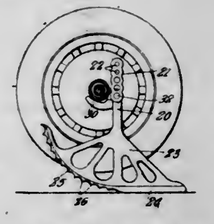
1,805,505. PLANTER MARKER. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 30, 1927. Serial No. 209,513. 7 Claims. (Cl. 97—230.)

1. In a planting implement, the combination of a marker pivotally mounted on the implement for swinging movement into and out of operative position, and handle means for swinging said marker comprising laterally spaced handle portions which are presented successively within convenient reach of the operator as the marker is moved between its operative and inoperative positions.



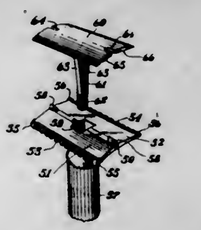
1,805,506. WIRE DOFFING MECHANISM FOR PLANTERS. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 6, 1927. Serial No. 217,569. 12 Claims. (Cl. 111—48.)

1. The combination with a planting implement comprising a check-head and a check-row wire cooperating therewith, of releasable holding means comprising part of said check-head for normally holding the check-row wire in operative position in the head, and cooperating members on said check-head and on said check-wire adapted by their engagement to release said holding means from said check-head for automatically doffing said wire.



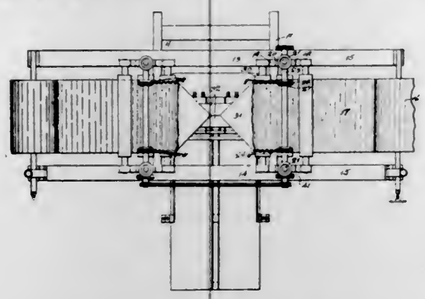
1,805,507. HAIR WAVER. ELLA M. ADAMS, New York, N. Y. Filed Apr. 5, 1929. Serial No. 352,727. 4 Claims. (Cl. 132—33.)

1. In a hair waving device, a plate having a plurality of hair loop supporting and hair loop compressing projections defining a plurality of V-notches extending inwardly from the opposite sides thereof, said notches being adapted to receive a strand of hair looped over every second projection between said notches the alternate



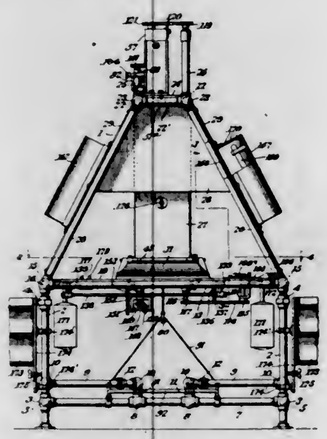
projections being adapted to compress and hold the curved portions of the strand without subjecting the intermediate portions thereof to substantial tension or destroying the fluffiness of such intermediate portions.

1,805,508. VEHICLE JACK. FEDELE ANGELILLO, New York, N. Y. Filed Nov. 17, 1930. Serial No. 496,111. 2 Claims. (Cl. 254—94.)



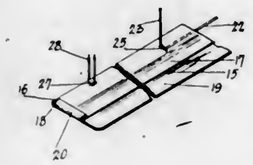
1. In a jack for wheeled vehicles having an axle between each pair of wheels, a base member having an arcuately curved portion provided with teeth to engage a surface, a web having a stem integral with said base, an elongated head on said stem having a row of spaced perforations, a hook having a pin engageable selectively in any of the head perforations, said hook adapted to partially encircle the lower side of said axle, and an abutment on said hook to engage the side of said head and stem.

1,805,509. SAFETY RAZOR. MARCUS B. BEHRMAN, Brooklyn, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a Corporation of Virginia. Filed May 11, 1928. Serial No. 276,832. 32 Claims. (Cl. 30—12.)



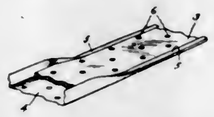
31. A safety razor blade having oppositely arranged cutting edges and a line of weakness substantially parallel to and intermediate the cutting edges whereby said double-edged blade can be severed along said line of weakness into two single edged blades, each section being provided with means for locating it as a blade in a razor.

1,805,510. MACHINE FOR FOLDING AND SCALLOPING PAPER SHEETS. SAMUEL J. CAMPBELL, Green Bay, Wis., assignor to Hudson-Sharp Machine Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1929. Serial No. 386,767. 6 Claims. (Cl. 270—67.)



1. In a machine of the class described, the combination of a frame adapted to support a paper roll, roller means for producing a scalloped edge cut along each edge of the paper web as it is fed from the roll and means for directing the elimination from the machine of the trimmed off edges, a former plate located beyond the edging means and adapted to longitudinally fold a paper web, cross-cutting roller means located beyond the former plate, one of said rolls being provided with a scallop cutting die adapted to cross-cut the folded paper web along the cutting line, and means for positively driving the edging cutters and the cross cutters in timed relation to one another.

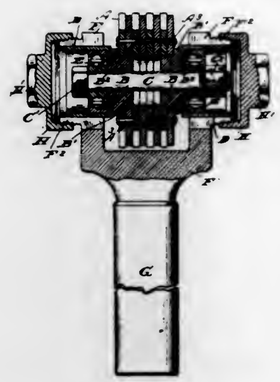
1,805,511. APPARATUS FOR MAKING ANIMATED PICTURES. ARTHUR WILTSEE CARPENTER, New York, N. Y., assignor, by mesne assignments, to Audio-Cinema, Incorporated, Long Island City, N. Y., a Corporation of New York. Filed June 18, 1927. Serial No. 199,798. 17 Claims. (Cl. 88—16.)



1. In a picture photographing apparatus, means to support a picture sheet for photographing it, comprising an outer frame defining a rectangular opening; a rectangular inner frame removably fitting in said opening and defining a rectangular aperture, the inner frame being formed with a countersunk ledge at the edges of its aperture; a flat plate supported by said ledge and closing the aperture; independently adjustable supporting posts threaded upwardly through the outer frame and loosely supporting the inner frame adjacent its four corners; a plurality of upstanding projections carried by the inner frame adjacent one edge of said plate; a pad of compressible material extending over the plate and the inner frame and formed with openings to receive said projections, the projections extending through the pad to enter openings in a picture sheet upon the pad and hold the sheet in place; a frame hinged to one side of the outer frame to fold down over the top thereof; and a glass presser plate carried by said hinged frame to flatten the picture sheet against the pad, the inner frame being reversible from front to rear and the glass plate being formed with openings to provide clearance for the said projections in either position of the inner frame.

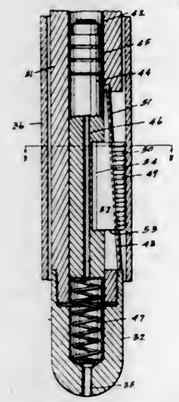
1,805,512. AUTOMATICALLY ACTUATED WEATHER STRIP. EDGAR J. CHANDLER, Oakland, Calif., assignor of one-half to Harold M. Steves, Oakland, Calif. Filed Nov. 1, 1929. Serial No. 404,009. 2 Claims. (Cl. 20—67.)

1. A weather-strip adapted to be hingedly secured to a swinging closure between one edge thereof and its frame, said strip comprising a metal strip bent upon itself to form a clamp, one of the members of the clamp having an end portion bent to overlap the other member of the clamp, an upwardly extending integral arm on one end of said clamp, a spring rod carried by the clamp, said rod having an arm extending upwardly from the clamp and mounted in a recess in the closure, said rod having a flat hooked end fitted in the bend in the clamp.



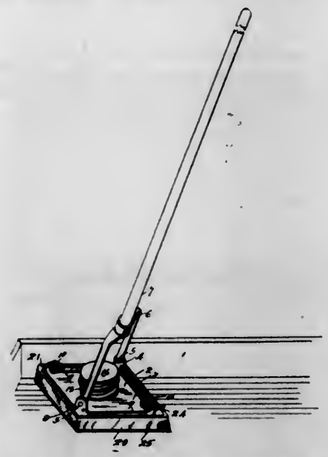
1,805,513. SHIELDING MEANS FOR HIGH TENSION CABLE. EUGENE L. CRANDALL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 20, 1929. Serial No. 408,589. 6 Claims. (Cl. 173—264.)

1. An electrostatic shield for an electric cable comprising a strip of insulating material and a strip of metal foil wider than said material having its edges folded back over the edges and part of the top surface of said material and embedded therein.



1,805,514. EMERY WHEEL DRESSING TOOL. CONSTANT DE MATTIA, Detroit, Mich., assignor to Vincent Steel Process Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 12, 1930. Serial No. 474,695. 1 Claim. (Cl. 125—37.)

A device of the character described, comprising a plurality of annular discs having V-shaped peripheral teeth, means for securing said discs together to form a unit with the teeth of the respective discs in staggered relation; a supporting arbor revolvable with the cutting disc, a pair of sleeves fitted with anti-friction bearings, in which the arbor is journaled, an arm having a yoke-shaped end with tapering screw-threaded split hubs to receive and grip the sleeves, and caps having tapering

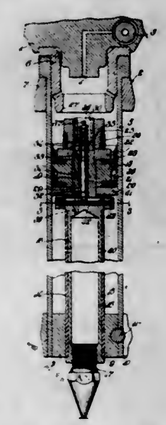


tapped screw-threaded flanges engaging said hubs, whereby upon adjustment of the caps the hubs may be compressed to grip and hold said sleeves against rotation.

1,805,515. INSIDE PIPE CUTTER. HARVEY J. DENNEY, Westlake, La. Filed July 18, 1930. Serial No. 468,869. 4 Claims. (Cl. 81—195.)

1. A device for cutting and removing pipe from a well bore comprising a tubular cutter body, outwardly movable cutters therein, an anchoring device having a swivelling connection with the body, outwardly movable anchoring jaws therein adapted to engage the pipe to anchor the cutting means against longitudinal movement in the pipe during cutting operations, separate means operatably connected with the cutters and jaws, respectively, and adapted to be actuated, simultaneously, by fluid pressure to move the cutters and jaws outwardly into active position in engaging relation with the pipe, a pulling device connected to said anchoring device and embodying outwardly movable pipe pulling jaws, means operatable by said pressure and effective to move said pulling jaws into active position in engagement with the pipe.

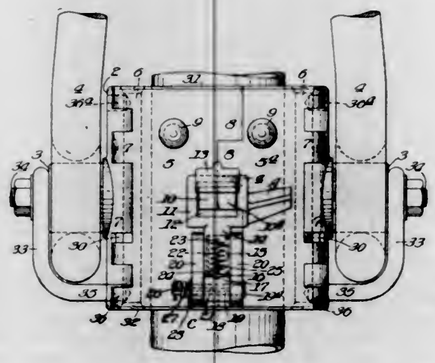
1,805,516. DIAMOND FLOOR POLISHER. CHARLES E. ERICSON, Los Angeles, Calif. Filed Oct. 12, 1929. Serial No. 399,234. 2 Claims. (Cl. 91—39.)



1. A floor waxing iron having a lozenge shaped body, said iron having a rim bead around its top and a set of V-shaped spring grips whose remote ends are pivoted on the iron rim and whose sides are yieldably connected by a crotch loop and are operative to clinch a smoothing cloth over the beads.

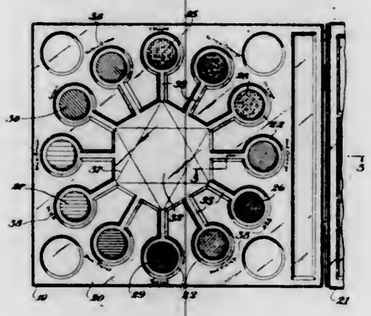
1,805,517. MANUFACTURE OF RUBBER COMPOSITIONS. WILLIAM FELDENHEIMER, London, England. Filed Mar. 14, 1924, Serial No. 699,846, and in Great Britain Mar. 27, 1923. 3 Claims. (Cl. 106—28.)

2. The process of manufacture of rubber compositions containing clay, comprising the steps of suspending clay in water by addition of sodium pyrophosphate in the presence of rosin, removing any undeflocculated matter, flocculating the clay from its suspension by the aid of a strong acid, and incorporating the so obtained flocculated product of low acidity with the rubber mixing.



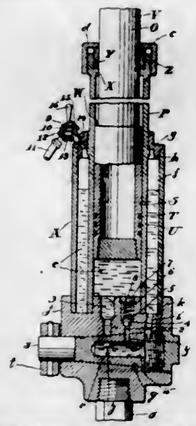
1,805,518. ROCK DRILL FEEDING DEVICE. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 18, 1930. Serial No. 475,946. 15 Claims. (Cl. 116—124.)

1. In a drilling mechanism, relatively movable feed cylinder and piston elements, the latter having a piston



rod, and means for indicating the attainment of maximum extension between the cylinder and piston including a tell-tale port in the piston and means for supplying air thereto only at about the limit of feed.

1,805,519. CASING ELEVATOR. EDGAR E. GREVE, Bellevue, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 7, 1929. Serial No. 390,891. 7 Claims. (Cl. 294—90.)

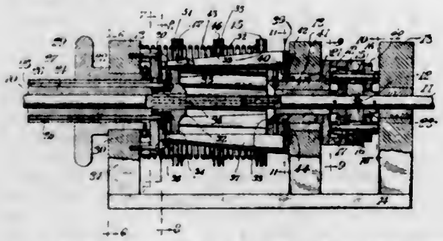


1. In a casing elevator, a reversible body member having similar end portions, trunnions projecting from the body, a bail pivotally connected with the trunnions, said body being provided with a recess adjacent each end, and a body-retaining member having a portion entered in one of the said recesses.

1,805,520. COLOR ARRANGEMENT. WALTER GRUMBACHER, New York, N. Y., assignor to M. Grumbacher, New York, N. Y., a Copartnership composed of Max Grumbacher and Walter Grumbacher. Filed Feb. 7, 1929. Serial No. 338,070. 3 Claims. (Cl. 41—5.)

2. A paint box comprising a plate having a series of depressions arranged in a circle, color pigments in said depressions, a central mixing chamber formed in said plate, said chamber being hexagonal in shape and so arranged that any two diametrically opposed apices of the hexagon point to colors which when mixed will give neutral gray and any three alternate apices also point to colors which when mixed will give neutral gray.

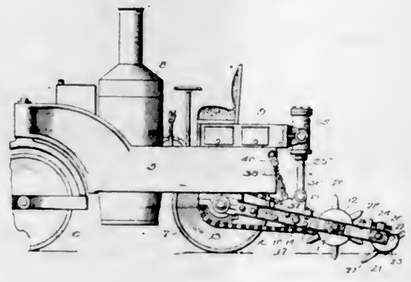
1,805,521. FEEDING DEVICE FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 19, 1928. Serial No. 313,528. 4 Claims. (Cl. 121—9.)



1. A feeding device for rock drills, comprising a pair of relatively movable members, one of which is adapted to be connected to the rock drill, a reservoir for liquid, means for introducing a pressure medium into the reservoir to force liquid therefrom into one of the members to actuate the other member and the rock drill in the direction of the material intended to be drilled, means interposed between the reservoir and said members for automatically controlling the flow of liquid from the reservoir into the member, and a manually operable valve for controlling the flow of liquid from the member to the reservoir and from the reservoir to said means.

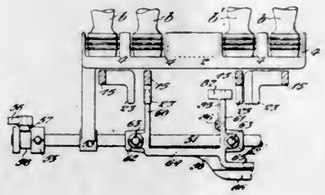
1,805,522. CAP. ALEXZANDER HOROS and STEPHEN HOROS, Philadelphia, Pa. Filed Mar. 15, 1930. Serial No. 436,008. 4 Claims. (Cl. 2—197.)

1. A cap comprising a disc and an annulus of launderable fabric seamed together at their perimeters, said annulus having a V-shaped slit with its base at the inner circumference and its apex at the outer circumference, and an expansible filler for the slit.



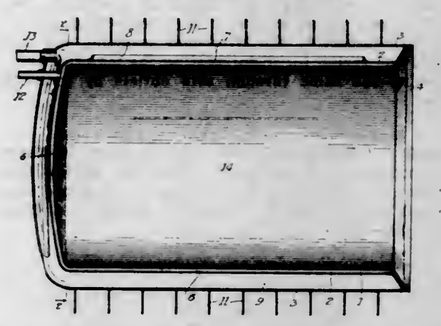
1,805,523. VARIABLE TRANSMISSION. CORTLANDT J. LANGLEY and WILLIAM F. O'GORMAN, New York, N. Y., assignors to Charles W. Bumstead, Highland Park, N. J., trustee. Filed June 27, 1929. Serial No. 373,974. 3 Claims. (Cl. 74—34.)

1. A structure of the kind described, comprising a driving shaft and a driven shaft in end alignment, a



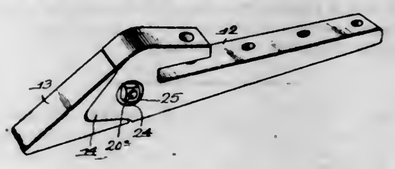
planetary gear system connecting the shafts and comprising a rotor having gears on opposite sides connected to the appropriate shafts, a housing for one set of gears rotatable on the driving shaft and connected to the rotor, a differential braking connection between the driving shaft and the housing, and a separate clutch connection between the driving shaft and the housing.

1,805,524. SCARIFYING ATTACHMENT FOR PAVING ROLLERS. HARRY W. LASTER, Oak Park, Ill., assignor of one-half to Joseph W. Schindler, Elmhurst, Ill. Filed Feb. 7, 1930. Serial No. 426,459. 10 Claims. (Cl. 262—9.)



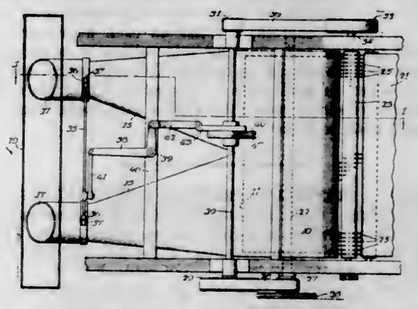
1. A scarifying attachment for paving rollers comprising a supporting element arranged for attachment to a paving roller, a spiked roller and a scarifier mounted on said supporting element, power operated means for rotating said spiked roller, and a ram connected to said supporting element and operating to depress the same and therewith the spiked roller and scarifier.

1,805,525. AUTOMATIC LOOM. WILFRID J. LEMIEUX and JAMES HOOD, New Bedford, Mass., assignors to Beacon Manufacturing Company, New Bedford, Mass., a Corporation of Massachusetts. Filed Oct. 29, 1928. Serial No. 315,824. 20 Claims. (Cl. 139—232.)



1. A filling-replenishing mechanism for multi-shuttle looms comprising a filling-detector operative upon the depletion of the filling in one shuttle to replenish the filling in this shuttle, and means set in operation by the same action of the filling-detector to change the filling in an associated shuttle when this latter shuttle is called.

1,805,526. EVAPORATOR. CARL E. L. LIPMAN, Chicago, Ill., assignor to Lipman Patents Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 8, 1930. Serial No. 449,377. 14 Claims. (Cl. 62—95.)



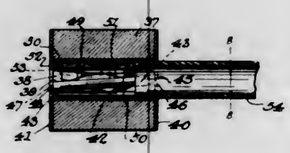
4. An evaporator comprising a plurality of spaced shells formed to provide a plurality of spaced concentric refrigerating chambers therebetween, said chambers being in communication with each other, a liquid refrigerant supply to one of said chambers and a suction connection to another of said chambers.

1,805,527. REVERSIBLE DIPPER TOOTH. VAN CORTRIGHT MEKEEL, Oak Park, Ill. Filed Mar. 9, 1929. Serial No. 345,718. 3 Claims. (Cl. 37—142.)

2. A two-part reversible dipper tooth, comprising a base casting with a bifurcated nose presenting spaced nibs, and a transverse integral web connecting said nibs, and a point having recesses on its side faces to receive said nibs and provide locking engagement therewith substantially throughout their length, with an interior gusset cut-out at the center to clear said web, and means for locking said point and base together.

1,805,528. FEEDING MECHANISM FOR INTERLACING MACHINES. GARRETT W. MUDD, Chicago, Ill., assignor to Manufacturers Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 4, 1928. Serial No. 303,940. 4 Claims. (Cl. 19—72.)

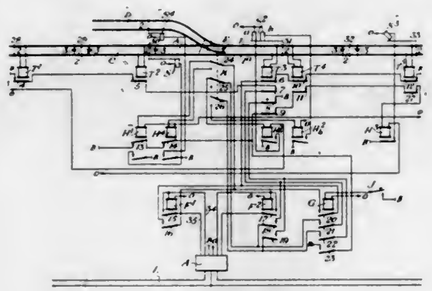
1. Means for feeding hair to and distributing the same in an interlacing machine embodying a casing having an



inlet for the material, a discharge outlet from the casing having two spaced delivery openings, downwardly curved extended delivery spouts individual to said outlets and swingingly supported with respect thereto, cam means common to said spouts for imparting a swinging movement to said spouts in unison for distributing the material with respect to the interlacing machine, and means within the casing for disintegrating the material and for throwing the same through said outlets by centrifugal force.

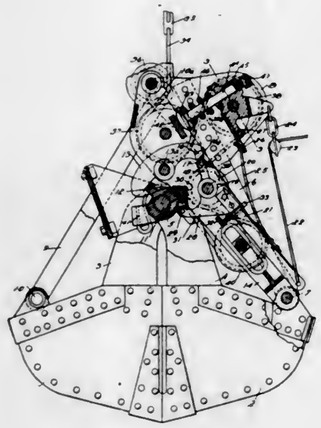
1,805,529. OPHTHALMIC MOUNTING. JOHN N. NELSON, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 30, 1927. Serial No. 223,027. 4 Claims. (Cl. 88—45.)

1. In an ophthalmic mounting, a yoke-shaped nosepiece including a relatively rigid cross-bar portion, thin resilient elongated side arms integral therewith, said arms each having a rearwardly extending end portion, and lens engaging members and nose guard members secured to said rearwardly extending end portions.



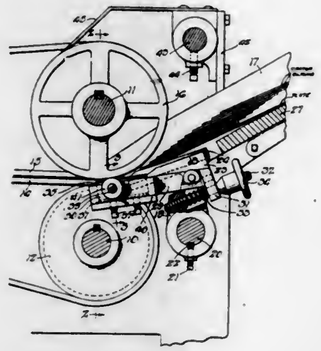
1,805,530. CLUTCH. ADOLF SCHACHER, Philadelphia, Pa., assignor of one-half to Daniel Simon, Philadelphia, Pa. Filed Apr. 7, 1928. Serial No. 268,246. 3 Claims. (Cl. 192—45.)

1. In combination with a cylindrical piece of proper diameter, a clutching device adapted to be used therewith comprising a clutch body, a plurality of three or more, substantially flat floors, positioned longitudinally of said body in notches therein, a roller on each floor having a tapered forward end adapting said rollers to be adjusted automatically outward to engage the cylindrical surface of said piece, as said piece is entered into said body, and means for retaining said rollers upon said floors when disengaged with said piece.



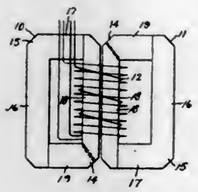
1,805,531. RAILWAY TRAFFIC CONTROLLING APPARATUS. CARL F. STOLTZ, Delhi, Ohio, assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1929. Serial No. 403,211. 9 Claims. (Cl. 246—8.)

1. In combination, a section of railway track, a track circuit including a track relay for said section, a signal governing traffic through said section, a remote controlled selector associated with said signal, means for normally controlling said signal by said track relay and said selector, and manually operable means for removing said signal from



control by said selector whereby the signal may function as an automatic signal in the event of failure of the selector or of the line over which it is controlled.

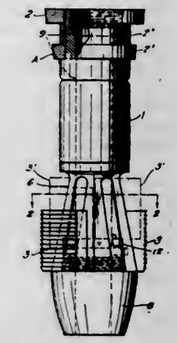
1,805,532. CLAMSHELL BUCKET. GEORGE F. THOMPSON, Erie, Pa., assignor to G. H. Williams Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 26, 1928. Serial No. 288,363. Renewed Jan. 30, 1931. 4 Claims. (Cl. 37—184.)



4. In a clam shell bucket, the combination of bucket members; a pivotal connection between the members; a head; links extending from the head to the bucket members at points remote from the pivot; a power arm pivotally mounted on one of the bucket members; a latch mounted on the power arm; a hook connection between the latch and bucket members adjacent to the pivotal connection, said latch connection tending under load to disengage; a trip lever on the power arm operating on the latch, the engaging surfaces of the trip lever and latch tending to lock the trip lever against disengagement under pressure of the latch; means for adjusting the trip lever relatively to the latch; and a cable connection extending between the head and the power arm.

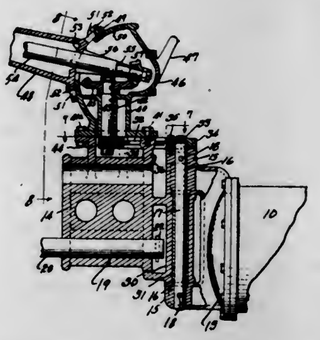
1,805,533. MEANS OF SEALING CARTONS. FRANK B. TOMLINSON, Louisville, Ky., assignor to Reynolds Metals Company, Louisville, Ky. Filed Oct. 22, 1929. Serial No. 401,432. 9 Claims. (Cl. 93—58.)

9. A box forming machine comprising blank feeding means, a tray, penetrating means in said tray adapted to engage blanks in said feeding means, and a guide upon said tray cooperating with said feeding means to regulate the penetration of said penetrating means into blanks.



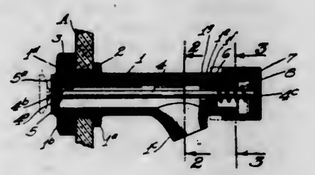
1,805,534. MAGNETIC CORE FOR ELECTRICAL APPARATUS. MATTHEW O. TROY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 18, 1929. Serial No. 415,003. 5 Claims. (Cl. 175—356.)

1. A transformer core including magnetic laminations formed of a high grade expensive material and a lower grade less expensive material, the winding leg portion of each of said laminations being formed of the high grade material and being welded to a yoke portion formed of the lower grade material to form a unitary lamination section, the ends of each of said lamination sections being connected by an L-shaped lamination section of the lower grade material.



1,805,535. HOLLOW CASING SPEAR. WILLIAM H. VREELAND, Augusta, Kans. Filed June 23, 1930. Serial No. 463,162. 3 Claims. (Cl. 294—96.)

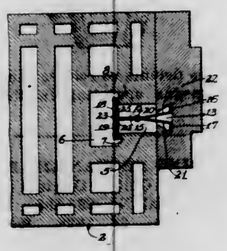
1. In a hollow casing spear of the class described comprising an apertured pyramidal block and slips slidably engaging thereon, the apertures being diametrically positioned, a jointed detent, the outer ends of which extend thru their respective apertures and on which their respective slips will rest as disengaging means therefor,



means to break the detents to release the slips for engagement, the said means operating in the hollow of the spear.

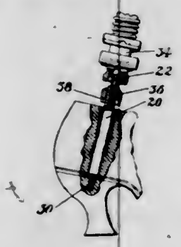
1,805,536. STEERING MECHANISM. ROLLIN H. WHITE, Cleveland Heights, Ohio. Original application filed Sept. 21, 1927, Serial No. 220,895. Divided and this application filed Sept. 27, 1928. Serial No. 308,774. 3 Claims. (Cl. 280—87.)

1. In a tractor having a main frame and a coupling swivelled thereto, steering mechanism for moving said tractor laterally relative to said coupling comprising a rack fixed to said main frame, gearing associated with said rack and carried by said coupling, a manually operable shaft, for actuating said gearing, and a column for supporting said shaft, said column, shaft and shaft gear being detachably associated as a unitary structure with the remainder of said steering mechanism.



1,805,537. NONCORRODIBLE FAUCET. RONALD S. ALLAN, Los Angeles, Calif. Filed Mar. 21, 1928. Serial No. 263,392. 2 Claims. (Cl. 251—137.)

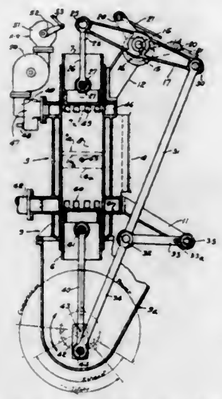
1. In a valve of the class described, a non-corrodible non-metallic tubular casing having securing means at



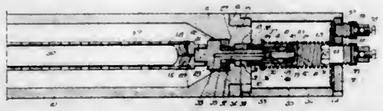
one end and a valve seat in said end, and a discharge spout intermediate its ends, a non-corrodible non-metallic valve rod reciprocally mounted within said casing, guide means within and intermediate the ends of said casing through which said rod extends, a non-corrodible non-metallic valve secured to the one end of said rod adapted to engage said seat, a valve button reciprocally mounted on the opposite end of said casing and connected with the opposite end of said rod, and a spring mounted within said casing in engagement with said button adapted to force the same outwardly and said valve against its seat.

1,805,538. BUILDING CONSTRUCTION. OSCAR T. ANDERBERG, Mason City, Iowa. Filed Dec. 19, 1928. Serial No. 326,962. 12 Claims. (Cl. 72—98.)

1. A device for holding a frame at an opening in a wall, the wall and frame having channels at the opening and connecting means extending into said channels for holding the frame in place, a channel having shoulders, and a locking means engaging said shoulders and connecting means for holding the connecting means in place, said connecting means being spaced from the sides of said channel to provide insulating spaces adjacent said connecting means.



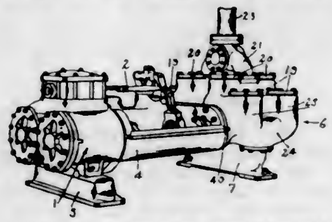
1,805,539. DEVICE FOR ATTACHING HEELS. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 14, 1922, Serial No. 606,880. Divided and this application filed June 27, 1928. Serial No. 288,620. 13 Claims. (Cl. 12—125.)



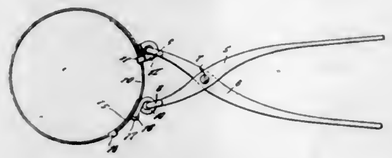
1. A heel fastening device comprising, in combination, a shank adapted to extend through a last, a threaded portion at one end of the shank to engage a heel, a driver-engaging head at the opposite end of the shank, and a last-clamping nut threaded upon the shank.

1,805,540. INTERNAL COMBUSTION ENGINE. SAMUEL B. BROWN, Los Angeles, Calif. Filed Jan. 7, 1930. Serial No. 419,093. 2 Claims. (Cl. 123—51.)

1. In an internal combustion engine, two opposed pistons, a piston cylinder common to said pistons, a piston rod pivotally connected to each of said pistons, a rocker arm having a pivotal support between its ends, a rocking head, a fixed support for said rocking head to which the latter is pivoted, said rocker arm being pivotally connected with said head at a point eccentric to the pivotal mounting of the latter, means to adjust the position of said head upon its pivot to vary the location of the pivotal support of said rocker arm, one end of said rocker arm being pivotally connected with the outer end of one of said piston rods and the other end of said rocker arm being operatively connected with the outer end of the other of said piston rods to coordinate the movements of said pistons, and a crank shaft operatively connected with said pistons.

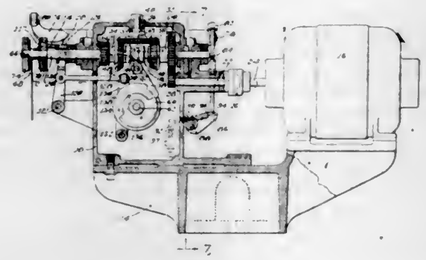


1,805,541. BLASTING CARTRIDGE. DENT FERRELL and ARTHUR W. HELMHOLTZ, Harrisburg, Ill., assignors to Safety Mining Company, Harrisburg, Ill., a Corporation of Illinois. Filed Feb. 19, 1927. Serial No. 169,441. 40 Claims. (Cl. 102—6.)



1. A blasting cartridge comprising a rigid container having a rupturable wall at one end and a perforated rigid wall at its opposite end, an electrical conducting inlet member positioned through the perforation and insulated from said casing, a cap member enclosing said inlet member having two electrical terminals, one connected directly thereto and the other insulated therefrom, and a yielding conductor between said last mentioned terminal and said inlet member.

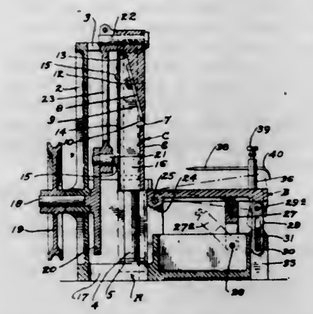
1,805,542. PUMP. JOHN W. GARDNER, Quincy, Ill., assignor, by mesne assignments, to Gardner-Denver Company, a Corporation of Delaware. Filed Mar. 2, 1926. Serial No. 91,740. 29 Claims. (Cl. 103—175.)



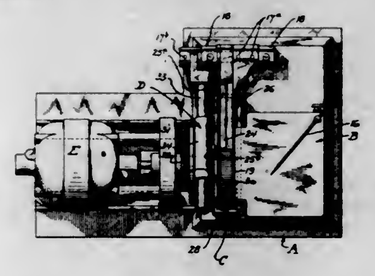
1. In a pump mechanism including a cylinder and a piston therein, means forming a suction passage extending laterally beneath and then upwardly at one side of said cylinder, longitudinally thereof, and then upwardly at each end thereof, means constantly forming a lateral chamber above said cylinder at each end thereof adapted to communicate with said suction and communicating with said cylinder, means forming a discharge above each end of said cylinder, and laterally spaced suction and discharge valves at each end of the cylinder controlling the flow through said lateral chamber and disposed in said chamber in vertically spaced decks.

1,805,543. PISTON RING COMPRESSOR. LUDWIG B. GLANTZ, Minden, Nebr. Filed July 8, 1929. Serial No. 376,629. 3 Claims. (Cl. 29—86.4.)

2. In a tool of the class described, an elongated band formed adjacent one end with a series of spaced openings, a plate having means engaging the band for slidably retaining the plate on the band, and a projection on the plate for reception in the openings, said projection adapted to be engaged by a tool engaging the opposite end of the band for contracting the latter.



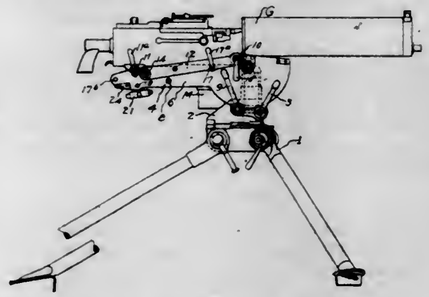
1,805,544. WINDING MACHINE. OTTO R. HAAS, North Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 24, 1929. Serial No. 357,842. 24 Claims. (Cl. 242—22.)



1. A bobbin winding machine having, in combination, a winding shaft, driving connections therefor including an electric motor, an arm adapted to contact with the mass of thread on the bobbin, and a switch actuated from the arm to turn off the motor.

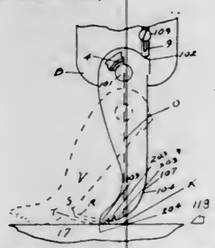
1,805,545. PLANER. FRANK H. HOWLETT, Oakland, Calif., assignor to Fred Wolfsohn, San Francisco, Calif. Filed Nov. 17, 1928. Serial No. 320,199. 6 Claims. (Cl. 32—5.)

4. A device of the character described comprising a planer head having a planer face formed on one side thereof, said planer face having a slot formed therein and having the portion above said slot projecting forwardly of the portion below said slot, a knife carried by the planer head and projecting through the slot, means for reciprocating the planer head and work supporting means adjacent the planer head.



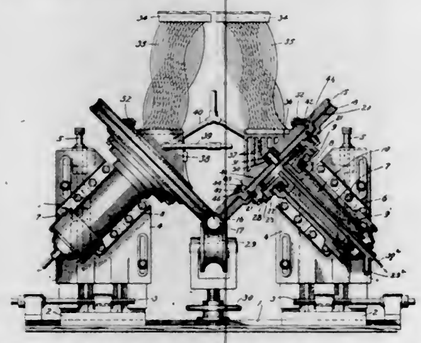
1,805,546. PLANER. FRANK H. HOWLETT, Oakland, Calif., assignor to Fred Wolfsohn, San Francisco, Calif. Filed Feb. 19, 1930. Serial No. 429,631. 5 Claims. (Cl. 32—5.)

1. In a device of the character described a pivotally mounted planer head having a planer face thereon and a blade extending through said face, driving means for causing said planer head to oscillate, said means varying the ratio of power transmitted to said planer head during its oscillatory strokes.



1,805,547. MACHINE GUN MOUNT. GEORGE IRONSIDE, Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn., a Corporation of Connecticut. Filed Feb. 24, 1930. Serial No. 430,736. 12 Claims. (Cl. 89—40.)

1. In a mount for a machine gun, the combination of a tripod, a head carried by the tripod, a cradle connected with the head for movement about a horizontal axis, and

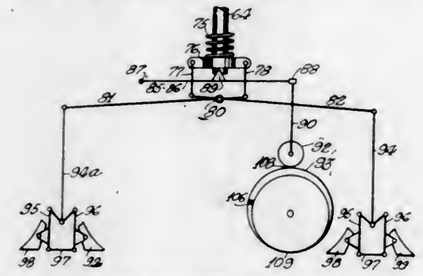


a means relatively movable with respect to the cradle and adapted to engage a machine gun at the horizontal trunnion axis thereof to hold the said gun in either of two positions with the said axis either adjacent the cradle axis or relatively remote therefrom, the gun when in the first position being relatively low and in normally fixed relationship to the cradle so that the angle of the gun may be adjusted by moving the cradle about its axis and the gun when in the second position being freely adjustable about its trunnion axis and being bodily movable to a relatively high position upon movement of the cradle to its upright position.

1,805,548. BOBBIN TRANSFER FEELER. HAROLD M. JEFFREY, Methuen, Mass., assignor to Patent Protection Corporation, Lowell, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1927. Serial No. 216,201. 12 Claims. (Cl. 139—286.)

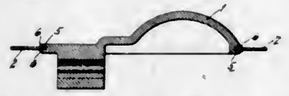
7. A feeler finger having near one end a pivot and having its other end cut on a curve the focus of which is at a point different from said pivot and having teeth cut out of the curved part and successively receding from the end, the tooth nearest the end being blunt.

1,805,549. ELECTRIC WELDING. JOHN F. LAWSON, Brooklyn, N. Y. Filed Aug. 27, 1925. Serial No. 52,727. 27 Claims. (Cl. 219—6.)



1. In an electric welding machine of the kind indicated, means effecting an electrical connection between a roller electrode thereof and the transformer comprising a rotating body and a stationary body, a crevice being formed between an end face of said rotating body and the proximate face of the stationary body, and an electrically conducting fluid in said crevice.

1,805,550. WOOD PRODUCT AND METHOD OF PRODUCING THE SAME. CHARLES B. LIPMAN and AARON GORDON, Berkeley, Calif., assignors to the regents of the University of California, Berkeley, Calif., a Corporation of California. Filed Nov. 5, 1927. Serial No. 231,306. 5 Claims. (Cl. 99—12.)



1. A method of protecting wood with a substance toxic to animal and bacteria life and fungus growth, which consists in injecting into a living tree a toxic substance capable of distribution by the sap flow of the tree and permitting the toxic substance to be distributed throughout the entire cellular and fibrous structure of the tree by the actual sap circulation of the tree, and treating said structure simultaneously with the impregnation to reduce and fix the toxic substance within the cellular and fibrous structure of the tree.

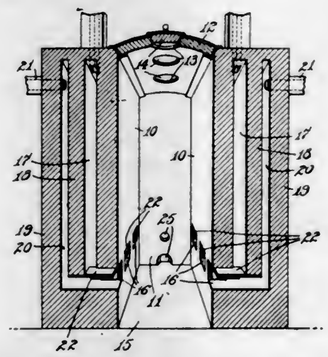
1,805,551. BRAKING SYSTEM. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed Sept. 2, 1924. Serial No. 735,276. 114 Claims. (Cl. 188—180.)

31. A mechanism supporting a load and including a braking system comprising a rotary driving element and a driven element operatively connected, said braking system operated by said load, means for releasing said braking system when the speed of the driving element exceeds the corresponding speed of the driven element.

1,805,552. METHOD OF MAKING LIQUID CONTAINERS AND CONTAINER SO PRODUCED. JAMES L. NELSON, St. Louis, Mo., assignor to C. Nelson Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 10, 1929. Serial No. 331,507. 2 Claims. (Cl. 113—120.)

1. A method of securing a casting in an opening in a sheet metal wall which consists in forming a groove in the edges of the casting, tinning the walls of said groove and the marginal portions of the sheet metal wall around the opening in which the casting is to be mounted, then placing the casting in said opening with the marginal edges of the sheet metal wall around said opening confined closely in said groove, and then applying along the edges of the casting at opposite sides of the sheet metal wall and against the surfaces of said wall continuous and impervious lines of solder.

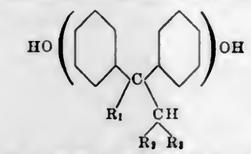
2. A tank comprising a sheet metal wall having an opening therein provided with tinned surfaces along the marginal edges of said wall about said opening, a casting having grooves in its edges, the walls of which grooves are tinned and which casting is located in said opening, and the marginal edges of the sheet metal wall about said opening being received in said grooves, and solder uniting the edges of the casting with the surfaces of the sheet metal wall at the sides of said grooves on both sides of said wall.



1,805,553. SHOE NAIL. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed June 16, 1920, Serial No. 389,397. Divided and this application filed Oct. 25, 1926. Serial No. 143,971. 4 Claims. (Cl. 85—10.)

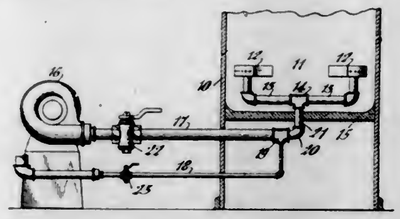
1. A shoe-nail comprising a body portion having a point with an inclined surface arranged to cause the deflection of the body in a predetermined relation to a shoe when the nail is driven, and a radial guide-fin of

less width laterally of the body than said body and extending longitudinally of the body at the side opposite the inclined surface.



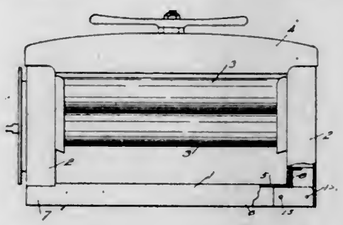
1,805,554. SMELTER. OSCAR POTTER, Downers Grove, Ill., assignor of one-half to George M. Bard. Filed Feb. 18, 1929, Serial No. 340,801. Renewed Oct. 6, 1930. 2 Claims. (Cl. 266—29.)

1. A smelting furnace comprising a main chamber formed by bounding walls and a normally closed top, a chimney duct formed alongside one of said walls, an air supply duct formed alongside the chimney duct and subject to the heating influence of the burning gases passing through said chimney duct, and tuyères leading from the air duct across the chimney duct to the smelting chamber, and ducts connecting the smelting chamber and chimney.



1,805,555. PRODUCTION OF ALKYLPHENOLS. WALTER SCHOELLER, Berlin-Charlottenburg, HANS JORDAN, Berlin-Steglitz, and REINHARD CLERC, Berlin, Germany, assignors to Schering-Kahlbaum A.-G., Berlin, Germany. Filed June 22, 1928, Serial No. 287,636, and in Germany July 14, 1927. 6 Claims. (Cl. 260—154.)

1. The process of producing alkylphenols comprising heating a dihydroxydiphenyl-methane of the formula

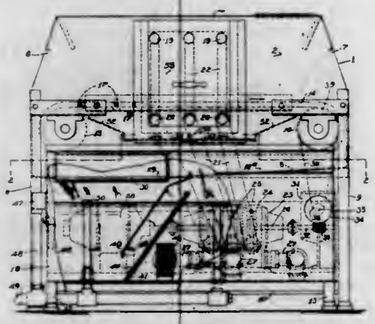


wherein R_1, R_2 and R_3 each is a hydrogen atom or an univalent alkyl radical, or R_1 and R_2 together a bivalent alkylene radical forming with the two adjacent carbon atoms a cyclic system and wherein the two aryl nuclei also can have other substituents, in a hydrogen atmosphere in the presence of a hydrogenation catalyst until two hydrogen atoms have entered into combination.

1,805,556. HEATING APPARATUS. HOWARD L. SCHRANKEL, Buffalo, N. Y. Filed Feb. 2, 1929. Serial No. 337,142. 4 Claims. (Cl. 158—118.)

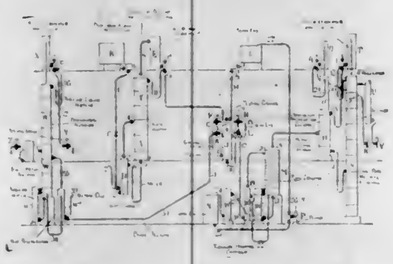
1. In a gas burning device of the character described, a burner, a mixture-conducting pipe connected thereto, a pipe for delivering air under pressure to the inlet end of said mixture-conducting pipe and disposed at substantially right angles thereto, a gas supply pipe connected to said air pipe at a point adjacent to its connection with the mixture-conducting pipe, the outlet end of said gas pipe terminating at the bore of the air pipe, and means interposed between the inlet end of the mixture-conducting pipe and the outlet end of said air pipe for effecting an intimate mixing of the air and gas.

1,805,557. WRINGER FRAME. ERNEST J. SCHUDA, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1927. Serial No. 241,303. 2 Claims. (Cl. 68—32.)



1. In a wringer frame, the combination of a base of channel shape with top and side walls, the side walls extending beyond the top wall; a side stile of box form narrower than the base and arranged between the extending sides, the stile being formed with an outer wall, side walls, and an inner wall, the inner wall being severed vertically and having a roll rod receiving slot, the inner wall terminating at the top of the base and the bottom ends of the side walls of the stiles having inwardly extending ears extending along the side walls of the base below the top wall of the base; and means for securing the base and stile together.

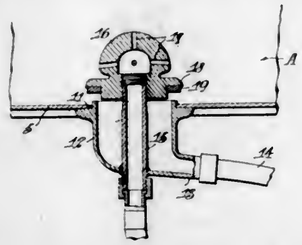
1,805,558. WASHING MACHINE. GEORGE WEBB, West Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn., a Corporation of Connecticut. Filed May 5, 1928. Serial No. 275,502. 2 Claims. (Cl. 141—1.)



1. A washing machine of the class described, comprising in combination a casing open at the ends and having parallel side walls with an opening in one of them, a substantially horizontal endless open-work conveyor for moving the articles to be washed longitudinally through the casing, the said conveyor being located with its lower run at a level above the bottom of the said side opening, a tank at least partly at one side of the casing and below the side opening therein, means for withdrawing liquid from the tank and delivering it against articles being moved by the conveyor, a shield under the lower run of the conveyor for receiving the liquid so delivered and

returning it laterally through the side opening into the tank, and a substantially horizontal screen in the casing between the upper and lower runs of the conveyor, the

said screen being out of register with the said side opening and serving to receive and retain articles passing through the upper run of the conveyor so as to prevent them from being deposited on the lower run thereof.

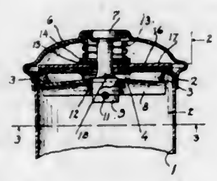


1,805,559. PROCESS FOR CONTINUOUS RECTIFICATION OF CRUDE METHYL ALCOHOL. EMILE AUGUSTIN BARBET, Paris, France. Filed Dec. 22, 1925, Serial No. 77,080, and in France Dec. 22, 1924. 1 Claim. (Cl. 202—55.)

Process of obtaining purified methyl alcohol and purified acetone from crude methyl alcohol containing acetone by continuous treatment consisting in rectifying the crude methyl alcohol, condensing the emitted vapors, causing the condensate to flow in countercurrent to a stream of an aqueous solution of caustic alkali in which the methyl alcohol is dissolved while the acetone remains insoluble, separating the acetone from the caustic alkali of methyl alcohol, separating by continuous distillation the methyl alcohol from the caustic soda and rectifying the alcohol obtained for collecting on the one hand the pure methyl alcohol and on the other hand separating the products entrained therewith, the separated alkaline solution being again brought into contact with the crude methyl alcohol, the crude acetone separated from the crude methyl alcohol being submitted to a continuous rectification whereby it is possible to obtain the acetone in the state of purity, and separately recovering the products entrained therewith.

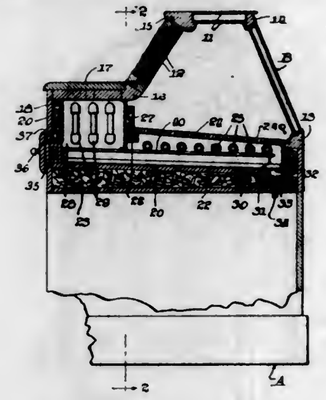
1,805,560. TUB. JOSEPH BARTA, Martins Ferry, Ohio. Filed Jan. 19, 1931. Serial No. 509,841. 4 Claims. (Cl. 68—31.)

1. A tub including a bottom having a waste opening and a peripheral wall; a waste pipe communicating with the opening in the bottom of the tub; a water inlet pipe extending upwardly through the waste pipe and through the opening in the bottom of the tub; and a discharge



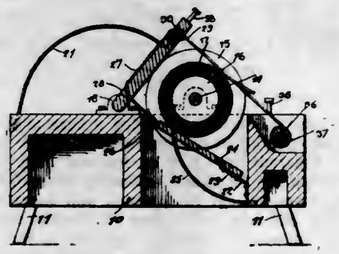
nozzle adjustably secured to the upper end of the water inlet pipe and normally sealing the waste opening in the bottom of the tub.

1,805,561. FOLDING CLOTHES HANGER. JOSEPH BECKER, Montclair, N. J. Filed July 31, 1929. Serial No. 382,488. 7 Claims. (Cl. 223—64.)



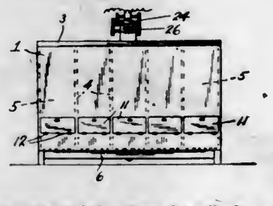
1. A garment hanger comprising arms pivoted to each other for movement from an extended position to a folded position, and support-engaging means movably carried by one arm only and movable into and out of position to engage the other arm and retain the arms in an extended position.

1,805,562. CLOSURE FOR A FILLER OPENING FOR RECEPTACLES. FREDERICK F. BEGUE and JAMES A. MCINTOSH, Detroit, Mich., assignors to Standard Tube and Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 21, 1928. Serial No. 320,820. 10 Claims. (Cl. 220—40.)



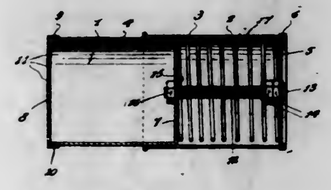
1. A closure cap for attachment to a tube or the like to be closed which is provided with double bayonet type slots with cam shaped shoulders between the slots, comprising a cap for fitting over the tube, a stud depending centrally of the cap, a cross member on the lower end of the stud for passing through the said slots, and for engagement under the shoulders upon relative rotational movement of cap and tube, a sealing member in the cap, and resilient means acting upon said sealing member and arranged to urge the sealing member against the top of the tube as a said cross member is moved along the cam surfaces.

1,805,563. REFRIGERATED DISPLAY COUNTER. JOSEPH BLAHEK, Chicago, Ill. Filed May 25, 1928. Serial No. 280,478. 4 Claims. (Cl. 62—89.5.)



1. In a display counter, the combination of a display compartment provided with an apertured floor, cooling coils located below the apertured floor, the coil sections being in spaced relation to one another, and a removable drawer pan located below the cooling coils and positioned to catch and retain scraps of material falling between the coils, said drawer pan being removable through an opening at the rear of the counter.

1,805,564. WIRE REEL CARRIER. JOHN BODNAR, Atlasburg, Pa. Filed Apr. 15, 1930. Serial No. 444,584. 7 Claims. (Cl. 242—156.)

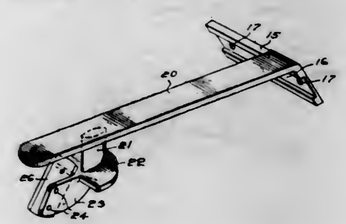


1. The combination with a wire reel; of a reel brake bearing on the reel, a wire brake bearing on the outer convolutions of wire on the reel; and means to apply said brakes simultaneously, said means being arranged to apply the reel brake more forcibly than the wire brake.

1,805,565. CABINET FOR STORING AND PRESERVING FRUITS AND VEGETABLES. HARRY C. BROOKS, Washington, D. C. Filed Aug. 13, 1929. Serial No. 385,623. 6 Claims. (Cl. 312—115.)

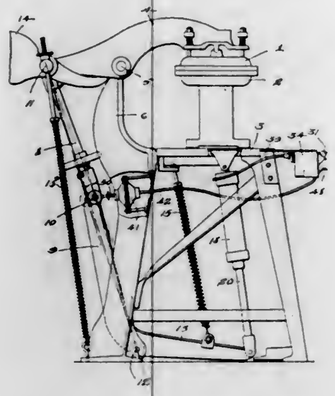
3. In an apparatus of the class described, a cabinet comprising a plurality of compartments arranged side-by-side and disposed in opposed series, hinged top members for said compartments having perforations therein, hinged outlet members adjacent the bottom of said compartments and means intermediate the series of compartments for distributing water over the perforated top members to permit water to circulate through said compartments to preserve the contents of the latter.

1,805,566. NOISE PRODUCING TOY. WILLIAM J. CIPRA, Cleveland, Ohio. Filed Jan. 29, 1931. Serial No. 512,139. 7 Claims. (Cl. 46—146.)



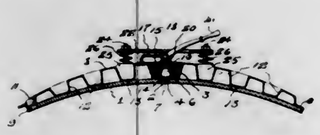
1. A sound producing device comprising companion sections telescoping one within the other, a roughened shaft extendng longitudinally of the outer section, the inner section being provided with a disk formed with an opening slidably receiving the shaft, the disk constituting a noise producing element actuated by contact with roughened portions of the shaft when the two sections are moved longitudinally of each other.

1,805,567. PRODUCTION OF BERYLLIUM AND OTHER METALS. HUGH S. COOPER, Cleveland, Ohio, assignor to Beryllium Development Corporation, a Corporation of Delaware. Filed Dec. 6, 1924. Serial No. 754,446. 1 Claim. (Cl. 204—19.)



The process of making beryllium which comprises heating a beryllium compound in the presence of a chlorinating agent under reducing conditions until a substantially oxygen-free chloride of beryllium is formed, and collecting and electrolyzing said chloride, all under anhydrous conditions.

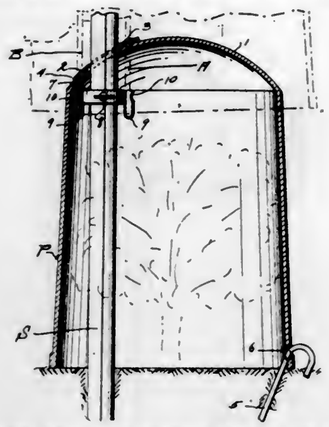
1,805,568. SPLITTING ATTACHMENT FOR LOOMS. SUMTER L. CROLLEY and DEWEY L. JONES, Camden, S. C. Filed July 26, 1930. Serial No. 471,023. 4 Claims. (Cl. 164—88.)



1. A cloth splitting attachment for looms, comprising a generally horizontal arm, means for attaching the arm to the breast beam of the loom, a depending shank secured to the arm at a point spaced a substantial distance from its free end, inclined wings arranged upon opposite sides of the shank and secured to the same near its lower end to engage beneath the split fabric, a bracket secured to the lower end of the shank and extending below the wings, and a blade secured to the bracket and arranged adjacent to the wings, the arrangement being such that the blade is covered by the free end portion of the arm.

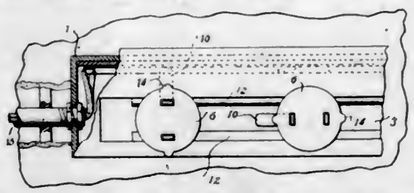
1,805,569. ACTUATING MECHANISM FOR PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Dec. 2, 1926, Serial No. 152,277. Renewed May 2, 1930. 8 Claims. (Cl. 68—9.)

1. A pressing machine including cooperating pressing elements, one of which is movable toward and from the other, power mechanism connected to the movable element for moving it into closed position including a toggle movable into a straightened locked position, means tending to open the press when the toggle is out of straightened position, a single acting fluid motor connected to the toggle mechanism to move it into locked position, a feed pipe for supplying fluid to said motor, and manual means for controlling the flow of fluid to and from the motor, an additional fluid motor and means operated thereby for coacting with the toggle mechanism when it is moved to its locked position and the press is closed, to control the initial movement of the toggle out of locked position, a pipe connecting the additional fluid motor to the feed pipe, and a manually operable valve in the last mentioned feed pipe.



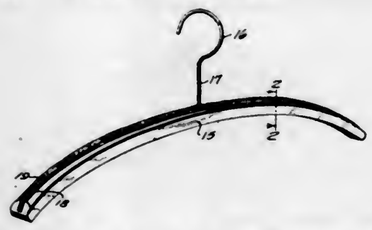
1,805,570. PRESSING ELEMENT FOR LAUNDRY AND GARMENT PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Feb. 15, 1929, Serial No. 340,139. Renewed Oct. 8, 1930. 5 Claims. (Cl. 68—9.)

1. A pressing element for pressing machines comprising a plate having a pressing face and a lengthwise slot opening through its opposite faces, a conduit mounted on the plate and having a lengthwise rib portion fitting the slot and formed with jet openings through which a fluid may be discharged from the conduit to the pressing face.



1,805,571. PLANT PROTECTOR. WALTER T. DAVIS, Parkersburg, W. Va. Filed July 31, 1930. Serial No. 472,054. 3 Claims. (Cl. 47—28.)

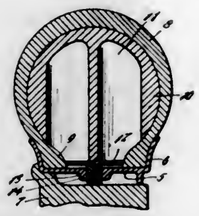
1. In combination, a plant protector having a closed end provided with an opening, a stake extending through said opening permitting the protector to be readily raised and lowered along the stake, and means carried by the stake for holding said protector in a raised position, the opening



in the closed end of the protector being to one side of the axial center of said end permitting the protector to be swung laterally with respect to the stake.

1,805,572. MULTIPLE BASE PLUG RECEPTACLE. MARTIN J. DE MASK, Pittsfield, Mass. Filed July 5, 1927. Serial No. 203,505. 7 Claims. (Cl. 247—3.)

1. An electric outlet comprising a base plug receptacle having an opening in one side extending the full length thereof to permit travel of an inserted plug, conducting strips within the receptacle extending through the length thereof at one side of the opening and electrically insulated from one another, a plug of circular cross section insertible endwise through the opening in the receptacle and movable sidewise along the receptacle, means to retain the plug in the receptacle, and contacts projecting radially from the plug whereby rotation of the plug within the receptacle at any point in the length of the latter will engage the contacts with the conducting strips or disengage them therefrom.



1,805,573. COAT HANGER. CARRIE MAY DINSMORE, Walnut Park, Calif. Filed May 31, 1927. Serial No. 195,537. 1 Claim. (Cl. 223—64.)

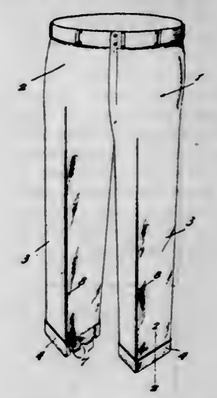
A garment hanger having a longitudinally curved body provided with a groove in its upper surface co-extensive

in length with the body, and a strip of fibrous material secured within said groove so that all of its fibers are upstanding and projecting an appreciable distance beyond the surface of the body so as to cause a portion of the material to flex in any direction under the weight of a garment supported on the hanger.

1,805,574. VEHICLE WHEEL. CHARLES G. FAWKES, Denver, Colo. Filed June 24, 1929. Serial No. 373,265. 1 Claim. (Cl. 152—5.)

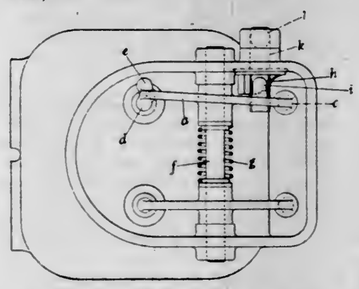
In a wheel structure, a rim having flanges, a casing having laterally spaced beads engaged with the flanges, a core of resilient material within the casing being provided with laterally spaced radial pockets defining an intervening central partition wall and outer side walls of greater cross sectional thickness than the said central partition wall and having inner and outer relatively straight and arcuately curved surfaces, an expansible band positioned between the beads of the casing to space the same and being engaged with said partition, and a pressure member carried by said rim and engaged with said band.

1,805,575. PROPELLING PENCIL. HERMANN FELGER, Nuremberg, Germany. Filed Mar. 14, 1929, Serial No. 347,095, and in Germany Mar. 21, 1928. 1 Claim. (Cl. 120—18.)



A propelling pencil comprising the combination with a casing having an opening for the lead in one end thereof and a lead holder in said casing including a flat bar twisted to form a screw, of guiding means for said lead holder comprising a cap fixed in the middle of the casing and having a slot therein for receiving the twisted portion of the lead holder so as to act as a nut therefor, a second cap rotatable but not longitudinally displaceable in the casing at the end thereof remote from the end having the opening for the lead, said second-mentioned cap having a slot therein for receiving the untwisted portion of the lead holder so as to act as a longitudinal guide for said portion, and a knob on said second-mentioned cap, as and for the purposes set forth.

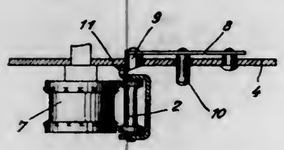
1,805,576. CUSHIONING STRIP. BENJAMIN B. FELIX, Chicago, Ill. Filed Sept. 24, 1926, Serial No. 137,609. Renewed Oct. 11, 1929. 1 Claim. (Cl. 154—45.5.)



A cushioning strip comprising a length of readily compressible material and a substantially inextensible longitudinal cord imbedded therein in a non-straight line whereby the strip may be stretched to the point where such inextensible cord is in the form of a straight line.

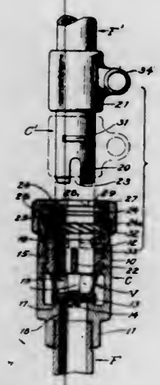
1,805,577. CUFF FOR TROUSERS. LOUIS W. FREEMAN, Gary, W. Va. Filed May 28, 1930. Serial No. 456,711. 5 Claims. (Cl. 2—227.)

1. Trousers having lower ends of the legs formed with cuffs, openings being formed in the inner wall of each cuff in spaced relation to each other and each having a straight lower edge substantially coincident with the lower edge of the cuff.



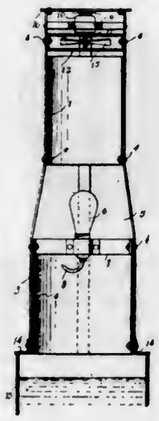
1,805,578. VALVE OPERATING MECHANISM OF INTERNAL COMBUSTION ENGINES. JOSEPH GARDNER and JOSEPH HUGH STOTT GARDNER, Patricroft, near Manchester, England, assignors to L. Gardner & Sons Limited, Patricroft, near Manchester, England, a British Company. Filed Aug. 30, 1929, Serial No. 389,485, and in Great Britain Jan. 4, 1929. 2 Claims. (Cl. 123—182.)

1. In internal combustion engines of the compression ignition type, the combination with the inlet valve, of a



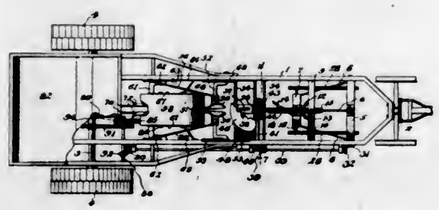
rocker arm having two operative faces for engaging the valve stem, one face leaving a relatively considerable clearance between itself and the valve stem, a shaft carrying said rocker arm, a scroll cam for traversing said arm axially along said shaft to bring one or other of said faces into operation, a spring around the shaft opposing said traversing movement, and means for limiting the movement of the rocker arm in a direction to allow of the closure of the inlet valve.

1,805,579. FILM TRANSPORTING DEVICE IN A MOTION PICTURE APPARATUS. LEO GOLDHAMMER, Munich, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed July 8, 1929, Serial No. 376,765, and in Germany July 10, 1928. 1 Claim. (Cl. 88—17.)



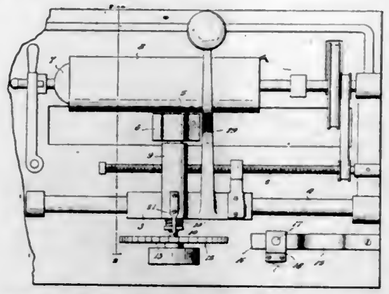
In a film transporting device in motion picture apparatus a film transporting drum, a swinging holder containing pressure rollers for pressing the film towards the film transporting drum, a bolt pivotally fixing one end of the roller-holder to the base-plate, a spring pressing the roller-holder in its open portion away from the transporting drum, a locking pin and a releasing button mounted on a leaf-spring, which locking pin engages the roller-holder in its operative position.

1,805,580. COUPLING. KENNETH C. HAZLETT and CLARENCE W. HAZLETT, Santa Monica, Calif. Filed Aug. 25, 1928. Serial No. 302,062. 8 Claims. (Cl. 284—19.)



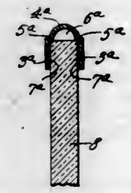
1. A coupling of the character described comprising a body member adapted to be secured to a fluid supply conduit and having an outlet port, a valve controlling the port, means for mounting the valve for movement to open or close the port according as the valve is rotated in one direction or the other, an actuator for the valve adapted to be secured to a fluid discharge conduit, and insertable into the body member for operative engagement with the valve to open or close the latter according as the actuator is rotated in one direction or the other, means for detachably connecting the actuator to the body member, and means for producing a fluid-tight seal between the actuator and body member when the valve is open comprising a gasket of yieldable material surrounding the actuator when the latter is inserted into the body member, and means on the valve operable when the valve is moved to open position to force the gasket into fluid sealing engagement with the actuator.

1,805,581. INSECT DESTROYER. WILLIAM W. HESS, Robinson, Ill. Filed July 11, 1928. Serial No. 291,969. 2 Claims. (Cl. 43—113.)



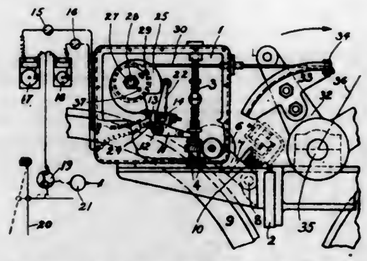
1. An insect destroyer, comprising a lower drum, an upper drum, strips connecting the drums to hold the same in spaced relation and having their upper ends extended above the upper drum, a bracket carried by the lower drum, and an illuminating element supported by the bracket and extended into the space between said drums, a bracket supported by the extended ends of a pair of strips, a motor supported thereby, a fan disposed above the upper drum and driven by the motor for creating a blast of air in the upper drum for discharge therefrom into the lower drum, and means carried by the lower drum for supporting the same upon a vessel adapted to contain a destroying liquid.

1,805,582. BEET HARVESTER. JAMES E. HOVERMALE, San Quentin, Calif. Filed Feb. 8, 1929. Serial No. 338,540. 3 Claims. (Cl. 55—107.)



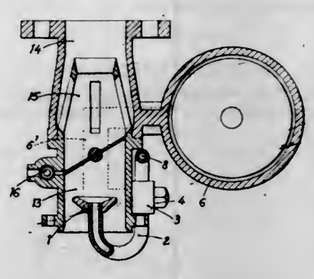
1. In a beet harvester, the combination of a main frame, an arched topper frame carried by the main frame, shoes carried by the lower ends of the topper frame to run at opposite sides of a row of beets, a knife secured to one of said shoes and extending obliquely rearwardly therefrom across the path of the other shoe at the rear of the latter, and a wheel mounted in the topper frame for relative vertical movement to engage the beet tops between the shoes.

1,805,583. SHAVING MACHINE FOR CYLINDRICAL SOUND RECORDS. BRUNO E. JACOB, Ripon, Wis. Filed May 15, 1929. Serial No. 363,257. 1 Claim. (Cl. 82—11.)



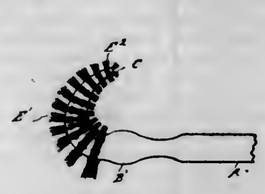
A machine for shaving cylindrical sound records comprising a cylinder receiving mandrel, a screw feed shaft geared to the mandrel, a carriage detachably connected with the screw feed shaft, a blade holder on the carriage, a screw, connecting means between the screw and blade holder, a knob on the screw for manual adjustment thereof, a wheel fixed to the screw and provided with groups of teeth of different size and having a scale to facilitate selection of the desired group of teeth, a trip in the path of the toothed wheel, and means for adjusting the trip to vary the period of action on the selected group of teeth.

1,805,584. GLASS PROTECTOR. JESSE B. KEMP, Pomona, Calif. Filed Jan. 10, 1930. Serial No. 419,950. 2 Claims. (Cl. 312—137.)



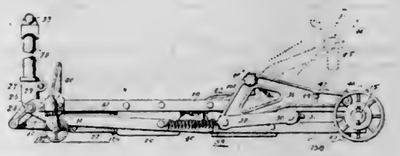
1. A protector of the class described, comprising strips of soft bendable metal connected by a hollow bead, there being shoulders at the places where the bead joins the strips.

1,805,585. STEAM ENGINE OPERATION EFFICIENCY DEVICE. RONALD FRANK KNIGHT, Ramsey, N. J. Filed May 1, 1928. Serial No. 274,328. 22 Claims. (Cl. 105—48.)



1. A locomotive, in combination with a device which can be cut in and cut out by manipulation of the engine throttle, and which, when predetermined relation exists between the speed of the engine and the position of the cut-off controlling means, co-operates with the operator's sense of hearing to apprise him of that fact.

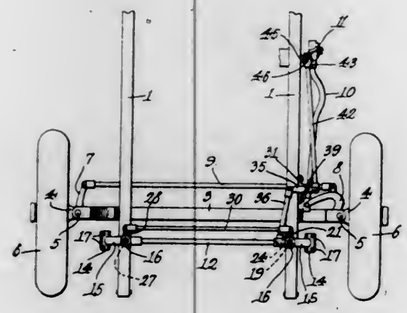
1,805,586. CARBURETOR. JEAN LAVERGNE, Paris, France. Filed Dec. 12, 1927, Serial No. 239,601, and in France Dec. 31, 1926. 2 Claims. (Cl. 261—76.)



1. In a carburetor, a body having an internal passage, a constant level fuel reservoir, a member located in the passage of the carburetor and disposed perpendicularly to the direction of flow therethrough, and means for supplying fuel to said passage at a point rearwardly of said member, with relation to the direction of flow of fluid through the passage, a nozzle located in said passage and means for supplying air under pressure to said passage in the vicinity of the nozzle, said nozzle being adapted to carburete air under pressure and said air producing a vacuum for causing delivery of fuel from said fuel supply means.

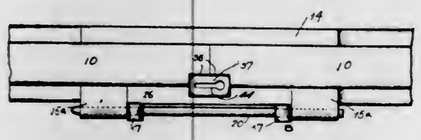
1,805,587. BRUSH FOR CLEANING ARTIFICIAL DENTURES. JOSEPH FRANCIS MANLEY, Scranton, Pa. Filed Sept. 9, 1929. Serial No. 391,433. 3 Claims. (Cl. 15—167.)

1. A brush for artificial dentures comprising a handle portion terminating in a curved portion of increasing radius from the handle to its outer end upon both inner and outer peripheries and being also of a gradually decreasing cross section, and bristles secured to and projecting from said curved portion on both convex and concave sides thereof.



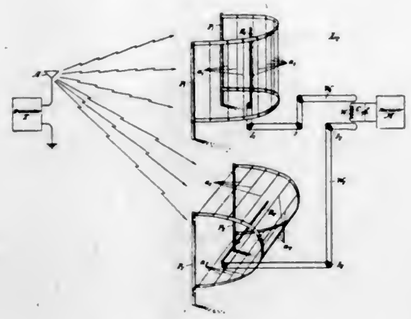
1,805,588. HYDRAULIC JACK. ROBERT E. MANLEY, York, Pa., assignor to Manley Manufacturing Company, York, Pa., a Corporation of Delaware. Filed Jan. 5, 1926. Serial No. 79,435. 8 Claims. (Cl. 138—9.)

8. In a reservoir for a ram and pump, a check body having a valved passageway therethru from the pump to the



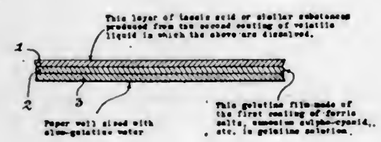
ram, a passageway between the ram and the reservoir, a valve therein, adjustable resilient means for closing the valve, and manually controlled means for releasing the valve from said resilient means to return fluid from the ram cylinder to the reservoir.

1,805,589. DIRIGIBLE HEADLIGHT. ARCHIE BAWLIN MCKAY, New London, Conn. Filed Feb. 7, 1929. Serial No. 338,284. 1 Claim. (Cl. 240—62.52.)



The combination with the fenders and chassis bars of a vehicle, of a support extended between and connecting the fenders, vertical lamp shafts journaled in the support, a lamp carried by each lamp shaft, an inwardly extended arm on the lower end of one lamp shaft and located directly beneath the support, rearwardly extended brackets secured to the lamp shafts and located immediately above the chassis bars, the chassis bars extending outwardly beyond the brackets, a connecting rod pivoted to the brackets, a second vertical shaft journaled on the outer side of one chassis bar and provided at its upper end with an inwardly extended arm located above the said chassis bar, a second connecting rod pivoted to the last-specified arm at a point spaced inwardly from the outer edge of said chassis bar, the second connecting rod being inwardly inclined, said chassis bar extending outwardly beyond all portions of the second connecting rod, the second connecting rod being pivoted to the first-specified arm at a point immediately below the support, and means connecting the lower end of the second-mentioned shaft to a part of the steering mechanism of the vehicle.

1,805,590. JOINT CHAIR AND RAIL LOCK. STEVE NAGY, Woodbridge, N. J. Filed Aug. 22, 1930. Serial No. 477,079. 7 Claims. (Cl. 238—260.)

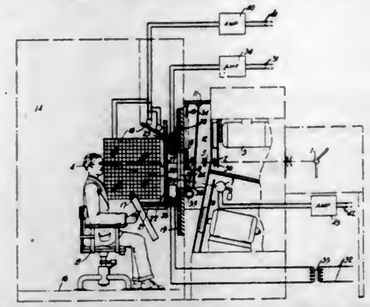


1. In a rail joint chair and lock, the combination with meeting rail ends carrying lateral lock bolt keepers, of a lock device engaged with the keepers, and a joint chair inclosing the lock device.

1,805,591. SIGNALING SYSTEM. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 18, 1926. Serial No. 155,726. 6 Claims. (Cl. 250—11.)

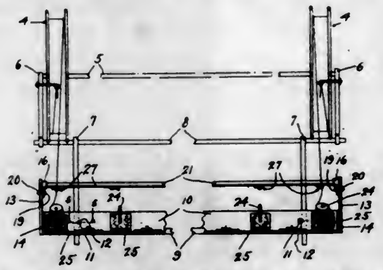
1. The combination of a pair of antenna arrays located about the surfaces of two cylindrical parabolas which make a predetermined angle with one another, respectively, and means for rendering said antenna arrays receptive to components of transmitted signals making corresponding angles with one another without regard to the angle of polarization of said transmitted signals.

1,805,592. BLACK LINE PHOTOGRAPHIC SENSITIZED PAPER AND PROCESS OF MAKING THE SAME. RYO OMOTO, Tokyo-Fu, Japan, assignor of one-half to Manabu Tada, Tokyo, Japan. Filed Jan. 25, 1928, Serial No. 249,504, and in Japan Feb. 9, 1927. Renewed Mar. 27, 1931. 4 Claims. (Cl. 95—7.)



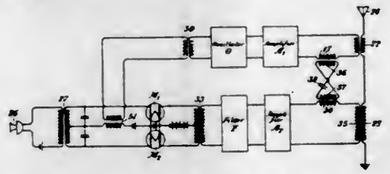
1. A sensitized photographic paper comprising paper having a coating of ferric salts and a superposed coating of tannic acid.

1,805,593. PROCESS OF PRODUCING VITAMINE PREPARATIONS. AAGE WILLAND OWE, Oslo, Norway. Filed July 8, 1926. Serial No. 121,269. 3 Claims. (Cl. 167—81.)



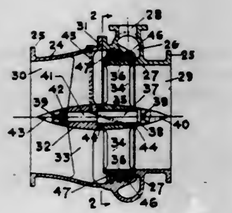
1. Process of producing vitamine preparations comprising in combination the steps of saponifying fat rich in vitamines with a solution of caustic alkali in a substantially non-dissociating liquid so as to obtain a solution of substantially non-dissociated alkali metal soaps, incorporating a proportion of an edible fat into the resulting solution of non-dissociated soaps so as to dissolve the vitamines contained therein and separating the vitaminized fat from the solution of non-dissociated soaps.

1,805,594. COMMUNICATING SYSTEM. RALZEMOND D. PARKER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 29, 1930. Serial No. 439,986. 7 Claims. (Cl. 178—6.)



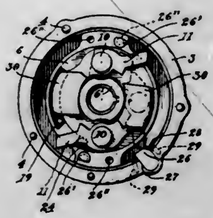
1. A combined telephone and simultaneously operable two-way television system including a plurality of stations, a booth at each station, an image integrator and analyzer associated with each booth and operative with respect to a person therein, and telephone instruments in each booth but out of range of said analyzer.

1,805,595. WINDING MACHINE ATTACHMENT. LOUIS FRANCIS PHELAN, Stonington, Conn. Filed July 21, 1928. Serial No. 294,458. 3 Claims. (Cl. 242—18.)



1. In combination with a winding machine which includes a plurality of cop receiving spindles and a swift supported above the spindles, an attachment including a base extending longitudinally of the machine between the cop receiving spindles and the swift, brackets extending outwardly from the base, rail supporting sockets adjustably mounted on said brackets, a rail supported between said sockets, yarn package supporting spindles mounted on said base, yarn guide means on said rail, and respectively including a guide member and a supporting element therefor, and means for adjustably mounting the supporting element on said rail.

1,805,596. SIGNALING SYSTEM. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1926. Serial No. 137,567. 12 Claims. (Cl. 250—6.)

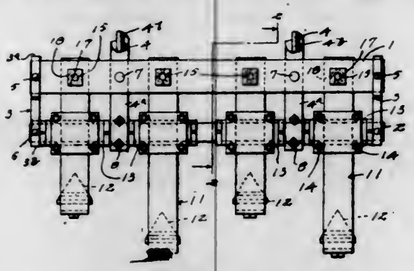


1. The method of signaling which consists in generating a wave of carrier frequency, transmitting the carrier frequency wave at a suitable energy level through space, generating voice frequency signals, producing a side band of the carrier frequency corresponding to said voice frequency signals, raising the energy level of the side-band to that of the carrier frequency, combining the side-band with the carrier frequency, and neutralizing the reaction of the energy of the carrier frequency upon that of the side-band.

1,805,597. METHOD OF AND MEANS FOR PROPELLING WATER CRAFT. ALEXANDER MCKENZIE PRATT, Newcastle, New South Wales, Australia. Filed Feb. 19, 1930, Serial No. 429,679, and in Australia Feb. 28, 1929. 7 Claims. (Cl. 115—16.)

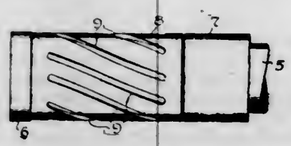
1. Improved propelling unit for water craft consisting of a propeller with a rim formed upon and encircling the tips of all the blades, turbine blades carried upon said rim, a mounting case within which said propeller is revolvably mounted, coacting turbine blades carried by said case, and means for directing fluid motive force to said blades.

1,805,598. IMPULSE COUPLING. CURT FREDERICK REIS, Chicago, Ill., assignor to Excel Magneto Company, Chicago, Ill. Filed Dec. 6, 1929. Serial No. 412,235. 9 Claims. (Cl. 123—149.)



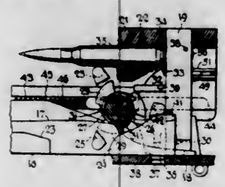
2. In an impulse coupling for magnetos, a driving member, a driven member, a casing in which said members are mounted, a stop lug on the interior of said casing, pawls on said driven member adapted to engage said stop lug, a spiral spring disposed between said members with its ends seated in recesses formed in the respective members, pins on said driving member for disengaging the pawls from the stop lug, said driving member provided with a second recess, and a shock absorbing member seated in said last-named recess.

1,805,599. COTTON CHOPPING ATTACHMENT FOR CULTIVATORS. JOHN H. ROBERTS, Hatfield, Ark. Filed Mar. 8, 1930. Serial No. 434,285. 3 Claims. (Cl. 97—23.)



1. A cultivator attachment of the character set forth, comprising a frame embodying a front bar and a rear shaft, attaching brackets secured to the frame, standards having straight front portions and curved rear portions, the straight standard portions extending across the shaft and having their front ends positioned in contact with the

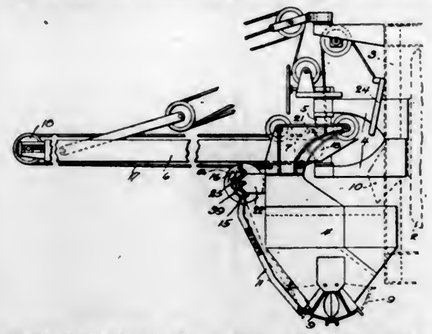
rear side of the bar and the rear portions of the standard extending downwardly and forwardly, blades secured to the lower ends and the rear portions of the standards, means



rockably connecting the standards to the shaft, and means cooperative with the bar and standards to yieldingly hold them against rocking movement.

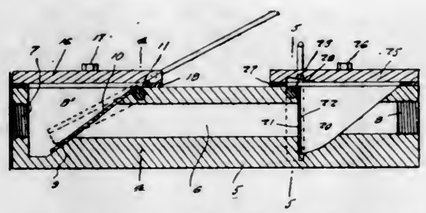
1,805,600. SPRING DEVICE. CHARLES L. ROSS, Washington, D. C. Filed Apr. 27, 1929. Serial No. 358,545. 6 Claims. (Cl. 267—1.)

1. A buffer comprising a hollow cylinder arranged to be loaded in the direction of its axis and having a plurality of quick pitch spiral slots extending through its walls, and characterized by the capability of absorbing and dissipating energy of impact without substantial recoil.



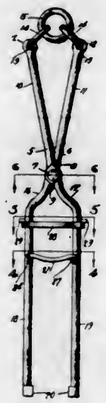
1,805,601. FIREARMS. CHARLES L. ROSS, Washington, D. C. Filed Oct. 14, 1930. Serial No. 488,650. 27 Claims. (Cl. 42—25.)

1. An extractor mechanism comprising a lever having an extracting nose for engaging a cartridge case; a guide for said lever about which the lever pivots and relatively to which it is free to move radially; and a cam mechanism operable to shift said extractor radially to cause the nose to engage a cartridge, then swing it in an extracting direction, then withdraw it radially from engagement with the cartridge and then free the extractor to permit it to return to its initial position.



1,805,602. CONCRETE DELIVERY APPARATUS. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 15, 1929. Serial No. 347,409. 8 Claims. (Cl. 94—44.)

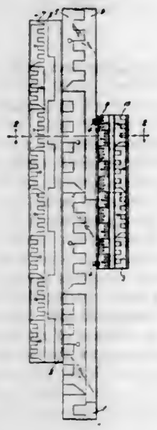
1. The combination with a conveying receptacle provided with a door through which its contents may be discharged and a track along which it may travel, of a free-running cable that moves as the receptacle moves along the track, means through which the cable may be connected with the door of the receptacle for opening the latter, means for arresting the free movement of the cable to open the door



and means whereby the door will be maintained in the open position it occupies when the restraint on the free movement of the cable is removed.

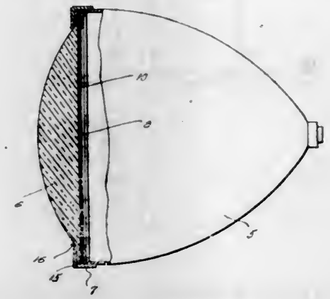
1,805,603. AUTOMATIC CHECK VALVE. IRA D. SMITH, Eastland, Tex. Filed Apr. 17, 1930. Serial No. 445,017. 2 Claims. (Cl. 137—153.)

1. A safety valve of the class described including a body having a bore extending therethrough with flat valves one of which closes in the direction of the flow through the bore and the other closes in the opposite direction, and means on the second valve for engaging means on the first valve to hold the first valve open when the pressure of the flow is sufficient to swing the second valve to an open position.



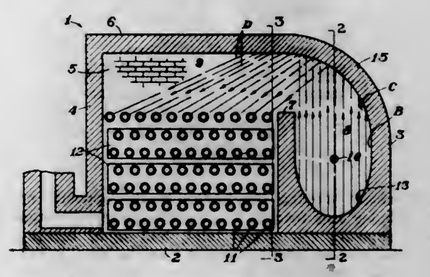
1,805,604. GRAPPLING HOOK. ANTON STRAKA, Chicago, Ill. Filed Dec. 9, 1930. Serial No. 501,133. 4 Claims. (Cl. 294—118.)

1. A well fishing tool of the character described, comprising a pair of crossed pivoted levers, connecting links



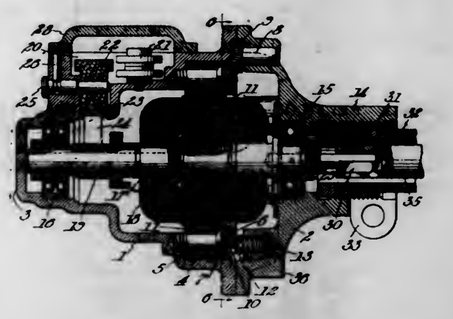
connecting the upper ends of the crossed levers, parallel jaw portions formed on the opposite ends of the crossed levers, friction gripping members secured to the free ends of the spaced parallel portions, means pivoted to one of the spaced parallel portions, having its free end engaging the opposite parallel portion, a detent carried by the spaced parallel portion in close relation to the free end of the first named means for limiting the downward movement thereof and a locking ring slidably mounted upon the spaced parallel portions.

1,805,605. STADIA ROD. HUBERT R. THORNBURGH, Leonia, N. J., assignor to Shell Petroleum Corporation, a Corporation of Virginia. Filed May 13, 1929. Serial No. 362,639. 2 Claims. (Cl. 33—74.)



1. A stadia rod for use in gravimetric torsion balance surveys comprising a plurality of faces, each face having a pair of parallel scales thereon, one of said scales being graduated to represent a constant for a separate predetermined radius of levelment times the height, and the other of said scales being graduated to represent a different constant times the height unit.

1,805,606. ANTIGLARE ATTACHMENT FOR HEADLIGHTS. HANS PETER VERDICH, Aberdeen, S. Dak. Filed Jan. 23, 1930. Serial No. 422,873. 1 Claim. (Cl. 240—48.4.)

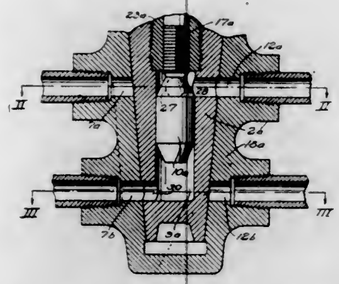


A dimmer attachment of the type described for positioning behind the lens of a vehicle headlight comprising an annulus positioned in contact with said lens at the marginal portion thereof, and an non-circular sheet of light diffusing material secured at its outer edge to said annulus, said annulus being further positioned between the casing of the headlight and said lens, and a second annulus secured to the said annulus and being deformed to overlie the front marginal portion of the lens for retaining the same, said lens and annuli being mounted on the headlight casing by an annular lens mounting ring member.

1,805,607. OIL HEATER. CARY R. WAGNER, Chicago, Ill., assignor to Gyro Process Company, Detroit, Mich., a Corporation of Michigan. Filed July 21, 1930. Serial No. 469,402. 5 Claims. (Cl. 196—116.)

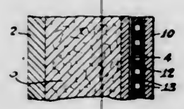
3. In an oil heater, a furnace setting formed to include an internally situated bridge wall which divides the setting internally into burner and tube compartments, a burner situated within said burner compartments and a plurality of horizontally arranged tubes disposed in rows or passes within said tube compartments, the walls of said burner compartments being curved to concentrate through reflection the radiant heat developed within said burner compartment upon the oil inlet ends of the tubes comprising the upper pass in said tube compartment.

1,805,608. MAGNETO. EDWARD F. WESTON, Newark, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a Corporation of New Jersey. Filed May 27, 1929. Serial No. 366,488. 14 Claims. (Cl. 171—209.)



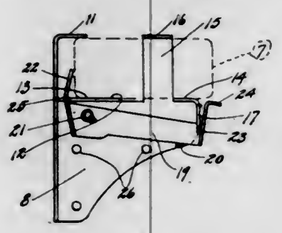
1. A magneto comprising an armature, a circular magnet having pole pieces cooperating with said armature, a casing housing said armature and magnet, a magnetic shunt supported in said casing for angular adjustment about the axis of said magnet, and means for angularly adjusting said shunt about its axis.

1,805,609. LUBRICATING SYSTEM. TOM WILSON, Homestead, Pa. Filed Mar. 30, 1929. Serial No. 351,160. 1 Claim. (Cl. 184—7.)



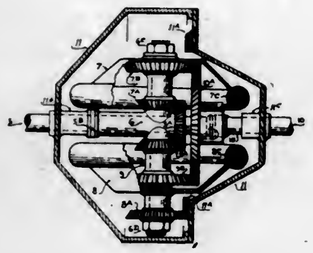
A device for use in a lubricating system in order to supply a predetermined amount of lubricant, said device

romprising a valve casing provided with two inlets and two outlets, a valve having an axially extending cylinder containing a piston, said valve being provided with passageways to supply lubricant from one inlet through a passageway in the valve to the cylinder, the outlet opposite thereto and the other inlet being closed, the incom-



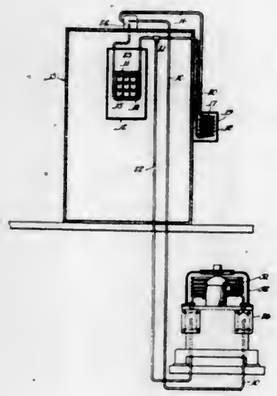
ing lubricant moving the piston to the opposite end of the cylinder and forcing a measured charge through the outlet opposite the closed inlet, and upon turning the valve the second inlet is opened and the first closed, the first outlet closed and the second opened, the piston being moved to the opposite end of the cylinder.

1,805,610. VAULT AND SAFE CONSTRUCTION. JOHN W. YOUNG, Ben Avon, Pa., assignor to Federal Laboratories, Inc., Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 6, 1928. Serial No. 317,581. 3 Claims. (Cl. 109—6.)



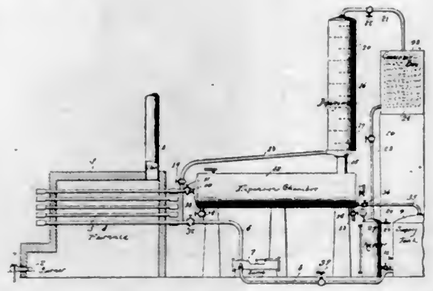
1. A safe comprising an outer wall, an inner wall, filling material between said walls, a casing spaced from one of said walls, a perforated plate of less thickness than the space between the wall and the casing arranged in said space, and a material adapted to liberate gas when heated supported by said perforated plate.

1,805,611. SELF-LOCKING COMBINATION VENETIAN BLIND BRACKET. FRED J. BURNS, Saginaw, Mich., assignor to Columbia Mills, Inc., Saginaw, Mich., a Corporation of New York. Filed Sept. 9, 1929. Serial No. 391,184. 12 Claims. (Cl. 156—17.)



4. A combination bracket for removably holding a supporting bar comprising a horizontal supporting shelf, inwardly turned sections for engaging the top of the bar, a locking member pivotally connected to said bracket, means on said member for forcing the bar outwardly when the locking member is shifted to unlocked position, and means for holding said member in locked position.

1,805,612. POWER TRANSMISSION CONSTRUCTION. PAUL CHAPMAN, Bayside, N. Y. Filed Jan. 23, 1931. Serial No. 510,727. 7 Claims. (Cl. 74—34.)

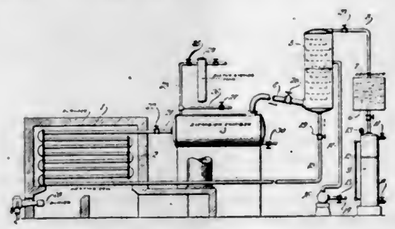


1. In power transmission construction, a fixed supporting casing, a driving shaft extending into one end of said casing, a driven shaft extending into the opposite end of said casing coaxially with said driving shaft, a rotor freely mounted coaxially on said driving shaft for rotation thereabout, cylindrical arms on said rotor projecting radially therefrom, one or more gyrators mounted coaxially on said cylindrical arms for revolution thereabout, a bevel gear fixedly mounted on said driving shaft beyond said rotor, bevel gears fixedly mounted on said gyrators in mesh with said beve lgear on said driving shaft to revolve said gyrators around said cylindrical arms, bevel gears fixedly mounted on said gyrators in mesh with a bevel gear fixedly mounted on the said driven shaft, suitable weights of ring form fixedly mounted coaxially on said gyrators for revolution therewith, a bevel gear fixedly mounted on the said driven shaft in mesh with said bevel gears on said gyrators to transmit power delivered by said driving shaft to said driven shaft.

1,805,613. REFRIGERATING APPARATUS. GEORGE J. COOKE, Chicago, Ill. Filed May 11, 1929. Serial No. 362,399. 3 Claims. (Cl. 62—115.)

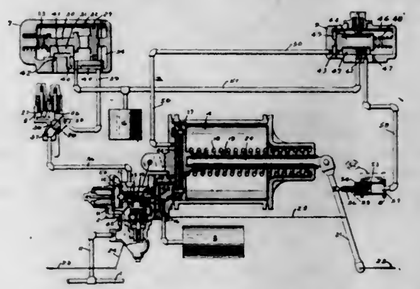
1. In an ammonia refrigeration system, an expansion coil, condensing means including a condenser coil, a block tin pipe supply or liquid line connecting said condenser coil and said expansion coil, and a block tin pipe return line connecting said expansion coil and said condensing means, said block tin supply and return lines having relatively thin side walls and being no greater than five eighths of an inch in diameter.

1,805,614. APPARATUS FOR CRACKING OIL. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 28, 1921, Serial No. 456,220. Renewed Feb. 21, 1929. 1 Claim. (Cl. 196—107.)



An apparatus for treating oil, comprising a heating coil located in a furnace and an expansion chamber located outside of the furnace with which said coil communicates, a dephlegmator connected to said expansion chamber, means for condensing and collecting the vapors issuing from the dephlegmator; a raw oil supply tank, a charging line leading from said tank to said coil, a pump interposed in said charging line, a connection between the expansion chamber and said supply tank, a connection between said charging line and said expansion chamber, valves interposed in said connections permitting the coil to be shunted to provide for a local circulation of the oil from the supply tank through the expansion chamber to cool said expansion chamber.

1,805,615. PROCESS FOR CRACKING HYDROCARBON PRODUCTS. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 25, 1921, Serial No. 464,367. Renewed July 2, 1928. 1 Claim. (Cl. 196—47.)



A process for cracking wax oil, consisting in introducing a body of oil to a still, in maintainng said oil while undergoing distillation in the still under a gradually decreasing self imposed vapor pressure ranging from a maximum of at least 350 pounds per square inch, and in increasing the temperature substantially as the pressure on the oil is decreased.

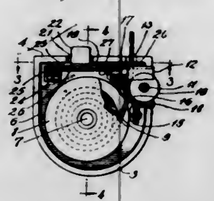
1,805,616. PROCESS OF TREATING PETROLEUM OILS. GUSTAV EGLOFF and JACQUE C. MORRELL, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 4, 1922, Serial No. 541,055. Renewed May 17, 1927. 3 Claims. (Cl. 196—24.)

1. A process for converting hydrocarbon oils, consisting in subjecting the oil to a cracking temperature, in transferring the heated oil to a reaction zone, in injecting into the oil in said reaction zone a mixture of sulphur dioxide and steam, in condensing the vapors evolved from the oil and in maintaining a regulated pressure upon the oil during treatment.

1,805,617. BRAKE RELEASE DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 18, 1930. Serial No. 429,288. 15 Claims. (Cl. 303—68.)

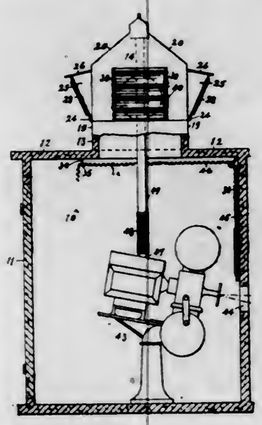
1. In a vehicle brake, the combination with a mechanism operative to effect an application of the brakes and operative to effect the release of the brakes, of fluid pressure means operative to apply braking power to said mechanism and operative to relieve said mechanism of braking power, and pneumatic means for operating said mechanism to release position when the mechanism is relieved of braking power and for maintaining said mechanism in release position.

1,805,618. STOKER. ROBERT A. FORESMAN, Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Feb. 4, 1929, Serial No. 337,445. Divided and this application filed Apr. 7, 1930. Serial No. 442,358. 12 Claims. (Cl. 110—33.)



1. In combustion apparatus, a progressive feed overfeed grate comprising, in combination, a series of rectangular-shaped grate frames pivotally connected together in end-to-end relation and extending in the direction of fuel feed; and grate bars detachably secured within the grate frames and arranged longitudinally in the direction of fuel feed; said grate bars having projecting portions at the ends thereof overlapping with one another to provide a substantially unbroken, fuel-supporting surface.

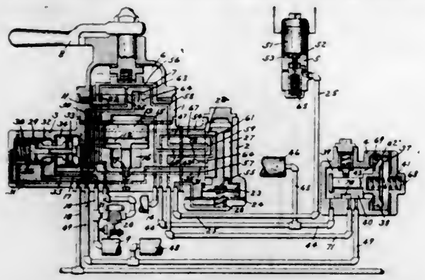
1,805,619. DEVICE FOR DISPENSING PIPE CLEANERS. THEODORE S. FULLER, Montclair, N. J. Filed Mar. 13, 1930. Serial No. 435,444. 2 Claims. (Cl. 242—142.)



1. In a pipe cleaner dispenser, the combination with a casing, of a reel mounted in said casing for supporting a strand of pipe cleaner material, there being an opening

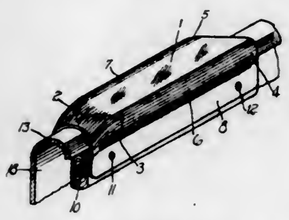
in said casing, an abutment disposed adjacent to said opening, a feeding wheel disposed opposite to said abutment to receive the free end of the pipe cleaner material and co-operating with said abutment to feed a length of said material through said opening when said feeding wheel is

operated, a shearing blade pivotally mounted in said casing, said shearing blade having a knife edge disposed adjacent to said opening in position to engage and cut off the length of material discharged when said shearing blade is operated, and a spring for engaging said shearing blade normally to maintain it out of cutting position.



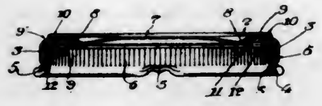
1,805,620. VENTILATING SYSTEM FOR PROJECTING ROOMS. BARNEY GOLDMAN, New York, N. Y. Filed Apr. 5, 1930. Serial No. 441,770. 2 Claims. (Cl. 98—33.)

1. A ventilating system comprising a room having a projecting machine arranged therein, a skylight enclosure extending upwardly from the top of the room, a conduit located in the upper part of the skylight, a flexible tube connecting the conduit with the projecting machine, a blower mounted on the top of the room outside of the skylight communicating with the conduit to suck the heated air from the projecting machine to the exterior of the skylight, an inlet for conducting air into the room, gravity operated shutters normally closing a vent in the skylight, and a fan situated in the skylight for operating the shutters.



1,805,621. TRAIN CONTROL DEVICE. JOHN N. GOOD, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 11, 1930. Serial No. 427,484. 5 Claims. (Cl. 303—18.)

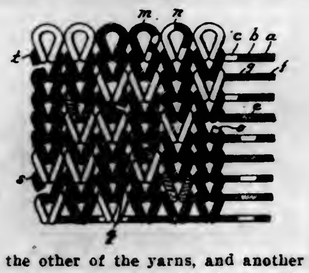
1. In a fluid pressure brake apparatus, the combination with a brake pipe and means for normally maintaining the brake pipe charged with fluid under pressure, of means for automatically effecting a reduction in brake pressure and for cutting off the supply of fluid under pressure to the brake pipe, and means for relaying the initiation of the automatic brake application for a predetermined period



of time, the brakes being initially applied during said period of time by the reduction in brake pipe pressure due to leakage from the brake pipe.

1,805,622. BATHTUB SEAT AND HAND REST. HARLEY E. GOODWIN, Hartford, Conn. Filed Nov. 29, 1929. Serial No. 410,467. 2 Claims. (Cl. 4—185.)

1. In a device of the character described a bathtub wall having an overhanging top rail, a combination seat and hand rest having downwardly extending wings engaging the sides of the top rail portion, and a filler member positioned beneath the curved overhanging rail and detachably connected to the rest.

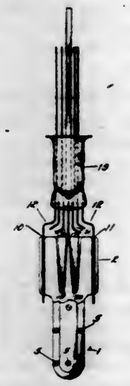


1,805,623. ROTARY CAP HAVING SEALING MATERIAL FLOWED THEREINTO. CHARLES HAMMER, Hollis Court Boulevard, N. Y., assignor, by mesne assignments, to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Dec. 21, 1928. Serial No. 327,602. 15 Claims. (Cl. 215—38.)

1. A sealing cap comprising a cover part, a depending skirt, a plurality of concentric grooves in the cover portion of said cap, and sealing material common to said grooves, said grooves co-operating with each other to hold the sealing material in position.

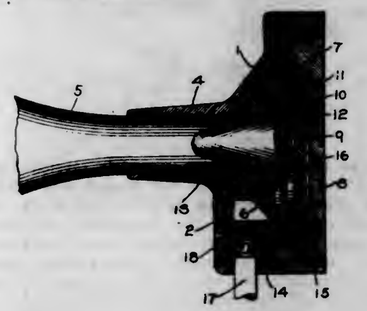
1,805,624. KNITTED FABRIC AND PROCESS OF MAKING THE SAME. WILBUR L. HOUSEMAN, Somerton, Pa., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 30, 1929. Serial No. 403,392. 8 Claims. (Cl. 66—36.)

1. A knitted fabric including at least two series of courses with courses of one series between successive courses of the other series, the two series being formed by separate yarns, the courses of one series having one portion in which two yarns are knit into loops with one of the yarns



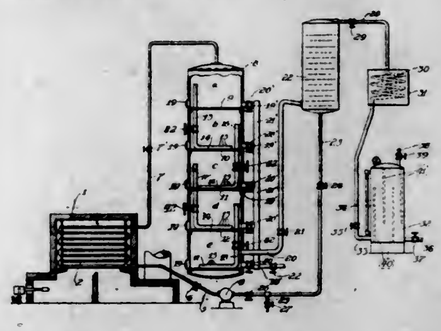
overlying the other of the yarns, and another portion in which the two yarns are knit into loops with the second yarn overlying the first yarn.

1,805,625. KNITTING MECHANISM. WILBUR L. HOUSEMAN, Somerton, Pa., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Original application filed Feb. 20, 1929. Serial No. 341,374. Divided and this application filed Apr. 21, 1930. Serial No. 445,906. 6 Claims. (Cl. 66—36.)



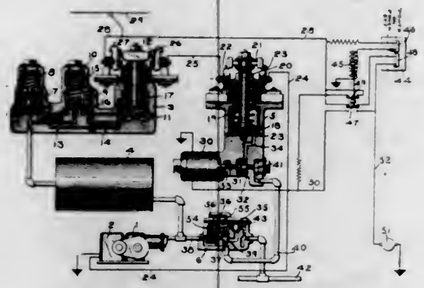
1. Knitting mechanism comprising a needle cylinder, needles movably mounted in the cylinder, devices cooperating with the needles to form loops at a stitch forming point, means for guiding yarns to the needles, one of the guiding means and the needles being arranged so that when the needles are in normal position they will fail to engage a yarn from the last named guiding means, means for deflecting needles out of normal position to effect engagement thereof with said yarn, and means for selectively effecting either normal or reverse plating of yarns during the formation of loops.

1,805,626. RADIO APPARATUS. JAMES D. JORDAN, Elmhurst, Ill., assignor to Grigsby Grunow Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1930. Serial No. 426,003. 11 Claims. (Cl. 250—27.5.)



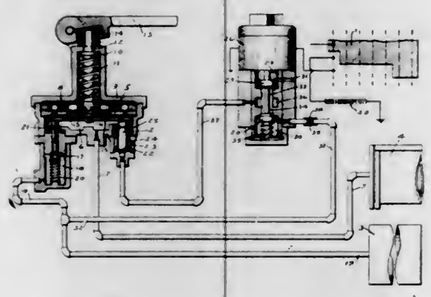
1. A jig for maintaining a shaped filament and mount in welding position consisting of a plurality of complementary plates, means for maintaining said plates in locked relationship, said plates being provided with means for maintaining a filament in a V shape and being provided with other means adapted to receive certain of the supporting arbors in said mount, said plate also having an aperture located where the bight of the filament occurs, and a removable pin in said channel for engaging said filament bight.

1,805,627. SIGNAL HORN. CECIL S. KELLEY, East McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 5, 1930. Serial No. 426,077. 5 Claims. (Cl. 116—142.)



1. A sound producing device comprising a casing, a diaphragm mounted in said casing and subject to fluid pressure in chambers at opposite sides of the diaphragm, and means for supplying fluid under pressure to said chambers.

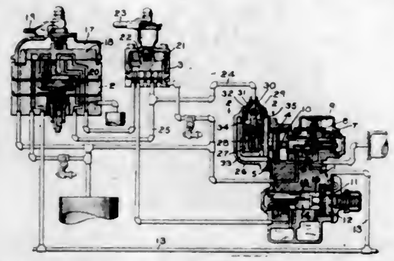
1,805,628. PROCESS AND APPARATUS FOR CRACKING OIL. LESTER KIRSCHBRAUN, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 21, 1922. Serial No. 583,408. 2 Claims. (Cl. 196—107.)



2. A process for converting high boiling point hydrocarbon oils into a lower boiling point product, consisting in initially subjecting the oil to cracking conditions of temperature and pressure in a heating zone, in thereafter collecting the oil in a plurality of separated pools in an enlarged reaction zone, in maintaining successively lower pressures on said pools, in admitting the hot oil from the heating zone to the pool maintained under the highest pressure, in causing the vaporous constituents evolved from the oil in each pool, except the last, to percolate through the body of oil in the next succeeding pool, in taking off vapors for dephlegmation from the last of said successive pools, and in preventing the return of unvaporized residual oil from said pools to said heating zone.

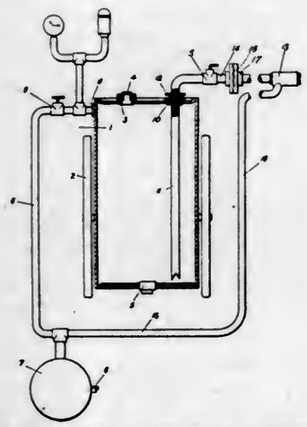
1,805,629. COMPRESSOR CONTROL DEVICE. JOSEPH C. MCCUNE, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1930. Serial No. 424,232. 11 Claims. (Cl. 303—1.)

1. The combination with a vehicle carried fluid compressor, an electric motor for driving said compressor, and a governor controlled by variations in the pressure of fluid compressed by the compressor for controlling the motor circuit, of an electric motor for driving the vehicle, electrically controlled means for also controlling the compressor motor circuit, and means for energizing said electrically controlled means by the counter electromotive force of the vehicle motor.



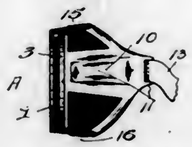
1,805,630. DYNAMIC AND FLUID PRESSURE BRAKE CONTROL. JOSEPH C. MCCUNE, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1930. Serial No. 424,233. 6 Claims. (Cl. 303—3.)

1. In a vehicle braking apparatus, the combination with a brake cylinder and a brake valve device for controlling the admission of fluid to the brake cylinder, and having a release valve for controlling the release of fluid from the brake cylinder, means for controlling a dynamic brake, and mechanism controlled by said means for controlling the supply of fluid under pressure to the brake cylinder through a communication controlled by said release valve.



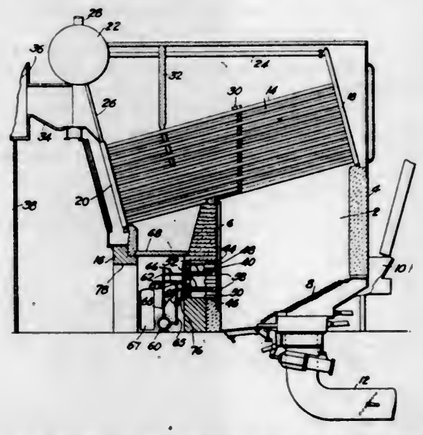
1,805,631. FLUID PRESSURE BRAKE DEVICE. JOSEPH C. MCCUNE, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 15, 1930. Serial No. 428,676. 4 Claims. (Cl. 303—84.)

1. In a locomotive brake equipment, the combination with a brake cylinder, valve means for controlling the supply of fluid under pressure to said brake cylinder, and a piston operated by an increase in pressure in an application cylinder for operating said valve means, of an application cylinder pipe through which fluid under pressure is supplied to said application cylinder, and a



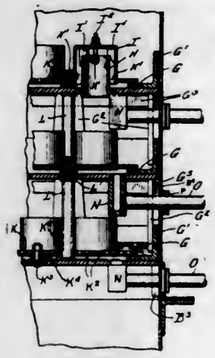
valve device providing a normally open communication from said cylinder to said pipe and operated by fluid pressure in the application cylinder upon breakage of said pipe for cutting off communication from the application cylinder to the application cylinder pipe.

1,805,632. PROCESS FOR ATOMIZING AND SPRAYING SEMIFLUID MATERIAL CONTAINING ASBESTOS FIBER. KARL A. MILAR, Chicago, Ill. Filed Nov. 28, 1927. Serial No. 236,147. 1 Claim. (Cl. 91—68.)



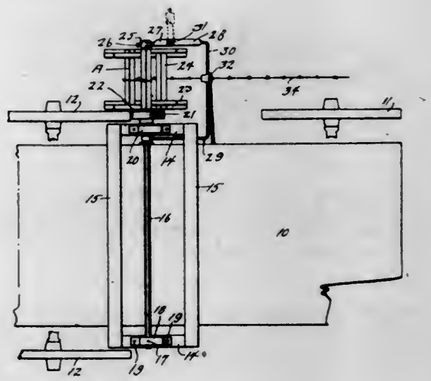
The herein described process which includes first providing a semi-fluid material containing fibrous matter; forcing said material by means of compressed air, into and through a spray gun and, while forcing said material to the spray gun, straining the larger particles of fibrous matter therefrom; and atomizing said material, including the fibrous matter, by separately supplying compressed air to the spray gun.

1,805,633. GOGGLES. JOHN L. MORAN and ALVIN J. LEE, Spokane, Wash., assignors, by direct and mesne assignments, of one-fourth to Francis E. P. Wilder, Spokane, Wash., and one-fourth to Robert Malcom, Chicago, Ill. Filed May 28, 1930. Serial No. 456,506. 4 Claims. (Cl. 2—14.)



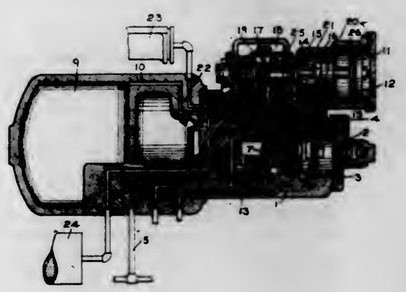
1. The combination in a pair of goggles with complementary cups, of integral slotted bridge-flanges on the cups and a bridge-strap, said flanges being spaced back of the lens of each cup, an integral, outset temple housing on each cup having its front wall terminating back of the lens of the cup, upper and lower vent openings in the cups, and rubber shields seated in grooves adjacent the bridge flanges forming continuations of the rear edges of the cups.

1,805,634. FURNACE. JOHN FRANCIS O'CONNOR, Toledo, Ohio, assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 26, 1921. Serial No. 448,280. 8 Claims. (Cl. 110—22.)



1. In a furnace, a fire chamber having a wall formed to provide a series of openings uniformly spaced horizontally across the width of the chamber through which air may enter into said chamber, a plurality of vertically spaced burners mounted in each of said openings, means for individually controlling the respective burners from the outside of said chamber, and means for controlling the flow of air through the individual openings.

1,805,635. REFLUX TOWER. JOHN PRIMROSE, Richmond, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1924. Serial No. 748,115. 2 Claims. (Cl. 261—113.)

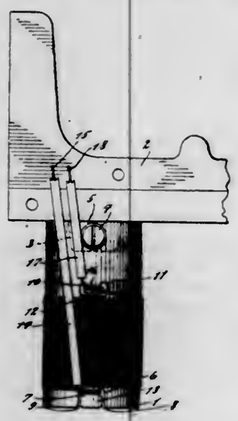


1. In oil and vapor separating apparatus, the combination with a vertical casing having a plurality of bubble trays therein, of a liquid reservoir carried by each tray, and a lateral outlet pipe connected to each of said reservoirs and projecting through the casing and through which a portion of the liquid collecting on the tray may be withdrawn from the casing.

1,805,636. WIRE REELING ATTACHMENT. WILLIAM C. SAUNDERS, Hinton, Iowa. Filed July 13, 1929. Serial No. 378,116. 7 Claims. (Cl. 242—92.)

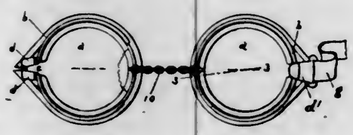
1. In a wire reeling attachment for a farm wagon having a wagon box, a step supported by the box, a reel shaft pivoted to the step and extending transversely under the box, a reel carried by the other end of the shaft, a pulley for driving the reel, adapted to engage the rim of a wheel of the wagon, and a lever engaging the shaft and pivoted to the side of the wagon box to urge the pulley into engagement with the wheel.

1,805,637. FLUID PRESSURE BRAKE. FRANCIS E. SCHWENTLER, St. Louis, Mo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 15, 1930. Serial No. 428,555. 3 Claims. (Cl. 303—57.)



1. In a fluid pressure brake, a brake cylinder, a distributing valve device comprising a valve for controlling the supply of fluid under pressure to the brake cylinder, an application chamber, a differential piston for actuating said valve and having one piston head subject to the pressure of the application chamber and the other piston head subject to brake cylinder pressure, means for connecting the chamber intermediate said piston heads either to the atmosphere or to the brake cylinder, and means for supplying fluid under pressure to the application chamber.

1,805,638. RADIO COUPLING COIL. THEODORE JOHNSON SCOFIELD, GEORGE ALFRED WHITE, and JOSEPH DAYTON HAMMOND, Jackson, Mich., assignors to The Sparks-Withington Company, a Corporation of Ohio. Filed Oct. 30, 1929. Serial No. 403,328. 4 Claims. (Cl. 175—359.)

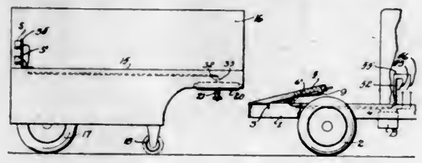


1. In electric coils, a spool, a flange on said spool having a transverse notch, pins in said flange on each side of said notch, and a coil wound on said spool adjacent the flange, the ends of said coil being secured to said pins.

1,805,639. ELECTRICAL TRANSFORMER AND INDUCTANCE COIL. THEODORE JOHNSON SCOFIELD, Jackson, Mich., assignor to The Sparks-Withington Company, a Corporation of Ohio. Filed Oct. 30, 1929. Serial No. 403,527. 2 Claims. (Cl. 175—359.)

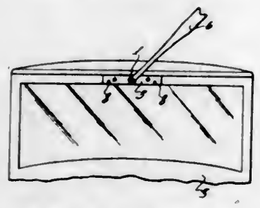
2. An electromagnetic coil consisting of an insulation tube having two spaced holes and slots of less width than the diameter of said holes joined together and entering the holes at the outside periphery thereof to form a notched tongue, and a coil of wire wound on said tube having one end wrapped around said tongue in the notch thereof.

1,805,640. ADJUSTING MEANS FOR GOGGLES. HARRY F. SHINDEL, Reading, Pa., assignor to Willson Products, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Oct. 1, 1930. Serial No. 485,643. 10 Claims. (Cl. 2—14.)



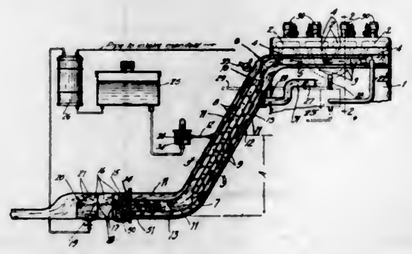
1. Goggles comprising a pair of head-secured lens frames, and a connecting bridge of determined length, said frames having variable peripheral connections for the bridge ends whereby the spacing of the frame centers may be determinedly varied.

1,805,641. AUTOMATIC STOKER. ALEXANDER I. SNOW, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed May 9, 1927. Serial No. 189,905. 16 Claims. (Cl. 110—44.)



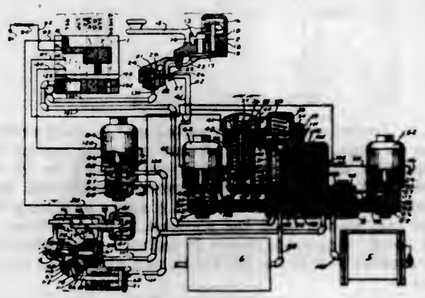
7. An underfeed stoker comprising separately reciprocable hollow side bars and bottoms forming parallel retorts, a row of tuyères for each side bar, partitions within the side bars forming separate air passages and dampers mounted on the side bars to control the flow of air in said passages.

1,805,642. TRACTOR AND TRAILER COUPLING. HUGH B. STRACHAN, Bedford, Ohio, assignor of one-third to Walter S. Ross, Bedford, Ohio. Filed Oct. 14, 1929. Serial No. 399,529. 2 Claims. (Cl. 280—33.1.)



1. The combination of a motor driven road tractor, a trailer adapted to be hauled by the tractor, mechanical coupling members respectively associated with the tractor and trailer adapted to lock the tractor and trailer together while permitting relative horizontal pivotal movement between the tractor and trailer when the coupling members are mutually associated, and electrical coupling members including relatively yielding cooperating sliding contacts carried respectively at all times by the mechanical coupling members, one of said contacts being arcuately extended about the pivot axis with relation to its cooperating contact through an angle corresponding substantially to the maximum horizontal swing of the trailer, whereby electrical communication between the tractor and trailer will be maintained throughout the cooperation thereof.

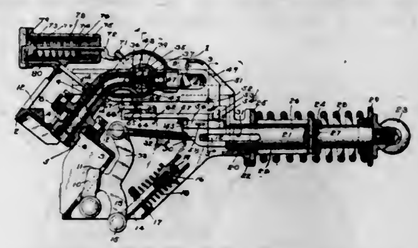
1,805,643. AUTOMOBILE OR TRAFFIC SIGNAL. WILLIAM A. STREET, Belington, W. Va. Filed Oct. 13, 1930. Serial No. 488,292. 1 Claim. (Cl. 116—51.)



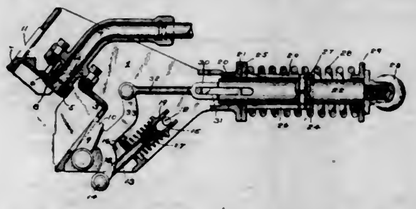
In combination with an upper frontal part of an automobile, a stub shaft journaled centrally through the said part, a signal arm rigidly secured to the outer end of the stub shaft, the said arm being of such length as not to extend beyond the sides of the automobile when thrown over to either side but being visible above the top of the car when turned angularly upward at either side or when directed straight up, a handle rigidly secured to the inner end of the said shaft, position indicating studs mounted under the said handle and whereby the angularity of elevation of the said arm may be indicated to the driver through the sense of touch, the said studs serving also as finger holds for steadying and supporting the driver's hand while maintaining the signal arm in the required position, and stop pins arranged laterally for the said arm to rest upon when not in use.

1,805,644. PROCESS AND APPARATUS FOR PREPARING CHARGES FOR POWER DEVICES. GEORGE SWARTZ, Albany, N. Y., assignor of one-half to Charles H. Andros, Nassau, N. Y. Filed Aug. 16, 1926. Serial No. 129,501. 14 Claims. (Cl. 123—25.)

1. An internal combustion engine comprising an exhaust pipe, a carbureter, a water jacket about said pipe, means for directing the flow of air to the carbureter through the water in said jacket, means for cutting off or regulating the quantity of air so flowing, and means for admitting air to the carbureter without passing it through said water.



1,805,645. SAFETY CAR EQUIPMENT. FRANK B. THOMAS, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 18, 1930. Serial No. 421,639. 7 Claims. (Cl. 303—6.1.)

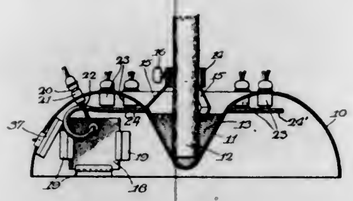


1. The combination with a door engine for controlling the opening and closing of a car door, a handle, and electrically operated means for controlling the release of the brakes, of means controlled by said handle and means controlled by said door engine for preventing the operation of said electrically operated means to effect a release of the brakes.

1,805,646. BRAKE PIPE CUT-OFF VALVE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1928. Serial No. 304,607. 3 Claims. (Cl. 284—6.)

1. The combination with an automatically operable train pipe coupling having a plurality of train pipe passages, one of which is controlled by a valve, of means actuated when the coupling is connected to a counterpart coupling for rotating the valve to partially open the passage, and means actuated by the pressure of fluid in another passage for subsequently rotating the valve to its wide open position.

1,805,647. TRAIN PIPE COUPLING. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1928. Serial No. 306,510. 3 Claims. (Cl. 285—58.)

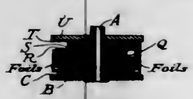


1. The combination with a train pipe coupling adapted to couple with a counterpart coupling and having means for locking the couplings in the coupled position, of a spring acting on the locking means and tending to move the same to the locked position, a second spring acting on the locking means and tending to move the same to the unlocked position, and means for relieving the locking means of the pressure of the second spring upon movement of the couplings to the coupled position.

1,805,648. PLASTER BOARD CLIP. FREDERICK M. VENZIE, Philadelphia, Pa. Filed July 30, 1930. Serial No. 471,719. 3 Claims. (Cl. 72—118.)

1. A plaster board clip of the character stated comprising a one-piece metallic member having an elongated relatively broad, flat, plate-like body arranged to have plaster board ends abut against its opposite faces, said body being provided with an elongated, narrow slot extending in the direction of the length of said body to provide a hook-like prong disposed in the same plane with said body and arranged for frictional engagement over the flanged edge of an angular support for free detachment, a plurality of spaced fingers struck out from said body at right angles thereto and from opposite sides thereof for free support of plaster boards with the faces of the plaster boards resting against the faces of said fingers, and generally curved terminal portions for the respective fingers to prevent abrasion of the faces of the plaster boards.

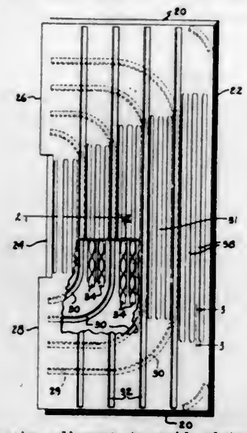
1,805,649. CHRISTMAS TREE STAND. HUGO H. WERMINE, Villa Park, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1927. Serial No. 167,938. 3 Claims. (Cl. 248—38.)



1. A stand of the class described comprising an inverted, generally bowl shaped base formed from a single sheet of material, said sheet having a centrally disposed part depressed so as to form a receptacle for receiving and positioning the lower end of a Christmas tree or the like in the base, a marginal portion of said sheet, spaced from the receptacle, being turned downwardly to form a support for the receptacle, and means carried by said base for engaging the trunk of the tree at a point spaced upwardly from its lower end for maintaining the tree in upright position.

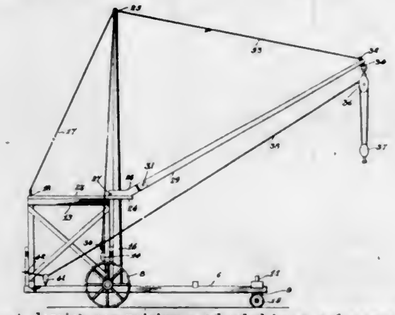
1,805,650. PROCESS OF PROTECTING SAND MOLDS AND CORES. EUGENE A. BALSLEY, Wheeling, W. Va., and LUCIEN I. YEOMANS, Chicago, Ill., assignors to Lucien I. Yeomans, Inc., Chicago, Ill., a Corporation of Illinois. Filed July 5, 1929. Serial No. 376,280. 1 Claim. (Cl. 22—192.)

The process of structurally strengthening the fragile projections and the surfaces adjacent thereto of a sand mold or core to protect such projections from wash which consists in spraying with molten metal such projections and adjacent surfaces, the remaining surface area being not coated with metal in order to permit escape of vapors from such uncoated surfaces.



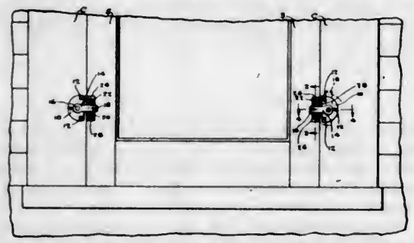
1,805,651. CONDENSER MANUFACTURE. BENJAMIN J. BUTLER, Somerville, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Nov. 16, 1926. Serial No. 148,665. 7 Claims. (Cl. 29—84.)

1. An assembling device for an electrical condenser having projecting foils to be folded over on top of the stack, which comprises a building surface including outer stationary portions and an intermediate depressible support adjacent the stationary portions; foil-alining means; and a device locking said support in its depressed position.



1,805,652. AIR HEATER. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y. Filed May 8, 1925. Serial No. 28,872. 3 Claims. (Cl. 257—245.)

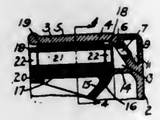
1. An air heating element for an air heater of the class described having, in combination, two plates arranged side by side and spaced apart, a plurality of partitions arranged in parallel relation between the plates to provide a plurality of air passages, and devices arranged in said air passages tending to cause a part of the air passing through each of said passages to traverse a spiral path, opposite sides of each of said devices being



arranged closely adjacent to said plates, and the air passing between the plates being heated by the application of heat to the outer surfaces of the plates.

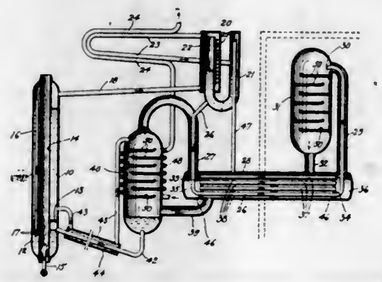
1,805,653. LIFTING AND TRANSFERRING DEVICE. WILLIAM S. CARMODY, Salem, N. J. Filed Oct. 15, 1929. Serial No. 399,827. 2 Claims. (Cl. 212—53.)

1. A derrick comprising a wheeled base, a frame erected upon the base, a platform upon and extending beyond the frame over the base and having an opening in its extended end, a mast projected downwardly through said opening and stepped on the base, a collar encircling the mast and bearing upon the platform, a boom pivoted to said collar, detachable means to maintain the verticality of the mast, and tackle carried in part at the end of the boom.



1,805,654. FASTENER FOR STORM AND SCREEN SASHES. PAUL M. DEHN, Alice, N. Dak. Filed Feb. 24, 1930. Serial No. 430,639. 1 Claim. (Cl. 292—202.)

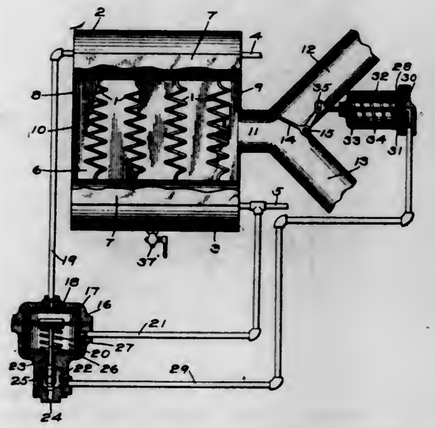
A fastener for storm and screen sashes comprising a base plate, means for securing said base plate to a window



casing, a locking lever of springy sheet metal pivoted near one end to said plate, a hand-engageable member on the other end of said locking lever, a projection on said locking lever, a wedge member, and means for securing said wedge member to the sash, said wedge member having a number of depressions any one of which is adapted to be engaged by said projection when said locking lever is turned on its pivot.

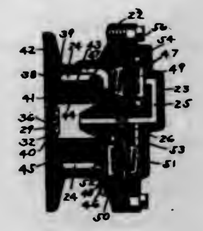
1,805,655. COOLING DEVICE FOR AUTOMOTIVE BRAKES. SIDNEY G. DOWN, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1927. Serial No. 171,182. 12 Claims. (Cl. 188—264.)

5. A brake drum for automotive vehicles, said drum having a web adapted to be secured to a wheel of said vehicle, a brake flange, a sloping web connecting said flange and securing web, said sloping web having ventilating openings formed therein, means projecting from said sloping web, exterorly of the drum, for inducing air to flow through said openings, and means projecting from said web, interiorly of the drum for inducing the air flowing through said opening, to now against said brake flange.



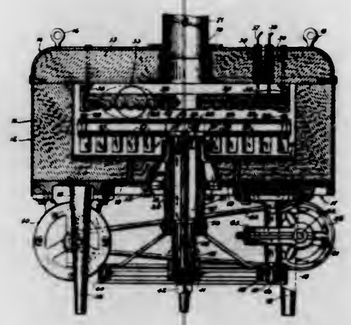
1,805,656. REFRIGERATION. BO KARL GEORGE EHNBOM, Stockholm, Sweden, assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1928, Serial No. 312,624, and in Germany Jan. 6, 1928. Renewed Sept. 29, 1930. 22 Claims. (Cl. 62—119.5.)

1. In a refrigerating system comprising interconnected vessels including a generator, a condenser, an evaporator and an absorber, said evaporator and absorber being interconnected to form a cycle for circulation of an auxiliary agent in the presence of which a cooling agent evaporates and plates within the said cycle of the system for providing gas and liquid contact surface, the combination therewith of wire screening under said plates and adjacent thereto for holding capillary films of liquid on the under-sides of the plates.



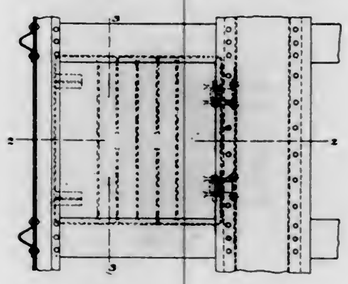
7. A vessel suitable for use in a refrigerator system comprising a plurality of superposed plates having parts adapted to permit formation of pools of liquid on said plates and wire screening under said plates and adjacent thereto for holding capillary films of liquid on the undersides of the plates.

1,805,657. AIR PURIFIER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 9, 1927. Serial No. 189,764. 13 Claims. (Cl. 257—3.)



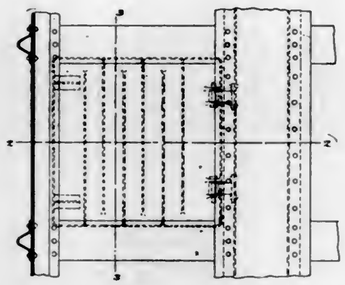
12. The combination with means interposed in the flow of fluid for separating oil and water from the flowing fluid and for conducting said separated oil and water from the path of the flowing fluid, of means operated upon the clogging of the separating means for supplying a heated current of air around the separating means to cause the clogging matter to flow from said separating means.

1,805,658. TRIPLE VALVE CYLINDER CAP. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1928. Serial No. 300,984. 14 Claims. (Cl. 303—88.)



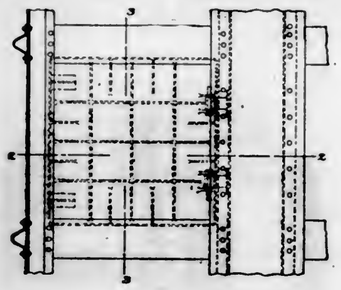
1. A valve device having a piston chamber open at one end, a cap enclosing the chamber, said cap having a chamber provided with a vented wall adjacent the piston chamber, means for supplying fluid to the chamber in the cap, a filter mounted in the cap and surrounding the vents in the wall, and a check valve controlling a by-pass around the filter and operated upon clogging of the filter to permit flow of fluid from the cap chamber through the by-pass passage.

1,805,659. ROASTING FURNACE. EDWARD J. FOWLER, deceased, Redwood City, Calif., by Edith Mary Fowler, executrix, Redwood City, Calif., and Dudley Baird, Berkeley, Calif., assignors to Nichols Copper Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1928. Serial No. 249,134. 10 Claims. (Cl. 263—26.)



1. In a roasting furnace, a hearth, a rotatable substantially vertically extending shaft carrying a rabble arm, located over said hearth within the furnace, and means extending longitudinally of said shaft to the exterior of the furnace for effecting vertical adjustment of the rabble arm in respect to said shaft.

1,805,660. CAST METAL HOPPER DOOR. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 249,999. 17 Claims. (Cl. 105—280.)

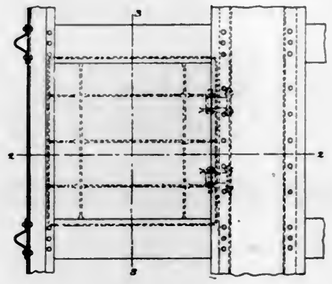


11. A hinged door for a railway car consisting of an integral casting comprising a panel, a flange adjacent the margins thereof, and a pair of reinforcing ribs which cross each other and terminate into the panel adjacent the corners of the door.

1,805,661. CAST METAL DROP DOOR. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 250,000. 8 Claims. (Cl. 105—280.)

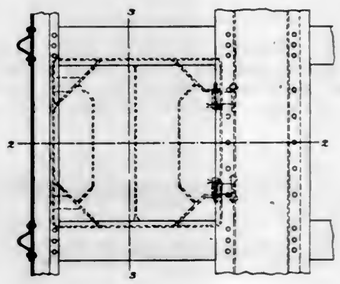
1. A hinged door for a railway car consisting of an integral casting comprising a panel with flanges adjacent opposite margins thereof, reinforcing ribs springing from the panel and merging into one of said flanges, and other renforcing ribs springing from the panel and merging into the other of said flanges.

1,805,662. HOPPER DOOR OF CAST METAL. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 250,001. 8 Claims. (Cl. 105—280.)



1. A hinged door for a railway car consisting of an integral casting comprising a panel having a smooth surface on one side with a continuous flange adjacent its perimeter varying depth reinforcing ribs terminating within the panel adjacent the opposite portions of the flange, and other reinforcing ribs angularly disposed to and merging into the first mentioned ribs.

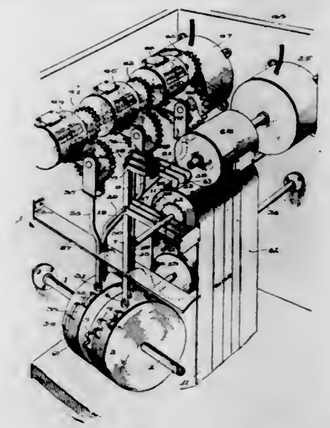
1,805,663. DROP DOOR OF CAST METAL. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 250,002. 6 Claims. (Cl. 105—280.)



1. A hinged door for a railway car consisting of an integral casting comprising a panel having a smooth

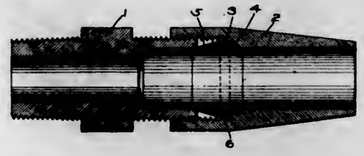
surface on one side with a continuous flange adjacent its perimeter, reinforcing ribs terminating within the panel adjacent the opposite portions of the flange, and other

reinforcing ribs having their opposite ends terminating into said panel adjacent the first mentioned ribs and positioned normal thereto.



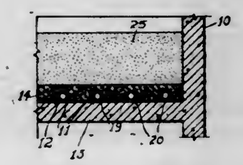
1,805,664. CAST HOPPER DOOR. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 250,003. 4 Claims. (Cl. 105—280.)

1. A hinged door for a railway car consisting of an integral casting comprising a panel with a continuous flange adjacent its perimeter, a secondary rib crossing each corner with its opposite ends merging into the flange, and a primary rib connecting the secondary ribs on the same side of the door.



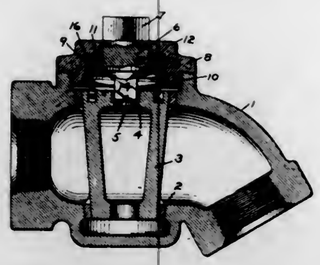
1,805,665. WIRED RADIO PROGRAM APPARATUS. CLINTON W. HOUGH, New York, N. Y., assignor, by mesne assignments, to Federal Telegraph Company, a Corporation of California. Filed Apr. 27, 1927. Serial No. 186,948. 4 Claims. (Cl. 234—36.)

1. In a signal receiving apparatus a plurality of signal receiving circuits a tuning mechanism for adjusting the signal receiving circuits to a plurality of predetermined positions, printing mechanism actuated upon the setting of said tuning apparatus in any selected position, and means for recording the time at which said tuning apparatus was set into a selected position and the time at which it was set into another position for determining



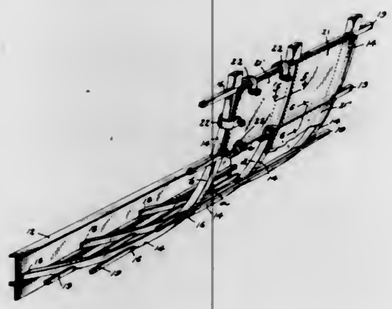
the time period over which any selected one of said signal receiving circuits is rendered effective for the reception of signals.

1,805,666. TUBE COUPLING. HENRY D. HUKILL, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 19, 1928. Serial No. 293,809. 3 Claims. (Cl. 285—122.)



1. The combination with a pair of coupling members, of a sleeve having opposed tapered surfaces tapered to a thin edge, one tapered surface engaging a surface of corresponding taper on one of the coupling members and the thin edge of the other tapered surface contacting with a more abrupt tapered surface on the other coupling member.

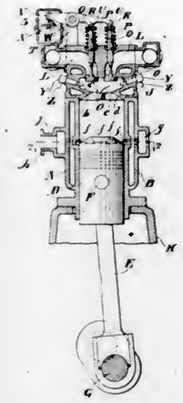
1,805,667. WATER TREATMENT DEVICE. HARRY NEVILLE JENKS, Sacramento, Calif. Filed June 7, 1926. Serial No. 114,061. 4 Claims. (Cl. 210—130.)



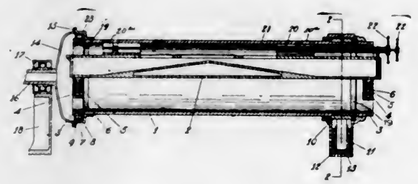
1. A filter bottom for a water treatment device comprising a porous filtration medium made of cemented materials, said medium having a plurality of longitudinally extending conduits, said conduits having a plurality of spaced apart apertures therein, there being a channel located beneath each conduit and communicating with its respective conduit through said apertures.

1,805,668. PACKING RING. CECIL S. KELLEY, East McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 1, 1926. Serial No. 106,010. 2 Claims. (Cl. 286—7.)

1. The combination with a fixed member having a flat contact face and a movable member spaced from the fixed member, of an elongated packing ring disposed in the space between said members having a long diameter and a short diameter and having a curved face in engagement with said flat face and terminating in the long diameter of the ring, whereby a sliding rolling movement of the curved face on the flat face is effected as the movable member recedes from or approaches the fixed member.



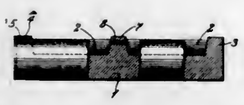
1,805,669. METAL BOAT CONSTRUCTION. DIMITRI LIAMIN, Los Angeles, Calif. Filed July 17, 1928. Serial No. 293,479. 5 Claims. (Cl. 114—79.)



1. A method of constructing metal boats which includes: the formation of curved transverse ribs by cutting such ribs from substantially flat plates; providing said transverse ribs with aligned recesses; welding said ribs in spaced relation with each other to a keel; placing longitudinal ribs upon said transverse ribs by cold bending substantially straight metal bars into said aligned recesses and welding thereto to form a frame work; and plating said frame work by cold pressing flat metal plate sections into engagement with said ribs and welding said plate sections to said ribs, said transverse ribs and said longitudinal ribs being so positioned that the plates may be cold bent into engagement therewith without buckling.

1,805,670. INTERNAL COMBUSTION ENGINE. RALPH MILLER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 1, 1929. Serial No. 404,097. 5 Claims. (Cl. 123—65.)

1. In a two-cycle internal combustion engine, the combination of a cylinder and a head therefor, a combustion chamber in the head, means for injecting fuel from the sides to the center of the combustion chamber, an exhaust valve for the combustion chamber, a passage in the wall of the cylinder to direct pressure fluid into the cylinder along a line off-set from the longitudinal axis of the cylinder to cause a spiral motion of such pressure fluid in the cylinder, said passage being controlled by the piston, and a lateral wall projecting from the head having a restricted opening between the cylinder and the combustion chamber and through which the pressure fluid whirls in decreasing spirals into the combustion chamber and impinges against the end wall thereof to spread outwardly and reverse the course of the pressure fluid, thereby effecting both a whirling and a tumbling turbulence in the combustion chamber for diffusing the fuel injected from the sides of the chamber.

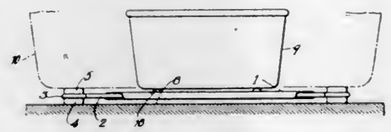


1,805,671. GEARLESS SUCTION ROLL. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio. Filed Mar. 17, 1928. Serial No. 262,474. 9 Claims. (Cl. 92—53.)

1. In combination with a suction roll shell, means adapted to create within said shell a predetermined hydraulic head.

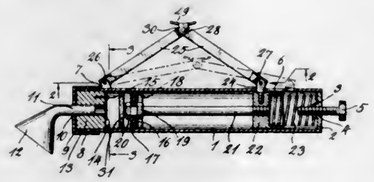
1,805,672. BLASTING CARTRIDGE. ERLE ORMSBY, St. Louis, Mo., assignor to Central Mine Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed June 21, 1928. Serial No. 287,159. 5 Claims. (Cl. 102—6.)

1. A blasting cartridge comprising an elongated metallic body having a longitudinal recess in one side thereof arranged to receive explosives and closed at one end by a part of said body preventing longitudinal direction of the explosive forces, and means in connection with said closed end for engagement with the inner end of a device extended longitudinally into the hole in which the shell is mounted for turning the shell to adjusted positions in the hole and permitting outward longitudinal withdrawal of said device from engagement with said shell and from the hole in which the shell is mounted.



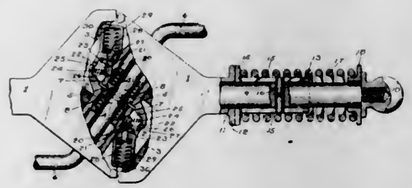
1,805,673. LEAD PENCIL. ARTHUR F. POOLE, Westport, Conn., assignor to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 15, 1924. Serial No. 743,841. 11 Claims. (Cl. 120—18.)

1. A pencil comprising a casing section having a central lead guide tube, lead propelling mechanism including a threaded tube and a plunger adapted to be moved through said lead guide, a pencil tip detachably connected to the front of said casing section and having a lead guide tube adapted to register with the lead guide tube of said casing section, the rearmost portion of said lead guide tube of said pencil tip having a beveled mouth to facilitate the entry of said lead into said tip lead guide tube, said casing section having a lead magazine disposed about said casing lead guide tube and having an open end positioned adjacent and opposite the beveled mouth of said tip lead guide tube to facilitate the transfer of lead from said magazine to the lead guide tube of said tip.



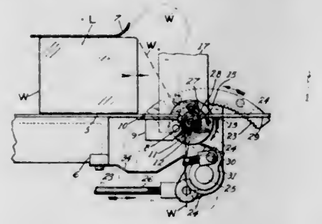
4. In a pencil provided with a slotted plunger tube in its front portion, the combination of a casing, a tip at the front end of said casing, an eraser seat at the rear end of said casing for retaining an eraser, a lead propelling mechanism operable in said plunger tube for advancing a lead through said tip, and means operable by the movement of said lead propelling mechanism for pushing said eraser outwardly in its seat to compensate for the wear on the eraser.

1,805,674. STAND. ALBERT B. RAMSPERGER, Richmond Hill, N. Y. Filed Oct. 22, 1927. Serial No. 227,962. 1 Claim. (Cl. 248—41.)



A stand of the character described comprising a metal plate and a wire to which the edges of the plate are fastened and which has loops and legs fastened in said loops of wire.

1,805,675. MASSAGE DEVICE. ALFRED P. RUDOLPH, Denver, Colo. Filed Jan. 18, 1930. Serial No. 421,719. 2 Claims. (Cl. 128—300.)

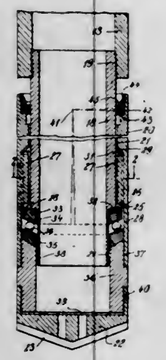


1. A hand operated vacuum massage device comprising, in combination, a cylinder formed from a tubular member having one end closed and the other open, a piston slidably mounted in the cylinder, a guide member secured to the piston and spaced from the latter, said guide member engaging the wall of the cylinder, a spring located between the guide member and the closed end, said spring being under compression and exerting a force tending to move the piston towards the open end, the tubular member having a slot, a pin secured to the guide member and extending through the slot, means comprising a toggle having one end attached to the pin and the other end connected with the tubular member for moving the piston against the force exerted by the spring and an applicator secured in the open end of the tubular member.

1,805,676. AUTOMATIC TRAIN PIPE COUPLING. GEORGE W. RUMMEL, Swissvale, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1928. Serial No. 307,182. 4 Claims. (Cl. 285—58.)

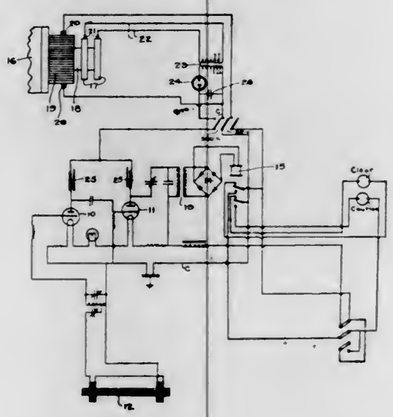
1. The combination with a train pipe coupling adapted to automatically couple with a counterpart coupling and having a nose adapted to engage a recess formed in the counterpart coupling, a pivotally mounted sleeve, a pin slidably mounted in the sleeve, and a spring pressed plunger for projecting the pin into engagement with the nose of a counterpart coupling and lock the same in coupled position.

1,805,677. PAPER-FEED FOR WRAPPING MACHINES. FRANK REINHOLD SCHMITT, Queens Village, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Feb. 1, 1930. Serial No. 425,210. 16 Claims. (Cl. 93—2.)



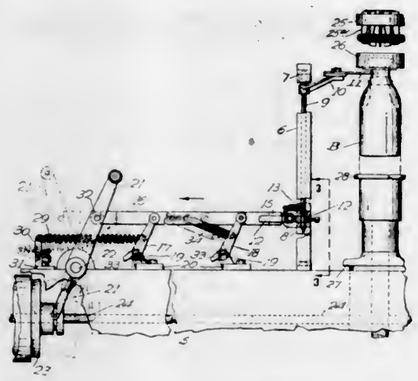
1. The combination with article wrapping mechanism operating to pull from a source of supply of wrapping material a length thereof sufficient to closely wrap the article, of wrapper material feeding means operating on the portion of the wrapping material trailing said length to follow said length with an additional adjoining length of material to produce loose wrapping of the article.

1,805,678. SELF-SEATING DEVICE FOR DRILLING BITS. EGGLESTON SMITH, Mamaroneck, N. Y., assignor to Eggleston Drilling Corporation, Dover, Del., a Corporation of Delaware. Filed Sept. 27, 1926. Serial No. 137,840. 15 Claims. (Cl. 255—28.)



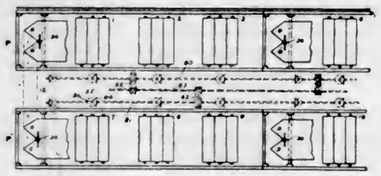
1. A self-seating device for earth-boring bits comprising a pair of telescoping driving and driven members,

means for imparting rotation from one member to the other, and having coacting angularly disposed feeding pressure transmitting surfaces, said members fitting loosely together so as to permit a limited relative oscillation on said surfaces, and a packing ring mounted between said members to prevent the escape of drilling fluid from the



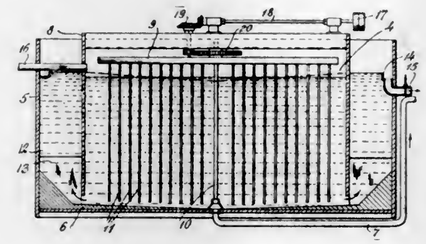
interior of the inner member, said packing ring being composed of yielding material and supported on one of said members with its sides free to move longitudinally with respect to the members so that the relative longitudinal movement between the members is taken up by flexing of the material of the ring.

1,805,679. APPARATUS FOR AND METHOD OF DEVELOPING HIGH VOLTAGE DIRECT CURRENT SUPPLY. CHARLES S. WILLIAMS, Kingston, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1928. Serial No. 303,133. 2 Claims. (Cl. 246—63.)



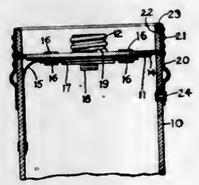
1. In the locomotive circuit of an automatic train control system, in combination, an amplifier, locomotive control apparatus, a direct current generator having a single commutator for delivering low voltage current to said apparatus and to the filament circuit of said amplifier, a pair of collector rings operatively associated with said single commutator of the generator, a transformer having its primary terminals connected to said rings for developing a relatively high alternating current voltage directly from said commutator and a rectifier included in the secondary circuit of the transformer for rectifying the alternating current voltage, the terminals of said secondary circuit being respectively connected to the plate reactors of the amplifier and the common wire of the locomotive circuit.

1,805,680. SAFETY-DEVICE FOR BOTTLE CAP CRIMPING MACHINES. FRANCIS EDGAR YOUNGDAHL and CLAS JACOB JULSTEDT, Brooklyn, N. Y., assignors to The Lakewest Corporation, a Corporation of New York. Filed Oct. 9, 1928. Serial No. 311,364. 4 Claims. (Cl. 192—125.)



1. In a bottle capping machine, the combination with a progressively moving crimper head for crimping caps on bottles, of a support for the bottles operable to lower the capped bottles from the head after crimping, a control member positioned between the path of movement of said head and the tops of bottles normally lowered from said head for the purpose of engaging only bottles which stick in said head, and means actuated by said control member to stop the machine when a bottle engages said member.

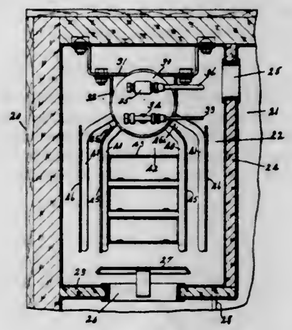
1,805,681. ASSOCIATING MECHANISM. HARRY V. BALL, Concord, Mass., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 20, 1927. Serial No. 185,147. 9 Claims. (Cl. 270—6.)



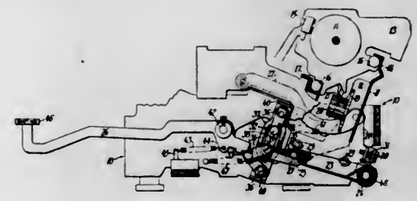
1. In a rotary multi-unit printing machine, the combination of two presses arranged side by side with a relatively wide aisle space between, each press including five or more printing units arranged in line the cylinders of which are positioned widthwise of the presses, formers for each press intermediate the units, web guides arranged to lead a web or webs across the space from below a former of one press and associate the led web or webs with web or webs coming from a former of the other press, and a delivery for each press arranged to deliver in opposite directions to each other.

1,805,682. SEWAGE TREATMENT. WARREN R. BORST, West New Brighton, N. Y. Filed Nov. 11, 1927. Serial No. 232,600. 6 Claims. (Cl. 210—8.)

1. The method of treating sewage which comprises agitating sewage in an open tank by means of a revolving agitator and rakes extending from above the exposed liquid surface to substantially the bottom of the tank thereby causing a vortex in the liquid within the tank and retaining the solids of the sewage in suspension near the center of the tank by means of the formed vortex.



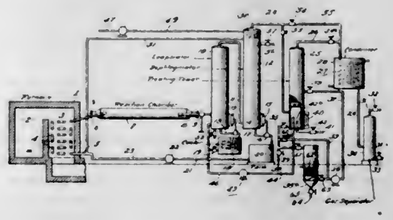
1,805,683. FLASHLIGHT. JAMES T. BROWN, Jamaica, N. Y., assignor to Bond Electric Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 4, 1928. Serial No. 267 195. 1 Claim. (Cl. 240—10.66.)



In a flashlight, in combination, a cylindrical battery containing a casing of non-conductive material, a lamp socket support comprising a disc of non-conductive material seated upon the end of the casing and of a diameter substantially that of the casing, a cylindrical member of non-conductive material of substantially the same outside diameter as the outside diameter of the casing and seated upon said lamp socket support disc, a hood collar telescoped over said end of the casing and formed with an inwardly extending flange at its outer end to engage the end of the cylindrical member remote from the lamp socket support disc, and means to permanently secure the hood collar to the casing to retain the parts rigidly together.

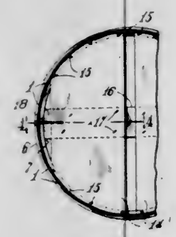
1,805,684. REFRIGERATING APPARATUS. RALPH H. CHILTON, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Nov. 20, 1926. Serial No. 149,771. 15 Claims. (Cl. 62—126.)

5. A cooling unit for mechanical refrigerators comprising an elongated header, and a plurality of conduits depending from the header, certain of which co-operate with the header to enclose a freezing space, and certain others being U-shaped loops arranged in downwardly extending rows, each row containing both branches of certain loops, said last mentioned loops being spaced from the freezing space and substantially entirely subjected to air circulating adjacent the cooling unit.



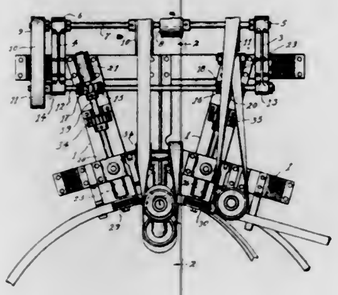
1,805,685. TYPEWRITING MACHINE. FREDERICK U. CONARD, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed May 4, 1928. Serial No. 275,133. 14 Claims. (Cl. 197—73.)

10. In a typewriting machine having a main frame, the combination with a platen and a supporting case-shift frame therefor, of means for reciprocating said frame between upper case and lower case position, stop-means to limit the shift-frame in its upward and downward movement, and means to move said stop-means as a unit to adjust the platen to the printing point.



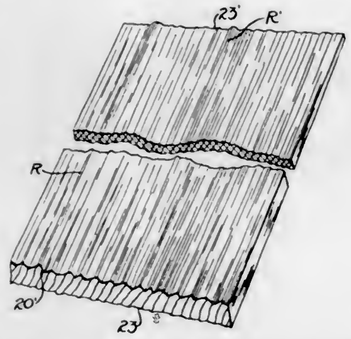
1,805,686. PROCESS FOR TREATING PETROLEUM HYDROCARBONS IN THE VAPOR PHASE. ROY CROSS, Kansas City, Mo., assignor to Cross Development Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 16, 1926. Serial No. 142,016. 5 Claims. (Cl. 196—28.)

4. A continuous method of purifying petroleum hydrocarbons comprising the steps of vaporizing the hydrocar-



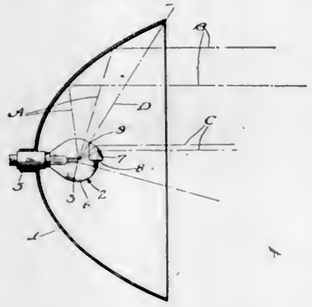
bons and bringing the evolved vapors into intimate contact with metallic sodium heated sufficiently to exist in the liquid phase, continuously circulating the treating liquid in counterflow relation with the oil vapor, diverting separated polymers and reaction products and supplying additional unused treating metal.

1,805,687. REENFORCED BASKET BOTTOM. CHARLES C. DAVIS, St. Joseph, Mich., assignor, by mesne assignments, to St. Joseph Iron Works, St. Joseph, Mich., a Corporation of Michigan. Filed Mar. 7, 1927. Serial No. 173,264. 2 Claims. (Cl. 217—123.)



1. In a shipping basket, a cylindrical shell having an internal hoop at its lower end, a circular bottom within the shell and resting upon the upper edge of the hoop, and a batten extending across the under face of the bottom, the ends of the batten abutting the inside of the hoop, and fastenings securing the parts together.

1,805,688. METHOD AND MACHINE FOR RECLAIMING RUBBER AND FABRIC FROM TIRE BEADS. MAURICE E. DAVIS, Grand Rapids, Mich., assignor, by mesne assignments, to Leo Meyer Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 10, 1929. Serial No. 331,651. 6 Claims. (Cl. 164—61.)

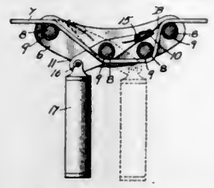


1. A machine of the class described comprising a frame, cooperating rollers journalled on said frame for feeding a tire bead lengthwise therethrough, a guide on said frame for positioning the bead after it passes through said feed rollers, and a pair of co-operating rotating disc cutters positioned to rotate in transverse planes for slicing a V-shaped strip from the bead after passing from said guide.

1,805,689. HAND SPLIT TAPERED SHAKE. FRANK L. DIETZ, Seattle, Wash., assignor of one-half to Edwin H. Luke, Seattle, Wash., and one-half to North Pacific Cedar Products Corporation, Seattle, Wash., a Corporation of Washington. Filed Apr. 18, 1928, Serial No. 270,956. Renewed Sept. 30, 1930. 3 Claims. (Cl. 108—S.)

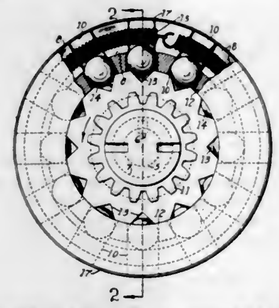
1. A shake tapered from its butt to its tip, the two faces being naturally split, and with the natural corrugations exaggerated.

1,805,690. LIGHTING UNIT. ADIEL Y. DODGE, South Bend, Ind. Filed Jan. 10, 1929. Serial No. 331,614. 1 Claim. (Cl. 240—48.6.)



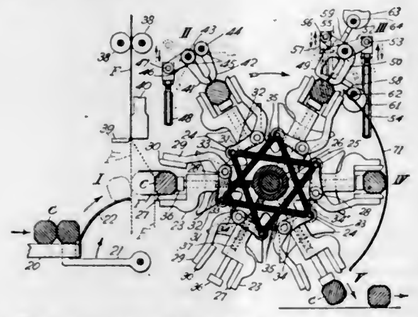
A light projecting apparatus comprising a concave reflector and an electric lamp in front of said concave reflector, said lamp comprising a transparent bulb and a concentrated light source in said bulb, said bulb having a lens integral therewith for lessening the divergence of the rays from the light source falling thereon, said lens projecting forwardly from the front of the bulb and having a convex front face above the horizontal plane through the light source and having a lower crescent shaped surface lying substantially in said horizontal plane, said lens having a greater refractive power vertically than horizontally whereby the upward rays striking the lens are refracted to a substantially horizontal direction while the laterally directed rays still diverge after being refracted.

1,805,691. RAZOR STROPPER. JOHN E. DREW, Jersey City, N. J., assignor to Wade & Butcher Corporation, a Corporation of New Jersey. Filed Apr. 12, 1927. Serial No. 183,029. 6 Claims. (Cl. 51—153.)



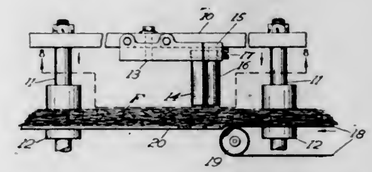
1. The combination with a razor strop, of a frame movably mounted on said strop and having offset means on opposite sides of said strop arranged to form in said strop two stropping sections of different angularity with respect

to the main body portion of the strop, a blade holder swingable in said frame for movement to either one of two positions in which a held blade engages said sections at different stropping angles, a handle, and connections be-



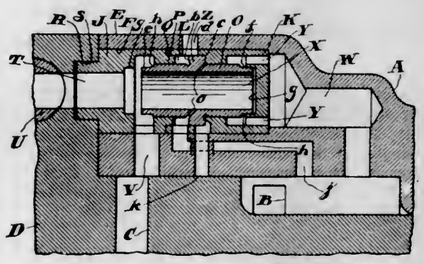
tween said handle and said holder in which the latter is fixed operating in either direction to first move the holder into one or the other of said stropping positions and then move said frame along said strop.

1,805,692. AUTOMATIC SLIP COUPLING. LESTER FERENCI, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Oct. 22, 1929. Serial No. 401,460. 3 Claims. (Cl. 192—103.)



1. An automatic slip coupling comprising rotary driven and driving members, weighty clutch elements carried by one of said members and engaging the other member, and clutch element controlling means acting counter to the action of centrifugal force on said elements, the engaged member having a notched periphery about which said elements are arranged, and said means consisting of a resilient member encircling and contracting on said elements.

1,805,693. LOCK-JOINT FOLDING ATTACHMENT FOR CIGAR ENVELOPING MACHINES. FREDERICK C. GLADECK, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed June 19, 1929. Serial No. 372,026. 12 Claims. (Cl. 93—7.)

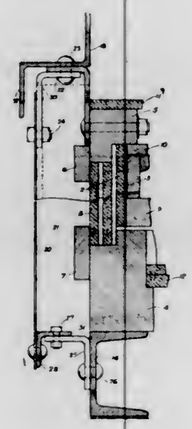


1. The combination with means for supporting a cigar and envelop therefor having outstanding edges, of means for pinching together the outstanding edges of the envelop over the cigar, mechanism for folding one edge over and tucking it behind the other, and a device for laying the folded and tucked edges flat on the cigar.

1,805,694. CUTTING FILLER TOBACCO FOR CIGAR BUNCHES. JOHN FREDRIK HALSTEAD, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed May 12, 1928. Serial No. 277,302. 8 Claims. (Cl. 131—39.)

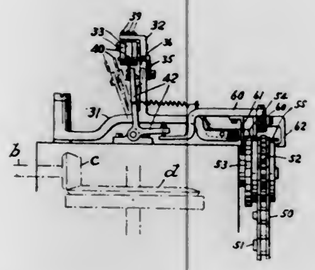
7. Apparatus for preparing filler tobacco for cigar bunches, comprising a crooked knife for cutting the tobacco, and associated means for removing selected portions of tobacco spaced from the cut, said knife being corrugated and said removing means including a series of punches arranged in juxtaposition to concavities of said knife.

1,805,695. VALVE FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 9, 1927. Serial No. 182,322. 4 Claims. (Cl. 121—18.)



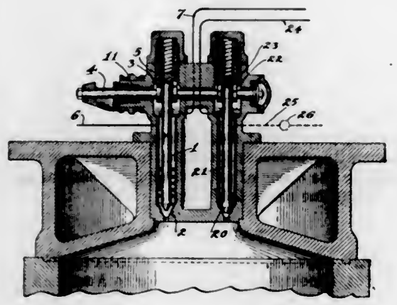
1. In a fluid actuated rock drill, the combination of a cylinder and a piston, a valve chest in the cylinder having an exhaust port therein, a hollow distributing valve in the valve chest through which pressure fluid passes, said valve being movable back and forth in the valve chest to admit pressure fluid to one end or the other of the cylinder, a flange on the valve controlling said exhaust port and having relatively large actuating pressure areas upon which pressure fluid from the cylinder may act to move the valve, said movement of the valve serving to partly uncover the exhaust port and permit the exhaust of pressure fluid acting on said actuating pressure areas, reduced ends on the valve adapted to alternately engage the valve chest and prevent the admission of pressure fluid over said ends to the cylinder, and shoulders defined by said reduced ends on the valve, said shoulders and the end surfaces of the valve forming relatively small actuating pressure areas upon which pressure fluid may act and complete the movement of the valve when the exhaust port is uncovered by the flange.

1,805,696. CAR CONSTRUCTION. AUGUST W. L. HARTBAUER, Chicago, Ill. Filed Nov. 19, 1928. Serial No. 320,399½. 14 Claims. (Cl. 105—423.)



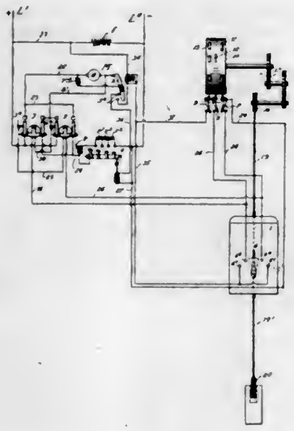
1. In a railway car, the combination of oppositely disposed frame members, an insulating wall positioned sub-

stantially between said frame members, a metallic sheathing removably secured to said frame members and spaced from said wall to provide an air chamber, and means to ventilate said chamber.



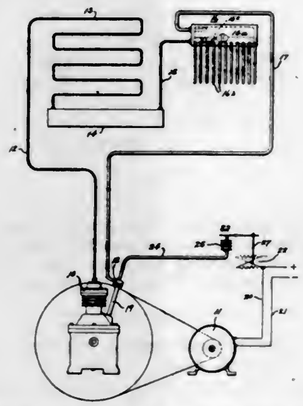
2. In a railway car, the combination of oppositely disposed frame members, an insulating wall positioned substantially between said frame members, a metallic sheathing, connecting members attached to said sheathing and removably secured to said frame members, and an air chamber between said sheathing and said wall, said connecting members being perforated to provide means to ventilate said chamber.

1,805,697. PATTERN MECHANISM FOR CIRCULAR KNITTING MACHINES. HAROLD E. HOUSEMAN, Edge Moor, Del., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Original application filed May 20, 1926, Serial No. 110,311. Divided and this application filed June 22, 1928. Serial No. 287,406. 45 Claims. (Cl. 66—138.)



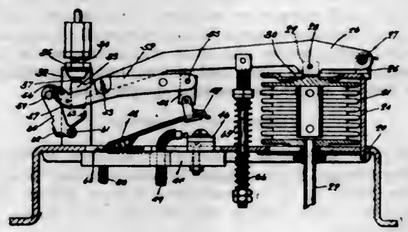
1. In a circular knitting machine, the combination with mechanism adapted to cooperate in the knitting operation and to be selectively operated, of a set of independently operable devices adapted to selectively operate said mechanism, operating means carrying said devices, selecting means which are adapted to be engaged by and position said devices as they are moved by their operating means, and pattern mechanism adapted to move the selecting means into position to selectively position said devices so that, in their subsequent operation by their operating means, they will selectively operate said mechanism.

1,805,698. INTERNAL COMBUSTION ENGINE. EMIL KÄGI, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 14, 1922, Serial No. 543,784, and in Switzerland Mar. 21, 1921. 9 Claims. (Cl. 123—27.)



1. In an internal combustion engine, an inwardly closing air and fuel admission valve, an air admission valve, a cam shaft, a valve operating rock shaft operated by said cam shaft, and a valve lifting lever on said rock shaft for each of said valves.

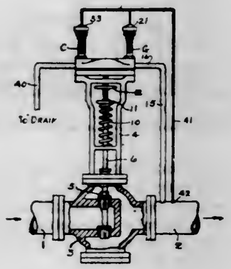
1,805,699. MOTOR CONTROLLER. EDWIN F. KIECKHEFER, Milwaukee, Wis., assignor to A. Kieckhefer Elevator Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 11, 1925. Serial No. 29,403. 17 Claims. (Cl. 187—29.)



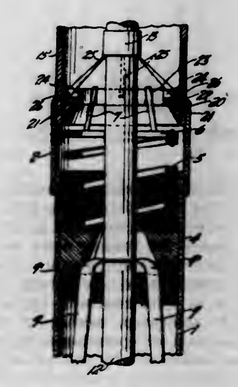
1. In a controller for an elevator or other device driven by an electric motor, the combination with motor control means whereby the driven device may be started and stopped, of means associated with the former means to effect predetermined positioning of the driven device if the stopping position thereof selected by said former means is within a given range of any one of a number of predetermined positions, the second mentioned means having a fixed location and being operable by and in synchronism with the driven device.

1,805,700. REFRIGERATING APPARATUS. JESSE G. KING, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Oct. 23, 1923, Serial No. 670,357. Renewed May 2, 1928. 3 Claims. (Cl. 62—4.)

3. A system having a low pressure side and a high pressure side, means for circulating refrigerant through said system, said low pressure side including an evaporator having a plurality of refrigerant ducts and having a supply reservoir for said ducts, said supply reservoir being directly connected with the high pressure side, a float actuated valve responsive to the quantity of refrigerant within the reservoir for controlling the flow of refrigerant from the high pressure side to the reservoir, and adjustable control means for the circulating means responsive to the pressure within said low pressure side, for varying the upper and lower temperature limits of the evaporator independently of one another.



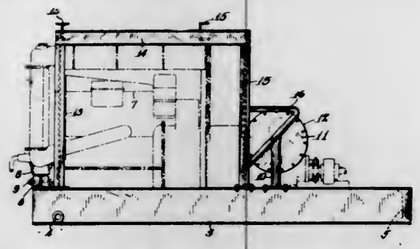
1,805,701. REFRIGERATING APPARATUS. JESSE G. KING, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed July 22, 1926. Serial No. 124,160. 4 Claims. (Cl. 236—28.)



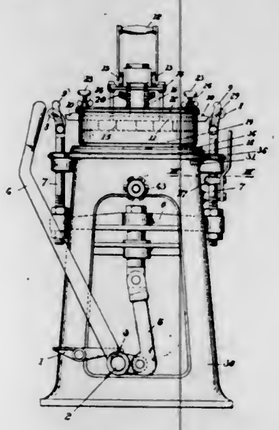
1. A controller for a refrigerating system comprising in combination an operating member responsive to conditions in the system, and a resistance member for said operating member comprising an adjustable casing, a plurality of spring members inside the casing adapted to resist the movement of said operating member in one direction, the adjustment of said casing determining the number of spring members made operative.

1,805,702. REDUCING VALVE. HENRY J. MASTENBROOK, Cleveland Heights, Ohio, assignor to The Swartwout Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 15, 1928. Serial No. 312,550. 1 Claim. (Cl. 50—11.)

In combination, a pipe, a fluid actuable valve in said pipe having a pressure chamber for actuating fluid and a part enclosing one side of said chamber for moving said valve, means exerting a force tending to move said valve in opposition to the force exerted upon said part, means for adjusting and varying said last named means, fluid conducting means extending from said pipe to said pressure chamber and fluid conducting means leading from said pressure chamber to a point of lower pressure than the pressure in said pipe, and means for controlling the inflow to said pressure chamber and outflow therefrom comprising independently operable and adjustable valves, one controlling the inflow and the other controlling the outflow to and from said chamber, each of said valves having an independently operating pressure chamber and a part for moving said valve enclosing one side of each of said chambers, said chambers having fluid communication with each other and with said pipe, one of said valve being movable toward open position whilst the other is moved toward closed position in response to changes in pressure in said pipe.



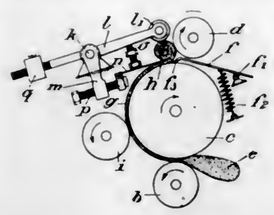
1,805,703. DRILL PIPE CUTTER. KEARNEY MITCHELL, Sulphur Mines, La. Filed May 2, 1930. Serial No. 449,102. 2 Claims. (Cl. 81—189.)



1. In a device of the character described, in combination with a drill pipe cutter including an operating pipe and lock prongs, a band secured in the operating pipe, a supporting ring rotatably mounted on the said band, means on the said supporting band to receive the said lock prongs, and supporting fingers pivoted to the said supporting ring.

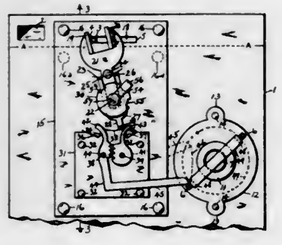
1,805,704. TRACTOR SUPPORTING UNIT. JOSEPH S. OECHSLE, Philadelphia, Pa., assignor to Metalweld Service Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Aug. 29, 1923, Serial No. 659,897. Divided and this application filed Apr. 21, 1924. Serial No. 708,005. 2 Claims. (Cl. 248—14.)

1. A supporting framework for use with a standard tractor comprising spaced longitudinals of standard I-sections and transverse bracings of like cross section, and angle struts with integrally connected disc members, said latter members being arranged for bolting connection to the rear axle housing of said tractor.



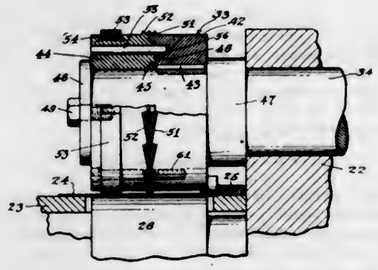
1,805,705. DOUGH DIVIDING AND WORKING MACHINE. GOTTFRIED RAUSCH, Ammendorf, near Halle-on-the-Saale, Germany. Filed Feb. 11, 1927, Serial No. 167,500, and in Germany Sept. 24, 1926. 27 Claims. (Cl. 107—20.)

11. A dough-dividing machine comprising a frame, a presser head pivoted to said frame, a press plate in said presser head, dividing knives arranged in said presser head, hand operated means for forcing down said knives into the dough, an adjustable stop on said frame, a lever fulcrumed on said presser head, operatively connected with said knives so as to withdraw said knives and adapted to be engaged by said stop, mechanism carried on the frame of said machine for operating said press plate, and automatic means connected with said press-plate operating mechanism for interrupting its operative connection with said press plate in a given relative position of said mechanism and said press plate.



1,805,706. LOAF-FORMING MACHINE. GOTTFRIED RAUSCH, Ammendorf, near Halle-on-the-Saale, Germany. Filed May 12, 1928, Serial No. 277,329, and in Germany Dec. 7, 1927. 14 Claims. (Cl. 107—9.)

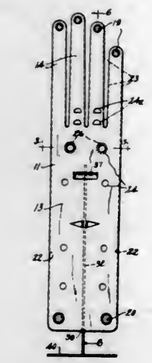
1. A dough-molding machine comprising a principal roller, a sheeting roller below said principal roller, and a coiling roller above said principal roller both these latter being arranged to cooperate with said principal roller to form a sheet of dough and then arrange it in a coil, said principal roller being adapted to carry the sheet of dough



from said sheeting roller toward said coiling roller, and stationary means between the principal roller and the coiling roller for detaching the sheet from said principal roller so as to deflect it toward said coiling roller.

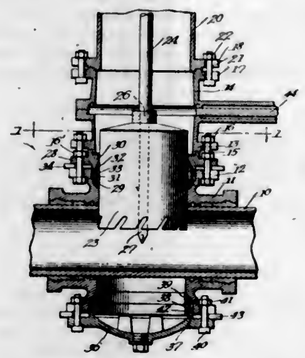
1,805,707. SHUTTER-LOCKING DEVICE FOR CAMERAS. LOUIS W. ROSEN, Brooklyn, N. Y. Filed Dec. 13, 1922. Serial No. 606,633. 11 Claims. (Cl. 95—31.)

1. In a camera of the class described, means for exposing a portion of film, either for instantaneous or time exposure, means for shifting said portion after each exposure has been made, and means for automatically locking said exposure means, after each and either kind of said exposures has been completed regardless of any prior shifting of film, and preventing operation as for a succeeding exposure until the exposed portion of film has been shifted, all of said exposure means being structurally independent of said locking means, and all of said locking means being assembled on one base and demountably superimposed as a unit on an external surface of said camera.



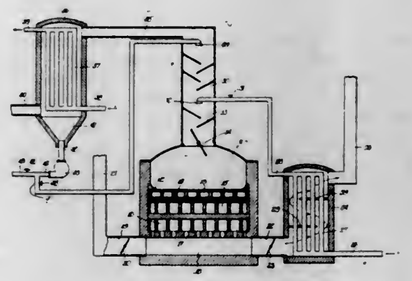
1,805,708. SCORING MACHINE. WILLIAM E. TAYLOR, East Orange, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 22, 1929. Serial No. 365,019. 8 Claims. (Cl. 113—15.)

1. In an apparatus for scoring blanks for tearing strip containers, the combination of a feeding table, feeding



rollers for advancing a blank over said table, a scoring roller disposed above one of said feeding rollers and having means for scoring parallel bounding lines of the tearing strip in said blank, a two-part scoring roller embodying a roller body and a roller head disposed above another of said feeding rollers, and means carried by said body and said head for scoring diagonal lines between said parallel lines.

1,805,709. FORM FOR WASHING AND DRYING GLOVES. CORALLIE D. THOMA, New York, N. Y. Filed June 19, 1928. Serial No. 372,100. 4 Claims. (Cl. 223—19.)



1. A device of the character described, including a form for gloves, said form including a hand proper and four digits therewith, and a thumb wholly separate from the hand proper, said thumb having a base portion to abut the hand proper, the said base portion and a portion adjacent to an edge of the hand proper constituting a plane sliding and abutment area for the base of the thumb, whereby the latter may be adjustable along the hand proper, and the thumb insertable into the glove with a uniform sliding contact of the base thereof along the hand proper.

1,805,710. PACKING FOR PIPE CUTTERS AND VALVE INSERTING MACHINES. JAMES M. WILKINS, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a Corporation of Illinois. Filed June 17, 1929. Serial No. 371,601. 3 Claims. (Cl. 77—41.)

1. In combination, a valve casing adapted to be secured to a main and having an opening therein, a valve cutter arranged to be inserted in said opening for severing a portion of the main, a valve unit arranged to be inserted in said opening when the cutter is removed therefrom, a packing around said opening for preventing the escape of liquid from the casing when the valve unit is mounted therein, said packing adapted to be loosened during the cutting operation and tightened when the valve unit is inserted in said opening, a gland for maintaining the packing in position, and an auxiliary packing connected to said gland for preventing the escape of fluid during the cutting operation.

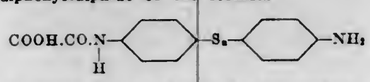
1,805,711. METHOD FOR THE TREATMENT OF HEAVY HYDROCARBON MATERIAL. CHARLES W. ANDREWS, Chicago, Ill., and REGINALD D. ROGERS, Bayonne, N. J., assignors to C. P. T. Development Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 6, 1929. Serial No. 368,997. 3 Claims. (Cl. 196—50.)

1. The method of converting heavy hydrocarbons in liquid form into lighter hydrocarbons and coke in a chamber having a flat floor heated from below which comprises raising the hydrocarbons to a high temperature while flowing in a stream under a pressure sufficient to prevent undue vaporization, releasing the pressure, removing vaporized hydrocarbons and discharging the unvaporized hydrocarbons directly onto the heated floor of said chamber or onto the coke deposited thereon by the cracking and vaporization of the unvaporized hydrocarbon, and further removing vaporized lighter hydrocarbons.

1,805,712. RUBBER TREATING PROCESS AND PRODUCT. CHARLES E. BRADLEY and CONRAD FERRETTIE, Mishawaka, Ind., assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed Dec. 8, 1925. Serial No. 74,198. 22 Claims. (Cl. 18—50.)

5. The method of improving the milling and calendering properties of rubber which comprises steeping crude rubber for substantially 24 hours in water at a temperature around 150 to 200 degrees Fahrenheit, then subjecting the resulting rubber in a closed container to substantially 25 to 50 pounds of live steam, and then drying the rubber.

1,805,713. RUBBER TREATING METHOD AND PRODUCT. CHARLES E. BRADLEY, Mishawaka, Ind., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed June 30, 1928. Serial No. 289,631. 10 Claims. (Cl. 18—50.)

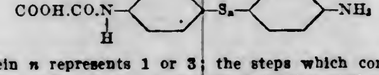


1. The method of treating rubber which comprises subjecting wet rubber to free oxygen and heat without drying.

1,805,714. MANUFACTURE OF AZO DYES. RAINALD BRIGHTMAN, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, Westminster, England. Filed Feb. 12, 1930, Serial No. 427,959, and in Great Britain Feb. 21, 1929. 19 Claims. (Cl. 260—92.)

1. In the process of manufacturing new azo dyestuffs probably represented in the form of the free acid by the formula

where *n* represents 1 or 3 and X represents the residue of a coupling component; the step which comprises combining a diazotized oxamic acid derivative of a 4:4'-diaminodiphenylsulphide of the formula



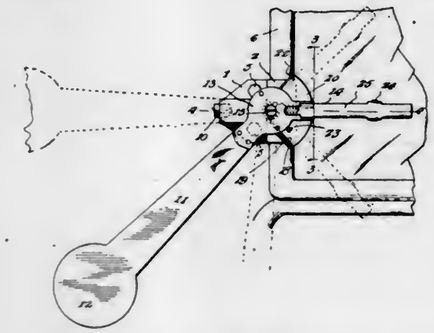
where *n* represents 1 or 3 with an azo dyestuff component.

1,805,715. MANUFACTURE OF AZO DYESTUFFS. RAINALD BRIGHTMAN, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, Westminster, England. Filed Feb. 12, 1930, Serial No. 427,960, and in Great Britain Feb. 21, 1929. 11 Claims. (Cl. 260—81.)

1. In the process of manufacturing new azo dyestuffs suitable for dyeing wool, acetate rayon, viscose rayon and cotton and which may be represented by the probable formula:

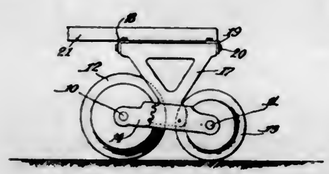
$$Y-N=N-X-N=N-Z$$

wherein X represents the divalent residue of an intermediate coupling component, Z the coupled residue of an azo dye component, and Y represents the coupled residue of an oxamic acid derivative of the formula:



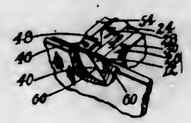
wherein *n* represents 1 or 3; the steps which comprise coupling a diazotized oxamic acid derivative of the above formula with an intermediate coupling component and causing the result to combine with a further component.

1,805,716. INDIVIDUAL CUP HEATER. MONROE S. CLAWSON, Montclair, N. J. Filed Nov. 9, 1929. Serial No. 405,972. 11 Claims. (Cl. 219—43.)



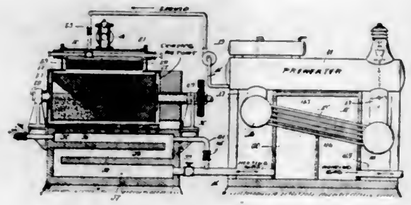
11. An electric heating device comprising a shell of insulating material having a base portion with a resistance coil embedded therein, contacts secured on said base portion and connected with the terminals of said coil, a supporting member mounted beneath and secured to said base portion and projecting therebeyond, and a switch assembly enclosed within a housing slidably mounted on said supporting member and including contacts engageable with said first named contacts, said housing being provided at its sides with downwardly curved portions constituting retaining means for back wiring.

1,805,717. DIRECTION SIGNAL FOR MOTOR VEHICLES. RUSSELL S. CUNARD, Everett, Pa. Filed Mar. 25, 1930. Serial No. 438,866. 4 Claims. (Cl. 116—52.)



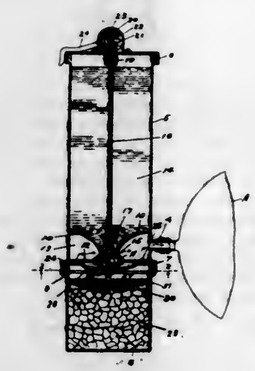
1. A direction signal for vehicles comprising a bracket adapted to be secured to a support, a semaphore arm having a lever at its inner end, a pin to pivotally mount said semaphore carried by said bracket and extending through the inner end portion of the semaphore, the bracket being formed with sockets spaced transversely from each other, abutments carried by said bracket with the sockets disposed between the same, a spring engaging said lever and one abutment to yieldably resist upward swinging of the semaphore, and a latch carried by said lever and engageable in said sockets to releasably secure the semaphore in a set position.

1,805,718. DOUBLE ROLLER PULVERIZER. HARRY S. DICKINSON, Moline, Ill., assignor to The Dunham Company, Berea, Ohio, a Corporation of Ohio. Filed July 26, 1928. Serial No. 295,423. 11 Claims. (Cl. 55—77.)



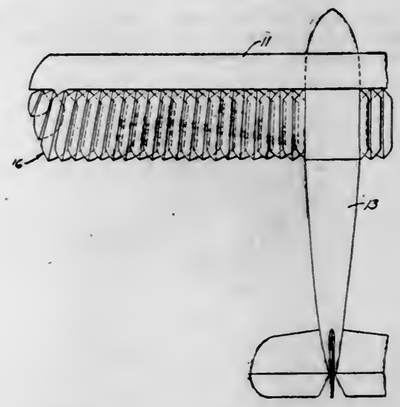
1. A soil pulverizer comprising a weight frame and roller carrying frames disposed below the weight carrying frame and rockably mounted thereon, said mounting including rolling surfaces, gear teeth adjacent the rolling surfaces for preventing relative slippage therebetween, and means for maintaining said surfaces substantially in contact.

1,805,719. CHANNELING MACHINE. ALBERT E. DUNHAM, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 22, 1928. Serial No. 287,575. 12 Claims. (Cl. 12—18.)



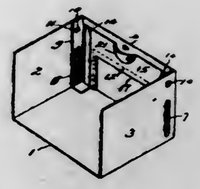
1. In a channeling machine, a main channel knife and an auxiliary channel knife movable to and from an operative position substantially in the plane of the main knife for cooperating with the main knife to cut a channel of increased depth in a sole, the auxiliary knife being constructed and, when operatively positioned, arranged relatively to the main knife to cut substantially in line with the main knife.

1,805,720. APPARATUS FOR DISTILLING AND COKING HEAVY HYDROCARBON LIQUIDS. ALEXANDER S. KNOWLES and CHARLES W. ANDREWS, Chicago, Ill., assignors to Tar & Petroleum Process Company, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1928. Serial No. 288,183. 2 Claims. (Cl. 202—150.)



1. Apparatus for the treatment of heavy liquid hydrocarbons, comprising a distillation apparatus, means for continuously passing the liquid through the distillation apparatus, a heating chamber for the distillation apparatus, a closed, stationary coking chamber for treating heavy liquid residue from the distillation apparatus, a pipe for passing heated liquid from the distillation apparatus to the coking chamber, heating flues for the coking chamber and a connection for leading waste heating fluid from said flues to said heating chamber.

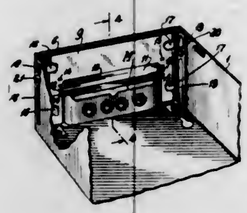
1,805,721. LIFE PRESERVING DEVICE. FRANK KOGL, St. Paul, Minn., assignor of one-half to Hans Steingassinger, Zell-on-the-Ziller, Austria. Filed May 26, 1930. Serial No. 455,653. 6 Claims. (Cl. 9—19.)



1. A generator for life preservers comprising a cylinder having a water chamber therein, a container for carbide or the like attached to the cylinder, a valve normally closing the water chamber and which when opened will permit water to flow into the container, said cylinder having an annular passageway about the valve for communication with the preserver, and valve controlled means normally closing the passageway with respect to the container.

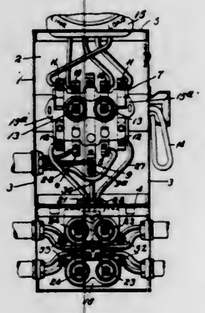
1,805,722. AIRPLANE. CORNELIUS RAMAKERS and DAVID R. CARSLEY, Los Angeles, Calif., assignors to Soaring Plane Corporation, a Corporation of California. Filed June 18, 1929. Serial No. 371,904. 23 Claims. (Cl. 244—12.)

1. In a wing element for an airplane wing, the combination of: walls defining slots in the upper surface of said wing element, said slots being formed at an angle to the line of motion of said wing element; and means in said slots for directing air currents impinging on the forward leading portion of said wing element along said slots and discharging said air currents from the trailing edges thereof so as to produce a negative pressure on the upper surface of said wing element.



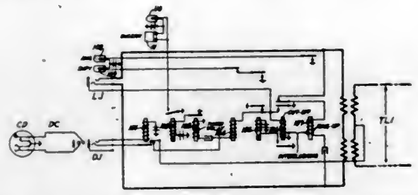
1,805,723. ELECTRIC METER PROTECTING CABINET. JOSEPH SACHS, Hartford, Conn. Filed Jan. 28, 1922. Serial No. 532,449. 2 Claims. (Cl. 247—2.)

1. An electric appliance enclosing cabinet adapted for protective relationship with an electric meter, comprising in combination, a cabinet body including connected rear and side walls, a cabinet end wall, normally positioned in fixed relationship with the rear and side walls but removable therefrom in the forward direction, the said end wall being provided with an opening therein extending forward from the rear edge thereof, a shutter adapted to be positioned immediately adjacent the end wall at the said opening, the said shutter being removable from the cabinet in the forward direction and having an opening therein extending forward from the rear edge thereof which opening is smaller than the opening in the end wall and adapted to register therewith and is of such size and shape as to approximately fit for protective purposes a part of an electric meter, and a front cover for the cabinet separate from the end wall and from the shutter and serving when closed to prevent access to the interior of the cabinet and to the said protected part of the meter, the said cover being so constructed that when closed it overlaps both the end wall and the shutter to prevent removal thereof and



the said cover being openable independently of the end wall and shutter so as to provide access to the interior of the cabinet with the end wall and shutter in place and with the latter in protective relationship with the meter.

1,805,724. ELECTRIC METER PROTECTING CABINET. JOSEPH SACHS, Hartford, Conn. Filed Jan. 7, 1927. Serial No. 159,584. 16 Claims. (Cl. 247—2.)



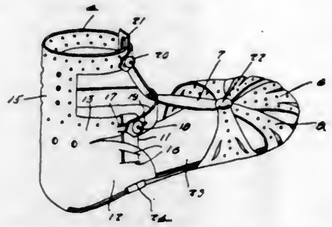
1. In an electric meter protecting cabinet adapted for enclosing a current controlling appliance and having an openable front cover, the combination of a main end wall plate separate from the cover and normally held in fixed position in the cabinet when the cover is opened, the said plate having a meter opening therein, shutter means and means for relatively movably connecting the shutter means with the main plate to enable the said means in one position to entirely close the said opening and in another position to leave the said opening at least partly unobstructed for approximately fitting the terminal portion of an electric meter.

1,805,725. FUSE BLOCK ATTACHMENT. JOSEPH SACHS, Hartford, Conn. Filed June 3, 1926. Serial No. 113,492. 17 Claims. (Cl. 247—2.)

1. A fuse block attachment for an electric appliance containing cabinet comprising in combination, a block adapted to be externally mounted immediately adjacent a wall of the said cabinet so as to at least partly close an opening therein, a pair of complemental fuse receiving contacts on the block accessible externally of the cabinet when the block is in place as aforesaid, a circuit wire connecting terminal electrically connected with one of the fuse receiving contacts on the block, and a continuous conductor having a permanent electrical connection with the other fuse receiving contact on the block so as to be included as a composite element of the complete fuse block attachment prior to its connection with the said cabinet and being long enough to extend through the said opening in the cabinet wall and to directly and of itself engage and connect with a conducting part of the appliance within the cabinet when the block is in place as aforesaid.

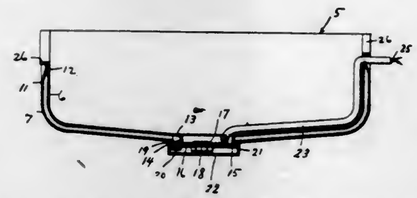
1,805,726. AUTOMATIC TELEPHONE SYSTEM. NORMAN H. SAUNDERS, Homewood, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed May 8, 1929. Serial No. 361,311. 40 Claims. (Cl. 179—27.)

22. In combination, a pendulum, momentarily applied means for starting the pendulum and for allowing it to attenuate, and means responsive to the attenuation of said pendulum for restarting it.



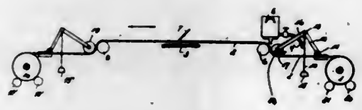
1,805,727. EARTH DRILLING APPARATUS. EGGLESTON SMITH, Newark, N. J., assignor to Eggleston Drilling Corporation, Dover, Del., a Corporation of Delaware. Filed Nov. 23, 1927. Serial No. 235,173. 16 Claims. (Cl. 255—72.)

1. An earth drilling apparatus comprising a rotary drilling bit, a rotary drive shaft extending throughout the drilled portion of the hole, and a device for operatively connecting the bit to the drive shaft including means for permitting the axis of the bit to move angularly with respect to the axis of the drive shaft so as to allow the drilling bit to seat upon the surface being cut when the axis of the drive shaft diverges from the axis of the hole, resilient means for transmitting feeding pressure from the drive shaft to the bit, and means for retracting the bit from the surface being cut when the resistance to rotation exceeds a predetermined amount.



1,805,728. SANDAL. JOHN SOHN, Deadwood, S. Dak. Filed Oct. 14, 1930. Serial No. 488,653. 2 Claims. (Cl. 36—11.5.)

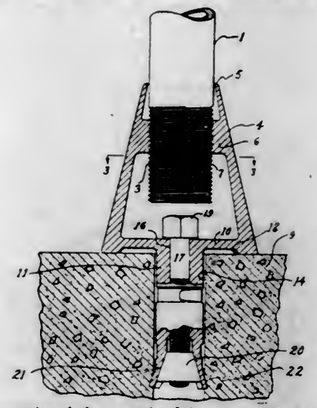
1. A sandal of the type described formed from a single blank of material, and provided with a separate inner sole, said blank comprising a sole portion, a heel engaging portion rising from the rear of the sole portion and provided with a plurality of ankle encircling straps, and portions thereof for engaging the sides of the heel; and a plurality of straps for engaging the toe portion of the foot and consisting of a central strap leading from the forward end of the sole portion and brought back over the foot to engage with the ankle encircling straps, and side straps for engaging the toe portion of the foot formed



on the side edges of the forward portion of the sole portion, said straps brought to a common meeting point and there fastened together.

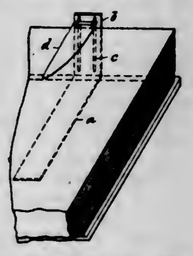
1,805,729. OIL PAN FOR INTERNAL COMBUSTION ENGINES. GEORGE TALLON, Malone, N. Y. Filed July 13, 1929. Serial No. 378,132. 4 Claims. (Cl. 184—106.)

3. An oil pan for internal combustion engines comprising inner and outer spaced walls to provide an air space extending along the sides and ends of the pan, said outer wall being provided with a drain opening in the bottom thereof for the interior of the pan, a plug for closing said opening, and said bottom wall being provided with a drain opening for the air space between said inner and outer walls, and a plug for closing said last mentioned opening.



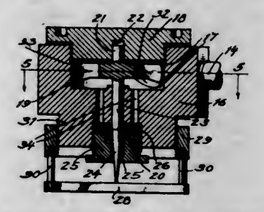
1,805,730. MEANS FOR IMPREGNATING AND COATING FLEXIBLE MATERIALS. EMIL WEINHEIM, New York, N. Y. Filed June 23, 1926, Serial No. 118,057, and in Germany July 13, 1925. 3 Claims. (Cl. 91—17.)

1. A machine for impregnating or coating a web of flexible material comprising a supply and a storage reel, a pair of feed rolls arranged intermediate said reels and comprising a roll mounted to rotate in a fixed bearing and a roll mounted to be displaced with respect to said first-mentioned roll, said rolls being adapted to engage opposite sides of the web, means for exerting uniform and resilient pressure on said displaceable roll, and means for applying a coating to the web while moving from said supply to said storage reel, said reels and said fixedly supported roll rotating independently of the web.



1,805,731. UPRIGHT CONSTRUCTION. LOUIS I. BECKWITH, Dorchester, Mass. Filed July 23, 1929. Serial No. 380,308. 7 Claims. (Cl. 189—28.)

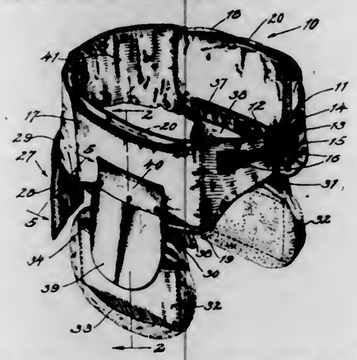
1. A connection between the lower end of an upright and a floor, comprising a base member receiving and substantially enclosing the lower end of the upright, the upper portion of the base member having a part of small diameter in juxtaposition to the upright and having a lower portion of larger diameter in engagement with the surface of the floor, a central depending projection of



the base member being received in an opening in the floor and held against longitudinal movement in relation to the same, said base member being hollow and having an internally threaded annular flange intermediate its upper and lower portions, the upright being threaded into engagement with said flange.

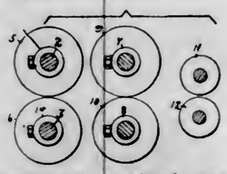
1,805,732. BOOKMARKER. EMIL DITTMANN, Plon, Germany. Filed Sept. 6, 1930, Serial No. 480,159, and in Germany Sept. 14, 1929. 1 Claim. (Cl. 116—119.)

A book-marker of the character described, comprising a supporting strip having an upturned end portion formed with parallel, longitudinal slits, a marking tongue formed near one end with apertures arranged at the same distance apart as the slits of the supporting strip, and a connecting cord formed into a loop passing through said slits and apertures and engaging the strip and tongue portions intermediate thereof.



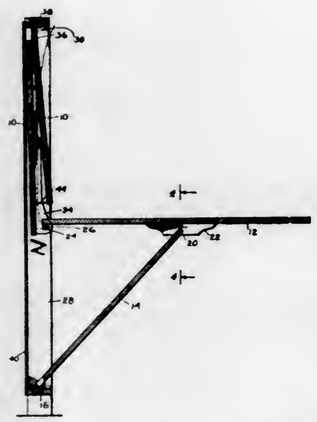
1,805,733. METERING VALVE. FRED GEOFFERY ECKSTINE, Los Angeles, Calif., assignor of one-half to Charles Benedict, Los Angeles, Calif. Filed Oct. 10, 1928. Serial No. 311,513. 10 Claims. (Cl. 251—29.)

6. A valve structure comprising a housing having a chamber therein, a liquid supply pipe in communication



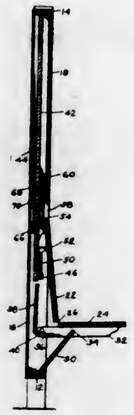
therewith, an orifice formed through the wall of said chamber and having a tapered wall, a valve stem extending through the orifice and having a tapered portion agreeing with the taper of the wall, a propeller member within the chamber and mounted upon the valve stem whereby a flow of liquid from the inlet pipe to the outlet orifice will cause rotation of the propeller and the valve stem, and means for adjustably maintaining the valve stem with relation to the orifice whereby a predetermined area of discharge opening will be established.

1,805,734. PAD FOR FOOTBALL PLAYERS. HOWARD H. JONES, North Hollywood, Calif. Filed Sept. 9, 1929. Serial No. 391,115. 6 Claims. (Cl. 2—2.)



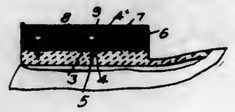
1. A protecting device for football players which comprises a girdle adapted to circumscribe the waist of the player, said girdle being formed of quilted material, a pair of pockets on the outside of the girdle and at opposite sides thereof adapted to overlie the region of the kidneys of the player, a pair of convex shield members, one of which is disposed in each of said pockets with its concaved portion facing inwardly and having flexible straps extending longitudinally thereof to bear against the girdle, a pair of thigh pads articulately connected to the girdle at points beneath the kidney pads, a pocket on the outside of each of said thigh pads, a pair of convex thigh shields, one disposed within each of said thigh pad pockets and having a fabric portion stretched longitudinally thereof to rest against the pad, and a pair of convex shield members, one articulately secured by its upper edge to the pocket of each kidney pad with its concave portion adapted to lie down thereover and with its lower concaved edge resting against the convex face of a corresponding thigh pad, said shields bridging the space occurring between the kidney and thigh pads.

1,805,735. BEVELING MACHINE. DANIEL W. B. KURTZ, Jr., Baltimore, Md. Filed June 30, 1930. Serial No. 465,029. 2 Claims. (Cl. 164—61.)



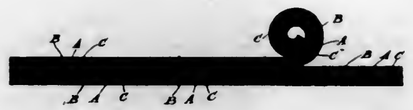
1. In combination with a pair of rotary beveling dies, said dies opposingly arranged, said dies having flat peripheral edges in cross section of relatively narrow width, said dies having beveled side walls terminating at said peripheral edges, said dies adapted to bevel two edges of a card at one operation, rotary slitting dies disposed adjacent the beveling dies in tracking relation thereto for severing the stock in the trough of the creases produced by the said beveling dies.

1,805,736. FOLDING FURNITURE. BRUNO LAURIS LAURSEN, Dunedin, Fla., assignor, by mesne assignments, of forty-eight per cent to Clearwater Lumber Company, Incorporated, Clearwater, Fla., a Corporation of Florida. Filed Apr. 23, 1927. Serial No. 185,969. 2 Claims. (Cl. 68—10.)



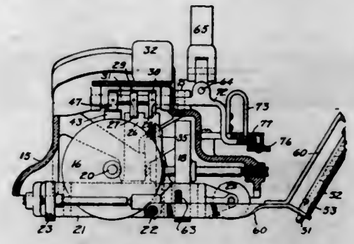
1. In a device of the class described, a cabinet having vertical side members with slots in the inner surfaces thereof, each slot comprising a long vertical section and a short horizontal section, an ironing board having at its cabinet end trunnions engaging said slots, a brace extending between and hinged to the lower portion of the cabinet and said board, a table top engaging said trunnions at its end toward the cabinet and having at an intermediate point of its length a hinged joint; said board brace and top being foldable within the cabinet while not in operative position, and said top being of a length and a width to close the front of the cabinet when the top is in inoperative position.

1,805,737. FOLDING FURNITURE. BRUNO LAURIS LAURSEN, Dunedin, Fla., assignor, by mesne assignments, of forty-eight per cent to Clearwater Lumber Company Incorporated, Clearwater, Fla., a Corporation of Florida. Filed Apr. 23, 1927. Serial No. 185,970. 2 Claims. (Cl. 68—10.)



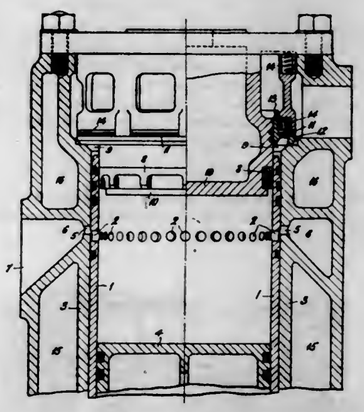
1. In a structure of the character described, in combination, upright side walls having lower and upper grooves in the inner surfaces thereof, each lower groove having an upright inclined portion and an upwardly and forwardly inclined portion at the lower end of the upright portion, and each upper groove having an upright portion and a forwardly extending portion at the lower end of said upright portion, a seat having trunnions disposed and movable in the lower grooves of said side walls, an ironing board having trunnions disposed and movable in the upper grooves of said walls and also having a grooved portion at its underside, and a seat back and ironing-board brace hingedly connected to the seat and having trunnion means disposed and movable in the grooved portion of the ironing board, whereby the seat, ironing board and seat back may be supported in operative and inoperative positions at the will of the operator and may be moved from either of said positions to the other by a single continuous operation.

1,805,738. DETACHABLE RUBBER HEEL. PING LEE, Windsor, Ontario, Canada. Filed Mar. 29, 1929, Serial No. 351,069. Renewed Mar. 30, 1931. 1 Claim. (Cl. 36—36.)



The combination with a shoe heel of a plate provided with dome fastener members secured to the face of the heel, a rubber heel provided with a recess conforming to the shape of the aforesaid plate, an opposing plate fitting within the base of the recess and provided with dome fastener receiving members, such recess being of a depth greater than the combined thickness of the opposing plates so that when the dome fastener members are engaged the edge portion of the rubber heel face is held compressed against the face of the shoe heel.

1,805,739. BUILT-UP ROOFING AND METHOD OF APPLICATION. WILLIAM J. MOELLER, Mount Healthy, and ARTHUR H. ZIMMERMAN, Lockland, Ohio, assignors to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Mar. 29, 1926. Serial No. 98,327. 1 Claim. (Cl. 108—9.)



The method of forming upon a roofing support a built up roofing of layers of bituminous saturated sheets alternated with layers of a bituminous substance which comprises coating both sides of a saturated sheet with a layer of bituminous material of the desired thickness, forming the coated sheet, after the coating is set, into a roll, unrolling the roll onto the roofing support while applying a solvent to the coated sheet material slightly in advance of the line of tangency between the roll and the roofing support, then unrolling a second roll of the coated sheet material while applying a solvent to the surface of the material slightly in advance of the line of tangency between the roll and the upper surface of the first sheet, whereby in applying the sheet material to the surface below, any air bubbles or surplus solvent will be forced out from between the approaching surfaces due to the curvature of the sheet being applied and the weight of the unrolled portion of the sheet.

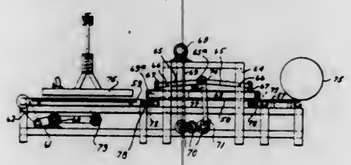
1,805,740. DRAFTING MACHINE. FREBERT J. PETERS, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Dec. 21, 1928. Serial No. 327,630. 12 Claims. (Cl. 33—32.)

12. A drafting machine combining a movable casing member; a drawing instrumentality carried thereby; a plurality of sets of rollers journaled in said casing and having their axes transversely arranged, the axes of the rollers in each set being parallel; and means for selectively engaging one of said sets of rollers with the drawing surface.

1,805,741. HIGH PRESSURE GAS COMPRESSOR. EDWIN PRESTAGE, London, England, assignor of one-half to Broom & Wade Limited, High Wycombe, Buckinghamshire, England, a Company of Great Britain. Filed Sept. 25, 1930, Serial No. 484,377, and in Great Britain July 21, 1930. 5 Claims. (Cl. 230—179.)

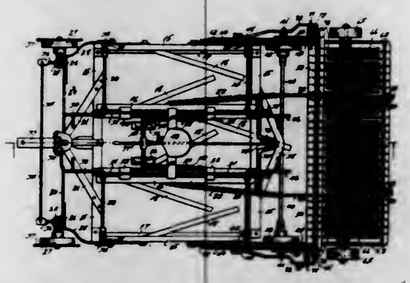
1. A high pressure air or gas compressor comprising a cylinder with gas inlets spaced around its wall, a piston reciprocating in said cylinder, a cylinder head projecting into said cylinder and of such a diameter that it forms with the inner wall of the upper end of the cylinder an annulus, a housing at the upper end of said annulus, an automatic outlet valve in said housing and a sleeve valve reciprocating in said cylinder between said piston and cylinder head and the inner wall of said cylinder in a partly contrary direction to said piston and adapted to first trap the air or gas compressed into said annulus on the upward stroke of the piston and then to expel said air or gas therefrom through the outlet valve on its continued upward movement through said annulus.

1,805,742. ROD SUPPORTING BRACKET. EDWIN REYNOLDS, Vineland, N. J. Filed Jan. 21, 1930. Serial No. 422,300. 2 Claims. (Cl. 248—20.)



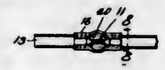
1. In a supporting bracket with self adjustable holders for towel bars a sheet metal blank having cut out U shaped

bodies within its outer edges said bodies having free ends disposed towards each other and in the same plane, said bodies being spaced apart by an intervening strip of metal at their free ends and integral with the body at their opposite ends, said bodies being exactly alike, said sheet blank



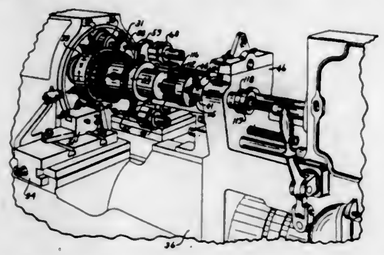
body being folded upon itself to form a head with U shaped semicircular bodies with parallel arms at right angles to the semicircular bodies, said arms being integral with the bracket supports, and said supports having fastening plates with apertures for screws to mount same.

1,805,743. SHEET CUTTING MACHINE. ARTHUR B. SAUNDERS, Nashua, N. H. Filed Aug. 29, 1929. Serial No. 389,185. 4 Claims. (Cl. 164—20.)



1. A machine for trimming sheets of asbestos and cement including a rectangular cutter, means for vertically reciprocating the cutter, and a conveyor for transporting the sheets to be cut and supporting them during the cutting operation, said sheets projecting beyond the edges of the conveyor support and the cutting blades engaging the projecting portions of the sheets.

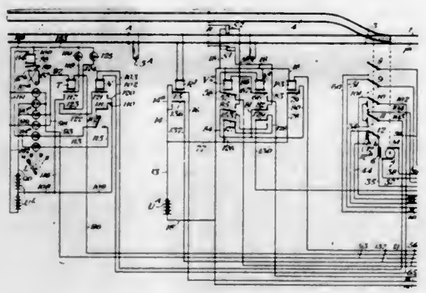
1,805,744. HARVESTER. LEWIS A. SHAW, Washington County, Colo. Filed Aug. 19, 1929. Serial No. 386,835. 5 Claims. (Cl. 56—384.)



1. A harvester comprising a rigid frame, wheels supporting and altitudinally adjustable relative to said frame, manually-operable means carried by said frame for selective altitudinal adjustment of said wheels, a toothed raking frame in trailing relation laterally of said first frame and manually operable through a longitudinal vertical arc relative to said frame, a toothed, wheel-supported, lifting frame in cooperating relation with said raking frame and pivotally secured thereto, manually-operable means for moving both said raking frame and said lifting frame through a vertical arc relative to said first frame and means for limiting the vertical movement of said raking frame and continuing the vertical movement of said lifting frame relative to said raking frame.

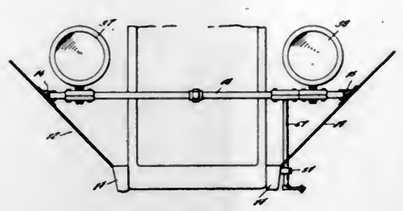
1,805,745. UMBRELLA. RAYMOND A. TEEL, Glenolden, Pa. Filed Nov. 26, 1928. Serial No. 322,055. 3 Claims. (Cl. 135—32.)

2. In an umbrella the combination with a rib channeled longitudinally, of a sleeve embracing the rib having an integral socket portion closed by the rib, there being a slot intersecting that portion of the socket remote from the rib, and a stretcher extending through the slot and anchored at one end in the socket.



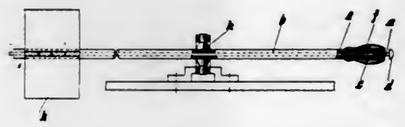
1,805,746. SCREW MACHINE. EDGAR WARNER, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 30, 1930. Serial No. 424,693. 65 Claims. (Cl. 101—401.5.)

1. In a knurling machine; the combination of a support member; a matrix carrier on the support member; means to rotate the matrix carrier; a plurality of matrices; and means to feed the matrices.



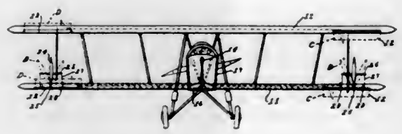
52. A method of manufacture of type wheels including the step of knurling a series of characters on stock; and the step of removing the surplus metal from the type wheel.

1,805,747. RAILWAY TRAFFIC CONTROLLING APPARATUS. ARTHUR R. WHITEHORN, Chicago, Ill., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 27, 1927. Serial No. 229,048. Renewed Apr. 30, 1930. 12 Claims. (Cl. 246—3.)



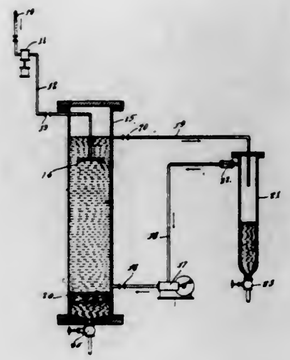
2. In combination with a railway traffic governing device, manually operable means located at a point remote from the device for moving the device to one position or another, a polarized relay located at such remote point, means for supplying said relay with current of one polarity or the other in accordance with the position of the device, and means effective under certain conditions of traffic adjacent the device to periodically interrupt the supply of such current to the relay.

1,805,748. DIRIGIBLE HEADLIGHT. GEORGE W. WILSON, Canfield, Ohio. Filed Feb. 18, 1930. Serial No. 429,248. 2 Claims. (Cl. 240—62.51.)



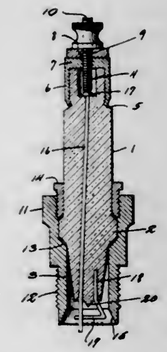
1. In combination with an automobile including a steering gear, a hollow transverse bar, a rod movably supported within the bar, gear casings supported on said bar, stub shafts mounted in certain of said casings, a drive shaft journaled in another of said casing, gears mounted on the drive shaft and stub shafts, means on the rods engageable with one stub shaft for turning said one stub shaft while the other stub shaft is stationary, means connecting the drive shaft within the steering gear to move said rod in either direction, said means on the rod movably supported thereon, and a limit stop on the gear casings supporting the lamp for said last-mentioned means.

1,805,749. ROWING DEVICE. FERDINAND ZOGLAUER, Peterswalds, near Arlau, Czechoslovakia. Filed Feb. 7, 1930. Serial No. 426,722. 3 Claims. (Cl. 9—24.)



1. In a rowing device of the character described, the combination with an oar, a steel tube within which the loom of the oar is arranged, means for holding said loom within said steel tube, a handle surrounding the upper end of said tube, and striking blades in connection with the lower end of the said loom.

1,805,750. AUTOMATICALLY CONTROLLED AIRPLANE. ROBERT M. ADAMSON, Los Angeles, Calif. Filed Jan. 21, 1929. Serial No. 333,911. 15 Claims. (Cl. 244—29.)

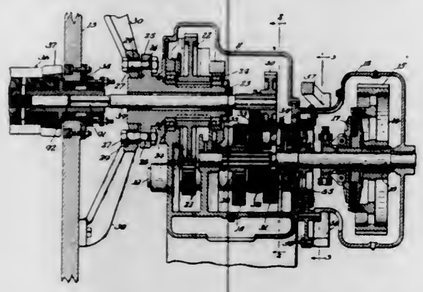


1. An automatically controlled airplane comprising a wing, fins movably mounted on the end portions of the wing, ailerons adjustably connected with the wing and connections between the fins and ailerons, said connections including a joy-stick.

1,805,751. PROCESS FOR TREATING, SEPARATING AND PURIFYING OILS. ERNST BERTHOLD AUERBACH, Berlin, Germany. Filed Sept. 8, 1927, Serial No. 218,368, and in Germany Sept. 25, 1926. 8 Claims. (Cl. 87—12.)

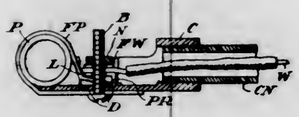
1. A process of fractionating oils comprising bringing said oils in contact with liquid carbon-dioxide, absorbing certain constituents of said oils in said liquid carbon-dioxide, separating the liquid carbon-dioxide from the remaining oil and then separating the absorbed constituents from the carbon-dioxide.

1,805,752. SPARK PLUG. BERT A. BIRDSALL, Decatur, Nebr., assignor of one-half to Henry C. King, Decatur, Nebr. Filed Apr. 2, 1929. Serial No. 351,958. 1 Claim. (Cl. 123—169.)



A spark plug, comprising a shell having an inner edge at one end beveled, an insulation body secured in the shell with one end adjacent said beveled edge, a main electrode extending through said body and projecting straight from said end, and an auxiliary electrode extending from said end of the body and having one portion angled to parallel the face of said bevel and a terminal portion extending transversely of and spaced from the adjacent straight portion of the main electrode.

1,805,753. POWER CHURN. ARTHUR H. BOILEAU, Cedar Rapids, Iowa, assignor, by mesne assignments, to Cherry-Burrell Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 4, 1928. Serial No. 282,750. 8 Claims. (Cl. 259—85.)



1. In a churn wherein there is included a drum, a drum driving shaft, a roll in the drum, a roll driving

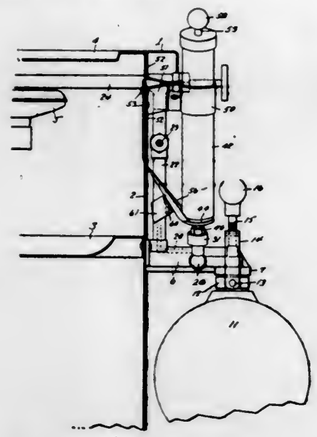
shaft, and a main drive shaft, the combination therewith of a counter shaft adjacent said main drive shaft, gearing for rotating the drum driving shaft from the counter shaft, a shiftable gear on the main drive shaft selectively

engaging the gearing on the counter shaft for rotating the drum driving shaft at different speeds, and means for rotating the roll driving shaft from the main drive shaft.

1,805,754. ELECTRICAL CONNECTING DEVICE FOR ELECTRICAL CONDUCTORS. STEPHEN W. BORDEN, Summit, N. J., assignor, by mesne assignments, to Crouse-Hinds Company. Filed Apr. 8, 1926. Serial No. 100,683. 17 Claims. (Cl. 247—1.)

1. An electrical connecting device comprising a rigid portion and a conductor clamping portion and means for connection to another conductor, the rigid portion having means on a plurality of sides thereof for interchangeably engaging and thrusting against the conductor and the clamping member being adjustable into juxtaposition to any one of said sides.

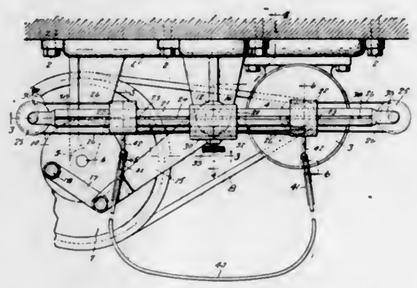
1,805,755. COMPOSITION FOR PRODUCING IRRITATING SMOKE CLOUDS. DONALD B. BRADNER, Hamilton, Ohio. Filed Jan. 24, 1928. Serial No. 249,215. 4 Claims. (Cl. 167—47.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



1. In a composition for producing irritating smoke cloud, a mixture of white phosphorus and a halogen derivative of acetophenone.

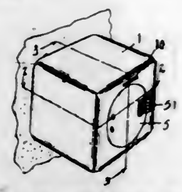
1,805,756. METHOD OF MAKING METAL ALKYL COMPOUNDS. EDGAR C. BRITTON, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Nov. 16, 1926. Serial No. 148,714. 30 Claims. (Cl. 260—11.)

20. In a method of making a lead alkyl compound, the steps which consist in treating magnesium with an ethyl halide in a non-reactive solvent medium, adding to the resulting product a lead halide at a temperature below 50° C., and finishing the reaction by heating at a temperature materially above 50° C.



26. In a method of making a metal alkyl compound, the steps which consist in treating magnesium with an alkyl bromide, then with an alkyl chloride in a non-reactive carrier liquid, treating the resulting compound with a halide of the metal at a temperature not much in excess of room temperature, and finishing the reaction at a materially higher temperature.

1,805,757. AIR PUMP FOR PRESSURE FUEL TANKS. LEE S. CHADWICK, Shaker Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 13, 1927. Serial No. 160,846. 11 Claims. (Cl. 230—235.)

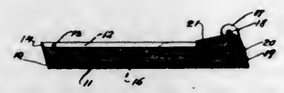


1. In combination with a receiver, an air pump, a ported part to which said pump is adapted to be applied for transmitting air from the pump to the receiver, a rotatable valve controlling the passage of air through the port of said part, means supporting the pump for rotation with its discharge opening in communication with said port, and further means releasably holding the pump in such position and in such manner as to permit of its being rotated, the pump and said valve having cooperating parts through which a driving connection is effected between the pump and valve whereby the valve is adapted to be rotated through the instrumentality of the pump.

1,805,758. VIBRATING APPARATUS. LEE S. CHADWICK, Shaker Heights, Ohio. Filed Apr. 6, 1928. Serial No. 267,829. 10 Claims. (Cl. 128—63.)

7. In a vibrating machine, the combination of a vibrating bar, mechanism for actuating the same, members movable along the bar on opposite sides of its center of oscillation, guides carried by the bar outwardly beyond the range of movement of said members, two flexible elements engaged; respectively, with said guides each having its opposite ends connected, respectively, to the opposed members whereby said members, when adjusted, are caused to move simultaneously like distances in opposite directions, means for securing the members in various adjusted positions along the bar, means for taking up slack in said flexible elements, and means for connecting the opposite ends of an applicator strap to said members.

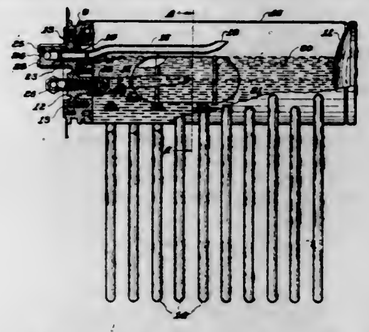
1,805,759. SAFE. HARRY B. CHAMBERLAIN, Kalamazoo, Mich. Filed Aug. 3, 1928. Serial No. 297,170. 4 Claims. (Cl. 109—1.)



1. In a wall safe, the combination of an integral cast box recessed at its back, a vertical channel bar disposed in said recess, and bolts projecting inwardly therethrough with nuts at their inner ends for attaching said box, as specified.

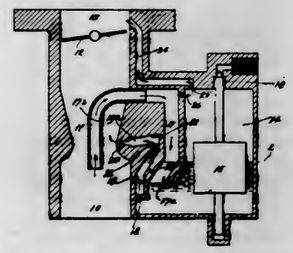
1,805,760. DEPOSIT RECEPTACLE. GEORGE COUGHLIN, New York, N. Y. Filed Mar. 28, 1928. Serial No. 265,414. 7 Claims. (Cl. 232—59.)

1. A deposit receptacle including a tubular body having end closures, the upper one of the end closures having a coin slot, a tube of less area than the tubular body integral with and suspended frmo the upper end closure, spaced from the wall of said tubular body and projecting into the body, said tube communicating with said slot and being provided with stationary internal baffles.



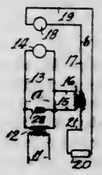
1,805,761. PAD. GENNARO DE PAMPHILIS, New York, N. Y. Filed June 12, 1929. Serial No. 370,204. 3 Claims. (Cl. 129—26.)

1. A sheet pad holder, comprising a pad support having upright and inclined pad-limiting means, said upright pad limiting means provided with weight guides, and a weight bar arranged between and having portions slidably mounted within said guides for exerting a pressure in the direction towards said pad support.



1,805,762. EVAPORATOR. DON G. ELLIS, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 21, 1928. Serial No. 263,563. 3 Claims. (Cl. 62—126.)

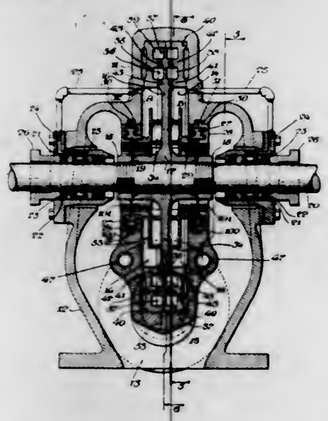
3. In a mechanical refrigerating system an evaporator having a removable head provided with refrigerant inlet and outlet openings, means for maintaining a relatively constant level of liquid refrigerant therein, and a removable outlet tube projecting into the evaporator through



the outlet opening, said tube having an opening therein remote from the removable head and in a plane above the level of the liquid refrigerant.

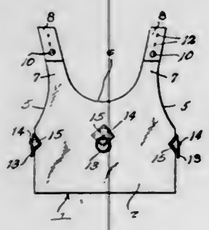
1,805,763. CARBURETOR. ROY F. ENSIGN, South Pasadena, Calif., assignor to Ensign Carburetor Co., Ltd., Huntington Park, Calif., a Corporation of California. Filed June 22, 1926. Serial No. 117,671. 9 Claims. (Cl. 261—72.)

1. In a carburetor having mixture passage to which suction is applied, a fuel chamber, and walls defining a fuel passage leading from the fuel chamber into the mixture passage, said fuel passage having therein at a definite level an overflow edge to which fuel must be lifted to the discharged into the mixture passage; the combination of means to feed air into the liquid in the fuel chamber outside of said walls defining said fuel passage, and below the normal fuel level at a point vertically below said overflow edge in the fuel passage, and means to apply to the surface of the fuel in the fuel chamber a pressure lower than that in said air feeding means.



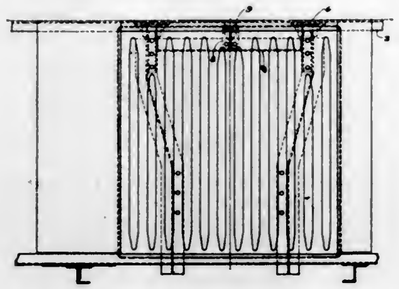
1,805,764. ELECTRIC CIRCUITS. EDWARD A. EVERETT, Long Island City, N. Y., and MATTHEW H. LOUGHRIDGE, Bogota, N. J.; said Loughridge assignor to said Everett. Filed Mar. 23, 1928. Serial No. 264,234. 6 Claims. (Cl. 175—374.)

6. In a system as described, the combination, a main circuit including a translating device, an auxiliary cir-



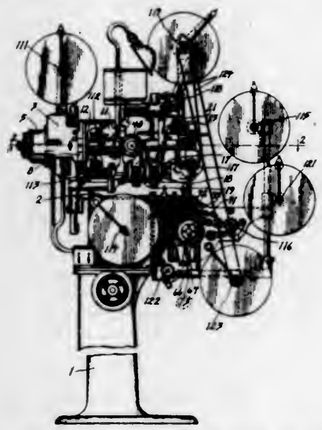
cuit including a second translating device, means for energizing each of said circuits and a transformer having a primary coil connected with said main circuit and a secondary coil connected with said auxiliary circuit means whereby when the translating device in the main circuit is energized said second translating device is deenergized and when the translating device in the main circuit is deenergized said second translating device is energized.

1,805,765. CENTRIFUGAL PUMP. RHEUEL H. FREDERICK, Irvington, N. J., assignor to Ames Pump Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 31, 1928. Serial No. 266,149. 10 Claims. (Cl. 103—110.)



1. A centrifugal pump comprising a suction chamber having a liquid inlet, an impeller chamber having an outlet passage, an annular velocity chamber encircling the impeller chamber and in communication at its receiving end with said outlet passage, means for varying the capacity of said outlet passage, and a rotor mounted to rotate in the impeller chamber and velocity chamber, said rotor comprising a body having an impeller within the impeller chamber, vanes within the velocity chamber, and a liquid inlet to the impeller from the suction chamber.

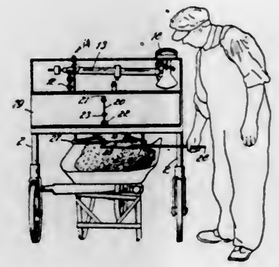
1,805,766. INFANT'S GARMENT. ELMER H. GROVES, Minneapolis, Minn. Filed Sept. 17, 1929. Serial No. 393,193. 1 Claim. (Cl. 2—111.)



A garment of the character described comprising a tubular body encircling portion formed of a single piece of material, a series of flexible sheets stitched to the body portion in circumferentially spaced relation, an eyelet mounted on each sheet and projecting outwardly therefrom, a metallic coupling ring loosely mounted for swinging movement on each eyelet, and means extending circumferentially on the rear of the body encircling portion for adjusting said portion.

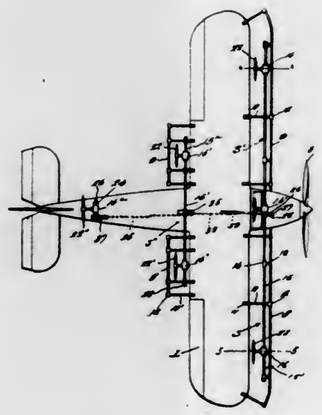
1,805,767. RAILWAY CAR CONSTRUCTION. AUGUST W. L. HARTBAUER, Chicago, Ill. Filed Mar. 23, 1929. Serial No. 349,380. 2 Claims. (Cl. 105—280.)

1. In a railway car of the dumping type having a center sill construction, a door attached to said center construction by a pair of hinges, a beam secured to the door adjacent the hinged edge thereof and extending substantially between the hinges, a bracket secured to said beam, and a shelf upon the center construction which supports the bracket when the door is in closed position.



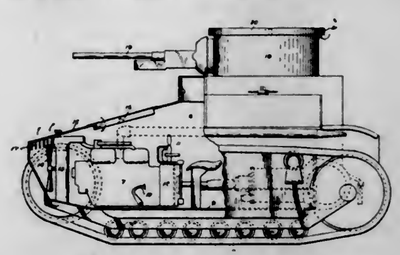
1,805,768. PHOTOGRAPHIC PRINTING MACHINE. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1928. Serial No. 266,659. 10 Claims. (Cl. 95—75.)

1. In a photographic printing machine the combination with a revoluble film feed sprocket comprising two axially spaced wheels and an axial shaft extending therebetween, of a film guide disposed for guiding superposed films engaged on said sprocket and provided with an exposure aperture between said wheels and facing inwardly of the sprocket, closed light passage means between said wheels and leading to said exposure aperture and angled to avoid said shaft and including a removable structure completing the angled portion thereof, and reflecting means carried on said removable structure for reflecting printing light through said passage means to said exposure aperture.



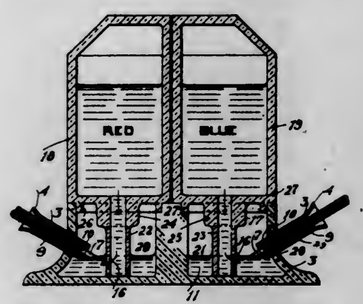
1,805,769. PORTABLE BATCHER. CHARLES S. JOHNSON, Champaign, Ill. Filed July 23, 1930. Serial No. 470,003. 5 Claims. (Cl. 265—27.)

1. A portable batcher for weighing a batch and discharging it into a wheelbarrow, comprising a supporting frame, legs upon which said frame is mounted for convenient movement and leveling and between two of which a wheelbarrow may be slid with the handles of the wheelbarrow projecting beyond one end of said frame, a hopper suspended in said frame in position to be directly above the center of a wheelbarrow inserted between said legs, a



weighing scale mechanism connected to said hopper and mounted upon that end of said frame beyond which the handles of the wheelbarrow project, a gate for controlling the discharge from the hopper, and a handle for operating said gate, said handle projecting through the space between said two legs.

1,805,770. AEROPLANE. EARL RAYMOND KELLY, Kansas City, Kans. Filed Apr. 12, 1930. Serial No. 443,771. 4 Claims. (Cl. 244—14.)



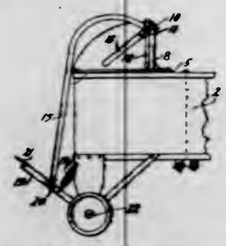
1. An aeroplane including in combination a fuselage, a transverse sustaining wing, a frame supported adjacent the leading edge of said wing on opposite sides of said fuselage, a rock shaft mounted in each of said frames, a housing carried by each of said rock shafts, a housing operatively connecting said rock shaft, a frame supported adjacent the trailing edge of said wing on opposite sides of said fuselage, a housing rockably mounted in each of said last mentioned frames, a rock shaft operatively connecting said last mentioned housing, a motor mounted in each of said housings, and having a drive shaft extending through the housing, a propeller carried by said drive shaft, and means for simultaneously rocking all of said rock shafts.

1,805,771. VEHICLE. HARRY A. KNOX, Davenport, Iowa. Filed Nov. 4, 1929. Serial No. 404,812. 6 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

6. In a vehicle of the class described, an enclosed body forming a single compartment, a power plant in the forward portion of the compartment, a driver's seat in rear of the power plant, and means for drawing air from the rear of the compartment for discharge forwardly of the power plant.

1,805,772. DESK STAND AND INK FOUNTAIN. FABYAN J. LAMARRE, Springfield, Mass. Filed Feb. 9, 1928. Serial No. 253,056. 1 Claim. (Cl. 120—4.)

An ink receiving desk stand comprising a base member to receive the ink, an elongated tubular member for receiving a pen holder having a shouldered opening at its inner end to receive the pen, a removable sleeve member in the tubular member having a shouldered opening, the shouldered opening of the tubular member serving as a stop for the sleeve member, the shouldered opening of the sleeve serving as a stop for the end of the pen holder to limit the distance the pen enters the ink in the base member.



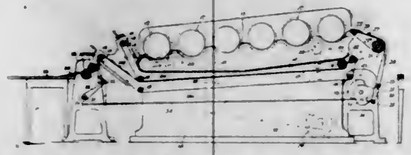
1,805,773. VEGETABLE GLUE AND METHOD OF MAKING SAME. IRVING F. LAUCKS and GLENN DAVIDSON, Seattle, Wash., assignors to I. F. Laucks, Incorporated, Seattle, Wash., a Corporation of Washington. Original application filed Oct. 29, 1923, Serial No. 671,881. Divided and this application filed Sept. 23, 1927. Serial No. 221,609. 20 Claims. (Cl. 87—17.)

1. A method of making an adhesive composition, which comprises treating a proteinous vegetable seed flour including fiber and other natural substances, and an aqueous alkaline medium and an alkali-soluble copper compound.

1,805,774. WRINGING MACHINE. SIMEON C. LAWLOR, Chicago, Ill., assignor to S. C. Lawlor Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1927. Serial No. 214,312. 2 Claims. (Cl. 15—262.)

1. In a wringer mechanism, a pair of rigidly mounted parallel plates, a stationary roller mounted between said

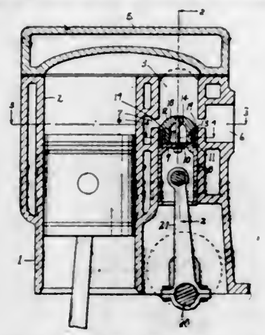
plates and having a bearing in each plate in a corner thereof, an inclined slot in each plate extending diagonally from a point near the bearing of the stationary roller in a straight line to the opposite upper corner of the plate, a movable roller having a shaft inserted at its ends through



the slots of both plates, an operator operated rigid steel frame connected to the ends of the shaft of said movable roller for moving the same up and down in a straight line in said inclined slots into engagement with the stationary roller, and a spring means for returning the movable roller to its upper position.

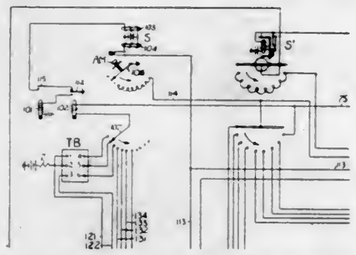
1,805,775. **METHOD OF MAKING ESTERS OF THE FATTY ACIDS.** FRANK E. LICHTENTHALER, Newton Highlands, Mass. Filed Jan. 21, 1926. Serial No. 82,854. 5 Claims. (Cl. 260—106.)

5. The method of making ethyl acete which consists in mixing together dilute acetic acid, ethyl alcohol, sodium acid sulphate and anhydrous ammonium alum.



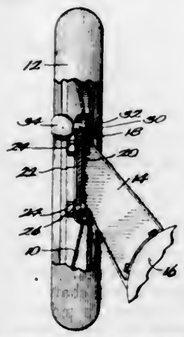
1,805,776. **COORDINATED IRONING AND FOLDING MACHINE.** WALDEMAR F. MAYER, Rutherford, N. J., assignor to The Alba Corporation, St. Albans, Vt., a Corporation of Vermont. Filed Dec. 21, 1928. Serial No. 327,577. 5 Claims. (Cl. 68—69.)

1. In an ironing and folding machine, an ironing mechanism having ironing and conveying devices and feeding devices to deliver a sheet to said ironing mechanism, a folding machine to receive the ironed sheet from said conveying devices and including a movable folding device, means to drive said conveying devices, and means connected to said driving means to actuate said feeding and folding devices coordinately and in timed relationship to one another whereby the sheet may be folded in definite predetermined widths.



1,805,777. **VALVE STRUCTURE.** ARTHUR C. MCINTYRE and WILLIAM H. MCINTYRE, Kalamazoo, Mich. Filed Dec. 10, 1925. Serial No. 74,545. 10 Claims. (Cl. 123—188.)

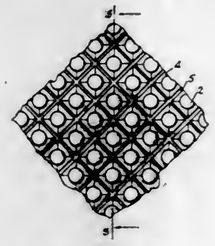
1. In a valve structure, the combination of a cylinder open at the top and having an annular surrounding passage communicating with the cylinder through a continuous annular slot-like port, a piston valve body member having a recess in its inner end and an annular packing ring channel open at the inner end of the body member, a head member constituting an end wall for the packing ring channel, said head member having a reduced neck movably fitting said recess in said body member, a connection for said head member to said body member permitting limited movement thereof relative to the body member, and a packing including a pair of superimposed split rings arranged in said channel to break joints, the inner ring having a flange at its head end overhanging the outer ring, the width of the packing exceeding the width



of the port and also exceeding the depth of said channel in said body member whereby the packing is subject to the thrust of the piston members.

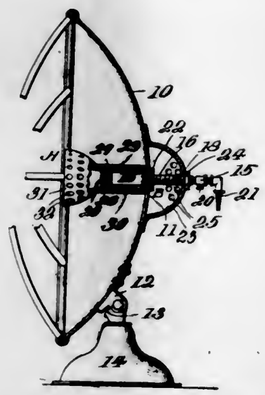
1,805,778. **TELEPHONE SYSTEM.** RICHARD MERCER, Harrow, England, assignor to Associated Telephone & Telegraph Company, Kansas City, Mo., a Company of Delaware. Filed Feb. 26, 1927, Serial No. 171,119, and in Great Britain Mar. 26, 1927. 20 Claims. (Cl. 179—18.)

13. In combination, registering devices each arranged to register a series of impulses and a non-registering device, an impulse distributor, and means for operating said distributor between series of impulses so that a plurality of series of impulses are directed to a like plurality of said registering devices and one series of impulses is directed to said non-registering device.



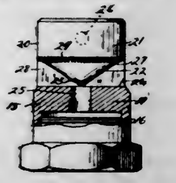
1,805,779. **LOCK.** RAYMOND METZ and WELLINGTON J. QUIRK, Evanston, Ill. Filed Dec. 13, 1926. Serial No. 154,342. 4 Claims. (Cl. 70—122.)

1. In a lock in combination, two members, the first entering the second, to be detachably secured together, a lock



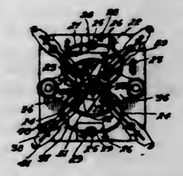
part carried by one of said two members located, when the parts are in locked position, inside said second member, key operated means for so moving the lock member that the first mentioned parts may be separated, and resilient means for normally urging the lock part into an unlocked position.

1,805,780. **COUNTERSUNK SUCTION ROLL SHELL.** WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio, a Corporation of Ohio. Filed Dec. 13, 1926. Serial No. 154,363. 2 Claims. (Cl. 92—53.)



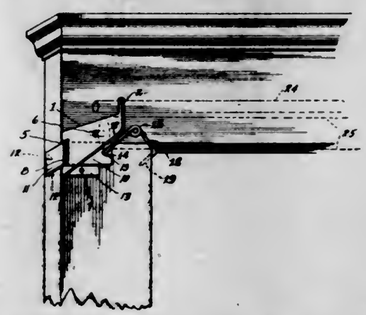
1. In a rigid cylindrical suction element, a wire supporting wall provided with a plurality of circular perforations throughout the greater part of its surface said perforations having surrounding outwardly inclined countersunk surfaces bounded at their outer edges by perimeters of angular configuration closely abutting one another on all sides and collectively presenting a net-like wire supporting surface carried by said element and lying between and filling the spaces between the countersunk outer ends of all said perforations, the aforesaid countersunk areas greatly increasing the effective suction area of said element without appreciably weakening the same.

1,805,781. **GAS HEATER.** HENRY H. MORETON, Santa Monica, Calif. Filed June 14, 1928. Serial No. 285,479. 14 Claims. (Cl. 126—92.)



1. A gas heater of the character described comprising a circular reflector, an axially disposed burner section supported by said reflector and having a portion extended rearwardly through the reflector, a perforated burner disk closing the discharge end of said burner section, a retainer sleeve engaging said disk and said burner section so as to hold the disk in place, and a perforated casing of refractory material enclosing said sleeve and the discharge end of said burner section, so that combustion will take place within aid around said casing.

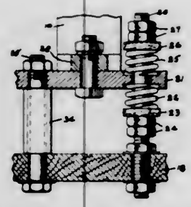
1,805,782. **SPRAY NOZZLE.** ELMER G. MUNZ, Detroit, Mich. Filed Jan. 16, 1928. Serial No. 247,195. 9 Claims. (Cl. 299—121.)



1. In a sprinkling system, the combination of a nozzle head having a substantially vertical discharge orifice, a conical deflecting surface arranged above the orifice in the path of the water issuing from said discharge orifice for spreading the same into a thin film, said surface being outwardly inclined in the direction of flow to direct the film laterally and outwardly, said surface being provided at its upper end with a series of unconfined grooves that extend in the direction of flow whereby said film is subdivided into a series of finely divided streams capable of being projected further than said film.

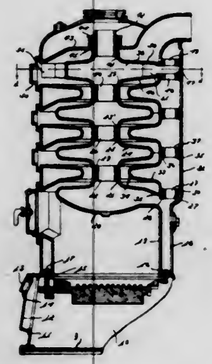
1,805,783. **SOCKET.** HALVOR M. OLSEN, Oak Park, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1926. Serial No. 152,737. 12 Claims. (Cl. 173—328.)

1. In a device of the character described comprising a base, means for holding an audion tube, a pair of spring members forming a double loop and secured at their respective ends to said base to form a resilient element, and means for securing said holding means to said resilient element to resiliently support said holding means from said base.



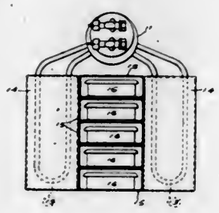
1,805,784. **SUPPORTING BRACKET.** RALPH PETERSON, Elbe, Wash. Filed Feb. 2, 1927. Serial No. 165,404. 2 Claims. (Cl. 156—24.)

1. A device of the character described comprising a bracket having a laterally extending base portion adapted to seat flatly against a casing and having teeth thereon for projection into the casing and having an opening therethrough adjacent the base, and an attaching plate extending through said opening with its inner portion support-



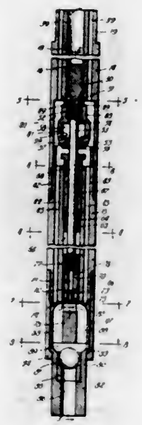
ingly overlying the base of the bracket and provided with a hole, and having its outer end turned inwardly to form a stop for engaging the edge of the casing with teeth turned inwardly from said stop for holding engagement with the casing and a spring having one end hooked within the hole in said plate and its other end in holding engagement with the inner edge of the casing.

1,805,785. REFRIGERATED FOOD CABINET. JOHN R. REPLOGLE, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Aug. 25, 1924, Serial No. 733,913. Divided and this application filed Feb. 18, 1928. Serial No. 255,244. 3 Claims. (Cl. 248—16.)



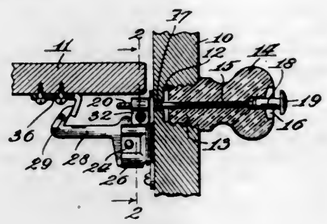
1. A resilient suspension device comprising, a supporting member and a frame member, a stud bolt having an intermediate portion loosely mounted in one of the members, a resilient element associated with each end of the stud bolt, means for retaining the resilient elements in operative relation between the member and the ends of the stud bolt, means for securing one end of the stud bolt rigidly to the other member, and means for securing the members rigidly together to render the suspension non-resilient.

1,805,786. FURNACE. JOHN SPOUSTA, River Rouge, Mich. Filed Feb. 9, 1928. Serial No. 253,147. 2 Claims. (Cl. 122—218.)



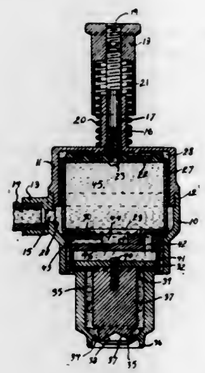
2. A furnace of the class described, comprising: a plurality of duplicate double walled sections, with the spaces between said walls in intercommunication, the inner wall of each of said sections being bulged inwardly away from the outer wall, a plurality of centrally disposed disc-like hollow intercommunicating members enclosed by said double walled sections, the edges of adjacent disc-like members extending in overlapping spaced relation to said bulged walls, the space between said bulged walls and said disc-like members forming sinuous passages for the escape of gas, a supporting section comprising spaced walls from continuations of the walls of the double walled sections, the space between said walls being in communication with the space between said doubled walled sections, a centrally disposed hollow globe shaped container connected to said supporting section and said disc-like members and establishing communication between the enclosed spaces of said sections and members and providing support for said disk-like members, a top disc-like hollow section communicating at its central portion with said disc-like members and having a hollow portion overlying the uppermost of said double walled sections and communicating therewith, a hollow top section communicating with said top disc-like section and having an exit flue in communication with said sinuous passages.

1,805,787. MECHANICAL REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1927. Serial No. 169,764. 3 Claims. (Cl. 62—95.)



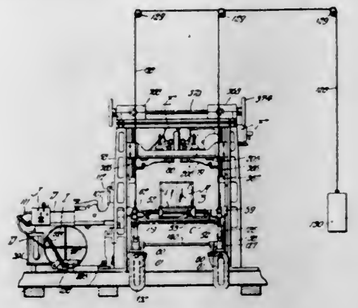
2. In refrigerating apparatus, a refrigerant expansion unit comprising a drum, separate depending pipe loops arranged in rows on each side of said drum, said pipe loops being in open communication with said drum, and separate heat transfer means thermally associated with the loops in each of said rows.

1,805,788. PUMP. WILBUR N. SQUIRES, Joplin, Mo., assignor to Hydraulic Deep Well Pump Company, Joplin, Mo., a Corporation of Missouri. Filed Sept. 16, 1927. Serial No. 219,922. 23 Claims. (Cl. 103—46.)



1. In combination, a motor cylinder, a double acting piston therein, a pump cylinder, a piston therein, a rod connecting the pistons, means to apply pressure alternately to opposite sides of the motor piston, and means for checking the motion of the moving parts at each end of their stroke, said means comprising chambers within which the pistons move, said chambers having restricted outlets and means for trapping fluid in said chambers during the corresponding strokes.

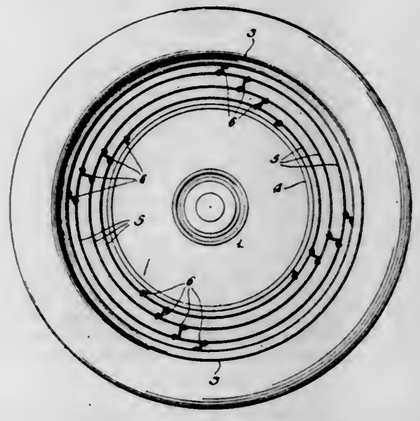
1,805,789. PUSH CATCH FOR DOORS. THOMAS F. STUART and HENRY A. MOORE, Los Angeles, Calif.; said Stuart assignor to Mary E. Bigelow, and said Moore assignor to Albert H. Brunner, Los Angeles, Calif. Filed Dec. 28, 1927. Serial No. 243,144. 2 Claims. (Cl. 292—227.)



1. In a push catch for doors, a knob formed in a single piece from vitrified earthen material and having a portion adapted to be screw seated in a door, said knob having an axial opening, a push rod extending through said opening, a plate secured on the inner face of the door, a spring pressed hook pivotally mounted on said plate, a pair of plates adjustably clamped on the inner portion of said push rod for engaging said hook and swinging the same upon its pivot and said pair of plates having sliding connection with the plate on the inside of the door.

1,805,790. LIQUID DISPENSING VALVE. THOMAS L. TITUS, Omaha, Nebr., assignor of one-fourth to Myrtis Blackburn, Omaha, Nebr., and one-fourth to Francis K. Hart, Council Bluffs, Iowa. Filed June 20, 1928. Serial No. 286,870. Renewed Mar. 17, 1930. 3 Claims. (Cl. 221—103.)

1. In a structure of the class described, a piston, a cylinder fitting slidably upon said said piston and having end-openings for admitting fluid to opposite sides of the piston, means for actuating the piston longitudinally of the cylinder, the cylinder being movable longitudinally, fixed means forming stops for limiting the longitudinal movement of the cylinder in each direction, said fixed means at one end of the cylinder having a perforate seat engageable by said end of the cylinder and through which contents of the cylinder may be forced by movement of the piston toward the same while said end of the cylinder is engaged with said seat, and means for preventing return flow through said perforate seat to the cylinder during movement of the piston away from said seat, so that as said end of the cylinder is disengaged from the seat the cylinder-space may be refilled from a body of fluid surrounding the cylinder.

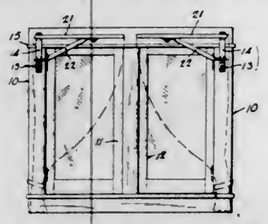


1,805,791. BOX STRAPPING MACHINE. SIDNEY W. TREAT, Chicago, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company, a Corporation of Delaware. Filed Aug. 30, 1926. Serial No. 132,410. 40 Claims. (Cl. 100—31.)

3. A wrapping mechanism for folding a binder about a plurality of sides of a box, said mechanism comprising a fixed member and a pair of binder folding arms having spaced pivots thereon, said arms being adapted to receive said binder, and clamping means at the free ends of said arms for holding said binder on said arms during the folding thereof.

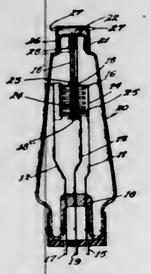
37. The combination of jaws for crimping a length of girth about a pair of strap ends, means for positioning an end of a continuous girth within said jaws, and means for subsequently severing said end from said continuous girth.

1,805,792. COOLING MEANS FOR VEHICLE WHEELS. ROBERT S. WENTWORTH, Germantown, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1926. Serial No. 157,511. 4 Claims. (Cl. 301—6.)



1. A brake drum heat dissipating device comprising a plurality of radially spaced bands of heat radiating material arranged between the brake drum and tire rim for dissipating by radiation the heat generated in the brake drum and for preventing the same affecting the tire rim.

1,805,793. WINDOW CURTAIN HANGER. JOHN WITTEMANN, Milwaukee, Wis. Filed Oct. 22, 1927. Serial No. 227,874. 3 Claims. (Cl. 156—22.)

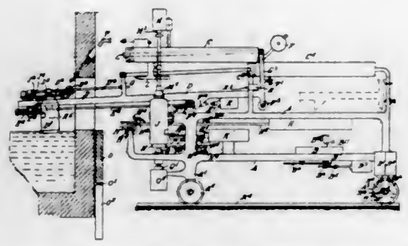


1. In a window curtain hanger, a supporting bracket comprising a back strip of metal having an outwardly

bowed portion intermediate its ends and an angular loop of metal having a vertically disposed middle portion separated from the back strip and connected thereto by arms at its ends above and below the said bowed portion, a curtain supporting bar and a brace therefor adjustably connected at one end to the bar and free at its other, the

free end of the brace and the corresponding end of the bar being spaced to receive between them the arms of the said loop, pivotal connections between the spaced ends of the said bar and brace and the loop, and means carried by the loop for maintaining the pivotal connection in position.

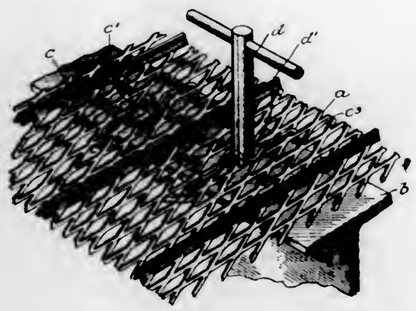
1,805,794. AUDION TUBE. GEORGE A. YANOCHOWSKI, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1926. Serial No. 84,595. 3 Claims. (Cl. 250—27.5.)



1. An audion tube including an evacuated bulb having reduced end portions, a tubular cathode member within said bulb the inner end of which is closed and its outer end flared and sealed to the upper reduced end portion of said bulb whereby the interior of the tubular cathode is separated from the evacuated portion of the bulb, a refractory member within said cathode having a pair of parallel orifices therein, a looped resistance element extending through said orifices, a top cap fitted onto the upper reduced portion of said bulb, terminals for said cap connected to said heating element, a base member fitted onto the lower reduced portion of said bulb, a terminal supported by said base member, and a split collar carried by said terminal making connection with said tubular cathode for positioning the same and for extending the electrical connection to said cathode.

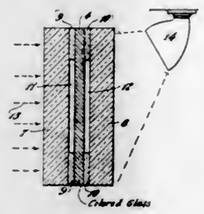
1,805,795. FASTENING DEVICE. ANTON ZEINDLHOFER, Vienna, Austria, assignor to Groove Lock Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 26, 1928. Serial No. 249,507. 1 Claim. (Cl. 292—162.)

A fastening device comprising a pair of frames hinged together, said frames each having a flat top, the top of one frame being wider than the top of the other and overlapping the same when the frames are in closed position, the wider top having an upstanding rib at one edge thereof, the other top having a flange at the edge thereof adjacent said rib and extending above and below the same, a portion of which abuts against said rib when the frames are in closed position, and a C-shaped catch slidably mounted up on and embracing said flange, one end of the C-shaped catch being adapted to engage the rib when the frames are in closed position to secure the same together.



1,805,796. MACHINE FOR MAKING GLASSWARE. PIERRE ARBEIT, Paris, France, assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Apr. 24, 1925. Serial No. 25,574, and in France May 1, 1924. 34 Claims. (Cl. 49—5.)

1. Glass-working apparatus comprising fluid pressure actuated means for performing a plurality of glass fabricating operations, a rotary distributor for receiving and distributing fluid pressure to the several fabricating means in predetermined order and time, and fluid pressure means operable in response to predetermined movements of certain of said fabricating means respectively for imparting predetermined intermittent step-by-step rotary movements to said distributor.

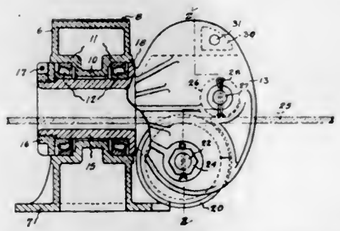


32. A glass working machine comprising a carriage, a parison mold mounted thereon and adapted to be projected within a glass furnace to gather a charge of molten glass by suction from a glass bath therein, penumatic means for determining the interval of time said mold remains in contact with said bath in said furnace, and a valve associated with said pneumatic means for varying said time interval.

1,805,797. LATH FASTENER. ALBERT J. BATES, Chicago, Ill., assignor, by mesne assignments, to Bates Expanded Steel Corporation, East Chicago, Ind., a Corporation of Delaware. Filed Oct. 11, 1926. Serial No. 140,705. 6 Claims. (Cl. 72—118.)

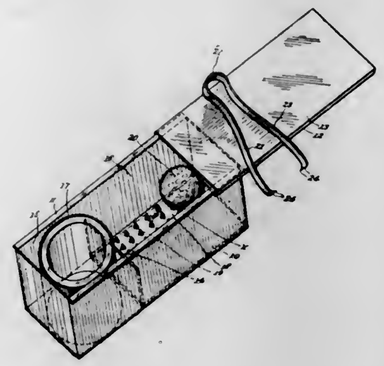
3. A fastener for securing a lath to a flanged beam, formed from a single strip of metal and consisting of a pair of oppositely facing hook-members adapted to extend through the lath, and an intermediate connecting member for bearing against the lath, said connecting member being normally of such length that the hook-members may be shifted without flexure to straddle the beam flange and having a straight and transverse central portion adapted to fit in a kerf or slot in a turning tool and sufficiently pliable to be bent by the tool relatively to the end portions of the connecting member in order to bring said end portions towards each other and thereby cause the hook-members to be drawn into interlocking relation with said flange.

1,805,798. COMBINED ELECTRIC SIGN AND MIRROR. MARK D. BEDROSSYAN, Springfield, Mass. Filed Dec. 2, 1929. Serial No. 411,195. 3 Claims. (Cl. 40—130.)



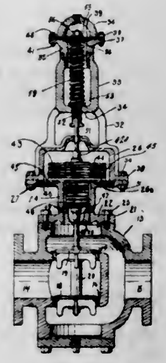
1. A combined sign and mirror having a portion of its silvering removed to form the characters of the sign proper, means for illuminating the characters comprising a bulb arranged above the silvered surface of the mirror, a reflector for projecting the rays downward onto the silvered surface, a colored glass back of the mirror, and means for reflecting the light onto and thru the colored glass onto the mirror whereby the characters composing the sign are colored and visible in the mirror, as described.

1,805,799. PROCESS FOR MAKING SULPHITE PULP FROM DOUGLAS FIR AND OTHER RESINOUS CONIFERS. HENRY K. BENSON, Seattle, Wash. Filed July 27, 1929. Serial No. 381,679. 3 Claims. (Cl. 92—2.)



1. The improvement in processes of pretreatment of Douglas fir and other resinous coniferous chips with volatile alkali to eliminate resins, coloring matter and other non-cellulose materials contained therein so that the chips can subsequently be treated with sulphite solutions to manufacture pulp, comprising the circulation over uncrushed chips in enclosed systems of volatile alkali aqueous solutions at temperatures of 70–150° C., the subsequent substantial cooling of the solutions before release is made of pressure, and the draining and washing of the chips substantially at 70° C.

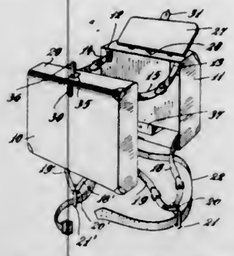
1,805,800. FAIRLEADER. KNUTE BERGER, Seattle, Wash. Filed July 23, 1929. Serial No. 380,332. 3 Claims. (Cl. 254—190.)



1. A fairleader comprising a main frame, a sheave frame having a shank rotatably supported in said main frame, said shank being tubular to permit the passage of a cable therethrough, a sheave in said sheave frame for supporting the cable in a position at one side of the axis of said shank, and counterbalancing means at the opposite side of such axis, whereby the sheave will be held in proper guiding position at all times regardless of the direction of the line of pull of the cable.

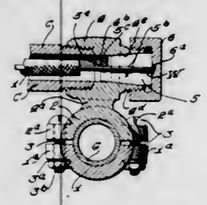
1,805,801. GOLF BALL PAINT KIT. HOWARD S. BOYLAN and GEORDIS F. BRETZ, Council Bluffs, Iowa. Filed Mar. 19, 1929. Serial No. 348,333. 3 Claims. (Cl. 91—60.)

1. A golf ball paint kit comprising a container closed at its bottom and sides and open at its top with flanges along its longitudinal edges, a slidable cover for the container having inturned flanges to interlockingly cooperate with the container flanges, a partition in the container dividing same into short and long compartments, a paint can contained in the short compartment in which the balls to be painted are adapted to be dipped, a ball drying rack removably mounted in the long compartment, and a pair of tongs for dipping the balls adapted to be contained in the long compartment.



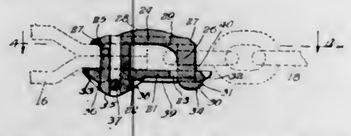
1,805,802. SENSITIVE FUEL GOVERNOR. LYLE W. BROWNE, Marshalltown, Iowa, assignor to The Fisher Governor Company, Inc., Marshalltown, Iowa. Filed Apr. 14, 1926. Serial No. 102,087. 1 Claim. (Cl. 137—153.)

In a governor valve structure, a valve proper including a valve body, a valve stem, a disk, a small bellows affixed



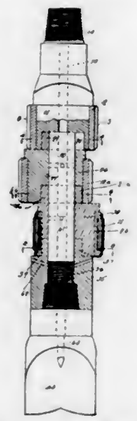
to one side of said disk and a large bellows to the other side thereof, said bellows being hydraulically connected together, a frame affixed to said valve body, means for securing said disk to the intermediate portion of said frame, a diaphragm housing carried by the outer end of said frame, a diaphragm therein, an operative connection between said diaphragm and said large bellows and means for applying pressure to said diaphragm from a source independent of the pressure within said valve structure.

1,805,803. LIFE SAVING DEVICE. LUIS BULGARINI, Buenos Aires, Argentina, assignor of one-third to Luis Salvo, Buenos Aires, Argentina, and one-third to Santiago Imas, New York, N. Y. Filed May 9, 1930. Serial No. 450,923. 10 Claims. (Cl. 9—17.)



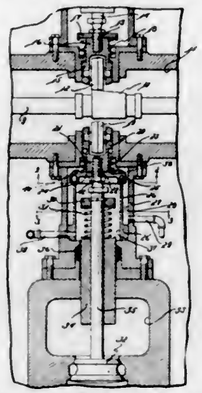
4. A device of the class described comprising a collapsible structure consisting of front and rear buoyant members, flexible connecting straps therebetween, releasable means for securing said members to each other to form a single compact structure, and recesses within said members, adapted to receive said straps when said members abut against each other.

1,805,804. GROUNDING CLAMP. HENDRIX K. CALDWELL, San Diego, Calif. Filed May 7, 1929. Serial No. 361,239. 5 Claims. (Cl. 247—1.)



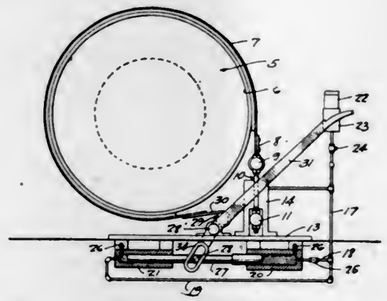
1. In a device of the class described, a grounded pipe clamp means, a nipple integral therewith, the one end of said nipple adapted to receive an electric conduit, said nipple provided with a bore continuing from said conduit, said bore diverging as it extends from said conduit forming a wedging surface, a plug means adapted to clamp a wire extending through said conduit and into said bore, and means for wedging said plug into said bore.

1,805,805. CLEVIS FOR BRAKES. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Dec. 4, 1926, Serial No. 152,587. Renewed Mar. 5, 1931. 3 Claims. (Cl. 59—86.)



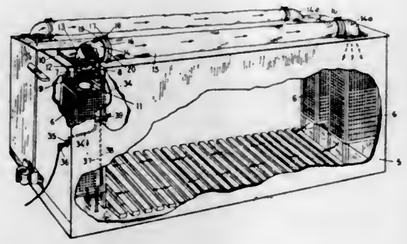
1. A clevis for connecting a small link of a railway brake chain with an end of a brake operating device, said clevis comprising a plate having an inner surface for fitting against the surface of said device and parallel to the plane of an end link of the chain, a pin carried by said plate and extending at substantially right angles thereto for extending through said device, a second pin also extending at approximately right angles to said plate for extending through said link of the chain, a second plate having perforations to receive said pin, said second plate adapted to lie flat against said device and means on the pins for holding said second plate in parallel relation to said chain link, said plates being provided with reinforcing flanges extending longitudinally thereof.

1,805,806. EXPANDING REAMING OR CUTTING TOOL. STEWART L. CAMPBELL, Berkeley, and JOHN GRANT, Los Angeles, Calif.; said Campbell assignor to said Grant. Filed Mar. 7, 1930. Serial No. 434,034. 6 Claims. (Cl. 255—74.)



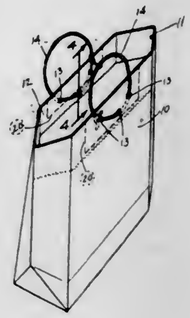
1. In an expansive tool of the character described, a mandrel, a plurality of carrier eccentrics mounted on the mandrel, at least one of said eccentrics being rotatable on the mandrel and rotatable with reference to the remaining eccentrics, wall contacting elements carried by the several eccentrics, and stop means to limit the relative rotation between the eccentrics comprising recesses in some of the eccentrics and stop lugs on the others which enter said recesses.

1,805,807. VALVE MECHANISM OIL JACKET. CHARLES COULOMBE, Detroit, Mich. Filed Apr. 17, 1930. Serial No. 445,013. 7 Claims. (Cl. 121—167.)



5. In combination: an engine having a steam chest communicable through a port with a cylinder; a lubricant chamber positioned above said steam chest; a cam shaft rotating in said lubricant chamber; a valve for closing said port; a spring for normally retaining said valve in closed position; cams on said cam shaft; a push mechanism projected through said steam chest and operable through engagement with a cam on said cam shaft for moving said valve to open position; a cylinder positioned in embracing relation to a portion of said push mechanism positioned above said steam chest to provide a condensate chamber for reception of condensate resulting from steam escaping thereinto from said steam chest; and a conduit for delivering condensate from said condensate chamber; a peripheral boss on said cylinder adjacent its lower end; a cylindrical neck concentrically arranged in embracing relation to said cylinder and closely engaging at its inner surface the periphery of said boss, the upper portion of said cylinder being spaced from said neck to provide an escaped lubricant receiving chamber for reception of lubricant escaping from said lubricant chamber around said push mechanism.

1,805,808. BOOSTER BRAKE DEVICE. ROLAND R. CAUM, Whittier, Calif. Filed Feb. 12, 1930. Serial No. 427,721. 15 Claims. (Cl. 188—151.)

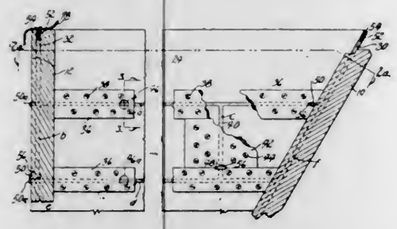


1. A brake mechanism comprising a brake drum, a brake shoe for said drum having a live end and a dead end, operating means secured to the live end of said shoe to apply the shoe to said drum; a fluid transmission system including an expansible chamber operator secured to the dead end of said brake shoe to cause displacement of fluid in the chamber of said operator on movement of the dead end of said shoe, an expansible chamber booster, fluid transmission means connecting the chambers of said operator and said booster, said booster being connected to said operating means to aid the application of the shoe to said drum.

1,805,809. COOLING APPARATUS. FRED JOHN DAY, Los Angeles, Calif. Filed Apr. 1, 1929. Serial No. 351,584. 2 Claims. (Cl. 62—24.)

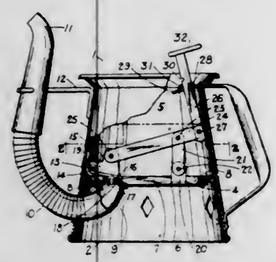
1. In apparatus of character described, in combination, a car body having ice bunkers at opposite ends, a fabric tube adapted to be detachably mounted upon the top of said car to form a portion of means for circulating air through said bunkers, and means within said tube to maintain it in diametrical extension while permitting its longitudinal collapse.

1,805,810. PAPER SHOPPING BAG. WALTER H. DEUBENER, St. Paul, Minn. Filed Nov. 11, 1929. Serial No. 406,251. 2 Claims. (Cl. 229—54.)



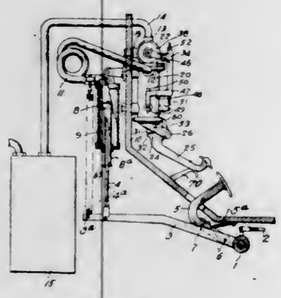
1. A paper shopping bag including a reinforced mouth and a substantially independent flexible complete loop forming handle therefor at each side, said loop extending in opposite directions through successive openings, there being at least three openings arranged substantially upon the arc of a circle the chord of which extends between the outer most openings, the bag having at least one loop receiving intermediate opening and positioned upon the opposite side of said chord from the mouth of the bag and an appreciable distance from said chord but not appreciably beyond the biscetors of the base angles of an inverted equilateral triangle, the sides of which are equal to the length of said chord and the base of which is constituted by said chord.

1,805,811. CIGARETTE PACK OPENER. AXEL P. DE VEGA, Boston, Mass. Filed Jan. 16, 1929. Serial No. 332,950. 6 Claims. (Cl. 131—59.)



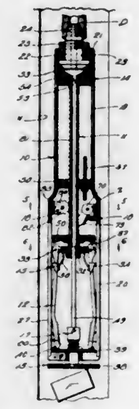
1. A cigarette pack opener of the character described comprising a thin flat blade of uniform thickness of a maximum width materially exceeding the thickness of a pack and converging at one end and of a length greater than the width of the package to provide a handle, operable to enter the pack between the ends of the cigarettes and the end of the enclosed wrapper and upon endwise movement selectively to cut a part or the whole of said end from the side walls of the wrapper.

1,805,812. BOAT SEAM SEALING METHOD. ARTHUR R. DE WITT, Harbor Springs, Mich., assignor of one-half to Carl L. Wright, Harbor Springs, Mich. Filed Feb. 24, 1930. Serial No. 430,499. 9 Claims. (Cl. 9—6.)



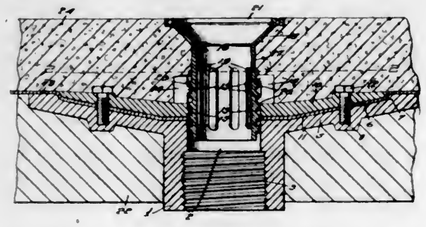
1. A boat seam sealing method comprising the construction of a boat with channeled seams, the forcing of heated air thru the seams and the forcing of a sealing compound into the seam at one point under sufficient pressure to force the compound throughout the length of the seam.

1,805,813. OIL MEASURE. HAROLD B. DONLEY, Columbus, Ohio, assignor to The Columbus Auto Brass Company, Columbus, Ohio, a Corporation of Ohio. Filed June 18, 1929. Serial No. 371,872. 1 Claim. (Cl. 221—16.)



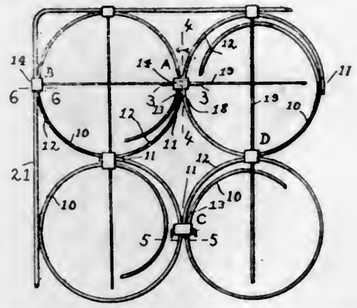
In a liquid measure, a body, a wall disposed within said body and serving to define the bottom of a liquid measuring chamber, said bottom being formed to include a diametrically extending level portion having a discharge opening at one end thereof, inclined portions sloping toward said level portion and a valve for opening and closing said discharge opening.

1,805,814. FLUID PRESSURE CONTROL. HERBERT U. DURANT, Los Angeles, Calif. Filed Mar. 5, 1929. Serial No. 344,191. 5 Claims. (Cl. 303—54.)



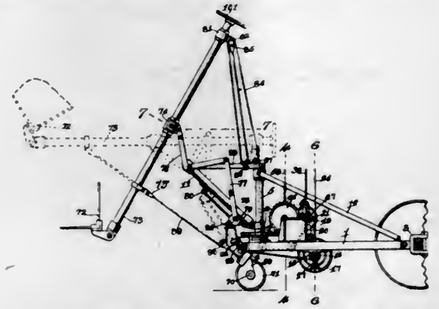
1. Pressure regulating means comprising a piston, a rotary valve adapted for oscillation to open or close the valve, the valve when open being adapted for pressure discharge to shift the piston in one direction, means for yieldably resisting said shifting of the piston, means for moving the yieldable means so as to oppositely shift the piston and adjust the tensioning of the yieldable means, and means for oscillating the valve for respectively closing and opening the valve by shifting the piston in said first mentioned direction and in said opposite direction.

1,805,815. FISHING TOOL. JOSEPH G. FITZPATRICK, Anaheim, Calif. Filed Mar. 5, 1930. Serial No. 433,268. 20 Claims. (Cl. 294—88.)



1. A tool of the character described including, gripping arms, means for normally urging the arms radially outward, fluid pressure means for operating the arms downwardly, means for moving the lower ends of the arms inwardly during downward movement, and releasable control means normally holding the arms against movement.

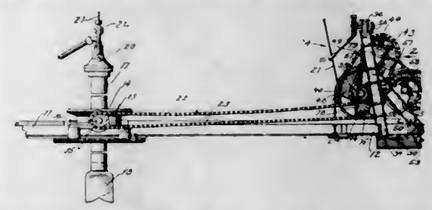
1,805,816. FLOOR DRAIN FIXTURE. WELLS S. FLEMING, Portland, Oreg. Filed Dec. 15, 1928. Serial No. 326,386. 1 Claim. (Cl. 285—37.)



In a floor drain, a body having a tubular bore and an integral lateral flange, a plate formed with an opening to register with said bore, said body having a recess to receive the edge of said plate, a sheet of water-proofing material arranged between the plate and body, spaced studs rising from said plate at the edge of the opening therein, a pair of said studs being in diametrically-opposed relation and formed wtih segmental threads, the bore of the body being formed with corresponding threads, a drain section adapted to fit within said bore, said drain section being formed with diametrically-opposed segmental threads to cooperate with the threads of the studs and bore to secure and permit fine adjustment of the drain section, the relation of the threads on the drain section and studs permitting free vertical movement of the drain section when such threads are not in registry.

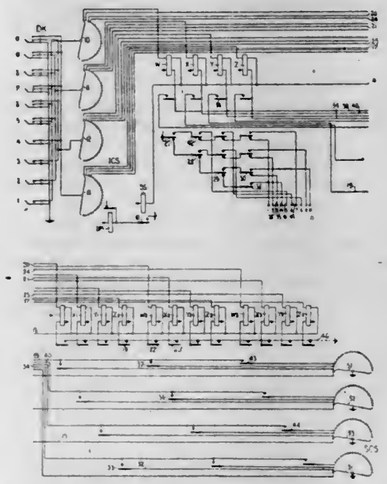
1,805,817. SPRING CUSHION CONSTRUCTION. WILLIAM B. FOSTER, Utica, N. Y., assignor to Foster Brothers Manufacturing Company, Utica, N. Y., a Corporation of New York. Filed Aug. 22, 1929. Serial No. 387,634. 3 Claims. (Cl. 5—275.)

2. In a spring cushion construction, the combination of a pair of adjacent coiled springs one of which has the extremity of its end coil free of the overlapping portion of said end coil and provided with a two-sided hook, an open-ended stirrup having two legs, said legs straddling the said hooked extremity and the adjacent portion of the end coils of both springs, and a locking wire extending transversely of the stirrup and through the legs of said stirrup beyond the wires of said springs and between the sides of said hook, and closing the opening of said stirrup, whereby the wires of said springs are retained in said stirrup, contact of the sides of said hook with said locking wire preventing endwise movement of the hooked extremity from the said locking wire while the base of the stirrup holds the connecting part of the hook closely upon said locking wire.



1,805,818. MANURE LOADER. RAYMOND H. FRISBIE, Kewaunee, Wis. Filed Jan. 20, 1930. Serial No. 422,172. 3 Claims. (Cl. 214—1.32.)

1. A device of the class described including a traction supported frame, an upright carried thereby, means for imparting rotating movement to said upright, an inclined supporting member connected with the upright, a bell crank at the outer end of the inclined supporting member, a movable arm pivotally mounted on one end of the bell crank, a fork member carried by one end of said arm and normally disposed in a lowered position, means for raising the fork supporting end of said arm and means for returning said arm to its normal position.

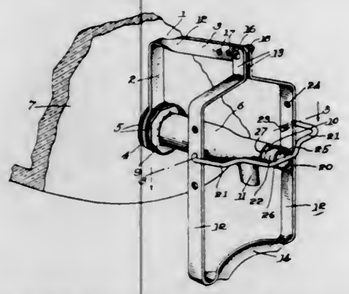


1,805,819. TWO-SPEED ROTARY DRIVE. EDWIN W. GOESER, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Oct. 11, 1928. Serial No. 311,731. 5 Claims. (Cl. 255—19.)

1. In combination: a derrick structure having a base and a rotary table; a plurality of draw-works uprights secured to said base at their lower ends and to the derrick at their upper ends; a rotatable drum rotatably supported by certain of said uprights; a line-shaft mounted on certain of said uprights above said drum; drum-drive means connected to said line-shaft and said drum; a jack-member rotatably supported by certain of said uprights near said base and operatively connected to said table;

jack-member operating-means for operatively connecting said line-shaft and said jack-member; a counter-shaft rotatably supported outside said derrick in a lower plane than said line-shaft and adapted to be driven by a prime mover; high-speed drive-means connected to said line-shaft and said counter-shaft; and low-speed drive-means connected to said line-shaft and said counter-shaft.

1,805,820. TELEPHONE SYSTEM. PERCY FRANK GUNNING, Liverpool, England, assignor to Associated Telephone & Telegraph Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 25, 1929, Serial No. 349,604, and in Great Britain May 23, 1928. 5 Claims. (Cl. 179—90.)



1. In an arrangement for controlling the operation of an impulse sender, a plurality of relay groups, means for operating said relay groups in turn to record successive digits of a number, and means whereby one of said relay groups controls the operation of the sender to transmit all the digits recorded.

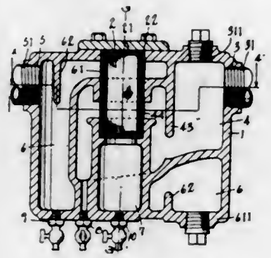
1,805,821. AUTOMATIC FAUCET OPENING ATTACHMENT. VIRGIL B. HAIG, Los Angeles, Calif. Filed Sept. 4, 1928. Serial No. 303,887. 7 Claims. (Cl. 251—117.)

1. An automatic faucet opening attachment for faucets of the push button type, comprising fixed supporting means adapted to be secured to the outside of the faucet structure, lever means pivotally mounted on said supporting means and provided with a thrust-receiving member extending in position to be engaged by, and to receive an

inward thrust from, a receptacle brought into a position beneath the faucet outlet; actuating means in position to engage and exert inward pressure upon the push button of the faucet; and link means connected at the for-

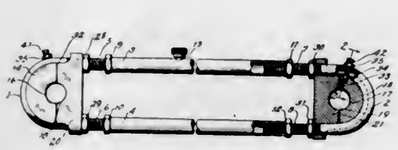
ward end to said actuating means and pivotally connected at the rear end to said lever means at a position intermediate the thrust-receiving member and the axis of pivotal support of the lever means.

1,805,822. VEHICLE TOWING DEVICE. FRANK HANSES, Glenview, Ill. Filed Feb. 18, 1930. Serial No. 429,431. 6 Claims. (Cl. 280—33.9)



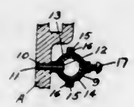
1. A towing device for motor vehicles comprising a draft member dimensioned and arranged for extending lengthwise of the vehicle frame; guide bearings for said draft member adapted to be mounted n the vehicle frame toward the front and rear ends thereof, stops carried by the draft member; springs arranged for co-operation with said stops respectively in the opposite longitudinal movements of the draft member through said guide bearings and to react between said stops and the respective guide bearings, the draft member being arranged at its opposite ends for towing connection with another vehicle.

1,805,823. DOLL EYE-BULB. SAMUEL HEILWEIL, New York, N. Y., assignor of one-half to Abraham Messer and one-half to Robert B. Messer, Brooklyn, N. Y. Filed Apr. 11, 1930. Serial No. 443,310. 5 Claims. (Cl. 46—40.)



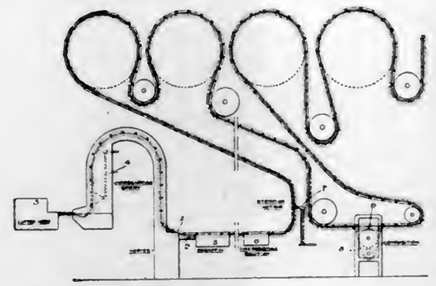
1. In combination with a doll's head, having openings at the eyes, eyeball members within the doll's head and behind said openings and consisting of electric bulbs with translucent eye-forming members on their fronts, sockets supporting said electric bulbs, a bracket supporting said sockets and pivotally mounted at its top end, a contact finger depending from said bracket and engageable with a stationary contact, an electric circuit including said lamps and contacts, and adjustable means for changing the center of gravity of said bracket and parts thereon for gravity control of said contact finger to close the circuit at desired positions of said doll's head.

1,805,824. AIR FILTER. LEO B. HENDRICKSON, Battle Creek, Mich., assignor to Union Steam Pump Company, Battle Creek, Mich. Filed Aug. 23, 1929. Serial No. 388,021. 2 Claims. (Cl. 183—66.)



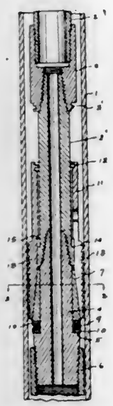
1. In an air filter, the combination of an outer shell, a central cylindrical screen chamber with a cover at one end thereof and a collecting well at the other, a cylindrical screen scroll therein, an annular intake chamber with an intake connection and surrounding and connecting with said screen chamber and connected thereto by an annular port, and an annular outlet chamber having outlet connection, said outlet chamber surrounding and communicating with a part of said screen chamber and connected thereto by an annular port.

1,805,825. ADJUSTABLE CONNECTING ROD. WALLIE HILLS and FRED W. HILLS, Ashton, Kans., assignors of one-third to Althelbert A. Fisk, Hutchinson, Kans. Filed Apr. 11, 1930. Serial No. 443,337. 5 Claims. (Cl. 74—47.)



1. A connecting rod comprising a continuous hollow loop-shaped reservoir, bearings at the ends of the loops in ported communication with the reservoir and valves normally closing the ports, movable to uncover the ports upon movement of the connecting rod.

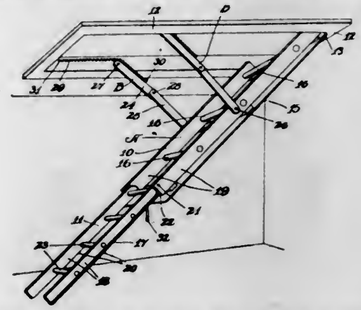
1,805,826. MOTOR LUBRICATING DEVICE. ROY E. LANGMACK, Minneapolis, Minn. Filed Jan. 14, 1929. Serial No. 332,377. 2 Claims. (Cl. 184—18.)



1. A device for connecting a lubricant pressure pipe to the cylinder of an internal combustion engine, comprising a tubular nipple secured in the cylinder and having an accurate head to receive the pipe, a cap member releasably secured to and complementing the head member to retain the pipe, brackets mounted on the engine, to support the pipe and for urging the same toward the cylinder to insure retention of the nipple therein.

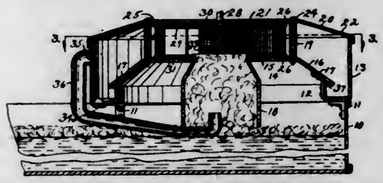
1,805,827. PROCESS OF MAKING MATCHES. CLARE K. LIGHT, Oswego, N. Y., assignor, by mesne assignments, to The Diamond Match Company, a Corporation of Maryland. Filed July 30, 1930. Serial No. 471,631. 6 Claims. (Cl. 144—60.)

1. A process of making matches comprising applying wax to a portion of a splint at one end of the latter, then applying a free-flowing fire-resisting material to such portion, then blowing the material from such portion to and upon the unwaxed part of the splint, and finally applying match composition to the free end of such waxed portion.



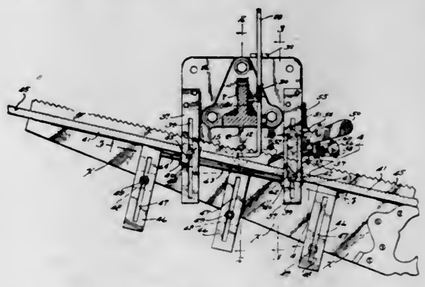
1,805,828. SPEAR. GEORGE A. LOWREY, Pelly, and WALTER F. HALL, Goose Creek, Tex. Filed July 19, 1927. Serial No. 206,974. 3 Claims. (Cl. 294—96.)

1. A pipe puller including an operating stem having an annular external abutment, a sleeve-like downwardly flared mandrel on said stem and supported by said abutment, expansible pipe engaging means around the stem above the mandrel, releasable interengaging means carried by the stem and engaging means respectively, adapted, when engaged to hold said pipe engaging means out of cooperating relation with the mandrel, said pipe engaging means having a free longitudinal movement on the stem when said interengaging means are released, and antifriction means between said abutment and mandrel to facilitate the free rotation of the stem relative to the mandrel.



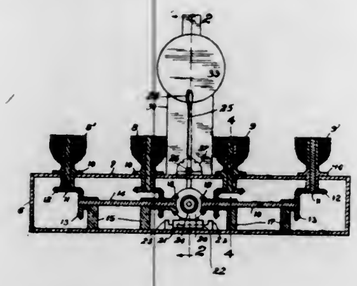
1,805,829. COLLAPSIBLE CONCEALING LADDER. REINHOLD B. MAERSCHKE, St. Paul, Minn. Filed Feb. 21, 1929. Serial No. 341,661. 5 Claims. (Cl. 228—50.)

5. A collapsible concealing ladder for buildings including, a frame and a closure hinged thereto, ladder portions one of which is fixed to said closure and the other slidable on said fixed portion, means for supporting said slidable portion upon said fixed portion slidably, and folding bracket means for supporting said closure and ladder portions in a manner to permit the same to be collapsed



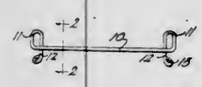
and folded into said frame when said closure is closed and to extend therefrom when said closure is open, and cam means for placing said slidable portion above said fixed portion.

1,805,830. FOAM DESTROYER. CHARLES DOREL MASON, Des Moines, Iowa. Filed May 20, 1929. Serial No. 364,508. 2 Claims. (Cl. 183—2.6.)



2. A foam destroyer comprising a screen, means for delivering foam to and through said screen at a high velocity for breaking the bubbles of the foam and condensing the same into a liquid, and means for returning vapors thus formed to said foam delivering means.

1,805,831. RE-TOOTHING MACHINE. VINCENT J. MATHIEU, New Bedford, Mass., assignor to Foley Saw Tool Company, Incorporated, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 5, 1929. Serial No. 344,415. 5 Claims. (Cl. 76—29.)



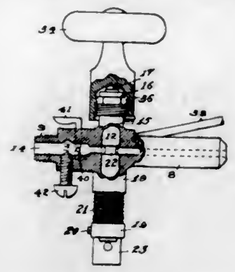
1. In a saw re-toothing machine, the combination with a tooth forming device including a movable die and means for operating the same, of a saw carrier, means for guiding the carrier for straight line movement past the die, means for imparting a step by step tooth spacing movement to the saw and carrier, and a clamping device for holding a saw on the carrier with the line, on which teeth are to be formed, parallel to the line of movement of the carrier, said carrier being adjustable in the plane of the saw and about the line of movement of the die to vary the pitch of the back edges of the teeth formed by the die.

1,805,832. SHOE SHINING MACHINE. JOHN SANGER MCDOWELL and WILLIAM CARSON, Midland, Ontario, Canada. Filed Apr. 25, 1930. Serial No. 447,236. 3 Claims. (Cl. 15—31.)

1. In a shoe shining machine, a supporting structure, two sets of brushes operably mounted thereupon, the brushes of each set being geared together for concurrent operation, a motor, means slidably supporting the motor, a driving element borne by the motor, a driven element carried by each brush set, and a hand lever fulcrumed on the aforesaid supporting structure and connected to the motor for shifting it to engage its driving element with one or the other of said driven elements.

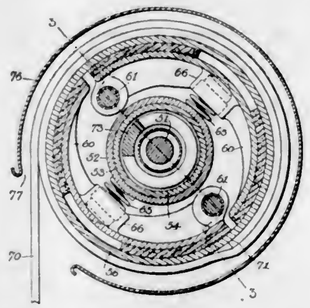
1,805,833. CLIP. DANIEL MCLEOD, Jr., Dallas, Tex. Filed Jan. 6, 1930. Serial No. 418,956. 3 Claims. (Cl. 24—66.)

2. A clip comprising a straight elongated bar having its ends bent at an angle thereto and then rebent inwardly and parallel to the bent portion to form loops, the free end of said rebent portion being normally in contact with the bar and terminating at the side thereof opposite the loop.



1,805,834. GLIDER PROPULSION DEVICE. GUSTAV A. MILLER, Seattle, Wash. Filed Sept. 16, 1930. Serial No. 482,233. 5 Claims. (Cl. 244—20.)

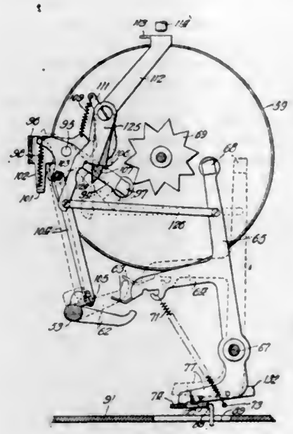
1. A glider propulsion device consisting of auxiliary wing members disposed below the fixed wings of a glider; said wings being pivoted at their adjacent ends to the glider body; a hand lever; a cross head disposed for vertical movement; guide for said cross head; linkage operatively connecting said cross head and both auxiliary wings; and linkage operatively connecting said cross head and the hand lever.



1,805,835. GAS APPLIANCE. ALBERT J. MILLIGAN, San Francisco, Calif. Filed Feb. 18, 1929. Serial No. 340,952. 8 Claims. (Cl. 126—52.)

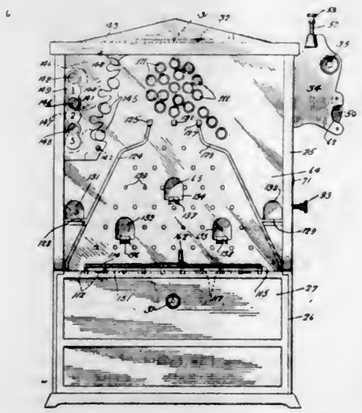
1. In combination with a gas stove adapted to support a utensil; a gas burner; a service valve having a longitudinal hole therethrough and a transverse plunger slidable in said valve and having a passage registerable with said

hole; automatic means operated by said utensil for operating said plunger, and manual means for operating said plunger.



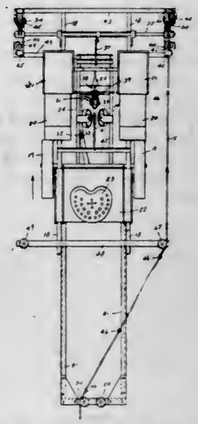
1,805,836. SHOCK ABSORBER. COURTNEY N. MITCHELL, Cleveland Heights, Ohio. Original application filed May 26, 1924, Serial No. 715,852. Divided and this application filed Nov. 2, 1928. Serial No. 316,772. 8 Claims. (Cl. 267—9.)

8. A rebound check for spring vehicles comprising in combination with a drum mounted rotatably on one of the two vehicle members between which the vehicle springs react; a spring connected to the drum for being tensioned by the rotation of the drum in one direction and for rotating the drum in the opposite direction by its reaction; means connecting the drum with the other vehicle member for rotating the drum in the direction for tensioning the spring by the separating movements of the vehicle members; a stud axle on which the drum is mounted for rotation; a pair of brake shoes pivotally carried by the stud axle for swinging about their pivots oppositely against the circumaxial surface of the drum, and means for pressing them thereagainst, the pivots of the two shoes being relatively remote in opposite direction from the axis of the stud axle and drum, both shoes trending from their pivots in the same circumferential direction, whereby the rotation of the drum in one direction causes both shoes to hug the circumaxial surface of the drum for increasing friction and its rotation in the opposite direction causes both shoes to be relaxed as to their pressure on the drum for diminishing friction.



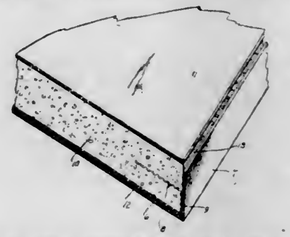
1,805,837. COIN-CONTROLLED VENDING MACHINE. FRED L. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1928. Serial No. 292,237. 9 Claims. (Cl. 273—143.)

1. A machine comprising a plurality of rotatable reels, dispensing mechanism controlled by said reels, means for setting said reels in motion, automatic devices for stopping the rotation of said reels, and manually operable devices whereby the reels may be stopped independently of said automatic stopping means, said last-mentioned



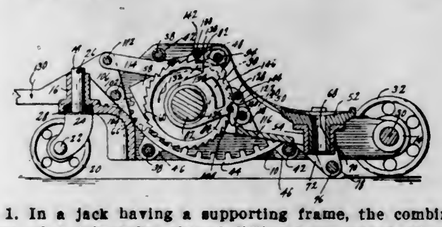
devices comprising a stop member on the reel, a spring-projected stop lever, a latch normally holding said lever out of action, and a member adapted to be actuated by the operator for releasing said latch.

1,805,838. TARGET PRACTICE VENDING MACHINE. FRED L. MILLS, Oak Park, Ill., assignor to Milk Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1928. Serial No. 292,927. 9 Claims. (Cl. 194—81.)



1. A machine of the class described, comprising a casing equipped with a coin slot and a coin receptacle, a plurality of targets visibly arranged within the casing and having designations associated therewith indicating rewards to be obtained or points to be scored, a driver whereby a coin after being inserted in said slot may be driven at said targets, the coins being retained in visible position outside said receptacle after being driven, means for transferring the coins from such position to said receptacle, and means operable by said last-mentioned means for changing the designations association with said targets.

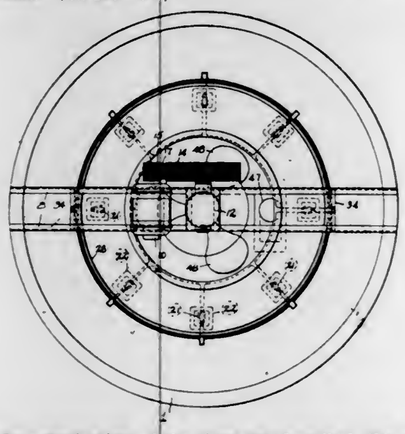
1,805,839. PLANT-SETTING MACHINE. AUSTIN MORRIS, Greenwood, Ind. Filed Apr. 7, 1930. Serial No. 442,074. 3 Claims. (Cl. 111—3.)



1. Plant-setting apparatus including a portable device adapted to be moved across a field, a receptacle carried thereby for the reception of a plant to be set, a hinged closure for said receptacle, and a reciprocable member automatically operable at predetermined intervals to engage said hinged closure for opening the same and to simultaneously discharge a plant from said receptacle.

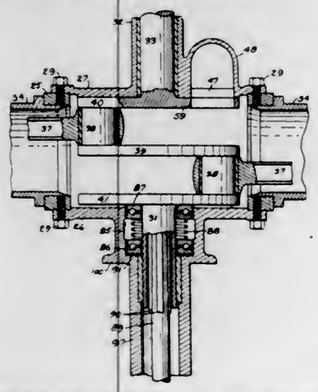
1,805,840. REENFORCED AND PROTECTED WALL BOARD EDGE. GUSTAVE ADOLPH NEW, Port Clinton, Ohio, assignor to The American Gypsum Co., Port Clinton, Ohio, a Corporation of Ohio. Filed Jan. 20, 1930. Serial No. 422,035. 4 Claims. (Cl. 154—45.9.)

4. A plastic board comprising a body having a textile fabric strip embedded in the edge thereof, and paper coverings on opposite sides of the body, one of said coverings having a marginal flap folded against said edge and across said strip, said flap being attached to said edge by glue having a retarder mixed therewith.



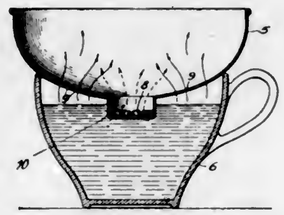
1,805,841. PLANETARY GEAR OPERATED LIFTING JACK. LEONARD D. NILSON, Wayzata, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed Dec. 5, 1927. Serial No. 237,739. 6 Claims. (Cl. 254—6.)

1. In a jack having a supporting frame, the combination of a triangular shaped lifting arm, means at one



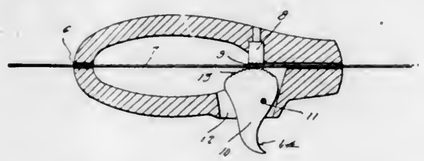
corner thereof for pivoting the lifting arm to the supporting frame, means at another corner for supporting a load engaging head and rotary means at the third corner of the lifting arm, means secured to the supporting frame with which the rotary means cooperates for moving the lifting arm relative to the frame when said rotary means is rotated and operating mechanism for giving said rotary means a step by step movement in either direction, said means comprising a shaft, a ratchet wheel mounted thereon, operating means oscillatably mounted on said supporting frame, and means pivoted on said shaft and operable from said operating means for rotating said ratchet wheel regardless of the position of the lifting arm relative to the supporting frame.

1,805,842. AGITATING MECHANISM. CECIL C. PECK, Lakewood, Ohio, assignor to The Hill Clutch Machine and Foundry Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 30, 1929. Serial No. 417,367. 9 Claims. (Cl. 259—97.)



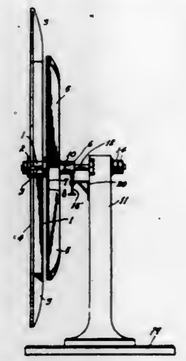
1. In a mechanism of the character described, the combination with a cylindrical chamber, of a tubular chamber having a restricted opening at the bottom thereof positioned coaxially therein, the wall of said tube around such opening progressively thickened to provide a smooth curve to said restricted opening, and means for producing a flow through said restricted opening from one of said chambers to the other.

1,805,843. INTERNAL COMBUSTION ENGINE. JAMES H. PIERCE, Bay City, Mich. Filed Nov. 5, 1928. Serial No. 317,212. 18 Claims. (Cl. 123—56.)



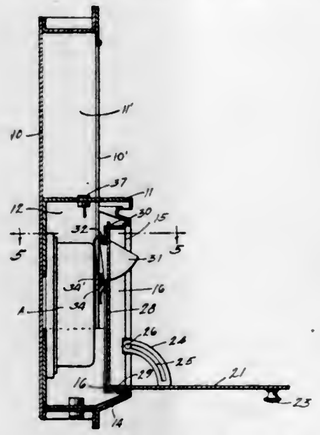
14. In an internal combustion engine of the two-stroke type, in combination, a crank case having an intake port in an end wall thereof, a crank-shaft rotatable in said crank-case, said crank-shaft having disc-like throws concentric to the main journals of said crank-shaft, a disc disposed between said end wall and the adjacent of said throws and normally closing said port, means for driving said disc from said crank-shaft, said disc having an opening therein co-operable with said port to control the admission of gas into said crank-case in timed relation with the angular relation of said crankshaft, said adjacent throw having an opening therein in alignment with said opening in said disc, a liner sleeve fitting both of said openings and secured to said adjacent throw, and fan blades of the axial displacement type carried in said liner for accelerating the flow of gas through said port.

1,805,844. VAPORIZER. CHARLES F. RUBSAM, Jackson, Mich. Filed June 14, 1929. Serial No. 370,807. 3 Claims. (Cl. 128—192.)



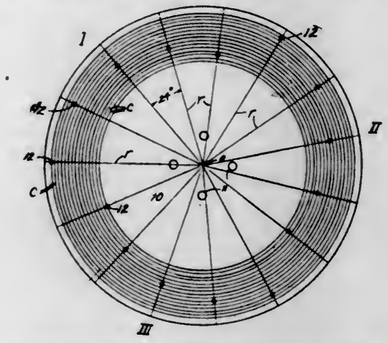
2. A vaporizing device of the character described, comprising a bowl adapted to set on the top of an ordinary vessel containing hot water, and provided at the central or bottom portion thereof with a depending pocket for holding a chemical, the margin of the bowl being adapted to rest loosely on the rim of the vessel and extending outwardly and upwardly from the rim-engaging part to form an enlarged chamber with an open top, the portion of the bowl between said rim-engaging part and the pocket being substantially flat and having a plurality of holes formed therein for directing steam from the vessel upwardly around the pocket and into the chamber.

1,805,845. TIE HANDLE. CALVIN P. ORR, Laona, Wis. Filed Jan. 31, 1930. Serial No. 424,960. 1 Claim. (Cl. 24—134.)



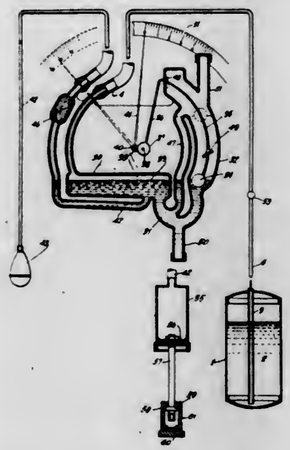
A device for facilitating the tying of wire about bundles consisting of an elongated hollow hand grip having a longitudinal passageway therethrough for receiving the wire to be grasped, the handle at one side thereof and adjacent to one end being provided with a longitudinally extending slot, a serrated gripping plug arranged in the interior of the handle on the opposite side thereof from said slot, and an eccentric gripping plate eccentrically pivoted within the slot and extending into the handle toward the plug and having its inner edge provided with outwardly disposed gripping teeth for coaction with said plug, and said plate having its outer end projected laterally from the handle through the slot and arcurately formed to provide a finger grip for increasing the gripping action of the inner end of the plate when the finger grip and the handle are simultaneously urged in a predetermined direction with respect to the wire.

1,805,846. LOOP ANTENNA. EARL F. POTTER, Glencoe, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1923. Serial No. 617,929. 6 Claims. (Cl. 250—33.)



3. A device of the character described including a mounting plate, a support rotatably secured thereto, a loop aerial connected to said support, and an adjustable element secured to said support and associated with said loop aerial and adapted to be rotated relative thereto, means comprising a spiral slot and a finger engaging said slot adapted to move said adjustable element in a longitudinal direction when the said element is rotated.

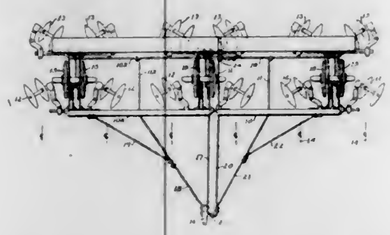
1,805,847. TELEPHONE CABINET. CONRAD A. REETZ, Dallas, Tex., assignor to Atlas Metal Works, Dallas, Tex., a Corporation of Texas. Filed July 15, 1929. Serial No. 378,416. 2 Claims. (Cl. 312—112.)



1. A telephone cabinet having an alcove at its upper portion and a compartment at its lower portion, the alcove having space for receiving a telephone stand, the compartment having space for receiving a bell box, a horizontal shelf mounted in the cabinet between the compartment and the alcove, a front frame surrounding the cabinet compartment below the shelf, the frame having openings to permit escape of bell vibrations, a casing extending inwardly from the frame, a removable panel mounted in the rear of said casing and concealing the bell box, a lamp hood mounted at an opening in the upper portion of the panel and extending outwardly therefrom whereby the rays of light are directed downwardly on the door when opened, and a door hinged at the base of said frame supported by brackets from the sides of the frame and serving as a desk when opened.

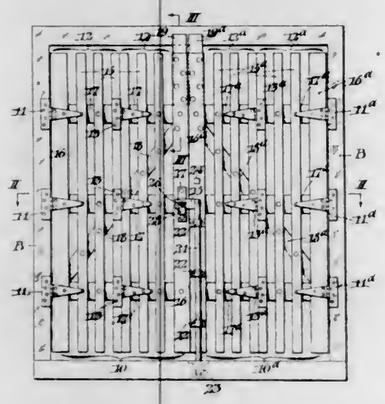
1,805,848. METHOD AND MEANS FOR SCANNING. ULISES A. SANABRIA, Louisville, Ky., assignor, by mesne assignments, to Western Television Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 7, 1929. Serial No. 369,169. 13 Claims. (Cl. 178—6.)

1. In apparatus of the class described an optical analyzing unit comprising a rotating disc provided with a plurality of apertures arranged in more than one spiral and so positioned that each aperture describes a separate circular path about the center of rotation.



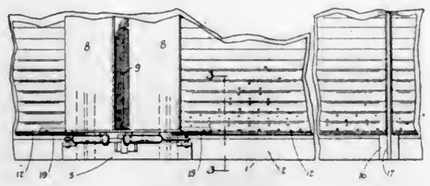
1,805,849. LIQUID LEVEL INDICATING SYSTEM. JACK D. SARTAKOFF, New York, N. Y., assignor, by mesne assignments, to Khetab Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1926. Serial No. 147,443. 7 Claims. (Cl. 73—54.)

1. In a liquid level indicating system, a pressure cylinder adapted to extend into the body of the liquid to be measured, in combination with an indicating instrument embodying a suitable casing, means for mounting the casing for pivotal adjustment on two distinct axes which are perpendicular to one another, a reservoir and a float chamber mounted within the casing and having a trapped connection with one another, a graduated scale associated with the casing, a pointer pivoted to the casing to traverse the scale, a float positioned within the float chamber, means operatively connecting the float with the pointer, whereby the rise and fall of liquid in the float chamber will cause the pointer to be operated, a body of liquid contained conjointly in the reservoir and float chamber, means for connecting the pressure cylinder with the reservoir, and means for introducing air under pressure into the



reservoir and pressure cylinder in sufficient amount to substantially balance the hydrostatic pressure of the liquid to be measured, whereby a corresponding liquid head is established in the float chamber and the pointer operated accordingly.

1,805,850. AGRICULTURAL IMPLEMENT. JOSEPH SCHERMULY, Wichita, Kans. Filed Sept. 15, 1928. Serial No. 306,122. 1 Claim. (Cl. 97—235.)

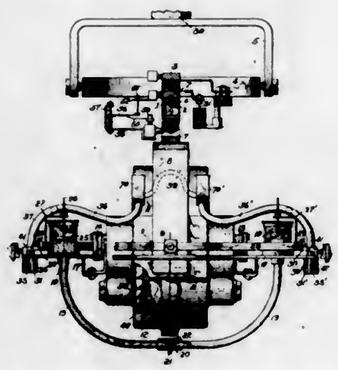


In an agricultural implement; a pair of right and left rectangular frame elements; a pair of wheel transport sets associated with one frame and a single set of wheel transport means associated with the second set; a hinge connection between the inner corner of one rectangular frame and the adjacent corner of the second frame as extended towards said corner element of the first frame; each frame having forwardly extending elements arranged in parallelism with and adjacent the line of draft of the composite machine, each forwardly extending element being rigid to its particular frame; said parallel extending elements having a hinged connection forwardly from the paired rectangular frames; and a draw bar element rigid to one of said forwardly extending elements and closely adjacent to said hinge.

1,805,851. GATE FOR DELIVERY VEHICLES. BERTRAM SEITZ, Philadelphia, Pa. Filed Sept. 1, 1928. Serial No. 303,378. 3 Claims. (Cl. 296—106.)

1. A double gate for delivery vehicles comprising opposing components each including interhinged sections adapted to close with their swinging edges engaging, the meeting edges of the respective components carrying limiting stops at their upper ends offset to contact the top of the vehicle body so that the gate closes flush with the back end of said body.

1,805,852. LIQUID DISTRIBUTOR. ROBERT D. SIMPSON, Columbus, Ohio. Filed Mar. 21, 1929. Serial No. 348,961. 2 Claims. (Cl. 210—4.)



2. A liquid distributor for a filtering bed comprising a plurality of substantially horizontally positioned parallel V shaped troughs, said troughs having their side walls formed with perforations through which the liquid will percolate to the filtering bed arranged below said troughs, and a pair of flanged members arranged transversely of said troughs and forming the ends thereof serving also to support said troughs above said filtering bed.

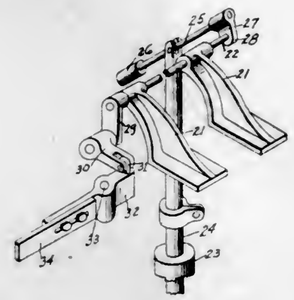
1,805,853. APPLICATOR FOR VIBRATING MACHINES. WALLACE D. SMITH, Kalamazoo, Mich. Filed Mar. 16, 1929. Serial No. 347,475. 5 Claims. (Cl. 128—63.)

3. The combination with a vibrating machine, of a vibrating belt, an applicator consisting of a body part with parallel ribs, a pivotal back section supported thereby with elastic pads therebetween and a pivotal joint for maintaining the same elastically in position, and a back plate with means for embracing the said vibrator belt and maintaining the applicator in position.

1,805,854. NONPENDULOUS GYROCOMPASS. ELMER A. SPERRY, Jr., Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 8, 1919. Serial No. 336,690. 27 Claims. (Cl. 33—226.)

1. In a gyroscopic compass, the combination with a gyro-rotor and journal casing therefor, a frame in which

said casing is mounted for oscillation about a horizontal axis, a support for the frame, and means for suspending said frame for movement about a vertical axis comprising a ball freely resting on said support and on which said frame is pivotally suspended.

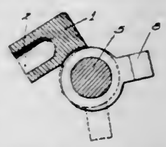


11. In a gyroscopic compass, a follow-up support, a sensitive element carried by said support, a plurality of contacts mounted on said support, a relatively movable cooperating contact pivoted on said support, means operating between said sensitive element and said movable contact for imparting movement thereto, and motive means controlled by said contacts for turning said support to follow the movements of said sensitive element.

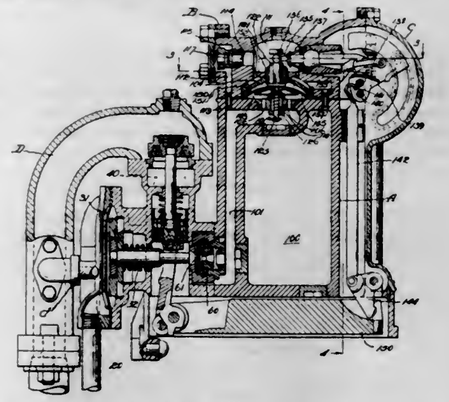
26. In a gyroscopic compass, the combination with a gyroscope mounted with three degrees of freedom, of a liquid container mounted on either side of the gyroscope, means for gravitationally transferring liquid between the containers on tilting of the gyroscope whereby the north seeking property is imparted to the compass, differential air reaction damping means, and means whereby said damping means is brought into action by the liquid transfer between said containers.

1,805,855. CONCENTRATION OF ORES, MINERALS AND THE LIKE. JAMES L. STEVENS, Hayden, Ariz., assignor to Raconite Chemical Company, a Corporation of Arizona. Filed Jan. 15, 1929. Serial No. 332,741. 13 Claims. (Cl. 209—166.)

1. The method of concentration of minerals by flotation which comprises adding to a mineral pulp a reagent comprising an organic sulphur bearing product formed by reaction of a xanthate with disulphur-dichloride (S_2Cl_2), and then subjecting the pulp to a froth flotation operation in the presence of such reagent.



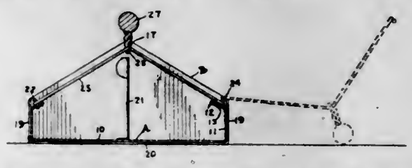
1,805,856. SCRAP REMOVING DEVICE FOR WOODWORKING MACHINERY. CARL F. STREIT and GEORGE J. KUEHNLE, Cincinnati, Ohio; said Kuehnle assignor to said Streit. Filed Feb. 15, 1929. Serial No. 340,315. 15 Claims. (Cl. 143—157.)



4. In combination with a sawing machine having a reciprocating table on which scraps of cut-off portions of work fall, means for wiping said scraps from said table, said means comprising pivoted wiping arms having extended ends movable through sectors over the surface of the table, and means operative incident to operation of said machine for actuating said wiping arms.

1,805,857. BATTERY TERMINAL CLAMP. WILLIAM H. TRIMBLE and JOHN N. CLARK, Dallas, Tex. Filed Feb. 4, 1929. Serial No. 337,351. 2 Claims. (Cl. 173—259.)

1. A battery terminal clamp comprising a body having a pair of ring shaped parts spaced apart with their openings in alignment and a curved wall connecting portions of the ring shaped parts together, a ring rotatably arranged between the ring parts and having a part contacting the inner face of the curved wall, said ring having an eccentric opening therein to receive the battery post and a handle connected with the ring and having an upwardly extending part.

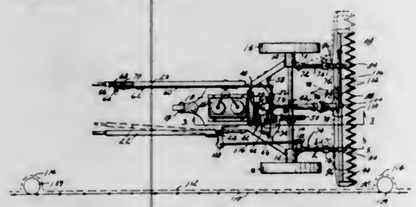


1,805,858. ACCELERATOR FOR DRY PIPE VALVE SPRINKLER SYSTEMS. EMIL TYDEN, Hastings, Mich. Filed Oct. 3, 1928. Serial No. 309,908. 7 Claims. (Cl. 169—17.)

1. In a fire extinguishing apparatus which comprises a sprinkler system having a construction for accelerating the action for admitting water to the sprinkler system characterized by a casing structure containing a chamber and passages affording chamber communication with the fluid pressure region of the system and having a movable element arranged to derive movement from change in the pressure derived from said fluid pressure region, the casing containing also a closed air chamber, the first mentioned chamber having a port of discharge into said closed air chamber at the upper part of the latter; means in the first mentioned passages restricting inflow to the first mentioned chamber relatively to the discharge flow therefrom to the second chamber, said first mentioned chamber and passages thereof to said discharge port being continuously dimensioned for free liquid flow relative to the restriction, and the course of said chamber and passages being continuously downward from the restriction to the discharge port, for preventing accumulation and trapping of liquid in said chamber and passages.

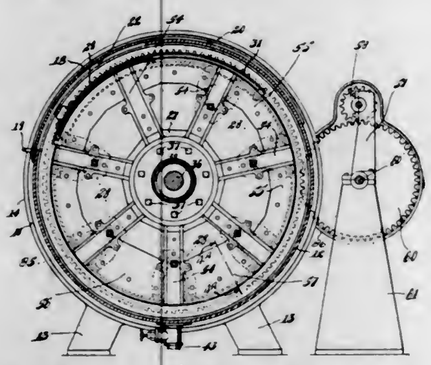
1,805,859. POULTRY FEEDING DEVICE. OLIVER C. WHITE, Gardena, Calif. Filed May 25, 1929. Serial No. 366,010. 2 Claims. (Cl. 119—61.)

1. A poultry feeding device, comprising a feeding trough having upstanding ends, and a guard adapted to



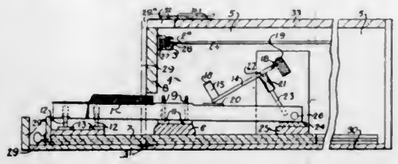
swing into and out of guard position, said guard being fabricated of spaced wires arranged transversely of the feeding trough and bent substantially in their center to form an angle, a wire connecting the apices of said angle and running substantially parallel with the trough thus forming a ridge, a second wire connecting the ends of said spaced wires on one side of said ridge and running substantially parallel with the trough, a third wire connecting the ends of said spaced wires on the opposite side of said ridge and running substantially parallel with said trough, said third wire extending through the said upstanding ends to form a pivotal connection for said guard.

1,805,860. COSMETIC POWDER CONTAINER. JAMES LESLIE YOUNGHUSBAND, Chicago, Ill. Filed Sept. 4, 1928. Serial No. 303,642. 6 Claims. (Cl. 132—83.)



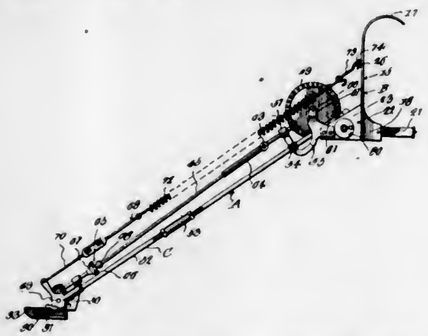
1. A container for loose powder comprising a receptacle for the powder, said receptacle having a plurality of shoulders formed in the walls thereof in different horizontal planes, and a plurality of flange members engaging said walls and resting against said shoulders with one flange to a shoulder.

1,805,861. FENCE ROW MOWER. JAMES H. BASS, Waukee, Iowa. Filed July 28, 1930. Serial No. 471,224. 8 Claims. (Cl. 56—25.)



1. In a mower of the character disclosed, a wheeled frame, a mower member, mowing mechanism carried thereby, means for supporting the mower member transversely adjustable with respect to said frame and a lever for so adjusting the mower chamber.

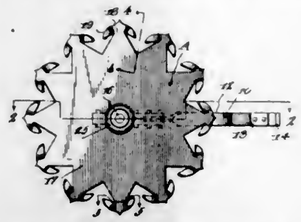
1,805,862. WASHING MACHINE. CHARLES C. BATINA, Chicago, Ill. Filed May 31, 1928. Serial No. 281,653. 1 Claim. (Cl. 68—18.)



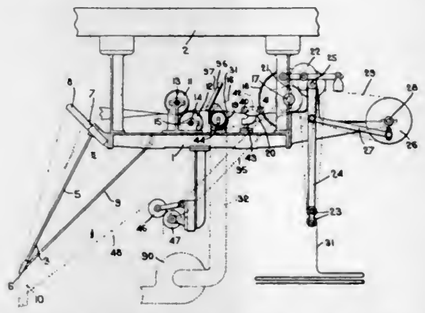
In a washing machine drum, journaled heads, said heads having radial enlargements for reenforcing the structure, a portion of the radial enlargements of said heads being of excess weight at one side of the axis of the drum whereby to determine the normal position of rest of the drum.

1,805,863. KEYBOARD OPERATED MUSICAL INSTRUMENT. ALICE VIOLET BENNETT, London, England. Filed Dec. 11, 1929, Serial No. 413,301, and in Great Britain Dec. 14, 1928. 8 Claims. (Cl. 84—403.)

2. A keyboard operated musical instrument comprising a box-like container, a series of sonorous bodies mounted within said container, a support slidably mounted within said container, a series of hammers carried by said support, a series of keys comprising a keyboard also carried by said support and adapted to operate said hammers, the arrangement being such that said support may be moved into a position in which the keyboard is located outside said container and in which the hammers when operated will strike said bodies and may also be moved into a position in which the keyboard is located within said container and said hammers operate in a portion of the container not occupied by said bodies.



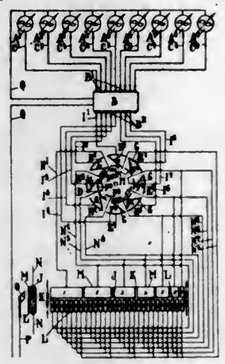
1,805,864. HAND MOWER. CARL R. BENZEL, Greeley, Colo. Filed Dec. 12, 1929. Serial No. 413,651. 4 Claims. (Cl. 30—11.)



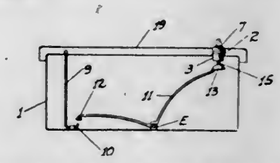
1. A mower comprising a body supporting device including a breast plate, means for attaching the breast plate to the wearer, a supporting bracket on the breast plate, a supporting rod rotatable in said bracket, a second bracket connected with the lower end of the supporting bar, a mower guard bar connected with the second bracket, a reciprocatory sickle bar carried by the mower bar, means for reciprocating the sickle bar from the frame bar, a worm rotatably carried by the supporting bracket, means for rotating the worm, means for locking the worm in an adjusted position, and a worm wheel keyed on the supporting rod meshing with said worm for rotating the rod, second bracket and guard bar upon the turning of the worm.

1,805,865. CULTIVATOR ATTACHMENT. CARL R. BENZEL, Greeley, Colo. Filed Dec. 23, 1929. Serial No. 416,046. 3 Claims. (Cl. 97—217.)

1. An attachment for cultivators comprising an attaching frame, an axle rotatably carried by said frame, a plurality of uniformly spaced ground working discs secured to the axle for movement therewith, a plurality of radially extending ground penetrating points on the periphery of each disc, and ground working blades carried by the opposite sides of each point.



1,805,866. CLOTH-OPENING MACHINE. ALBERT BIRCH, Belmont, Mass. Filed Jan. 30, 1930. Serial No. 424,712. 8 Claims. (Cl. 26—1.)

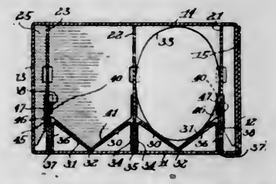


1. In a device of the class described, the combination with a supporting frame, of a triangular-shaped cloth-opening frame carried by the supporting frame and extending downwardly therefrom in an inclined direction, a belly-board at the base of the cloth-opening frame having a convex edge, means to draw the cloth to be opened upwardly over the triangular-shaped frame and belly-board, and detacking rollers for pulling a tacking thread from the cloth as it is fed to the cloth-opening frame.

1,805,867. TELEGRAPH SYSTEM. MANRICO COMPARE, Milan, Italy, assignor to S. A. Brevetti Italiani Esteri S. A. B. I. E., Turin, Italy. Filed Aug. 22, 1927, Serial No. 214,766, and in Italy Aug. 23, 1926. 6 Claims. (Cl. 178—22.)

1. Method of transmitting signals consisting in successively conveying at a transmitting station groups of electrical impulses comprising a plurality of different frequencies upon a conveying means, each group corresponding to a signal and the frequencies of each group being conveyed into said conveying means, in collecting at the receiving station said different frequencies conveyed by said conveying means and in setting into action by means of said different frequencies a plurality of resonators of a set of resonators for controlling local control-circuits at the receiving station.

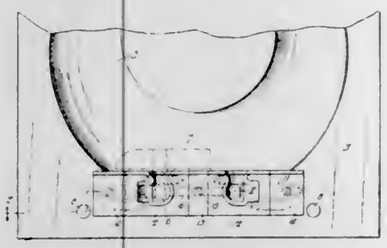
1,805,868. COMBINATION GAS-TANK CAP AND FEED SUPPLY LOCK. TONY S. GREER, Sacramento, Calif. Filed Feb. 10, 1930. Serial No. 427,134. 6 Claims. (Cl. 137—21.)



1. In combination with a tank having an outlet pipe leading therefrom, a filler tube thereon, and a cap for the tube; a closure for the tank end of the pipe, means between the cap and closure for selectively holding the latter in or out of closing relation with the pipe when the cap is in place on the tube, and means in corporated with said last named means to cause the closure to function to close the pipe whenever the cap is removed.

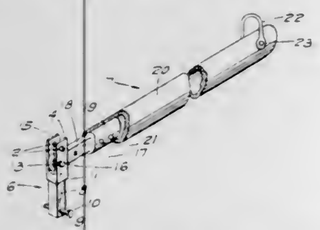
1,805,869. AIR PRESSURE GAUGE. LEON ARTHUR HALLSTEAD and HERBERT DAWSON, Buffalo, N. Y., assignors, by mesne assignments, to H. D. Taylor Co., Buffalo, N. Y., a Corporation of New York. Filed Nov. 24, 1924. Serial No. 752,052. 5 Claims. (Cl. 152—11.5.)

1. A combined air line nozzle and pressure gauge comprising an elongated casing having a tubular handle portion at one end for connection with an air line and provided with an air inlet valve chamber therein, a nozzle chamber at the opposite end of said casing, a longitudinal chamber opening at its outer end into the nozzle chamber, and an air passage paralleling the longitudinal chamber and connecting the nozzle chamber with the valve chamber, said handle portion being elongated and extending lengthwise of and from the longitudinal chamber; a valve operable in the valve chamber for controlling communication between the same and the air passage, a spring contained within the chamber of the handle portion for seating the valve, means for unseating the valve, a gauge mounted for movement lengthwise of and in the longitudinal chamber and operable in response to air pressure in the nozzle chamber, and a nozzle secured in and closing the nozzle chamber.



1,805,870. CONTAINER. HARRY A. INMAN, Newark, N. Y. Filed Aug. 22, 1930. Serial No. 476,988. 10 Claims. (Cl. 229—28.)

1. A container comprising a plurality of partitions movable longitudinally relative to each other from an expanded

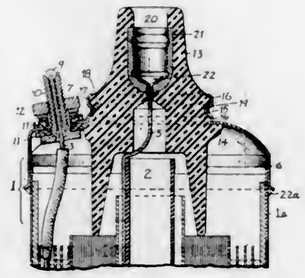


position spaced from each other to a collapsed position adjacent each other, an article supporting member connected to one partition and extending in a general direction toward a second partition, and means for supporting said member adjacent said second partition while permitting said member to move longitudinally relative to said second partition when the partitions are collapsed or expanded.

1,805,871. MOLD FOR TOILET SEATS. GEORGE JOHNSON, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 19, 1928. Serial No. 320,419. 3 Claims. (Cl. 18—34.)

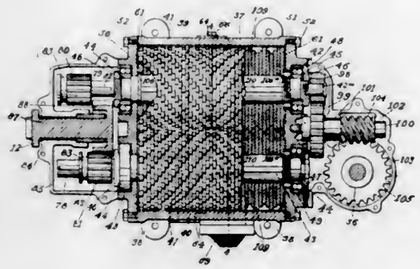
1. In a device for molding a coating of plastic composition about a toilet seat core having projecting hinge lugs, the combination of a large mold for one side of the core, a pair of small molds for one side of the hinge lugs, adjustably secured to said large mold so that their position may be changed to correspond to the distance between the said lugs, a large mold for the other side of said core, and a single small mold for the other side of both of said lugs.

1,805,872. POLE UNLOADER. CLARENCE A. JORDAN and CHESTER C. COON, Oakland, Calif. Filed Jan. 11, 1930. Serial No. 420,138. 3 Claims. (Cl. 105—382.)



1. A pole unloader comprising an anchor member having a yoke formed at one end, the opposite end being adapted to fit into the stake pocket of a car, a stake member hingedly connected in said yoke, a locking pin, and aligning apertures in said yoke and said stake adapted to receive said locking pin.

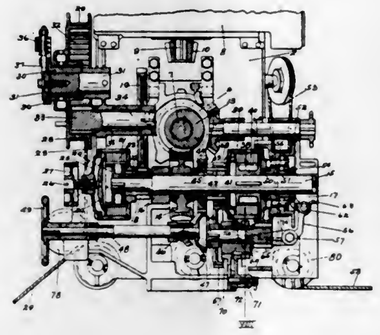
1,805,873. METHOD OF PRODUCING POTASSIUM PHOSPHATE. OSCAR KASELITZ, Berlin, Germany. Filed June 17, 1929, Serial No. 371,722, and in Germany Nov. 19, 1928. 4 Claims. (Cl. 23—107.)



1. The process of producing mono-potassium phosphate from phosphoric acid and potassium chloride comprising heating potassium chloride with a quantity, in excess of the molecular, of dilute phosphoric acid having a concentration of at least 30% until the hydrochloric acid has been expelled and decomposing the acid salt resulting on cooling of the solution with so much water that monophosphate is separated out and a liquor is formed which is saturated with monophosphate (KH_2PO_4) and the double-salt $KH_2PO_4 \cdot H_3PO_4$.

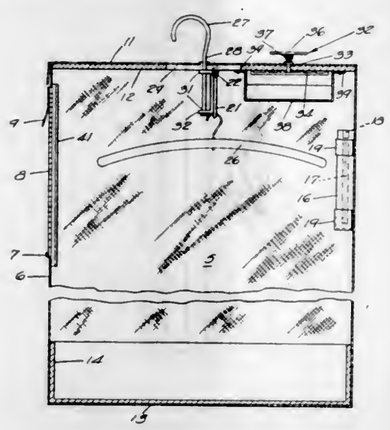
1,805,874. TERMINAL CONSTRUCTION FOR IGNITION COILS. GUSTAVE J. LANG, Longmeadow, JOSEPH F. DRENNAN, Springfield, and BARTHOLD E. SCHLESINGER, Boston, Mass., assignors to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed June 1, 1929. Serial No. 367,682. 4 Claims. (Cl. 175—361.)

1. In an ignition coil having a housing, a high tension insulating cap secured in operative position by a portion of the body of the housing spun over said cap.



1,805,875. ROTARY ENGINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 13, 1917, Serial No. 453,715. Renewed Mar. 19, 1921. 15 Claims. (Cl. 121—70.)

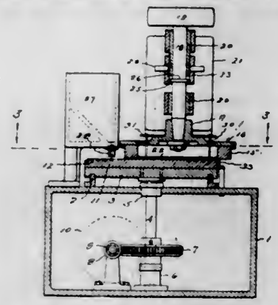
1. In an engine of the class described, the combination with a pair of drums provided with a plurality of intermeshing zig-zag gear tooth pistons and corresponding grooves diverging in helical lines from the central plane of the drums and each extending over a portion of the circumference to the ends thereof, of a casing having a wall in close proximity on the inlet side only with the top of the gear teeth and cooperating therewith to produce sets of expansion chambers, a port in said casing for admitting fluid at the meeting point of the successive grooves and gear tooth pistons during the rotation of the drums, an open ended elongated exhaust port in said casing wall spaced from said admission port in the direction of rotation of the drums and extending longitudinally from end to end thereof, and clearance space at both ends of said drum auxiliary to said exhaust port as and for the purpose set forth.



1,805,876. MINING MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 8, 1928, Serial No. 644,164. Renewed Apr. 18, 1929. 9 Claims. (Cl. 262—30.)

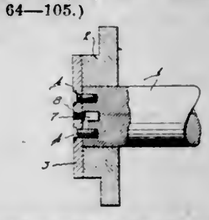
1. In a machine of the class described, the combination with a main frame adapted to rest upon and slide in any direction over the mine floor, of an elongated kerf cutter projecting horizontally from said main frame, power devices upon the main frame adapted to actuate the kerf cutter, a flexible draft member adapted to be connected with a suitable abutment external of the machine, winding means upon the machine adapted to exert strain upon said draft member to move the machine towards said abutment at a relatively low speed, a second flexible draft member adapted to be connected with a suitable abutment external of the machine, winding means upon the machine adapted

to exert strains upon the last mentioned draft member to move the machine towards the last mentioned abutment, a high speed connection between said power devices and the winding means for said second draft member, an intermediate speed connection between said power devices and the winding means for said second draft member, and means for rendering either of said connections active as and for the purpose set forth.



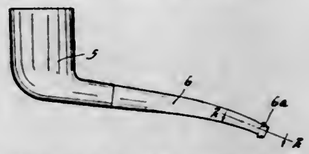
1,805,877. CLOTHES BAG. ABRAHAM J. LICHTIG, Oakland, Calif. Filed July 29, 1929. Serial No. 381,802. 6 Claims. (Cl. 206—7.)

5. In combination with a clothes bag having a portion thereof formed of an aromatic fibrous material, exteriorly operated means for abrading the inner surface of said fibrous material.



1,805,878. METAL BALL GRINDING MACHINE. JOHN J. MCINTYRE, Hartford, Conn. Filed Oct. 12, 1929. Serial No. 399,222. 2 Claims. (Cl. 51—130.)

1. A ball grinding machine comprising a rotatory metallic bed having a spiral groove in its face, mechanism for slowly rotating said bed, means for feeding balls into the inner end of said groove, means for directing balls out of the outer end of said groove, a rotatory abrasive

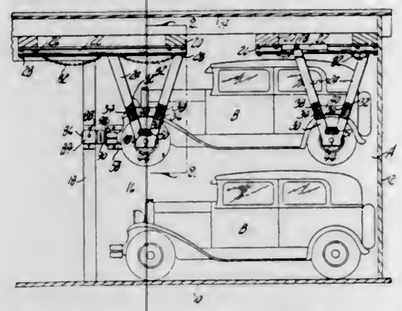


platen capable of vertical movement toward the bed, the axis of said platen being eccentric with relation to the axis of the bed, and mechanism for rapidly rotating said platen in the same direction as the rotation of the bed.

1,805,879. MECHANICAL OVERLOAD RELEASE. CHARLES A. MCKENNY, Detroit, Mich., assignor to The Joseph E. Barrett Co., Detroit, Mich., a Corporation of Michigan. Filed May 6, 1929. Serial No. 360,716. 5 Claims. (Cl. 64—105.)

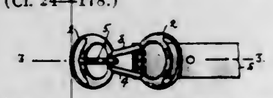
1. The combination with a power-transmitting shaft and a loosely mounted sprocket thereon of means adapted to serve normally as a driving connection therebetween, said means comprising one or more metal bars held in alined transversely disposed slots cut in the end of the power-transmitting shaft and sprocket hub respectively, said driving connection being broken automatically when the safe-load carrying capacity of the driving means is exceeded.

1,805,880. MOUTHPIECE FOR PIPES. STEPHEN A. MERICKO, Hinckley, Minn. Filed Aug. 15, 1929. Serial No. 386,115. 5 Claims. (Cl. 131—12.)



1. A mouth piece for pipes comprising, a stem having a smoke opening running therethrough and a tongue guard disposed in spaced relationship outwardly from the mouth end of said smoke opening to prevent the tongue of the smoker from coming in contact with the smoke opening, said tongue guard having an opening therethrough in direct alinement with said smoke opening.

1,805,881. OVERHEAD AUTOMOBILE DECKING FOR RAILWAY CARS. BERT A. MUSSELMAN, Des Moines, Iowa. Filed Sept. 8, 1930. Serial No. 480,468. 13 Claims. (Cl. 105—368.)

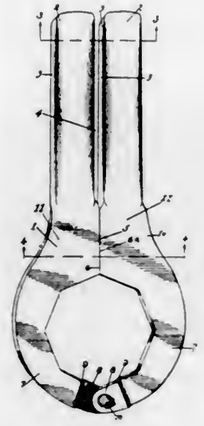


1. For use in a railway car or the like, decking of the character disclosed comprising suspension means hingedly

supported with respect to said railway car, the means of support being arranged along the upper side corners of said car, said suspension means being capable of swinging movement to an inoperative position against the roof of said car, thrust members mounted on said suspension members and means for securing said thrust members to the side walls of said car.

2. For use in a railway car or the like, decking of the character disclosed comprising suspension means hingedly supported with respect to said railway car, the means of support being arranged along the upper side corners of said car, said suspension means being capable of swinging movement to an inoperative position against the roof of said car, thrust members mounted on said suspension members and means for securing said thrust members to the side walls of said car, said thrust members being adjustable as to length.

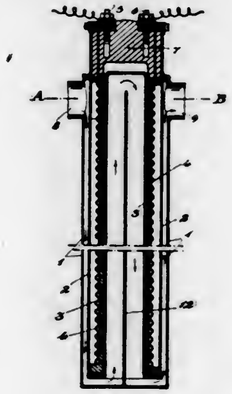
1,805,882. BUCKLE. WILLIAM L. MYERS, Newark, and GEORGE D. HARRISON, Belleville, N. J., assignors to L. A. Myers, jr., Inc., Newark, N. J., a Corporation of New Jersey. Filed Sept. 18, 1930. Serial No. 482,666. 2 Claims. (Cl. 24—178.)



1. In a buckle, an integral, rigid frame comprising a pair of spaced strap engaging loops, a pair of spaced bars connecting the adjacent sides of said loops, the side between the connecting bars on one loop serving as a sewing bar for a strap, and a tongue hinged to the other loop on the side between the connecting bars with its free end adapted to bear against the opposite side of said loop.

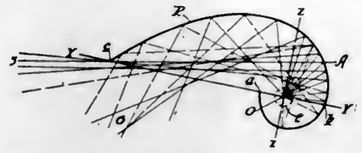
1,805,883. METHOD OF PRODUCING BUILDING BOARD. CARL-JOHAN H. NORDENSWAN, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 24, 1928. Serial No. 256,819. 1 Claim. (Cl. 92—2.)

In a socket wrench, a pair of flat stampings or forgings each forming part of a socket, a meeting portion and one channeled handle portion, means for hinging the same together, and the opposing edges of the handle portions being spaced apart by the channeling so that when the socket forming portions are closed against each other, the opposing edges of the handle portions will be spaced from each other, thereby avoiding pinching of the hand of the operator.



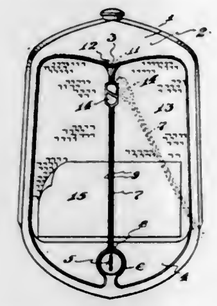
1,805,884. WRENCH. EWALD F. PAWSAT, Maysville, Ky., assignor to The Wald Manufacturing Company, Maysville, Ky., a Corporation of Kentucky. Filed Aug. 30, 1929. Serial No. 389,554. 1 Claim. (Cl. 81—78.)

In a socket wrench, a pair of flat stampings or forgings each forming part of a socket, a meeting portion and one channeled handle portion, means for hinging the same together, and the opposing edges of the handle portions being spaced apart by the channeling so that when



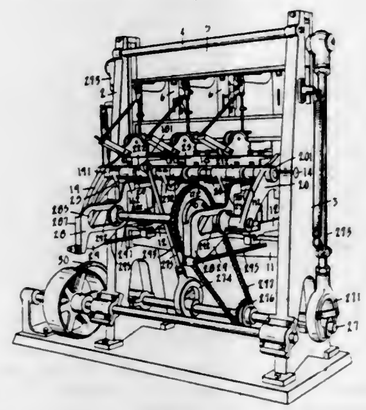
the socket forming portions are closed against each other, the opposing edges of the handle portions will be spaced from each other, thereby avoiding pinching of the hand of the operator.

1,805,885. ELECTRIC HEATER FOR LIQUIDS. EMILIO RINDERSPACHER, RAUL BERGARA, and CARLOS BERGARA, Buenos Aires, Argentina. Filed Jan. 20, 1928. Serial No. 248,159. 1 Claim. Cl. 219—39.)



Electric heating apparatus for liquids, comprising in combination, a container comprising inner and outer concentric chambers for the passage therethrough of the liquid to be heated; electric heat generating means arranged between said inner and outer chambers and bisecting partitions arranged in one of said chambers extending from the bottom thereof to a point near its upper end, the partition in the other of said chambers extending from the upper end thereof downwardly to points near the bottoms of said chamber and so constructed and arranged as to compel the liquid to be heated to flow in close proximity to the walls of said chambers adjacent to said heat generating means throughout its passage through said container.

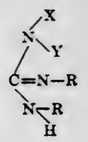
1,805,886. HEADLIGHT. CONRAD K. RIZER, New York, N. Y. Filed Oct. 31, 1930. Serial No. 492,392. 6 Claims. (Cl. 240—41.1.)



1. A light reflector of the character specified having a reflecting surface generated by the rotation of a continuously increasing parabolic arc in such a manner that the vertex of said arc describes a spiral.

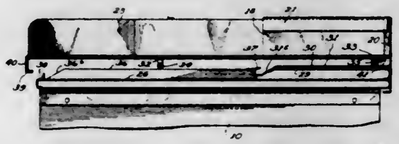
1,805,887. RADIATOR BAR AND REENFORCING MEANS. ROBERT C. RUSSELL, Dallas, Tex., assignor to W. S. Shaw Company, Dallas, Tex. Filed Nov. 11, 1930. Serial No. 494,918. 5 Claims. (Cl. 293—54.)

4. As new article of manufacture, a bar capable of vertical securement to the top and bottom of a radiator shell and frictionally restrained against displacement at its points of securement.



1,805,888. BOX MAKING MACHINE. ALBERT H. SCHMIDTKE, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich. Filed Mar. 3, 1930. Serial No. 432,953. 7 Claims. (Cl. 1—10.)

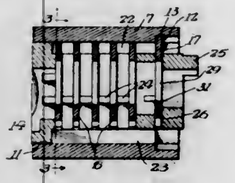
1. In a machine of the class described, the combination of a suitable base, end uprights connected at the top, a reciprocating carrier head in guides on said uprights, staple drivers carried by the said head disposed to drive staples into a box therebeneath, end supports for receiving the box ends to support them while being stapled, an intermediate support for the central box partition, a fixed shaft between the said uprights, brackets at each end, a rockshaft carried by the said brackets, fixed jaws clamped to the said fixed shaft and with extension bearings embracing the rockshaft, slidable clamping jaws on said shafts to coact with the fixed jaws with springs for holding them yieldingly in open position, cam arms on the said rockshaft disposed to act upon the slidable jaws, cam rollers on said slidable jaws to coact with the said cam arms, an ejector head at each end of the machine with an ejector plunger guided for ejecting and controlling the movement of the said box ends, oblong cams on a suitable cam shaft carried by the said brackets in parallel relation to the rockshaft and fixed shaft, a slotted guide projection on each of the said ejector heads and having cam abutments for cooperating with the said cams, the said cams each being provided with a dwell to hold the box at rest while it is being clamped and stapled, a drive shaft, a gear on said shaft to drive the cam shaft at one half the rate of the drive shaft, eccentrics at each end of the drive shaft with connections for reciprocating the carrier head, and an intermediate eccentric on said drive shaft with a connection to said rockshaft timed to actuate the jaws and clamp the work while the same is being stapled.



1,805,889. SUBSTITUTED GUANIDINE ALCOHOLS. WALTER SCHOELLER and HERBERT SCHOTTE, Berlin, Germany, assignors to the Firm Shering-Kahlbaum Aktiengesellschaft, Berlin, Germany. Filed June 21, 1926, Serial No. 117,569, and in Germany Jan. 7, 1925. 5 Claims. (Cl. 260—125.)

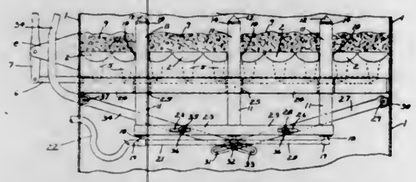
2. As a new product a substituted guanidine having the formula:

wherein R is a hydrogen atom, univalent hydrocarbon radical or an acyl group and the two R's may be the same or different, while X is a hydroxylated or alkoxylated alkyl group and Y a hydrogen atom or an alkyl group or X and Y form together a carbocyclic system, these products being bases capable of forming salts with acids and being decomposed by concentrated alkali.



1,805,890. EXTENSIBLE DESK TOP. GEORGE W. SCHULZ, Cleveland, Ohio, assignor to Yawman & Erbe Manufacturing Co., Rochester, N. Y., a Corporation of New York. Filed Nov. 21, 1928. Serial No. 320,780. 5 Claims. (Cl. 45—90.)

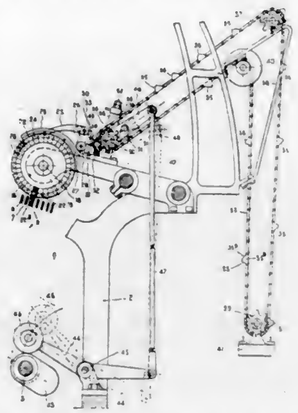
1. An extensible furniture top construction comprising a fixed portion and a movable portion, an inclined flange on said fixed portion, a supplementary flange on the movable portion, guide means associated with said fixed portion, rollers carried by said movable portion and cooperating with said guides to cause the supplementary flanges to register when the top is in extended position,



means for locking the inner end of the movable portion in extended position, said guide means causing the movable portion to cover the fixed portion when the top is in closed position.

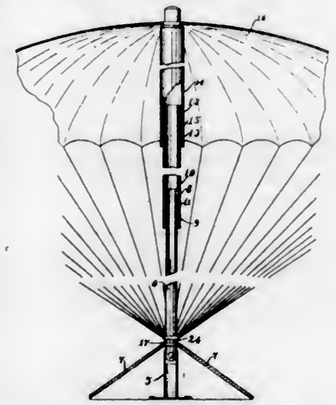
1,805,891. LOCK. LYLE B. SHINN, Chicago, Ill., assignor to Chicago Lock Company, Chicago, Ill., a Corporation of Illinois. Filed July 19, 1930. Serial No. 469,083. 7 Claims. (Cl. 70—46.)

1. In a lock, the combination of a casing having a bore extending longitudinally therethrough, a plug rotatable in and removable from the bore and having formed therein a longitudinal slot for a key and a series of transverse slideways intersecting the slot, spring pressed substantially flat tumblers mounted slidably in the slideways and adapted to lock the plug against rotation in the casing, said tumblers being formed of metal stampings and having central slots therein through which the key may be inserted in order to shift the tumblers into an inoperative position, and tongues projecting outwardly from the face portions of the tumblers and lengthwise of the key slot and plug and arranged to engage and coact with parts of the plug to hold the tumblers in connected relation with the plug and prevent ejectment upon removal of the plug from the bore.



1,805,892. ADJUSTABLE AIR BLAST HEATER FOR LOCOMOTIVES. OSCAR H. STONE, near Dayton, and DAVID A. COOPER, Dayton, Ohio. Filed Jan. 18, 1930. Serial No. 421,837. 4 Claims. (Cl. 110—76.)

1. In a locomotive fire box including a series of grate bars mounted adjacent each other to support a bed of fuel, tubes formed with air discharge holes in their upper ends, vertically movable through said grate bars and fuel bed, lever means for adjusting said tubes to bring their air discharge ends a desired distance above the fuel bed, and means for delivering air under pressure to said tubes.

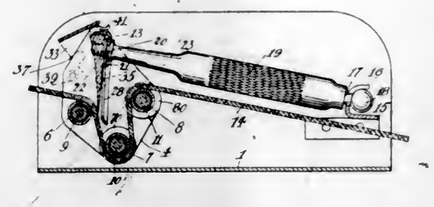


1,805,893. APPARATUS FOR KNITTING FULL FASHIONED HOSIERY. EDGAR J. THOMPSON, Montreal, Quebec, and RAYMOND H. HUBLER, Sherbrooke, Quebec, Canada, assignors to Canadian Silk Products Limited, Sherbrooke, Canada, a Corporation of Quebec. Filed May 28, 1928. Serial No. 281,246. 9 Claims. (Cl. 66—129.)

1. In a machine of the type described, reciprocatory thread carriers, an intermittently rotatable stepped abutment for varying the length of reciprocal travel of the carriers at predetermined course intervals, an endless chain, a series of spaced cam elements carried by said

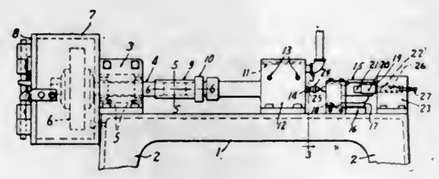
chain, ratchet mechanism adapted and arranged to be intermittently actuated by said elements to turn said abutment, and means for driving said chain.

1,805,894. PARACHUTE. JOSEPH J. WAMPACH, St. Paul, Minn., assignor of one-half to Frank J. Wampach, Jordan, Minn. Filed Aug. 12, 1929. Serial No. 385,093. 2 Claims. (Cl. 244—21.)



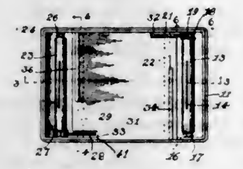
1. An aircraft parachute, comprising an extensible central frame member pivotally mounted on an airplane, each of the extensible portions of said frame having a shock absorbing member mounted between said frame member and the next extensible portion thereof to absorb the shock of opening thereof, the canopy of said parachute being connected to the outer portion of said extensible frame, the risers of said parachute being connected to said frame adjacent the point of pivotal support thereof, and a casing adapted to enclose said parachute and frame when in a folded collapsed position, said casing being split lengthwise and adapted to open to release the parachute therefrom.

1,805,895. SAFETY RAZOR. ALEC VERNON WATSON, St. Albans, England, assignor of one-half to Thomas Anderson Davis, London, England. Filed Apr. 7, 1928, Serial No. 268,243, and in Great Britain Apr. 22, 1927. 9 Claims. (Cl. 30—12.)



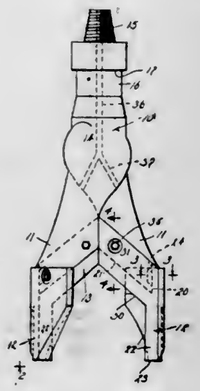
9. A safety razor comprising a hollow ground blade, a handle screwed at one end into a surface of said blade

and provided at the other end with locating means adapted for engaging a support, a clip seated on the back of



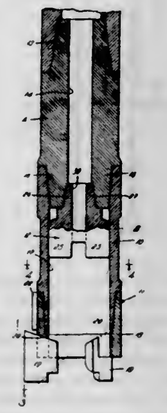
said blade and secured by the screwing in of said handle, and a spring biased blade guard supported by the clip so as to be swingable past the edge of the blade.

1,805,896. GRINDING WHEEL TESTING APPARATUS. HERMON G. WEINLAND, Springfield, Ohio, assignor to The Safety Grinding Wheel & Mch. Company, Springfield, Ohio, a Corporation of Ohio. Filed Mar. 21, 1928. Serial No. 263,484. 3 Claims. (Cl. 73—51.)



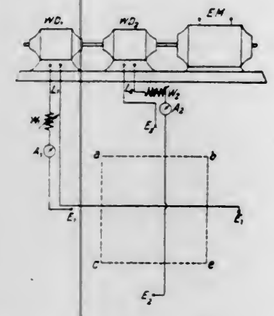
1. In a testing machine for grinding wheels, a grinding wheel mounting including a shaft for the wheel, an air motor having a shaft aligned with said wheel shaft, a flexible connection between said shafts, a speed indicating instrument having a shaft aligned with said motor shaft, and spring means for holding the same in uniform frictional engagement with said motor shaft.

1,805,897. RECORDING AND PROMPTING DEVICE. HARRY T. WILKINS, Philadelphia, Pa., assignor of one-half to Orville T. Bounds, Centralia, Ill. Filed Feb. 1, 1930. Serial No. 425,106. 4 Claims. (Cl. 281—7.)



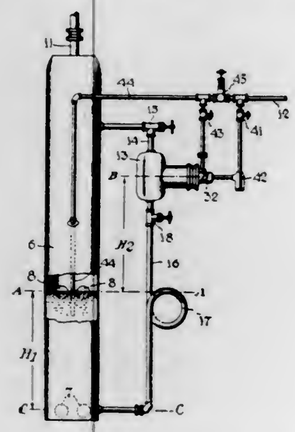
1. A recording and prompting device comprising a casing, a table within the casing, supply and receiving rollers journaled upon opposite sides of the table and provided with elements defining the width of the strip to be employed, and confining fingers juxtaposed to the table and attached at one end thereto and projected from opposite sides substantially paralell with the rollers and each stopping short of the side opposite its attachment, said fingers being spaced apart a distance greater than the width of the strip defined by the rollers.

1,805,898. WELL BIT. JESSE C. WRIGHT, Huntington Park, and LYNN F. BONNEY, Los Angeles, Calif., assignors to Wieman, Kammerer, Wright Co., Inc., a Corporation of California. Filed Oct. 1, 1927. Serial No. 223,340. 3 Claims. (Cl. 255—61.)



2. A well drilling bit including, a body, spaced legs projecting from the body, cutter units mounted on the legs having sockets receiving the lower end parts of the legs, and lugs on the cutter units fitting recesses in the said end parts.

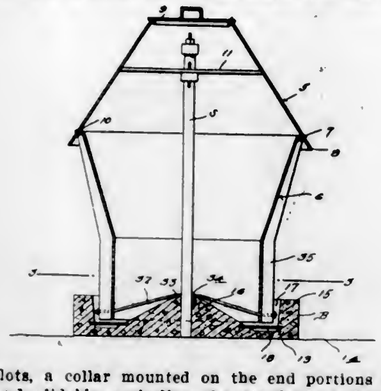
1,805,899. WELL DRILLING BIT. JESSE C. WRIGHT, Los Angeles, Calif. Filed July 1, 1929. Serial No. 375,115. 4 Claims. (Cl. 255—61.)



1. A well drilling tool including, an upper section having a longitudinal fluid passage, a tubular cutter detachably mounted on and projecting downwardly from the lower end of the upper section, and a core cutter closing the upper end of the tubular cutter and having a pin screw threaded into the lower end of the fluid passage and having a discharge fluid passage communicating with and of less diameter than the said fluid passage and discharging downwardly into the tubular cutter.

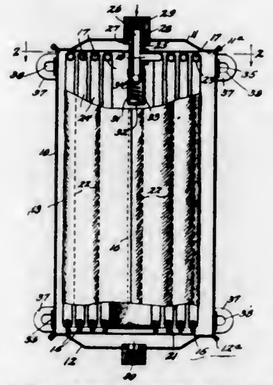
1,805,900. METHOD OF EXPLORING THE SUBSOIL. RICHARD AMBRONN, Gottingen, Germany. Filed Nov. 12, 1929, Serial No. 406,677, and in Germany Dec. 5, 1928. 5 Claims. (Cl. 175—182.)

1. Method of exploration of the subsoil comprising feeding it with alternating current under control of the form of oscillation ellipses of the field produced thereby and measuring the field of the ground currents.



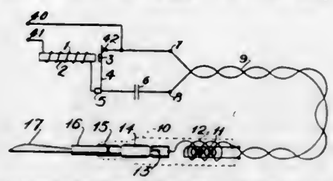
1,805,901. REFRIGERATION. JOHN G. BERGDOLL, York, Pa., assignor to York Ice Machinery Corporation, York, Pa., a Corporation of Delaware. Filed Nov. 19, 1929. Serial No. 408,363. 8 Claims. (Cl. 62—126.)

1. The combination with an evaporator, of means for maintaining a substantially constant liquid level therein, comprising a liquid containing manometer; a valve controlling the supply of liquid refrigerant to the evaporator; operating means for said valve responsive to the height of the liquid in said manometer; a pressure transmitting connection between said manometer and a point within the evaporator below the liquid level therein; and means for developing in said connection a vapor pressure at least equal to the head of the liquid refrigerant at said point.



1,805,902. HOG FEEDER. LOUIS BIEL, Ridgeway, Iowa. Filed Feb. 26, 1929. Serial No. 342,846. 1 Claim. (Cl. 119—54.)

A feeder of the character described comprising a base, a vertical hollow standard mounted on the base having longitudinal slots in an upper portion thereof, an apertured cap on the upper end of the standard, a hanger suspended for vertical adjustment from the cap and depending therefrom into the standard, a rod mounted transversely on the lower end of the hanger and operable in

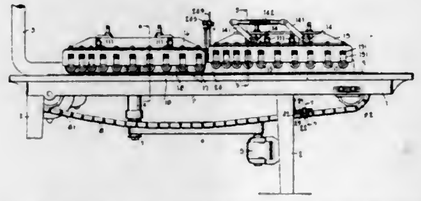


the slots, a collar mounted on the end portions of the rod and slidably encircling the standard, a horizontal bar slidable on the standard and resting on the collar, and a casing supported on the ends of the bar.

1,805,903. OIL FILTER. ARTHUR A. BULL, Detroit, Mich., assignor, by mesne assignments, to Handy Cleaner Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 23, 1928. Serial No. 294,738. 7 Claims. (Cl. 210—164.)

1. A filter of the character described, including in combination, a housing, a filtering bag wound into a spiral roll, means to suspend said bag within the housing and hold adjacent turns out of contact, said means conducting fluid to the interior of the bag throughout the full length of one spiral edge thereof, and means to conduct filtered fluid from the exterior of the bag.

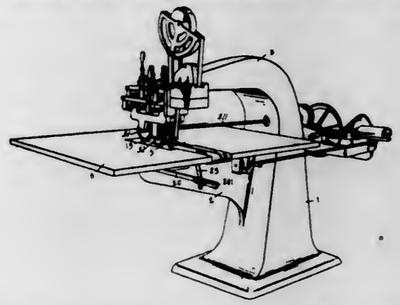
1,805,904. ELECTROTHERAPEUTICAL DEVICE. CHARLES W. CARPENTER, Rockville Center, N. Y., assignor to Collins Development Corporation, New York, N. Y., a Corporation of New York. Filed July 10, 1929. Serial No. 377,264. 3 Claims. (Cl. 174—89.)



1. An electrotherapeutical device comprising, means for producing a plurality of alternating currents of variant high frequencies from a commercial current, a member comprising a partially exhausted envelope of vitreous material, a surgical instrument connected to said source of variant high frequency currents and means whereby said exhausted envelope is interposed electrically between said surgical instrument and said source of high frequency currents.

1,805,905. RELEASING THREADING DIE. THOMAS COTTER, Evansville, Ind. Filed Mar. 1, 1929. Serial No. 343,794. 3 Claims. (Cl. 10—94.)

1. In a releasing threading die, the combination with a die stock having a chamber for containing the die, of an expansible threading die located within said chamber and held in contracted, screw-threading condition by the walls of the chamber, said chamber being of a width permitting the die to bodily tilt therein and having a supplemental cavity or enlargement which permits the die to expand when said die is tilted, thereby to permit the die to open.

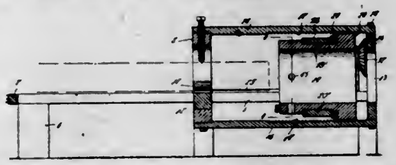


1,805,906. JOINTER. ALFRED A. DENNIS, Grand Rapids, Mich., assignor to Veneer Machinery Company, Grand Rapids, Mich. Filed Aug. 15, 1930. Serial No. 475,459. 11 Claims. (Cl. 144—90.)

1. In a jointer, the combination of a suitable bed, a jointer planer head on a vertical axis, an endless chain feed bed with means for driving the same on the bed of the said planer in proximity to the cutter head, yielding guide means for said feed bed on the cutter head side thereof, adjustable guide means for deflecting the opposite side of said feed bed to slightly curve the path of travel of the said feed bed, an adjustable presser feed roller member above the said feed bed opposite the said cutter head with yielding presser rolls therein, an endless belt conveyor around the said presser rolls, a clamp presser feed conveyor means in advance of the said presser feed roll comprising an adjustable clamp bar, spring pressed rollers carried thereby, parallel cam means for actuating the said clamp bar for clamping veneers against the said feed bed, an adjustable guide opposite the said clamp and feed means extending into proximity to the said cutter head, and a yielding table top opposite the said clamp means with springs for supporting the same above the level of the feed bed, the said table being provided with scale to set the work.

1,805,907. VENEER TAPING MACHINE. ALFRED A. DENNIS, Grand Rapids, Mich., assignor to Veneer Machinery Company, Grand Rapids, Mich. Filed Aug. 18, 1930. Serial No. 475,969. 5 Claims. (Cl. 144—279.)

1. In a veneer taping machine, the combination of a feed bed, a driven feed roll therein, feed bed presser rolls conical in form and disposed on converging shaft axles, spring pressed blocks therefor disposed in suitable sockets in the said frame, an adjusting lever for the springs of said blocks extending to the front of the said machine, an upper driven feed roll disposed in tangent relation to the spring pressed feed bed rolls in advance of the center line of their axes, presser rolls in advance of the said feed rolls, having screw thread spiral grooves thereon disposed

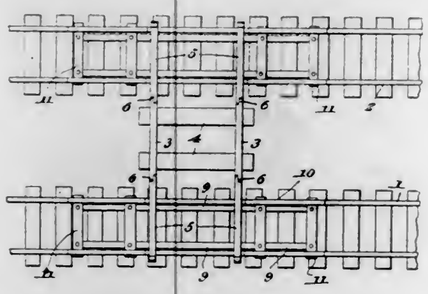


diagonally to converge toward the feed roll and disposed to engage the veneers each side of the tape, an auxiliary feed bed in advance of the said veneer taping machine, comprising a bed having a central dividing guiding rib, continuous conveyor rollers at front and rear of the means for adjusting the same, and a pair of continuous feed belts disposed at opposite sides of the said central dividing rib to operate in unison to advance veneers evenly and in matched relation to the said taping machine.

1,805,908. ELECTRICAL INDUCTIVE AND RESISTANCE HEATING DEVICE. EMIL FENDT and KARL SCHÖRO, Frankfort-on-the-Main-Hochst, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Dec. 19, 1929, Serial No. 415,346, and in Germany Dec. 28, 1928. 4 Claims. (Cl. 201—64.)

1. A heat-resisting electrical coil consisting of a layer of an insulating fibrous material, said insulating layer being impregnated with a cementitious substance containing a silicofluoride and an electrical conductor embedded in said layer.

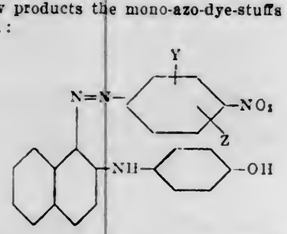
1,805,909. PIPE FITTING APPARATUS. LOREN C. FENN and STUART DAVIS, Chinook, Wash. Filed Apr. 29, 1929. Serial No. 359,074. 3 Claims. (Cl. 10—89.)



1. An apparatus of the class described comprising a clamp and a guide, a pair of bars connected to the clamp and to the guide and having opposed surfaces threaded, a cylinder having a threaded portion engaged in the bars, a cradle structure in which the cylinder is rotatably mounted, a slidable support for said cradle structure, means for supporting a tool in the cylinder for engaging a pipe held by the clamp, and means for rotating the cylinder.

1,805,910. TRANSFER MEANS FOR MINE CARS. EDWARD MARTIN HAWKINS, Glezen, Ind., assignor of one-half to Warren E. Pouder, Pike County, Ind. Filed June 21, 1930. Serial No. 462,906. 3 Claims. (Cl. 104—48.)

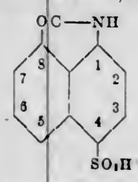
1. Means for transferring cars from one track to another track, comprising cross rails extending from one



track to the other track, pairs of inclined rails connected to the aforesaid cross rails at both ends of the latter, and a transfer car adapted to travel on the cross rails, whereby

a car may be run up to the transfer car or run down from said transfer car onto either track without necessitating re-laying or shifting of the cross rails, said cross rails and inclined rails being connected together.

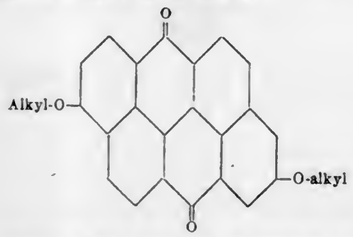
1,805,911. MONO-AZO DYE. WINFRID HENTRICH, Wiesdorf-on-the-Rhine, RUDOLF KNOCHE, Leverkusen-on-the-Rhine, and PAUL VIACK, Dessau-Anhalt, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 20, 1927, Serial No. 241,448, and in Germany Dec. 23, 1926. 3 Claims. (Cl. 260—90.)



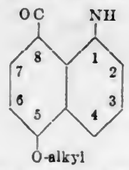
3. As new products the mono-azo-dye-stuffs of the general formula:

wherein Y represents SO_3H or $-CH_2SO_3H$ and Z represents hydrogen, alkoxy or a sulfonic acid group.

1,805,912. NEW DERIVATIVES OF ANTHANTHRONE AND PROCESS OF MAKING SAME. RICHARD HERZ, Frankfort-on-the-Main, and WERNER ZERWECK, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 7, 1927, Serial No. 224,755, and in Germany Oct. 13, 1926. 3 Claims. (Cl. 260—61.)



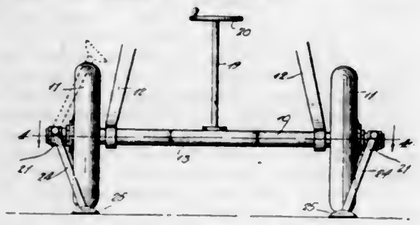
1. A process for producing new anthanthrone derivatives which process comprises saponifying a naphthostyril-sulfonic acid, corresponding probably to the formula:



to the corresponding 1-aminonaphthalene-8-carboxy-monosulfonic acid diazotizing it, treating its diazocompound with reducing agents, converting the formed disulfonic acid derivative of 1.1'-dinaphthyl-8.8'-dicarboxylic acid by alkali fusion into the corresponding dihydroxyderivative, subjecting this to the action of acid condensing agents and treating finally the formed dihydroxy-anthanthrone with alkylating agents.

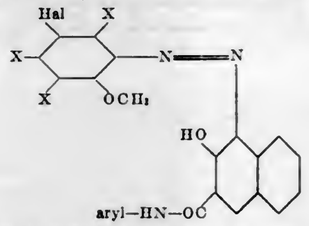
1,805,913. NEW ALKOXY DERIVATIVES OF ANTHANTHRONE AND PROCESS OF MAKING SAME. RICHARD HERZ, Frankfort-on-the-Main, and WERNER ZERWECK, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 7, 1927, Serial No. 224,756, and in Germany Oct. 13, 1926. 7 Claims. (Cl. 260—61.)

4. As new compounds alkoxyderivatives of anthanthrone, corresponding probably to the formula:

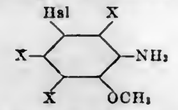


which compounds are when dry red powders, soluble in concentrated sulfuric acid with a green color and a reddish fluorescence, forming with an alkaline hydrosulfite solution a violet vat and dyeing cotton therefrom violet shades, turning to abrillian reddish oragne of a good fastness, when exposed to the air or soaped, which compounds are substantially identical with products obtainable by saponifying 5-alkoxynaphthostyrils of the formula:

to the corresponding 5-alkoxy-1-aminonaphthalene-8-carboxylic acids diazotizing them, treating the diazocompounds thus obtained with reducing agents and subjecting finally 5.5'-dialkoxy-1.1'-dianaphthyl-8.8'-dicarboxylic acids thus obtained to the action of acid condensing agents.



1,805,914. LANDING SKID FOR AEROPLANES. ALF N. LARSEN, Ogden, Utah. Filed Mar. 20, 1930. Serial No. 437,468. 3 Claims. (Cl. 244—2.)

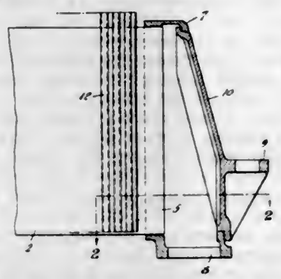


1. In combination with aeroplane landing gear including a shaft and a pair of landing wheels journalled thereon, bearing brackets fixed to the axle adjacent its ends, rock shafts supported in the respective bearings, skid arms fixed to respective rock shafts, skids carried by said arms, a pilot's control wheel, and means operatively connecting the wheel and shafts to rotate the latter simultaneously.

1,805,915. AZODYESTUFFS INSOLUBLE IN WATER AND PROCESS OF MAKING SAME. LEOPOLD LASKA, RUDOLF REYHER, and ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 11, 1928, Serial No. 325,384, and in Germany Dec. 12, 1927. 8 Claims. (Cl. 260—95.)

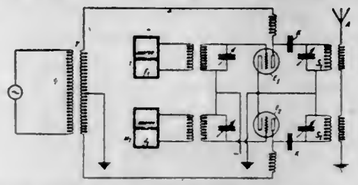
1. As new compounds the azodyestuffs of the probable formula:

wherein one X means halogen and the other X's mean hydrogen, which compounds are when dry orange to claret red powders, insoluble in water, yielding on reduction an 1-amino-2-hydroxy-3-naphthoic acid arylide and a dihalogen-2-anisidine of the general formula:



wherein X has the above signification.

1,805,916. PRODUCTION OF THIOETHERS OF THE ANTHRAQUINONE SERIES. ARTHUR LÜTTRINGHAUS, Mannheim, LUDWIG EIFFLAENDER, Ludwigshafen-on-the-Rhine, and FILIP KAČER, Mannheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 27, 1927, Serial No. 229,262, and in Germany Oct. 30, 1926. 4 Claims. (Cl. 260—58.)



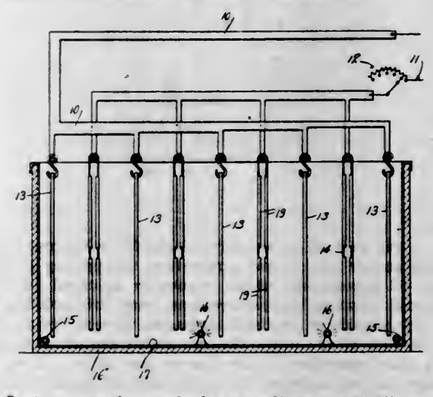
4. The process of producing anthraquinone-2-carboxy-1-thioethers which comprises acting on an anthraquinone-2-carboxylic acid with an aromatic compound, one of the said components containing a mercapto, the other a diazo group, the anthraquinone-2-carboxylic acid containing one of the said groups in the 1-position.

1,805,917. COOLER CONTACTING WITH CIRCULATING AIR. ALF LYSHOLM and GUNNAR CEDERSTRAND, Stockholm, Sweden, assignors to Aktiebolaget Ljungströms Ångturbin, Stockholm, Sweden, a Joint-Stock Company of Sweden. Filed Aug. 2, 1928, Serial No. 296,906, and in Sweden Aug. 4, 1927. 3 Claims. (Cl. 257—262.)

1. A cooler or condenser comprising pipes of flattened shape for the medium to be condensed, corrugated plates interposed between said pipes forming channels for circulating cooling air substantially at right angles to the longitudinal direction of said pipes, said pipes collected in groups, the ends of said pipes inserted in and connected with distributing or collecting chambers for the medium to be condensed or for the condensed medium, said corrugated plates extending with their corrugations from one of said pipes to the adjacent pipe, the outermost pipes of each of said groups provided on their external sides with corrugated plates of substantially half the height as the distance between two adjacent pipes in said groups.

1,805,918. OSCILLATION GENERATION. ALEXANDER MEISSNER, Berlin, Germany, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Oct. 20, 1928, Serial No. 313,703, and in Germany Nov. 24, 1927. 1 Claim. (Cl. 250—36.)

A transmission system for reducing the effect of fading comprising a first master oscillator for generating a first frequency, a first space discharge device amplifier circuit having input and output circuits tuned to said first frequency adapted to amplify the oscillations generated from said first oscillator, a second master oscillator for generating a second frequency, a second space discharge device amplifier circuit having input and output circuits tuned to said second frequency adapted to amplify the oscillations generated from said first oscillator, an alternating current source coupled in push-pull to the output circuits of said space discharge device amplifiers so that said amplifiers are made operative alternately, and means to radiate the resulting energy from both said amplifiers.

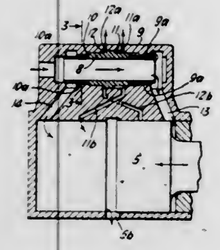


1,805,919. MANUFACTURE OF AZO DYESTUFFS. KURT H. MEYER, Mannheim, and CURT SCHUSTER, Ludwigshafen-on-the-Rhine, Germany, assignors, by mesne assignments, to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 31, 1925. Serial No. 53,741. 7 Claims. (Cl. 8—5.)

1. As new articles of manufacture, azo coloring matters of the general formula:

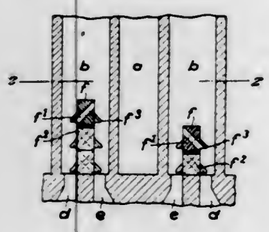
$$O_2N-R-N=N-R-NH.CH_2.CH_2.OH$$

wherein R represents a residue of the benzene series which is free from sulfonic acid groups.



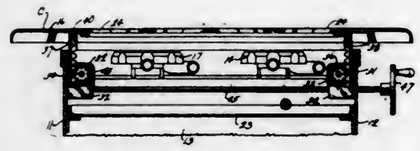
1,805,920. MAKING COPPER PLATED SHINGLES. FRED MUSCHLER, Denville, N. J. Filed Nov. 7, 1927. Serial No. 231,598. 4 Claims. (Cl. 204—8.)

3. A process for producing an adherent metallic coating upon an electrically non-conductive fibrous material which



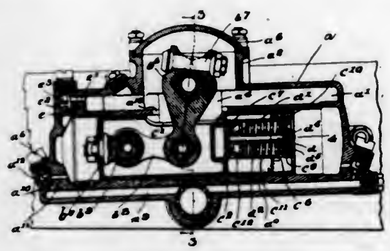
comprises coating the fibrous material first with a binder carrying a finely divided non-metallic conductor, and then with a binder having a finely divided conductor mixed therewith, immersing the coated article in a solution having a tendency to deposit metal by internal chemico-electrical reaction and causing the electrical current to flow between the conductor in the coating and the solution in such a manner as to assist the deposition of the metal as heretofore stated.

1,805,921. VALVE MECHANISM FOR FLUID PRESSURE TOOLS. GUSTAVE M. NELL, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 23, 1928. Serial No. 301,461. 9 Claims. (Cl. 121—18.)



1. A fluid pressure motor comprising a cylinder, a piston reciprocable therein, and a valve for controlling the motive fluid supply to operate said piston and moving automatically in timed relation with the latter, said valve having opposed shift areas, vents for said areas, supply passages thereto under control of said piston, said vents being of less extent than said passages, said valve having opposed holding areas alternately effective to retain the valve in position, means maintaining said holding areas continuously in communication with the opposits ends of said piston chamber, and means alternately subjecting said holding areas to live motive fluid.

1,805,922. HORIZONTAL COKE OVEN. CARL OTTO, Essen-Ruhr, Germany. Filed Aug. 13, 1929, Serial No. 385,561, and in Germany July 14, 1928. 2 Claims. (Cl. 158—118.)

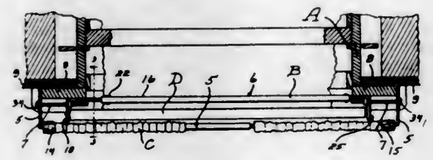


2. A gas and air mixer particularly for coke oven flues having an air and a gas perforation, comprising a plurality of superposed bricks removably mounted in the flues and between the perforations, each brick having a pair of oppositely inclined passages therein from one side thereof to the other through which the air and gas flows form one side of the flue to the other and each passage having a projection in the brick to guide the air or gas into the passage.

1,805,923. GAS RANGE. GUY A. ROBINSON, Cincinnati, Ohio. Filed July 24, 1929. Serial No. 380,622. 9 Claims. (Cl. 126—215.)

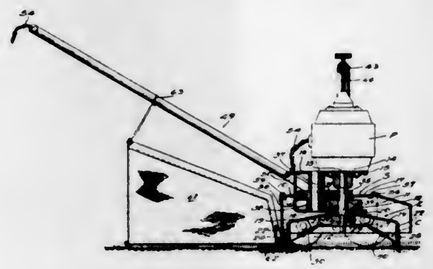
1. In a gas range the combination of a stationary lower frame portion including burners connected therewith, a top wall structure including grids for the respective burners, and means connected with the lower frame portion of the range for operatively elevating and lowering the top wall and the grids therewith.

1,805,924. HYDRAULIC SHOCK ABSORBER. FREDERICK HENRY ROYCE, West Wittering, near Chichester, England, assignor to Rolls Royce Limited, Derby, England. Filed Mar. 11, 1927, Serial No. 174,619, and in Great Britain Mar. 31, 1926. 2 Claims. (Cl. 188—88.)



1. A hydraulic shock absorber of the type comprising a closed cylinder, a double-ended piston within such cylinder, a compression chamber on each side of the piston, restricted means of communication consisting of pathways and orifices from one chamber to the other, and means whereby the piston is moved to and fro by the "shocked" member to be restrained, characterized in that the piston is hollow, and further comprises a diaphragm with the central orifice extending across the piston, means including pathways in the body of the piston whereby each compression chamber is in free communication with the space on its side of the diaphragm immediately adjoining the diaphragm, a moving tubular member normally closed at one end and permanently open at the other, seating at its normally closed end on the orifice in the diaphragm, radial ribs projecting inwardly from the piston wall extending from the diaphragm for a suitable distance in the direction of, and constituting axial guides for, the tubular member, notches in the inner edges of the said ribs beyond the range of movement of the tubular member forming an annular recess, a split ring in such notches, a flat annular member in the circular space within the ribs abutting against the split ring, a coil spring reacting between the said annular member and the tubular member urging the tubular member to close the said orifice, a central hole in the normally closed end of the tubular member, a sleeve guide within the tubular member co-axial with, but spaced away from the said hole, and supported at its end nearer to the said hole by ribs extended from the wall of the tubular member, a mushroom member seating on the outer side of the said hole and the stem thereof projecting through the hole and through and for a distance beyond the sleeve guide, a thread on the end of the said stem, a nut screwed on the said thread and a coil spring reacting between the nut, and the said ribs urging the mushroom member to close the said hole.

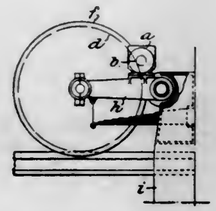
1,805,925. PROCESS FOR THE OXIDATION OF LEUCO COMPOUNDS OF THE TRIARYL METHANE SERIES. KARL SCHMIDT, Leverkusen, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 20, 1928, Serial No. 313,935, and in Germany Oct. 28, 1927. 5 Claims. (Cl. 260—68.)



1. Process which comprises dissolving a leuco compound of a dyestuff of the triarylmethane series in a pyridine base and oxidizing the leuco compound by means of oxygen in the presence of a suitable copper salt.

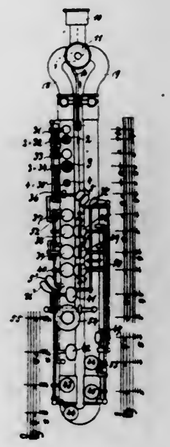
1,805,926. CURTAIN AND SHADE FIXTURE. WALTER R. SCOTT, Washington, Pa. Filed Feb. 7, 1928. Serial No. 252,590. 4 Claims. (Cl. 156—23.)

1. In a combined curtain and shade fixture, a pair of hanger members, a tie member including bracket arms provided at each end thereof for receiving the trunnions of a shade roller, a bolt extending thru each hanger member and its adjacent bracket arm of the tie member and freely rotatable therein, and a nut disposed inwardly of each bracket arm for threaded reception of said bolts.



1,805,927. MOWING MACHINE. LEWIS SHARP, Huntington Park, Calif. Filed Feb. 27, 1929. Serial No. 343,182. 9 Claims. (Cl. 56—25.)

1. A machine of the character described comprising a raking element having blades, means for mounting the element for rotary movement about a vertical axis and for movement bodily over a lawn, with the blades of the element positioned substantially vertical, and to travel edgewise through the grass of the lawn as the element is rotated, whereby the blades will effect raking up of grass streamers traversing the lawn in response to rotation of the element during the movement thereof bodily over the lawn, and means for rotating the element.

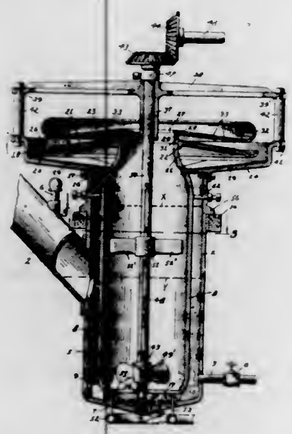


1,805,928. RUNNING GEAR FOR HIGH-SPEED SUSPENSION CARS. CURT STEDEFELD, Heidelberg, Germany. Filed Sept. 19, 1927, Serial No. 220,535, and in Germany Mar. 24, 1926. 6 Claims. (Cl. 105—109.)

1. Running gear for high-speed spring-mounted suspension cars comprising, in combination with the running wheels horizontal forked arms hinged to the car body, each of said forked arms carrying one of said wheels, at least one motor mounted adjacent to the turning axes of said forked arms, and toothed gears for transmitting the torque of said motors to the running wheels.

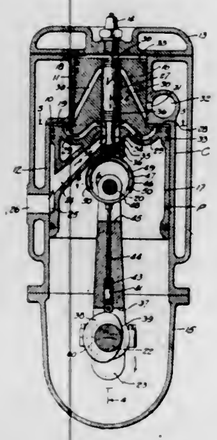
2. Running gear for high-speed suspension cars comprising, in combination with the running wheels, horizontal forked arms hinged to the car body, each of said forked arms carrying one of said wheels, at least one motor mounted on said forked arms and adjacent the axes thereof, and toothed gears for transmitting the torque of said motors to the running wheels.

1,805,929. CLARINET. FRIEDRICH STEIN, Saarbrucken, Germany. Filed Oct. 26, 1929, Serial No. 402,698, and in Germany Nov. 3, 1928. 8 Claims. (Cl. 84—381.)



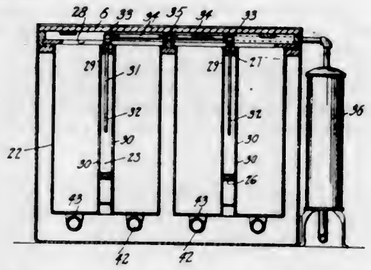
5. In a clarinet the combination of two tubes, a change-over valve enabling the said tubes to be used alternatively, and mechanism enabling said change-over valve to be actuated alternatively by the left thumb or the little finger of the player's right hand, the said tubes having note holes and valves for a continuous chromatic scale distributed between them, all within a range for fingering without substantial lateral shifting of the player's hands.

1,805,930. AMALGAMATOR. LEONARD D. STEPHENSON, Ashland, Oreg. Filed Apr. 18, 1928. Serial No. 269,786. 15 Claims. (Cl. 209—205.)



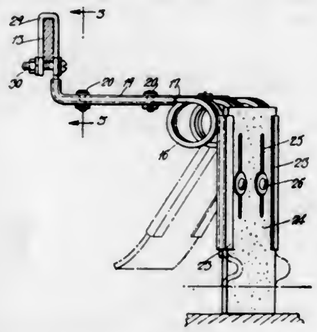
1. An amalgamator comprising a tank having a mercury well and arranged to receive a charge of slimes to be treated; a casing mounted within the tank; a power driven shaft axially disposed within the casing; an impeller adjustably mounted upon the shaft adjacent the bottom of the casing to circulate slimes upwardly through the casing, said impeller being provided with pitched impeller blades operative to lift and hold globules of

mercury from the well suspended in the circulating slimes; and means comprising a plurality of downwardly sloping



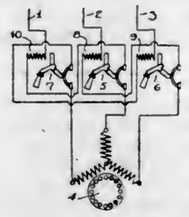
amalgamating plates mounted around the top of the casing for returning slimes overflowing from the casing back into the tank.

1,805,931. INTERNAL COMBUSTION ENGINE. FRANK F. TAYLOR, Santa Ana, Calif. Filed Jan. 4, 1930. Serial No. 418,555. 7 Claims. (Cl. 123—47.)



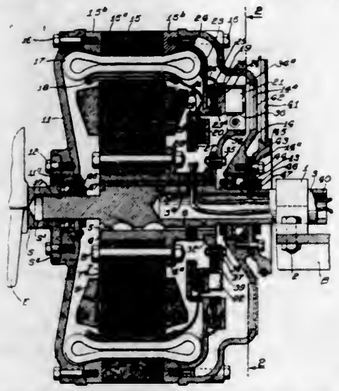
7. An engine having a cylinder with portions of different diameters, a differential piston working in said portions and co-acting therewith to define a fuel compressing chamber and a combustion chamber, a crankshaft, a connecting rod connected to the crankshaft and having a wrist pin connection with the piston, ducts in the piston through which fuel from a source of supply is adapted to be admitted to the fuel compressing chamber and from the latter to the combustion chamber, a valve mounted in the piston for controlling the flow of fuel through the ducts, a cam fixed to the crank of the crankshaft, a tappet engaging the cam and mounted in the connecting rod, an annulus freely receiving the wrist pin and composed of a pair of arcuate sections connected for relative oscillation, means for pivotally connecting one of said sections to the valve, and means for connecting the other section to the tappet so that movement of the latter by the cam will be transmitted by the annulus to the valve.

1,805,932. SYSTEM OF ICE-MANUFACTURE AND REFRIGERATION. GEORGE L. VAIL, Denver, Colo. Filed July 12, 1927. Serial No. 205,254. 6 Claims. (Cl. 62—159.)



1. In a system of ice manufacture, a freezing unit comprising a freezing chamber subject to exterior temperature conditions, an insulated circulation space connected with the freezing chamber by a horizontal upper slot and a vertical lower slot in a side thereof, and means to effect a circulatory movement of water in the circulation space into the freezing chamber through the upper slot and out of the same through the lower slot.

1,805,933. TIRE GUARD FOR AUTOMOBILES. HAROLD VICTOR, Roselle, N. J. Filed Apr. 9, 1930. Serial No. 442,945. 1 Claim. (Cl. 280—160.)

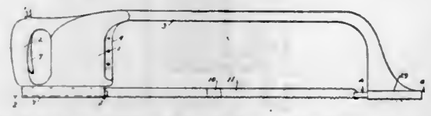


In a sweeper attachment for automobiles, a single length of bendable resilient wire, said wire bent into a spring coil and a pair of angularly disposed frames, plates secured to and covering said frame, a flexible sweeper element, and means for adjustably mounting said sweeper element on the plate of one of said frames.

1,805,934. PROTECTIVE DEVICE FOR ALTERNATING POLYPHASE SYSTEMS OF DISTRIBUTION. JOSEPH VOLKMANN, Glenside, Pa. Filed Sept. 18, 1925. Serial No. 57,249. 3 Claims. (Cl. 175—294.)

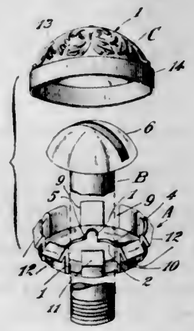
1. In a multiphase electrical distribution system, a plurality of phase lines leading to a motor, a circuit maker and breaker in each phase line and an electro magnet in each phase line, the electro magnet of each phase line being operatively associated with the circuit maker and breaker of the other phase lines, whereby the latter will be opened seriative, when the current in one line is so reduced as to overload the other lines.

1,805,935. ELECTRIC MOTOR GENERATOR. EATHELBERT W. WEATHERS, San Diego, Calif. Filed Nov. 2, 1926. Serial No. 145,723. 15 Claims. (Cl. 290—47.)



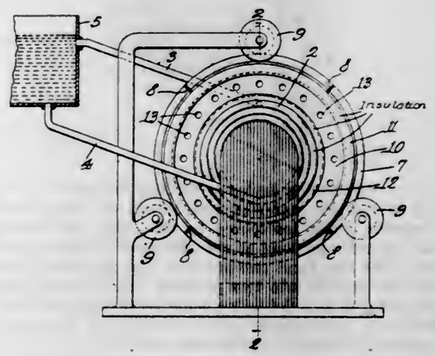
1. In a mechanism of the class described, a fixed hollow shaft, a field core mounted on and intermediate the ends of said shaft, a pair of end housing members revolubly mounted on said shaft at the opposite sides of said core, an armature core secured between and to the outer portions of said housing members, the inner portion of said core being provided with coil supporting means, a set of commuted coils mounted on said means around the circumference thereof, and another set of commuted coils mounted on said means and positioned inwardly from said first mentioned coils and adjacent the peripheral portions of said field core.

2. In a mechanism of the class described, a fixed hollow shaft, a field core mounted on and intermediate the ends of said shaft, a pair of end housing members revolubly mounted on said shaft at the opposite sides of said core, an armature core secured between and to the outer portions of said housing members, the inner portion of said core being provided with coil supporting means, a set of coils mounted on said means around the circumference thereof, another set of coils mounted on said means and positioned inwardly from said first mentioned coils and adjacent the peripheral portions of said field core, and a pair of annular commutators positioned within the housing and supported by said armature to one side of said field core in concentric relation with each other, the engaging faces of said commutators being transverse with their axes of revolution.



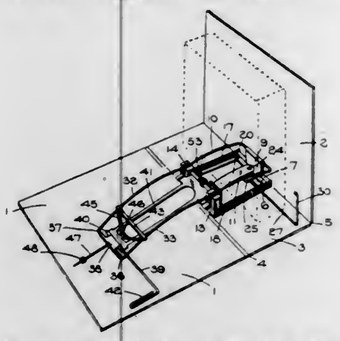
12. In a dynamo electric machine, a revolubly mounted armature, a pair of independent windings on said armature, each winding connected to a vertical commutator, said commutators being disposed in substantially concentric relation on one side of said armature.

1,805,936. SAW. VINCEY A. WILCOX, Los Gatos, Calif., assignor of one-half to Claude C. Parks, San Jose, Calif. Filed Apr. 30, 1930. Serial No. 448,712. 1 Claim. (Cl. 143—68.1.)



A device of the character described comprising, a supporting frame, spaced and aligned guides disposed thereon, a pair of opposed racks slidably mounted in each guide, a pinion journaled in each guide to mesh with the racks therein, saw blades mounted on the racks and disposed side by side whereby to make a single cut, a gear journaled in the frame and having an annular groove formed therein eccentrically disclosed relative to its axis of rotation, a pin mounted on one rack to engage said groove, and driving means for the gear mounted in the frame.

1,805,937. LOCK CAP FOR FASTENERS. JOSEPH BERGE, Montclair, N. J. Filed Dec. 27, 1928. Serial No. 328,718. 10 Claims. (Cl. 85—35.)



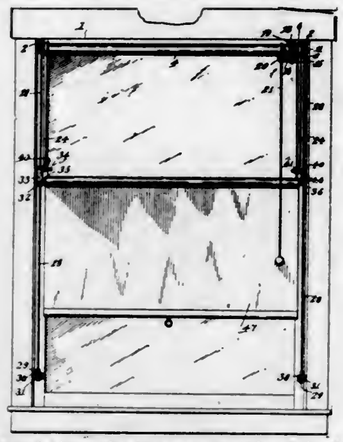
3. A device for ornamentating the ends of through fasteners comprising an anchoring member adapted to be securely held in position by said through fastener, locking devices on said anchoring means to prevent rotation of said fastener and of said anchoring means, locking means carried by said anchoring means, and an ornamental cover cap adapted for telescoping movement in one direction only relative to said locking means whereby said anchoring member securely locks said ornamental cover cap in position over one end of said fastener.

1,805,938. HEATING APPARATUS. WILLIAM L. CLOUSE, Tiffin, Ohio. Filed Mar. 15, 1929. Serial No. 347,402. 4 Claims. (Cl. 219—13.)

1. Heating apparatus including a transformer core, a primary thereon, means for cooling the primary, a secondary extending around the primary and including a ring having an opening for the reception of an object to be heated, and sheathing on the inner and outer peripheries of the ring, said sheathing constituting heat and electricity insulating means.

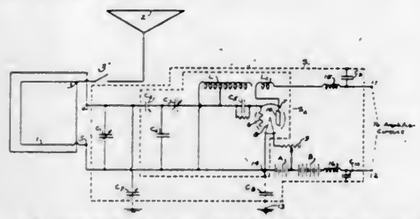
1,805,939. FILE FOR LETTERS OR OTHER PAPERS. JOHN FREDERICK DIXON, Wylde Green, England. Filed Sept. 16, 1929, Serial No. 393,017, and in Great Britain Sept. 19, 1928. 14 Claims. (Cl. 129—8.)

1. A file for letters, sheets, papers and the like comprising one or more primary prongs, mounting means therefor, a supporting guide with which the primary prong or prongs is or are adapted normally to engage, and a secondary or extension prong for each primary prong adapted to be engaged with the corresponding primary prong in a manner such that the latter is raised from the supporting guide and a continuous bridge is formed over the latter by such engaged primary and secondary prongs.



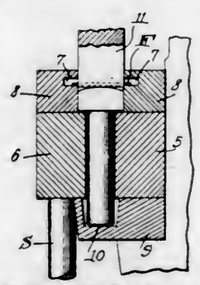
1,805,940. DISTRIBUTING DEVICE. FREDERICK J. DOLAN, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 6, 1928. Serial No. 304,368. 8 Claims. (Cl. 302—28.)

1. A distributing device comprising an inlet pipe for air and pulverulent material, two branch conduits connected therewith, walls interposed in the inlet pipe serving to scoop spaced portions of the incoming material from the remainder and form two streams, and partitions separating each stream into two portions, one of said partitions being shaped as a deflecting baffle arranged to combine one portion of each stream with a portion of the other and conduct the same to the branch conduits.



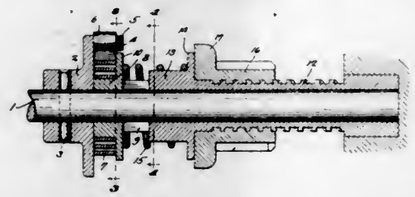
1,805,941. SHADE. CLARENCE M. EVELETH, River Forest, Ill., Filed Dec. 16, 1929. Serial No. 414,519. 5 Claims. (Cl. 156—27.)

1. In a device of the class described, a shaft having a recess in its periphery, a drum on the shaft and having an opening registering with the recess, an end plate abutting against the drum and forming one flange of the drum, a pintle mounted in the shaft and extended across the recess, the pintle having a shoulder engaging the end plate to hold the end plate and the drum on the shaft, a bearing wherein the pintle is journaled, and a shade-supporting



ribbon wound about the drum at one side of the flange, the ribbon passing through the opening and into the recess, one end of the ribbon being mounted on the pintle, within the recess.

1,805,942. RADIO LOOP ANTENNA SYSTEM. MALCOLM FERRIS, Washington, D. C. Filed Jan. 29, 1927. Serial No. 164,495. 5 Claims. (Cl. 250—33.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

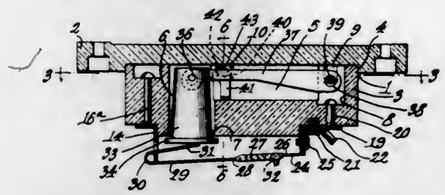


1. In a compensated radio compass receiver including a tuned loop antenna, a coupling unit and a detecting unit, a grounded shield surrounding the entire set with the exception of the tuned loop antenna, and a second shield surrounding the coupling and detecting units and disposed within the outer shield and insulated therefrom.

1,805,948. METHOD OF AND MECHANISM FOR TRIMMING FORGINGS. JOHN H. FRIEDMAN, Tiffin, Ohio, assignor to The National Machinery Co., Tiffin, Ohio. Filed July 21, 1927. Serial No. 207,483. 5 Claims. (Cl. 10—24.)

1. The combination with dies for receiving a forging, and trimming dies adjacent thereto for receiving a portion of the forging, said trimming dies having grooves for the reception of a flashing on the forging, of a shear for severing the engaged forging from stock extending beyond the first named dies, there being a recess in the shear adapted to register with one end of the severed forging, and means for punching the forging out of its flashing in the trimming dies and into the recess in the shear.

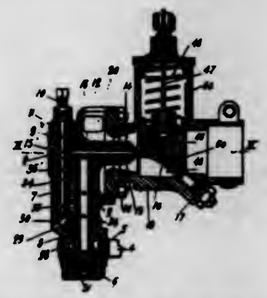
1,805,944. STARTER MECHANISM. EDWARD FROMM, Iowa Falls, Iowa. Filed Dec. 26, 1929. Serial No. 416,665. 1 Claim. (Cl. 74—7.)



A transmission mechanism for self starters of internal combustion engines including a power shaft, a collar secured thereto, a flange projecting from one face of the collar, a clutch member mounted for rotation on the shaft and constantly thrusting against the collar, an annular flange thereon, a stop lug on said flange in the path of the flange on the collar, a flat spiral spring secured at the end of its outer convolution to the flange on the collar and having its inner convolution secured to the clutch member, said spring being held between the collar and the flange on the clutch member, a screw threaded sleeve slidably and rotatably mounted on the shaft, a clutch member at one end thereof in sliding engagement with the first named clutch member, a gear threaded on the sleeve, and a cushioning spring between and pressing in opposite directions against the clutch members.

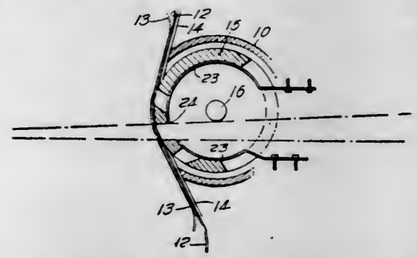
1,805,945. DETONATING FIREWORK COMPOSITION. WILLIAM F. GEHRIG, Berkeley Heights, N. J. Filed Mar. 5, 1928. Serial No. 259,378. 5 Claims. (Cl. 52—28.)

1. A non-hygroscopic firework composition adapted to produce successive detonations when ignited, consisting in the herein named ingredients in the approximate proportions by weight as follows:



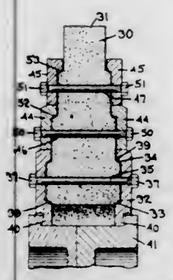
Potassium chlorate	35 parts
Magnesium oxide	35 parts
Phosphorous sesquisulphide	12 parts
Gum arabic	1 part
Potassium dichromate	5 parts
And a filler	8 parts

1,805,946. AUTOMATIC FIRE ALARM. JAMES E. GOODWIN, Cedar Bluff, Va. Filed Jan. 31, 1929. Serial No. 336,616. 3 Claims. (Cl. 200—142.)



1. In a thermal switch, the combination of a frame, a lever fulcrumed on the frame for vertical downward swinging movement, a depending weight mounted on the lever, and constituting means for swinging the lever downwardly, a contact member on the frame and out of electrical engagement with the lever when the lever is raised, the lever engaging the contact member when the lever swings downwardly, responsive to the weight, a link embodying a fusible portion, the weight resting directly on a part of the link, to support the weight, hold the lever raised, and keep the lever out of electrical engagement with the contact member, and means for mounting the link on the frame at spaced points on opposite sides of the weight, both of said means being spaced from the lever and being independent thereof.

1,805,947. CARBURETOR. HENRI JULES GUIRAUD, Veuxhaulles, France, assignor to Societe Anonyme La Cooperation Agricole & Industrielle, Veuxhaulles, France. Filed Nov. 12, 1926, Serial No. 148,078, and in France Oct. 12, 1926. 2 Claims. (Cl. 261—41.)

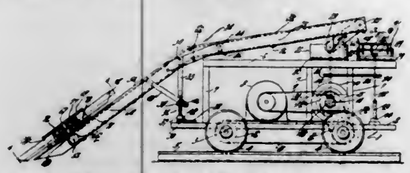


1. In a carburetor with a mixing chamber, a main nozzle and a slow speed nozzle, in combination, a flexible tube extending the slow speed nozzle and parallel in its free position to the axis of the mixing chamber of the carburetor and a throttling piston moving in said mixing chamber transversely to the axis thereof and having an end parallel to said axis of the mixing chamber, the end of said piston being provided with a groove of progressively increasing depth approaching the slow speed nozzle and adapted to receive said flexible tube.

1,805,948. MOTION PICTURE PRINTING MACHINE. GEORGE LANE, Poughkeepsie, N. Y., assignor, by mesne assignments, to Audio-Cinema, Incorporated, Long Island City, N. Y., a Corporation of New York. Filed June 27, 1928. Serial No. 288,695. 2 Claims. (Cl. 95—75.)

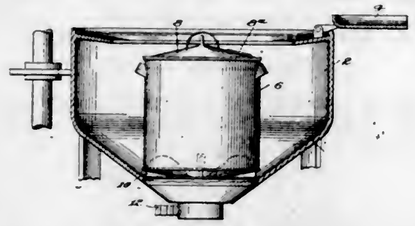
1. In a film strip printing machine, means having a printing aperture for the passage of light to the film, and means controlling the passage of light through said printing aperture comprising a member adjustable relative to said printing aperture, said member having a plurality of apertures spaced apart along the same and out of alignment in respect to the direction of the movement of adjustment of said member thereof, said member when adjusted bringing said apertures to register separately with the printing aperture for printing upon areas of said film which are disaligned longitudinally thereof, one area being for the motion pictures and the other for the sound track, substantially as described.

1,805,949. ABRASIVE WHEEL. THURE LARSSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 29, 1926. Serial No. 138,495. 13 Claims. (Cl. 51—207.)



1. A segmental grinding wheel comprising a plurality of abrasive segments arranged in the form of an annulus, the annulus having on each of its opposite sides two opposed beveled clamping shoulders sloping in opposite directions and forming a wedge shaped clamping lug, a clamping plate on each side of the annulus provided with beveled faces corresponding with the clamping shoulders on the annulus, and means to draw the plates together, said parts being so arranged that the annulus is supported wholly by its beveled clamping shoulders.

1,805,950. AWNING. CLARENCE G. MACK, Toledo, Ohio, assignor to Hettrick Manufacturing Company, Toledo, Ohio. Filed Sept. 9, 1929. Serial No. 391,118. 4 Claims. (Cl. 156—15.)



4. In combination with an awning frame, a crossbar having end portions, the end portions having plane surfaces, a pair of side bars having end portions, the end portions of the side bars having plane surfaces, an interconnecting member having plane surfaces and flanged edges, a pivotal member locating the plane surfaces of the crossbar on the plane surfaces of the interconnecting member, a second pivotal member locating the plane surfaces of the side bars on the plane surfaces of the interconnecting member to permit movement of the side bars relative to the crossbar to substantially a 90° angle.

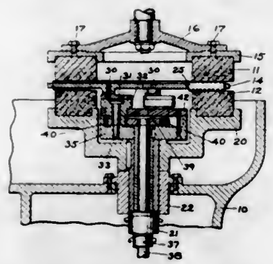
1,805,951. COAL LOADING MACHINE. CUYLER C. MILLER, Jr., Gillespie, Ill. Filed Jan. 18, 1930. Serial No. 421,647. 6 Claims. (Cl. 198—11.)

1. In a device of the class described, a carriage, a race mounted thereon, a carrier rotatably mounted in the race, a gathering conveyor pivotally attached to the said carrier, means for supporting and maintaining the said conveyor in any adjusted position, another race mounted on the carriage, a carrier rotatably mounted in this race, a delivery conveyor pivotally attached to the said carrier and means for supporting this conveyor in any adjusted position.

1,805,952. CHURN ATTACHMENT FOR WASHING MACHINES. MILTON I. MORGAN and BALLARD C. TATE, Bristol, Tenn. Filed Nov. 1, 1927. Serial No. 230,232. 6 Claims. (Cl. 259—56.)

1. The combination with the oscillating member of a washing machine, of a churn and engaging means between said churn and member, said means projecting within the churn body and acting as an agitator.

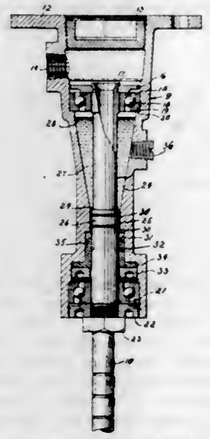
1,805,953. MINERAL OIL AND ANTI-OXIDANT AGENT AND PROCESS. HAROLD A. MORTON, Akron, Ohio. Filed Aug. 17, 1928. Serial No. 300,373. 33 Claims. (Cl. 87—9.)



1. The method of retarding the oxidation of mineral oils consisting in adding to the oil a derivative of hydrogenated glyoxaline containing no strongly negative groups.

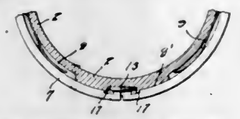
20. A mineral oil to which has been added a derivative of tetra hydroglyoxaline, wherein, each of the carbon atoms in the 4-5 positions has a hydrogen atom attached thereto and substituted in one or more of the 1-2-3 positions by a hydrocarbon residue.

1,805,954. SOAP AND SOAP PRODUCTS AND STABILIZING AGENT AND PROCESS. HAROLD A. MORTON, Akron, Ohio. Filed Aug. 17, 1928. Serial No. 300,372. 35 Claims. (Cl. 87—16.)



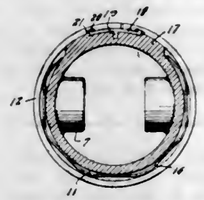
1. A soap having incorporated therein, a di-aryl tetra hydroglyoxaline.

1,805,955. METHOD OF AND APPARATUS FOR DRESSING ABRASIVE LAPS. SYDNEY PLAYER and HERBERT S. INDGE, Westboro, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1929. Serial No. 350,966. 5 Claims. (Cl. 125—11.)



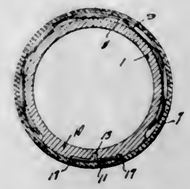
5. Apparatus for dressing the opposed faces of the lapping elements in a lapping machine having two abrasive laps and a work cage revolvable therebetween which has a plurality of work receiving openings adapted to hold work pieces in lapping contact with the laps, comprising several small cutting tools shaped and sized to fit loosely in and project through said openings in the work cage and having cutting faces on its opposite sides capable of cutting the abrasive surfaces of both laps when revolved in contact therewith.

1,805,956. SWIVEL COUPLING. HAROLD W. SHONNARD, Upper Montclair, N. J., assignor to Elevator Supplies Company, Inc., a Corporation of New York. Original application filed Aug. 7, 1924, Serial No. 730,705. Divided and this application filed Aug. 21, 1928. Serial No. 301,042. 4 Claims. (Cl. 285—96.)



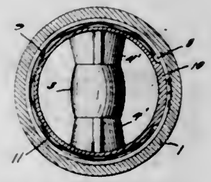
1. In combination, a tubular casing connected to a pressure line, a member within said casing having a cylindrical outer surface, a mass of lubricating material between the member and the casing having one end exposed to the line pressure, said casing being wider at said end than at the opposite end whereby said mass of lubricating material is adapted to multiply the resistance to the deformation of the lubricant at the end opposite to that exposed to the line pressure, and a packing between the member and the casing to prevent the escape of compressed lubricant.

1,805,957. AUTOMOTIVE PISTON. ARNOLD A. STEPHENS, Davenport, Iowa. Filed Dec. 30, 1926, Serial No. 158,110. Renewed Sept. 27, 1930. 5 Claims. (Cl. 74—108.)



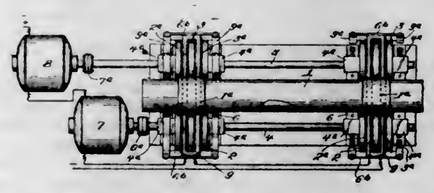
1. A restraining means for a bearing ring of the character described comprising a substantially circular base plate and chord extensions formed integral with the plate to slidably engage the internal face of the bearing ring and thereby limit its circumferential expansion.

1,805,958. HOLLOW PISTON. ARNOLD A. STEPHENS, Davenport, Iowa. Filed Nov. 23, 1926. Serial No. 150,307. 15 Claims. (Cl. 74—108.)



1. A hollow piston comprising a rigid head and resilient skirt portion, a split contractible and expansible bearing member in the head having less thermal expansion than the material of the piston and means to limit the expansion of the bearing member.

1,805,959. MOTOR PISTON. ARNOLD A. STEPHENS, Davenport, Iowa. Filed Dec. 10, 1926. Serial No. 153,812. 30 Claims. (Cl. 74—109.)

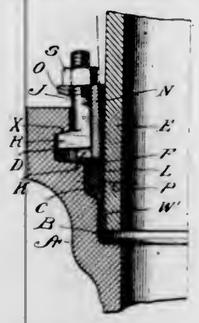


1. In combination with an engine cylinder a piston comprising a head and skirt of a material having a specific gravity less than iron, separate annular radially expansible sections of a ferruginous material carried by the head and skirt and means detachably mounted on the piston to restrain the expansion of the sections while permitting substantially free thermal expansion and contraction of the piston body.

1,805,960. PISTON CONSTRUCTION. ARNOLD A. STEPHENS, Davenport, Iowa, assignor of one-half to George E. Weeks, Davenport, Iowa. Filed Apr. 14, 1926, Serial No. 101,949. Renewed Apr. 9, 1931. 29 Claims. (Cl. 74—109.)

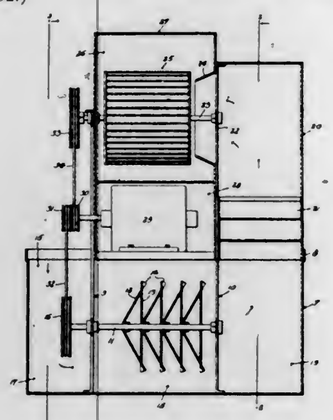
1. A piston comprising a head portion and a skirt portion, carrier bands mounted in the skirt portion, said bands being flush with the skirt portion on the thrust side of the piston but protruding beyond the skirt for the remainder of said skirt and means to limit the expansion of the bands.

1,805,961. MAGNETIC DRIVE FOR CENTRIFUGAL CASTING MACHINES. FRANK MCS. THOMAS, Easton, Pa. Filed Feb. 7, 1930. Serial No. 426,622. 11 Claims. (Cl. 22—65.)



6. In a centrifugal casting machine a flask having a raised peripheral track, a pair of cradle rolls underlying said track, one of said rolls being of greater width than the track and having peripheral channels, magnetizing coils located in said channels, means for driving said channeled roll, and means for supplying electric current to magnetizing coils.

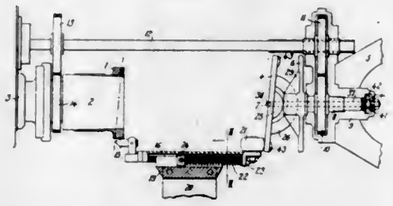
1,805,962. PIPE JOINT. FRANK MCS. THOMAS, Easton, Pa. Filed Dec. 31, 1927. Serial No. 243,931. 19 Claims. (Cl. 285—135.)



1. A flexible pipe joint comprising a bell, an abutting pipe within said bell, ring-shaped packing between said pipe and bell, said packing forming the sole contacting connection between said pipe and bell and spacing them

apart so that they may be misaligned flexibly about the packing as a pivot, a ring-shaped gland between the pipe, and bell extending within the mouth of the bell and

spaced from the pipe and bearing on said packing, and means slidably and rotatably associated with said gland for engaging the bell internally thereof.



1,805,963. AIR COOLING AND CONDITIONING APPARATUS. WILLIAM S. TONCRAY, Phoenix, Ariz. Filed May 7, 1930. Serial No. 450,548. 3 Claims. (Cl. 261—92.)

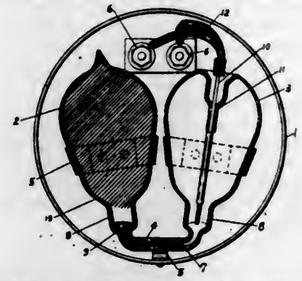
1. In an apparatus of the class described, an open top water tank, a horizontal shaft mounted for rotation therein, a pulley on said shaft, a plurality of bladed agitating elements assembled on said shaft, a separating casing supported on the tank and including a plurality of baffle plates arranged in the path of movement of the moistened air, said casing provided with an air outlet, a fan housing communicating with said outlet, a shaft mounted for rotation in said housing, a fan carried by said shaft, a pulley on said shaft, an electric motor arranged in said housing, and provided with pulleys, and belts trained over the respective pulleys for simultaneously actuating the shaft, agitators and fans, said fan housing being provided with a final air outlet for discharging the conditioned air into the room.

1,805,964. APPARATUS FOR TURNING INCLINED SURFACES. BARNES NEVILLE WALLIS, Weybridge, England. Filed Oct. 6, 1930, Serial No. 486,851, and in Great Britain Sept. 26, 1929. 12 Claims. (Cl. 82—11.)

1. Means for producing, by turning, strengthening sleeves for use with tubular members, such sleeves having terminal flanges located at predetermined angles to their axes, comprising a work holder for carrying a sleeve blank from which the strengthening sleeve is to be made, a former plate mounted to rotate on an axis parallel with that of the sleeve blank and angularly adjustable relatively to its axis so that its face can be set at an angle to its axis corresponding to the angle which the axis of the sleeve is to subtend to the plane of the terminal flange,

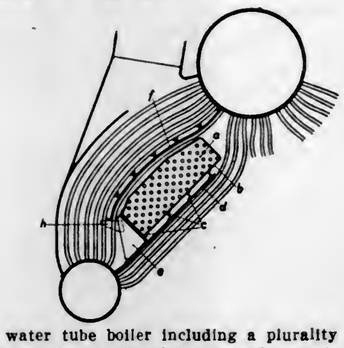
a tool carrier adapted to be reciprocated parallel to the said axis of the former plate and sleeve blank by said former plate and means for rotating the sleeve blank and former plate synchronously, relatively to the tool carrier and means for traversing the tool carrier across the sleeve blank and former plate, while maintaining the tool in a position relative to the axis of the sleeve blank corresponding to the position of the tool carrier relative to the axis of the former plate.

1,805,965. NECKTIE. SAMUEL WELDON, Portland, Oreg. Filed May 17, 1928. Serial No. 278,438. 4 Claims. (Cl. 2—150.)



1. A necktie comprising a Y-shaped wire form including a looped stem and branched loops at its upper end, a fabric sheath about said stem and folded over said form, a tubular fabric underflap enclosing and secured to said sheath, a fabric upper-flap secured to the rear of said form and extending thereover to overlie said underflap, a fabric band extending horizontally about said upperflap and secured at its opposite ends to the rear of the tie, an elastic tape secured at one end to the rear of said under-flap, a hook-fastener loosely mounted on said tape arranged to be engaged over a collar-button, and a snap fastener for the free end of said tape.

1,805,966. GLASS CONTAINER FOR LIGHT OPERATED ELECTRIC SWITCHES. RAYMOND W. ARMSTRONG and IRA E. MCCABE, Chicago, Ill.; said Armstrong assignor to The Arcless Contact Company, a Corporation of Illinois. Filed Sept. 20, 1926. Serial No. 136,504. 2 Claims. (Cl. 200—141.)



1. In a visible light-operated mercury tube switch, two interconnected gas containers having a portion of

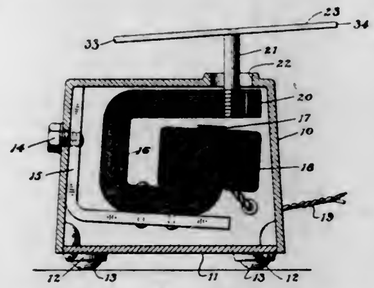
lesser diameter connecting the end portions and adapted to contain a mercury seal therebetween, the end portion of one container having a greater coefficient of absorp-

tion of visible light than the contiguous connecting portion, said end portion conically tapering into the said connecting portion presenting an angular surface adapted to reflect rays of light impinging on the said container.

1,805,967. SUPERHEATER FOR WATER TUBE BOILERS. GUSTAV BAUER, Hamburg, Germany. Filed Nov. 6, 1930, Serial No. 493,838, and in Italy Oct. 30, 1929. 4 Claims. (Cl. 122—478.)

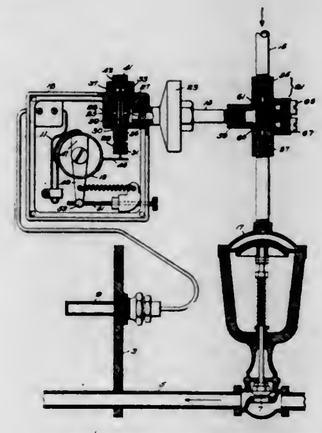
1. A water tube boiler including a plurality of steam generating tubes, a detachable superheater including a plurality of superheater tubes, and a frame structure holding said tubes together as a unit, and substantially horizontal runners disposed between said steam generating tubes and said frame structure for supporting said superheater unit, whereby said superheater unit is slidable in a substantially horizontal direction out of sliding contact with the steam generating tubes.

1,805,968. NECKTIE. VINCENT A. BIANCO, Culver City, Calif. Filed Mar. 19, 1930. Serial No. 437,078. 1 Claim. (Cl. 2—146.)



A necktie having an elongated strip forming the outside of the tie, such strip having its marginal edges stitched together and forming in effect a tube, such tube being flattened with folds forming the side edges of the tie with the stitching on the back of the tie, an elongated lining strip fitted inside of the outside tube and against the inside of the front portion of said tube, said lining strip having folds adjacent its sides turned toward the back of the tie inside the folds of the tube, the marginal edges of the lining strip being stitched to the back of the tube adjacent the side edges of such tube, leaving a space between the marginal edges of the lining strip and the stitching of the outer strip without any interlining directly bearing thereagainst.

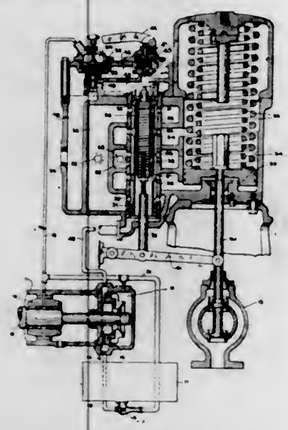
1,805,969. PROTECTIVE GLASS WITH COLOR WEDGE FOR SPECTACLES TOGETHER WITH METHODS FOR MANUFACTURING SAME. CARL GUSTAF BOSTRÖM, Stockholm, Sweden. Filed Aug. 28, 1928, Serial No. 302,646, and in Sweden July 21, 1928. 2 Claims. (Cl. 49—81.)



1. An article of manufacture, comprising a pair of glass plates secured together by a colorless cement compound of uniform thickness and possessing approximately the same transparency and refractory index as the glass plates, and a color wedge embedded in said compound, said color wedge being comparatively dense at one end and gradually fading into transparency toward its opposite end.

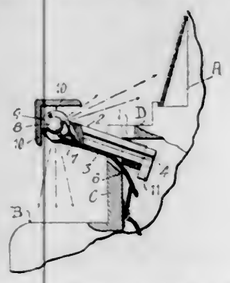
1,805,970. VIBRATOR FOR MOLDS AND DENTAL FLASKS. EDWARD BRIGGS, San Francisco, Calif., assignor to William J. Moran, Fairfax, Calif. Filed Nov. 13, 1929. Serial No. 406,973. 8 Claims. (Cl. 259—75.)

1. A device for vibrating flasks and the like which comprises a yielding magnetic core having its ends disposed adjacent each other, a single winding upon one end of said core, and a table mounted upon the other end of said core whereby when the core is energized with alternating current said table will be vibrated.



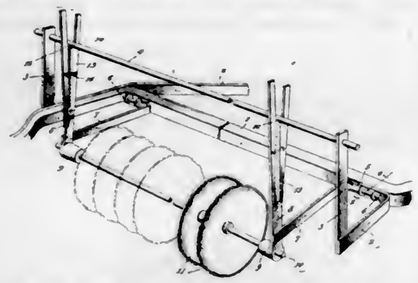
1,805,971. CONTROLLING MECHANISM. EDGAR H. BRISTOL, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1928. Serial No. 269,257. 6 Claims. (Cl. 286—86.)

1. In a controlling apparatus a supply line receiving pressure fluid from a source thereof, a delivery line there-



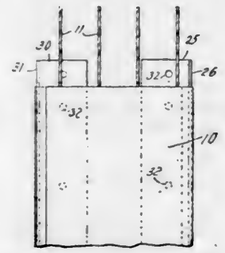
for leading to a mechanism to be operated thereby, a valve casing adapted to receive fluid from said lines having an exhaust port, a valve for the exhaust port, a device responsive to the fluctuations of a variable for moving said valve and thereby controlling pressure conditions in said delivery line, said supply line communicating with said casing and delivery line through a restricted bleeding opening, and a readily removable and replaceable element having a restricted bleeding opening and adapted to control the rate of exhaust from the delivery line.

1,805,972. FLUID PRESSURE GOVERNING MECHANISM. OZRO N. BRYANT, Moores, and ANTHONY F. SCHWENDNER, Essington, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 28, 1929. Serial No. 350,608. 13 Claims. (Cl. 264—14.)



1. In a governing mechanism for a prime mover having an admission valve, the combination of means providing fluid pressure varying as a function of an operating condition of the prime mover, a fluid pressure relay for controlling the admission valve and including an operating piston and an element responsive to said variable fluid pressure for controlling the movements of the operating piston, said pressure-responsive element being biased in valve-closing direction and being biased by fluid pressure in valve-opening direction, and valve means responsive to an abnormal operating condition of the prime mover for releasing the fluid pressure acting on said element in valve-opening direction.

1,805,973. PIANO LIGHTING DEVICE. CHARLES EWEN CAMERON, Jr., East Orange, N. J., assignor to Lauter-Humana Co., a Corporation of New Jersey. Filed May 19, 1930. Serial No. 453,536. 4 Claims. (Cl. 240—4.)

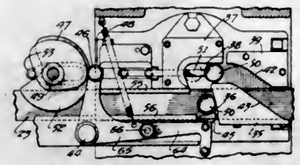


1. The combination of a piano including a case having a music support, a keyboard, a vertical wall extending upwardly from said keyboard and a horizontal wall meeting said vertical wall at approximately right angles, and extending toward said music support, said case having a recess opening outwardly through both said vertical wall and said horizontal wall, a lamp supporting bracket mounted on said case to move into and out of said recess, a lamp on said bracket, and a combined reflector and cover on said bracket having a vertical wall and a horizontal wall at approximately right angles to each other to direct light rays from said lamp to said music support and said keyboard respectively when said bracket is moved out of said recess and to contact with and form substantial continuations of said vertical and horizontal walls of said case respectively to close said recess when the bracket is moved thereinto.

1,805,974. DISK PLOW. ALEXANDER M. CAMPBELL, Winnipeg, Manitoba, Canada. Filed Feb. 3, 1930. Serial No. 425,611. 5 Claims. (Cl. 97—53.)

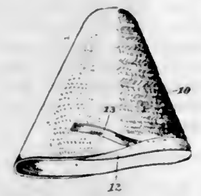
1. Means for the purpose set forth comprising in combination with a frame gang-carrying arms, means for pivotally mounting said arms upon the frame, posts rising from said arms, and means whereby said posts will yieldably engage the under side of a fixed member of the frame whereby normally the weight of the frame will be transmitted to the disks and under abnormal strain the disks may be permitted to rise relative to the frame.

1,805,975. PILE STRUCTURE. HARRY V. CAMPBELL, Freehold, N. J. Original application filed Oct. 20, 1926, Serial No. 142,855. Divided and this application filed Aug. 8, 1928. Serial No. 298,142. 7 Claims. (Cl. 61—59.)



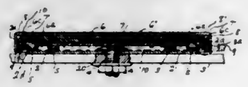
1. A pile having oppositely extending, exactly similar, angular recesses at the two side edges thereof, and oppositely extending longitudinal angle bars embedded in the pile structure, the outer edges of the bars being disposed in said recesses.

1,805,976. TRANSFER MECHANISM. ZENAS P. CANDEE, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 2, 1930. Serial No. 418,028. 4 Claims. (Cl. 198—24.)



1. In a device of the character described, a moving belt; a rigid member upon one side thereof having a stop wall, and a tangential wall upon each side thereof; a stop

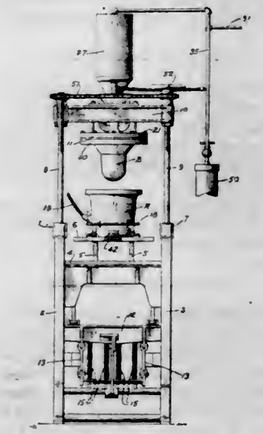
plate over the belt having guide faces upon opposite sides thereof; a rigid guideplate having a guide wall in extension of one of the said tangential walls and substantially parallel with one of the guide faces of the stop plate, the arrangement of the parts being such that there is an open space between the stop plate, rigid member and guide plate, and extending partially around the stop plate and through



which an article travels from and to the belt in a continuous path through said open space; means for moving the article from the belt and placing it against said stop wall, and a member to push the article from said stop wall along one of said tangential walls toward the guide plate, and transitory means for pushing the article between the stop and guide plates which directs its travel back onto the belt.

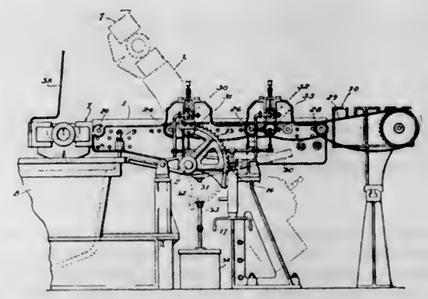
1,805,977. HAT. JOHN CAVANAGH, South Norwalk, Conn., assignor to The Crofut & Knapp Company, South Norwalk, Conn., a Corporation of Connecticut. Filed July 26, 1929. Serial No. 381,325. 2 Claims. (Cl. 2—178.)

1. A felt hat brim having a reinforced edge portion, said reinforcing comprising a layer of felt felted into and crosswise of the grain of the hat brim.



1,805,978. ROTARY FOOT PAD. HOWARD I. CLARK, Los Angeles, Calif. Filed Oct. 16, 1930. Serial No. 489,129. 4 Claims. (Cl. 280—163.)

1. A rotatable foot pad for automobile running-boards including concentric concave discs disposed one above the other, the concave portion of the uppermost disc nesting in the concave of the lowermost disc and forming therewith a race for a plurality of balls that render the uppermost disc rotatable relatively to the lowermost disc, adhesive means carried by the uppermost disc to prevent slipping of the foot when the user of the automobile steps upon said disc, and means to operatively clamp the peripheral margins of said discs to prevent separation thereof.



1,805,979. HAT SHAPING AND PRESSING MOLD. GEORGE H. EDWARDS, Mill Valley, Calif., assignor to Catalina Hats Ltd., San Francisco, Calif., a Corporation of California. Filed Jan. 23, 1929. Serial No. 334,411. 3 Claims. (Cl. 223—31.)

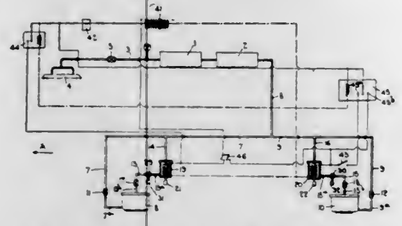
1. The combination with a female mold of the character described, of a cooperating male mold, said mold comprising a head member, a mold section secured thereto, said mold section being hollow and constructed of elastic material, means for inserting the elastic mold in the female

mold, said elastic mold being substantially filled with a liquid, and means for exerting air pressure on top of the liquid to expand the elastic mold with relation to the female mold.

1,805,980. TIN PLATE CONVEYER AND CLEANER. SAMUEL E. DIESCHER, Pittsburgh, Pa., assignor to S. Diescher & Sons, Pittsburgh, Pa., a Partnership consisting of Samuel E. Diescher and August P. Diescher. Filed Jan. 28, 1927. Serial No. 164,222. 7 Claims. (Cl. 91—12.1.)

1. The combination with a tinning machine and a branning machine for cleaning tin plate, of a conveyer arranged between them for moving plate from the former to the latter, said conveyer having continuous plate catcher rolls attached to its forward end and arranged above said tinning machine when the conveyer is in its operative position and said conveyer being pivotally mounted on a horizontal axis for swinging it and its attached plate catcher rolls from operative positions.

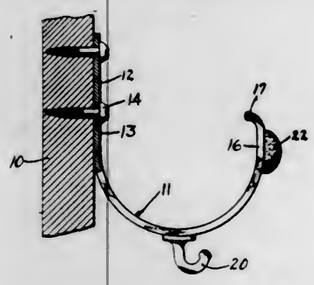
1,805,981. PROCESS OF MANUFACTURING FIBROUS BLOCKS. RICHARD BUCKMINSTER FULLER, Lawrence, N. Y., assignor, by mesne assignments, to The Soundex Corporation, a Corporation of Illinois. Original application filed Dec. 31, 1924, Serial No. 758,991. Divided and this application filed Mar. 1, 1927. Serial No. 171,908. 7 Claims. (Cl. 18—47.5.)



1. The process of producing fibrous blocks, which comprises the steps of treating fibrous material with a binder in substantially liquid form, subjecting the treated fibrous

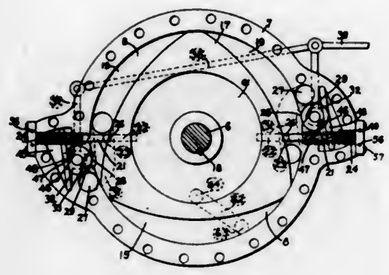
material in the absence of surplus binder to violent agitation whereby compacted masses of the fibrous material are broken up, forming the fibrous material into blocks without the use of substantial pressure and letting the binder set whereby light masses are obtained of a rigid structure comprising a very high percentage of connected air spaces.

1,805,982. METHOD OF AND MATERIAL FOR PREVENTING METAL FROM CORRODING. JAMES H. GRAVELL, Elkins Park, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a Corporation of Delaware. Filed Feb. 4, 1930. Serial No. 425,822. 14 Claims. (Cl. 148—7.)



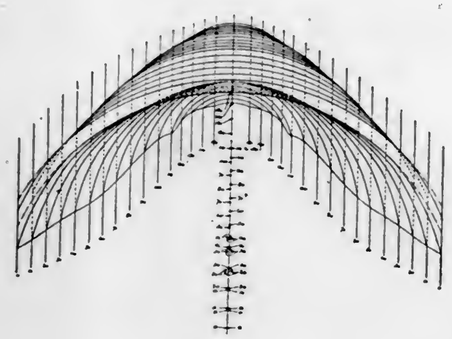
1. A material for preventing metal from corroding being an admixture of a material adapted to liberate phosphoric acid upon the application of heat and a neutralizer for phosphoric acid.

1,805,983. SYSTEM OF AND APPARATUS FOR OPERATING AND CONTROLLING THE DOORS OF RAIL OR ROAD VEHICLES. HORACE REGINALD HOCKLEY, Slough, England, assignor to G. D. Peters & Company, Limited, Slough, England, a British Company. Filed Dec. 4, 1928, Serial No. 323,758, and in Great Britain Dec. 9, 1927. 9 Claims. (Cl. 303—6.1.)



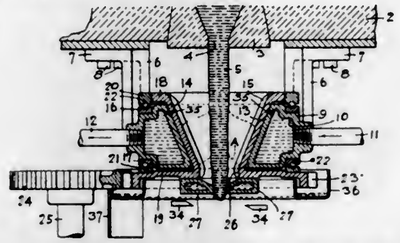
1. In a system of the type described for use on vehicles having power operated brakes and doors, the combination comprising a vacuum source, vacuum engines for operating the doors on the vehicle, vacuum engines for operating the brakes on the vehicle, connections between said door and brake engines and said vacuum source including electromagnetic valves, and means connected to said electromagnetic valves for energizing them when the brakes are applied including manually operated switches.

1,805,984. COMBINED DOOR BUMPER AND COAT HANGER. FRANKLYN H. HULL, Hawthorne, N. J., assignor to Austral W[illegible] Company, New York, N. Y., a Corporation of Maine. Filed Nov. 6, 1928. Serial No. 317,679. 2 Claims. (Cl. 248—22.)



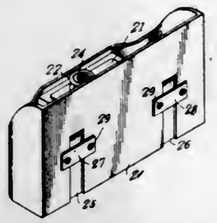
1. A combined door bumper and coat hanger comprising a U-shaped member, means to secure one arm of said member to a door, the other arm of said member having cushioning means serving as a door bumper and a hook carried on the said member.

1,805,985. HYDRAULIC BRAKE. CHARLES L. JOLLY, Wilmar, Calif. Filed Oct. 24, 1928. Serial No. 314,698. 6 Claims. (Cl. 188—90.)



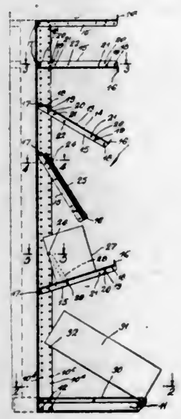
1. A hydraulic brake mechanism comprising a housing having a circular chamber therein, a shaft journalled axially of said chamber, a rotor rigid with said shaft, portions of the periphery of said rotor extending adjacent the bore of said chamber to define recesses therebetween, hydraulic fluid in said recesses, a gate slidably mounted in said housing, resilient means pressing the gate inward toward the rotor and into said recesses as they move therepast, a bypass connecting portions of said chamber with which the recesses come into register and upon opposite sides of said gate, means for controlling the flow of hydraulic fluid through said bypass, and means operable by said flow-controlling means for controlling the inward movement of said gate.

1,805,986. ARCH DAM. LARS R. JORGENSEN, Berkeley, Calif. Filed May 28, 1929. Serial No. 366,578. 7 Claims. (Cl. 61—30.)



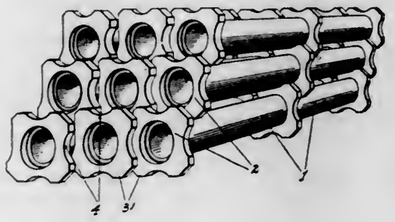
1. In a constant angle arch dam which is divided horizontally into a bottom, a middle and a top zone, and where said zones are superposed the top zone having the ends of the arches of sharper curvature towards the abutments than the central part of the arches, the central part of said arches projecting partly outside the middle zone on the downstream side, the amount of projection being maximum at the crown of the arch and diminishing to zero towards the haunches and towards lower elevations.

1,805,987. METHOD AND APPARATUS FOR FEEDING MOLTEN GLASS. JOHN R. KELLER, Carnegie, Pa., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 7, 1922. Serial No. 541,775. 41 Claims. (Cl. 49—55.)



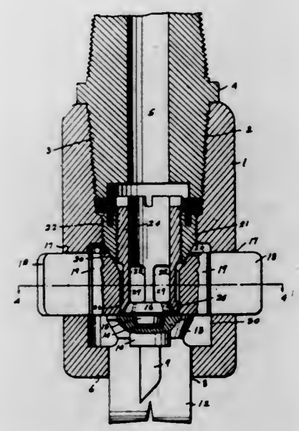
1. The method of producing mold charges of molten glass that comprises applying a variable centrifugal force to a descending body of glass to vary the rate of descent of different portions of said body of glass.

1,805,988. SUPPORT FOR ELECTRICALLY ACTUATED FIXTURES. CHARLES KRAFT, Jersey City, N. J. Filed Sept. 20, 1928. Serial No. 307,282. 3 Claims. (Cl. 173—338.)



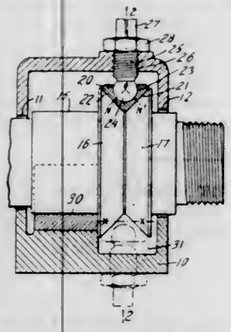
1. A container comprising a hollow casing having a pair of spaced grooves in its rear wall, bars fixed on said wall transversely across the upper portions of the grooves, and a pair of upright spring clips fixed on a support, said clips being receivable in the mentioned grooves and engageable with said bars.

1,805,989. SHELVING. ALBERT H. LEVENE, Newark, N. J. Filed May 15, 1929. Serial No. 363,372. 12 Claims. (Cl. 211—147.)



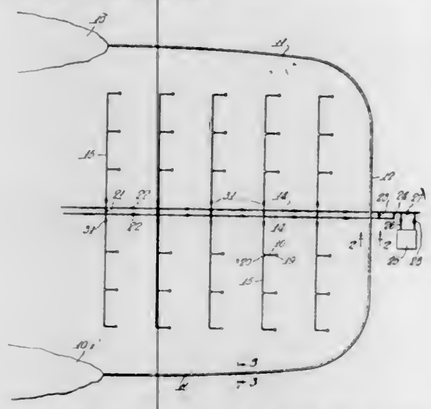
9. In shelving, spaced standards having a plurality of apertures arranged longitudinally thereof in vertically and laterally spaced relation, shelf members having flanges at the sides thereof, said flanges being provided with longitudinally and transversely spaced apertures, said shelf members being arranged between said standards, with the side flanges adjacent said standards, and fastening devices passed through at least two apertures in both flanges of each shelf member and through laterally spaced apertures in said standards so that said shelf members may be spaced apart at various vertical points and at different angles with relation to the standards.

1,805,990. CONDUIT ASSEMBLY. JOHN F. MAKOWSKI, Oakland, Calif., assignor to Fireproof Wall Company, Reno, Nev., a Corporation of Nevada. Filed July 20, 1929. Serial No. 379,813. 3 Claims. (Cl. 247—84.)



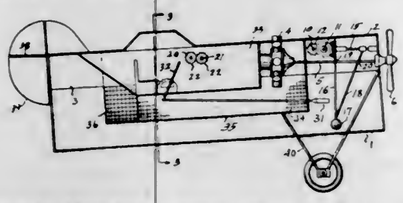
1. A conduit assembly including individual transversely separated conduits, each conduit comprising separate longitudinally alined sections, a member common to adjacent sections of a conduit at the joint between the same for connecting said sections together and means formed with said member to locate adjacent conduits in definitely spaced relation and preventing movement of one relative to the other.

1,805,991. DRILLING TOOL. CLAUDE W. METZGER, Houston, Tex. Filed July 9, 1928. Serial No. 291,227. 13 Claims. (Cl. 255—61.)



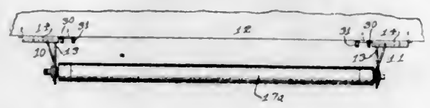
1. A drilling tool embodying a tubular head having vertical and lateral blade bearings, blades fitted through said bearings, abutments carried by the blades which abut the inner side of the head, removable, expansible, tubular means screwed into the head and abutting the inner ends of the blades, and clamping said abutments firmly against the head.

1,805,992. BEARING. Anthony G. M. Michell, Melbourne, Australia. Filed Aug. 16, 1928. Serial No. 299,941. 17 Claims. (Cl. 308—160.)



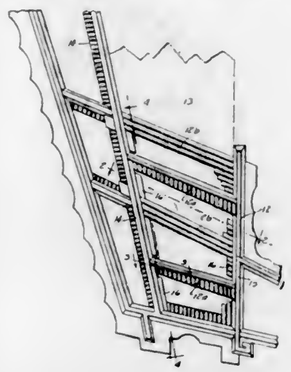
1. A combined journal and thrust bearing including in combination, a pair of relatively movable elements, one element having a substantially V-shaped groove, and the other element being pivotally mounted and having bearing surfaces adapted to fit within said groove.

1,805,993. METHOD OF AND APPARATUS FOR WATER FILTRATION. Anthony P. Miller, Pleasantville, N. J. Filed Nov. 27, 1928. Serial No. 322,140. 8 Claims. (Cl. 210—13.)



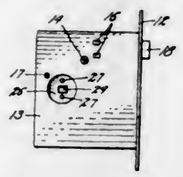
1. A gravity filtration apparatus including in combination with a reservoir and a stratum of sand at or below the bed thereof, a submerged main for filtered water disposed above the sand stratum and leading therefrom, feeders for said main, and well points connected to the feeders and having their screened inlet ends embedded in the sand, said feeders and well points being also submerged to effect a gravity feed to the main.

1,805,994. AEROPLANE. William Niemeyer, Sheridan, Tex. Filed Dec. 31, 1928. Serial No. 329,393. 5 Claims. (Cl. 244—29.)



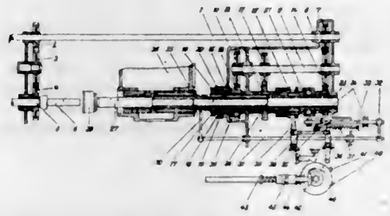
1. In an aeroplane a skeleton frame work forming a fuselage and of triangular vertical cross sectional contour, a substantially flat plane forming the top of said framework which is longer from front to rear than from side to side, and depending marginal side walls carried by said plane at substantially right angles thereto and extending from end to end thereof.

1,805,995. ADJUSTABLE SHADE ROLLER BRACKET. Joseph T. Palladino, Waterbury, Conn. Filed Jan. 20, 1930. Serial No. 421,915. 10 Claims. (Cl. 156—24.)



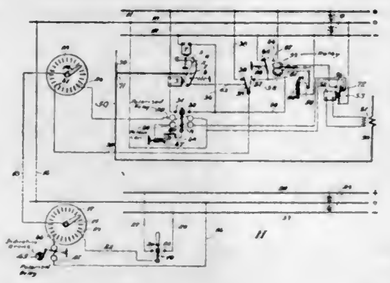
1. In a shade roller bracket, a guide frame to be attached to a window frame, an adjustable angle member slidable within said guide frame, said guide frame having a series of locking apertures, and said angle member having a spring strip tongue secured to the outer end thereof for selectively and interchangeably engaging in any one of said apertures.

1,805,996. LIGHTING FIXTURE PART. Samuel Perla, Brooklyn, N. Y. Filed Jan. 10, 1930. Serial No. 419,883. 6 Claims. (Cl. 240—78.)



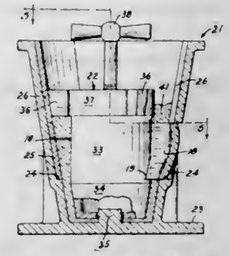
1. A cast lighting fixture part having a grille formed of end members and a plurality of cross members arranged in staggered relation and spaced to accommodate a glass panel.

1,805,997. DOORLATCH MECHANISM. Sherrie L. Rhiner, Pine Bluffs, Wyo. Filed May 2, 1930. Serial No. 449,164. 7 Claims. (Cl. 292—165.)



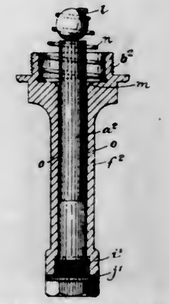
1. A door latch mechanism comprising: a latch bolt; a bolt operating mechanism; knobs mounted for swinging movement; keys projecting from said knobs so as to actuate said bolt operating mechanism; and springs positioned so as to force said keys to co-act with said operating mechanism.

1,805,998. SCREW CUTTING DEVICE FOR AUTOMATIC LATHES. Otto Schaerer and Fritz Poppensieker, Cologne, Germany, assignors to the Firm Alfred H. Schutte, Cologne-Deutz, Germany. Filed Aug. 2, 1929, Serial No. 382,865, and in Germany May 24, 1928. 8 Claims. (Cl. 29—40.)



1. A screw cutting device for automatic lathes comprising a tool mounted for rotative and axial movements, a unidirectionally rotated mandrel for effecting the forward and backward motion of said tool, a mandrel guide rotating in the same direction as the mandrel and threadedly engaged therewith, and mechanism for driving said mandrel alternately at higher and lower speeds than the speed of rotation of said guide, substantially as set forth.

1,805,999. MEANS FOR INDICATING THE POSITION OF A CONNECTER SWITCH. Manfred Schleicher, Berlin-Charlottenburg, and Leo Brandenburger, Berlin-Halensee, Germany, assignors to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Nov. 16, 1927, Serial No. 233,545, and in Germany Mar. 22, 1927. 2 Claims. (Cl. 177—311.)



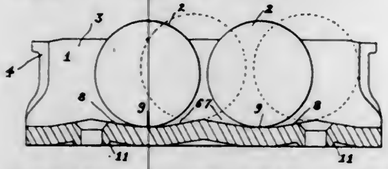
1. In a system for indicating the open and closed positions of a switch, the combination of an electric circuit controlled by the switch, an indicating device, electromagnetic means for variably operating the indicating device, means controlled by the switch in accordance with the open and closed position thereof for controlling the operation of the operating means to cause the indicating device to indicate the then position of the switch, an overload relay associated with the electric circuit controlled by the switch, a switching means, means controlled by the overload relay for operating the switching means, means controlled by the switching means for rendering the indicating device operating means non-responsive to the switch controlled means and to operate the indicator operating means to cause the indicator to indicate incorrectly that the switch is closed, and retarded operating means for restoring the switching means controlled by the overload relay to normal position and thereby restore the indicating device operating means to the control of the switch operated means to indicate the then position of the switch.

1,806,000. MOLDING APPARATUS. William B. Scott, Oakland, Calif., assignor to Marchant's Foundry Co., Oakland, Calif., a Corporation of California. Filed Mar. 4, 1930. Serial No. 433,042. 1 Claim. (Cl. 22—13.)

In molding apparatus for forming a tubular cast member having preformed vanes embedded therein to extend radially within the bore thereof, a core box, lining members in said core box cooperative to engage portions of said vanes to fixedly dispose the said vanes to extend into the core space of said box in circumferentially spaced alignment, a centering element adapted to be inserted into the core box and engageable with the vanes to maintain them in radial alignment, said centering element being tapered at its lower end and substantially cylindrical at the portion engageable with the vanes.

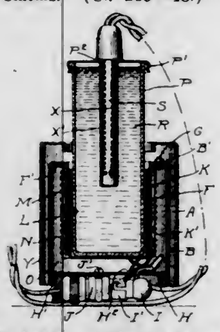
1,806,001. MEANS FOR CLEANSING OR FILTERING LUBRICATING OILS. Frederick Richard Simms, London, and Bertram Charles Joy, West Hampstead, London, England. Filed. Dec. 28, 1927, Serial No. 243,152, and in Great Britain Aug. 25, 1927. 4 Claims. (Cl. 209—215.)

1. A device for separating para-magnetic particles from lubricating oil, comprising an adaptor provided with means for securing it to an oil receptacle in communication with the ordinary drain aperture therein, and a magnetic device removably supported in said adaptor and having its inner end projecting beyond the end of the adaptor into the oil within said receptacle, the outer end of said adaptor being provided with an aperture through which the magnetic device may be removed without disconnecting the adaptor from the oil receptacle, and a removable closure for said aperture.



1,806,002. MEANS FOR CLEANSING OR FILTERING LUBRICATING OILS. Frederick Richard Simms, London, and Bertram Charles Joy, West Hampstead, London, England. Filed Dec. 28, 1927, Serial No. 243,153, and in Great Britain Nov. 14, 1927. 4 Claims. (Cl. 209—215.)

1. The combination with a magnet device for removing metallic particles from oil, of a removable collecting means surrounding portions of said magnet device to be

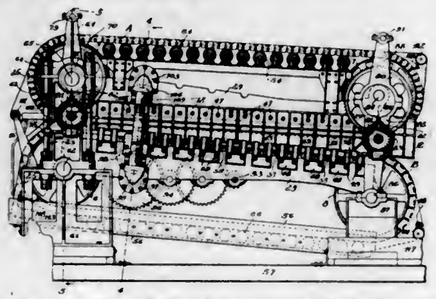


immersed in the oil, and detachably secured thereto, and comprising a sleeve formed separately from the magnet device and providing spaces for retaining the metallic particles collected by the magnet, and removable from the magnet with the collected particles for cleaning, the removal of the collecting device effectively cleaning the enclosed portions of the magnet device.

1,806,003. ROLLER SIDE BEARING. ARNOLD STUCKI, Pittsburgh, Pa. Filed Jan. 5, 1929. Serial No. 330,473. 3 Claims. (Cl. 308—226.)

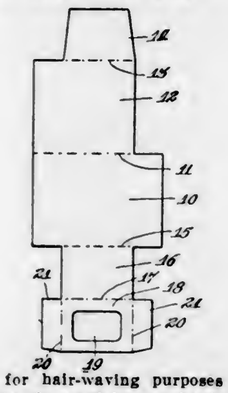
1. A side bearing for lower bolsters of railway cars comprising a forged cage formed of a rolled channel section, the bottom of which is of substantially uniform thickness and adapted to provide a bearing surface transverse to the bolster, said bottom being pressed upwardly at spaced points between its ends to form two separate roller receiving pockets each of which is inclined upwardly at its ends, and bosses formed on the under side of the bearing surface at the outer ends of said pockets for supporting the inclined portions thereof.

1,806,004. ELECTRIC HEATER. WALTER K. TAVENDER, Haworth, N. J. Filed July 25, 1928. Serial No. 295,323. 6 Claims. (Cl. 219—43.)



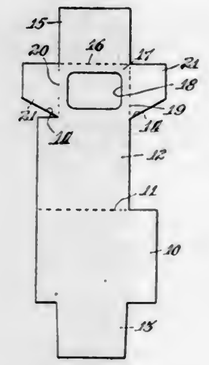
1. An electric heater of the character described comprising an inner and outer casing, means comprising discs for holding said casings together in spaced relation which project below said casings to serve as legs therefor and to provide an annular passage for air therebetween, a cup suspended from the upper end of said inner casing, a plurality of heating elements of relatively different heating capacity carried thereby, and electrical conductors connected to said heating elements and adapted to establish an electric circuit thru each of same.

1,806,005. FASTENING DEVICE. ANDRÉ THOMAS, Paris, France, assignor to Louise Thomas, Paris, France. Filed Oct. 16, 1929, Serial No. 400,002, and in France Sept. 26, 1929. 1 Claim. (Cl. 24—117.)



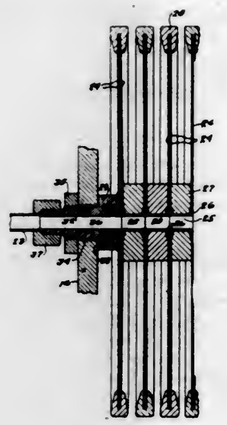
A fastening device for the bands or straps of shoes comprising a supporting portion constituted by a shallow hollow cylindrical element, an integral end member to said element at one end thereof, a boss at the centre of said end member, a screw threaded bore through the boss and end member, a base member at the other end of the cylindrical body, projecting pegs from the base member adapted to be attached to the body of the shoe by sewing, two elongated slots through the curved wall of the hollow cylindrical element in diametrically opposite positions, and a clamping element constituted by a button, a central screw threaded stem projecting from the button and adapted to screw into and through the screw threaded bore in the end of the supporting member, and a plate fixed to the inner end of the said screw threaded stem within the interior of the hollow cylindrical element and adapted when the button is screwed down to come into clamping engagement with the band or strap of the shoe inserted through the elongated openings, for the purposes set forth.

1,806,006. BOARD MAKING MACHINE. CHARLES A. UPSON and OTTO R. WINTER, Lockport, N. Y., assignors to The Upson Company, Lockport, N. Y., a Corporation of New York. Filed Mar. 10, 1927. Serial No. 174,316. 34 Claims. (Cl. 92—39.)



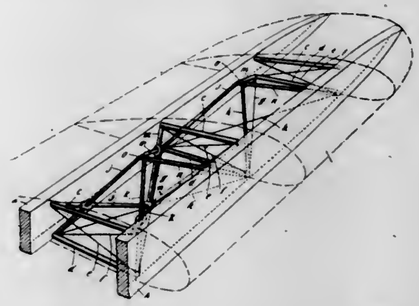
1. In a machine of the character described, the combination with a pressure chamber formed by upper and lower flights of pressure bars linked together in endless chains including means for driving the latter, said flights being convergent toward the delivery end of the machine, of pressure beds supporting the reaches of the chains which constitute opposite walls of the pressure chamber, said beds being provided with bearing rollers at the feeding end of the pressure chamber and the wider end of the latter, and with relatively stationary surfaces at the delivery or narrow end of the pressure chamber upon which the undersides of the pressure bars are received after they have left the said roller bearings.

1,806,007. HAIR WAVING WRAPPER. WARREN S. WATTS, Louisville, Ky., assignor to Arlette, Inc., Louisville, Ky., a Corporation of Delaware. Filed Dec. 7, 1928. Serial No. 324,504. 15 Claims. (Cl. 132—36.2.)



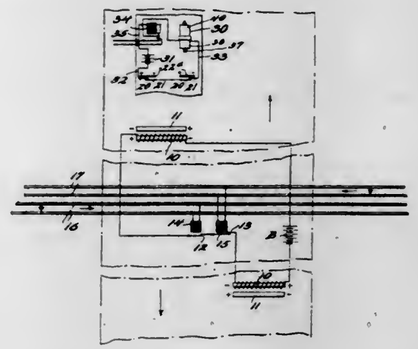
15. A sachet for hair-waving purposes comprising a plurality of sheets of material, one of said sheets having an opening therein, a lining sheet of impervious material between said sheets, and a pad between said sheets and extending across said opening.

1,806,008. HAIR WAVING WRAPPER. WARREN S. WATTS, Louisville, Ky., assignor to Arlette, Inc., Louisville, Ky., a Corporation of Delaware. Filed Dec. 22, 1928. Serial No. 327,808. 12 Claims. (Cl. 132—36.2.)



10. A blank for forming a sachet for hair waving and comprising a sheet adapted to be folded upon itself to provide a casing, a metal foil sheet in said casing, said blank having a plurality of extensions cooperating one with another to form an open sided pocket having a plurality of thicknesses of material at the back thereof, one of said extensions having a plurality of projecting sections foldable over another extension and adapted to be adhesively secured thereto.

1,806,009. BELLOWS AND METHOD OF MAKING THE SAME. CLARENCE J. WHITACRE, Detroit, Mich., assignor, by mesne assignments, to S. F. Arbuckle Corp., a Corporation of Delaware. Filed May 26, 1928. Serial No. 280,948. 14 Claims. (Cl. 137—156.5.)

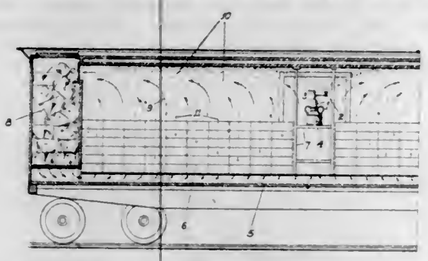


1. A bellows having the outer edges of the wall members thereof joined together in pairs by a yieldable nonmetallic material.

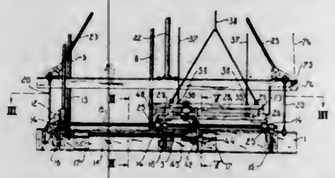
1,806,010. METHOD OF BRACING A CANTILEVER BEAM AGAINST TORSIONAL DEFLECTION. DAVID LEONARD HOLLIS WILLIAMS, Ickenham, England, assignor to Charles Richard Fairey, Hayes, England. Filed Oct. 16, 1928, Serial No. 312,854, and in Great Britain Nov. 16, 1927. 8 Claims. (Cl. 244—31.)

1. A cantilever beam for aircraft wings comprising a plurality of rectangular cellules and bracing means comprising a pyramid of bracing members within each cellule and having one entire side of the cellule as its base.

1,806,011. AUTOMATIC CONTROLLING SYSTEM FOR MOTOR VEHICLES. BENJAMIN F. WOODING, Montclair, N. J.; Daniel T. Dobyns administrator of said Benjamin F. Wooding, deceased. Filed Dec. 2, 1925. Serial No. 72,772. 9 Claims. (Cl. 246—63.)



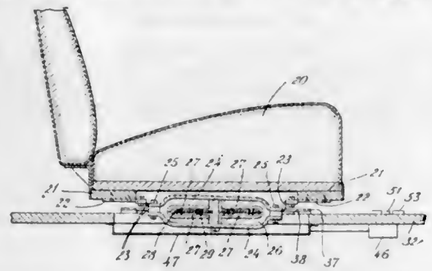
1. In a vehicle control system, a permanent magnet located beneath the surface of a roadway near the intersection thereof with a second roadway, an electro-magnet associated with said permanent magnet and adapted when energized to neutralize the action thereof, means controlled by a vehicle on said second roadway for controlling the circuit of said electro-magnet, and a vehicle having an alarm actuated by said permanent magnet.



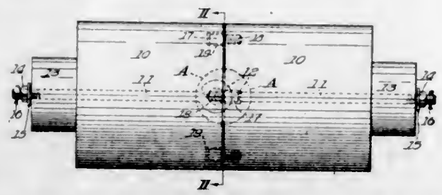
1,806,012. METHOD OF STERILIZING FRUIT IN REFRIGERATOR CARS. LESTER W. COLLINS, Modesto, Calif., assignor to Ansul Chemical Company of California, Modesto, Calif., a Corporation. Filed Sept. 21, 1929. Serial No. 394,297. 5 Claims. (Cl. 99—9.)

5. A method of sterilizing produce in a refrigerator car having air currents induced by the refrigerating means and flowing longitudinally of the car, consisting in discharging an undiluted sterilizing gas into the car in a space

at the central portion thereof between piles of containers of produce and in an upward direction, and under pressure so that when discharged the gas will strike the ceiling of the car and be spread out horizontally essentially through the movements of the air currents.



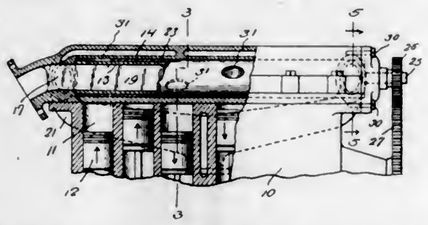
1,806,013. MACHINE FOR SAWING UNDER WATER. JACOBUS GROENEVELD DE KATER, The Hague, Netherlands. Filed Jan. 24, 1930, Serial No. 423,082, and in Germany Dec. 31, 1928. 10 Claims. (Cl. 29—73.)



7. In a machine for sawing off an element such as a sheet piling below the water level, the combination with a frame being U-shaped in horizontal section, of guide ways secured to and extending in substantially parallel relation with the legs of said U, a carriage adapted for lengthwise movement along said guide ways, a saw associated with said carriage but adapted to move in transverse direction relative thereto, means for imparting to said saw reciprocatory transverse movement relative to said carriage, a feed screw associated with said frame and extending in parallel relation with said guide ways, means normally preventing said feed screw from rotation, a nut in operative engagement with said feed screw and engaging said carriage, a ratchet wheel secured to said nut, a member adapted for swinging motion about the axis of said feed screw, means associated with said reciprocatory transverse movement imparting means and adapted to impart swinging motion to said member, two ratchet pawls hinged to said member and adapted during swinging movement of said member to engage said ratchet wheel and impart thereto rotary motion the one pawl in forward and the other pawl in backward direction, a third ratchet pawl hinged to said carriage and adapted when engaging said ratchet wheel to prevent the same from rotation in backward direction, means interconnecting said third ratchet pawl with said backward rotary motion imparting ratchet pawl in such a manner that when the one engages the said ratchet wheel the other disengages the same and vice versa, means located in the path of said backward rotary motion imparting ratchet pawl and adapted to move same out of engagement with said ratchet wheel before said pawl has reached the end of its idle stroke, and means associated with said frame for clamping the same below the plane of movement of said saw to said element when horizontally straddled by said frame.

1,806,014. ADJUSTABLE SEAT FOR VEHICLES. GERHARD FLINTERMANN, Orange, N. J. Filed Jan. 7, 1929. Serial No. 330,719. 12 Claims. (Cl. 155—14.)

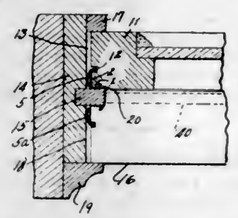
2. In an adjustable seat, the combination of a support therefor, means for movably mounting the seat on the support, cooperating parts for effecting movement of the seat relative to the support and non-metallic resilient means interposed at a point intermediate the longitudinal extremities of the seat in supporting relationship between the seat and the support, whereby the seat may have a limited longitudinal rocking movement on said support.



1,806,015. ROLL FOR FLATTENING METAL SHEETS. WILLIAM E. FOALE, Wilkinsburg, Pa. Filed Sept. 5, 1928. Serial No. 304,127. 8 Claims. (Cl. 153—57.)

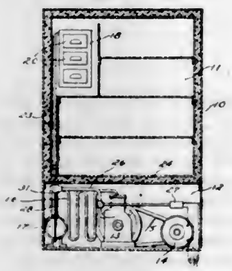
8. A roll for flattening metal sheets, including a plurality of cylindrical roll sections arranged end to end in slightly spaced relation, a projecting member on one end of a section, and a recess in the adjacent end of another section to effect a loose connection therebetween.

1,806,016. ROTARY VALVE. EARL WILLIAM GRIFFITH, Dalhart, Tex. Filed June 9, 1930. Serial No. 460,000. 1 Claim. (Cl. 123—59.)



A rotary valve for explosive engines comprising spaced inner and outer stationary casings carried by the head of the engine, a longitudinal partition dividing the inner casing into inlet and exhaust chambers extending throughout the length of the casing, an end wall carried by the partition for closing the adjacent end of the exhaust chamber, said casings having aligned inlet and exhaust ports communicating with their respective chambers, a rotary valve sleeve insertable through an opening in one end of the head into the space between said inner and outer casings, a removable cap carried by said end of the head and closing the adjacent ends of said casings, said valve sleeve being closed at one end and having a circumferential series of spaced openings adjacent said end, said inlet chamber communicating at both ends with the inlet manifold of the engine, and through the spaced openings of the sleeve at one end thereof, and a shaft projecting from the closed end of the sleeve and journaled in said cap, whereby said sleeve can be rotated.

1,806,017. MOLD FOR PLASTIC SUBSTANCES, FOR INSTANCE, CHOCOLATE. JENS JOHANNES JENSEN, Copenhagen, Denmark, assignor to Messrs. Boggild & Jacobsen, Copenhagen, Denmark. Filed Mar. 26, 1930, Serial No. 439,154, and in Germany Apr. 8, 1929. 2 Claims. (Cl. 107—19.)

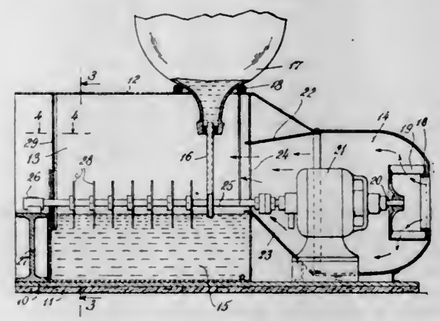


2. A mold of the class described, comprising upper and lower mold sections, a frame supporting the lower sections, a rail, spring arms carried by the rail and having their outer ends engaged with the upper mold sections, the lower sections having a plurality of upwardly and outwardly inclined projections upon their edges for guiding the edges of the upper sections for engagement with the edges of the lower sections, and a spring restrained hook slidably associated with the frame for engaging the rail to yieldably hold the edges of the respective sections in yielding contact.

1,806,018. WEATHER STRIPPING. LOUIS F. JULIEN, Detroit, Mich., assignor to Chamberlin Metal Weatherstrip Company, Detroit, Mich., a Corporation of Michigan. Filed May 9, 1929. Serial No. 361,585. 8 Claims. (Cl. 20—69.)

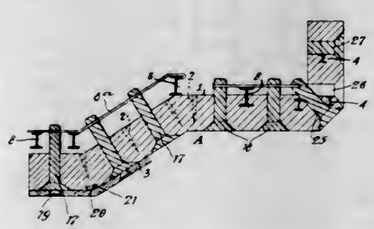
1. A metal weather strip for sliding window sash, comprising the combination with a sash having its rail provided with a groove in its outer side face respectively, of a metal weather stripping having a body provided with portions adapted to engage the grooves under spring pressure, and a resilient weather closing portion attached to the body and extending inwardly from the outer face of the sash.

1,806,019. REFRIGERATING MECHANISM. GLENN MUFFLY, Detroit, Mich., assignor to Copeland Products, Inc., a Corporation of Michigan. Filed Dec. 10, 1929. Serial No. 413,102. 1 Claim. (Cl. 62—95.)



In a mechanical refrigerating system, in combination, a cabinet provided with a cooling compartment and a unit compartment separated by a wall, an evaporator in said cooling compartment, a compressing and a condensing unit in said unit compartment, a motor for driving said compressor, a pair of tubes, one positioned within the other for at least part of its length, extending from said evaporator through said wall and forming intake and discharge passages for said evaporator, the outer of said tubes being connected to said compressor unit and the inner of said tubes comprising a capillary tube connected to said condensing unit and forming the sole metering means for controlling the flow of liquid refrigerant to said evaporator, and means controlled by variation in pressure within the outer of said tubes for controlling the operation of said motor.

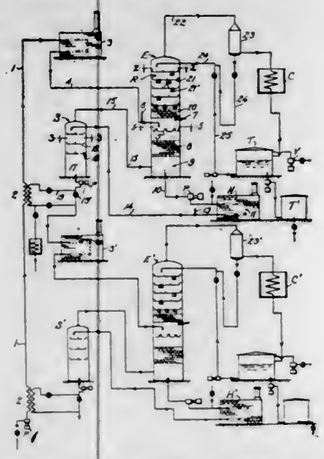
1,806,020. PROCESS FOR REVIVIFYING USED DECOLORIZING MATERIALS. CHARLES K. PARKER, Richmond, and FRANK A. BENT, Berkeley, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Aug. 22, 1927. Serial No. 214,562. 5 Claims. (Cl. 252—2.)



1. A process of revivifying used decolorizing clays, comprising distilling and partially carbonizing hydrocarbons present in said clays in the presence of added steam and air, and then removing the carbonized impurities by producing an endothermic reaction in the presence of steam, without substantial loss of combined water of the clay.

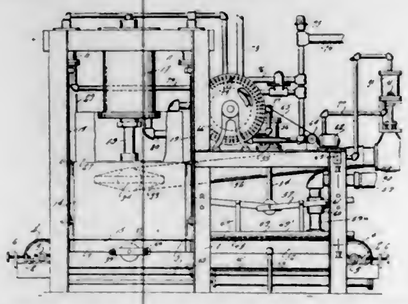
1,806,021. HUMIDIFIER. KARL D. PERKINS, New York, N. Y., assignor to Audiffren Refrigerating Machine Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 2, 1927. Serial No. 237,242. 4 Claims. (Cl. 183—22.)

1. In air conditioning apparatus, the combination of a chamber, said chamber providing a liquid-containing tank, a constant level liquid supply device, a rotatable shaft extending above the surface of the liquid, a plurality of spaced discs arranged on the shaft and partially immersed in the liquid, means for rotating the shaft and discs, means for producing a current of air through the chamber substantially parallel to the shaft, and a device for removing the excess liquid contained in the air.



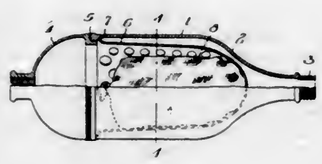
1,806,022. IGNITION ROOF FOR TRAVELING GRATE BOILER PLANTS. RICHARD POTH, Dortmund, Germany. Filed Oct. 5, 1926, Serial No. 139,740, and in Germany Oct. 17, 1925. 2 Claims. (Cl. 110—99.)

1. An ignition arch for traveling grate boiler plants comprising in combination main girders arranged above the



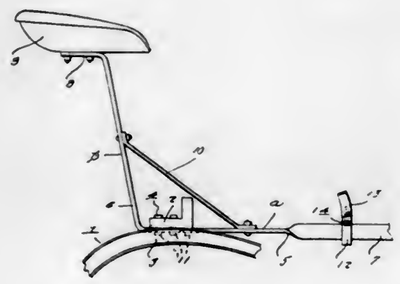
furnace chamber, auxiliary girders extending transversely of the main girders, supporting bricks including shanks having heads at one end and openings at the opposite end receiving the auxiliary girders whereby the supporting bricks are movably suspended thereon, a coherent body filling the space between the bricks, said body being supported by the heads of the bricks and forming with the latter a body constituting the top of the furnace chamber.

1,806,023. METHOD FOR THE DISTILLATION OF PETROLEUM. EDWARD G. RAGATZ, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a Corporation of California. Filed Nov. 6, 1926. Serial No. 146,673. 7 Claims. (Cl. 196—88.)



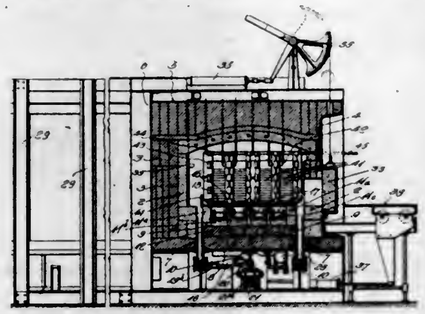
1. A method for the fractional distillation of petroleum oils comprising preheating an oil and introducing the same into an exhausting column in which lighter constituents are liberated, the temperature of the oil approximating that of the vapors in the column at the point of introduction of the oil, passing heated vapors through said column for the purpose of releasing lighter constituents therefrom, withdrawing the bottoms from said column and heating without cracking the same by a once-through passage in a coil to generate a quantity of vapors, separating said vapors and employing the same as said heated vapors for passage through said column to release said light constituents.

1,806,024. MINERAL FIBER FELTING. FRANK C. RUSSELL and CLINTON L. SAVIDGE, Toledo, Ohio, assignor to The Mineral Felt Insulating Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 5, 1929. Serial No. 411,791. 18 Claims. (Cl. 92—61.)



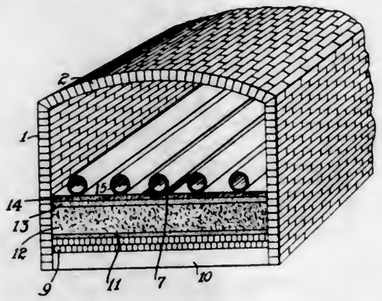
1. The method of forming a felted fiber block comprising confining a volume of liquid containing separated fiber, removing said liquid while maintaining a controlled resistance against the liquid flow therefrom.

1,806,025. DEVICE FOR DISTRIBUTING FERTILIZER AND THE LIKE. HARRY T. SEAMAN, Rochester, N. Y. Filed Dec. 8, 1927. Serial No. 238,642. 2 Claims. (Cl. 299—83.)



1. A portable device for insertion in a water line for distributing fertilizer or the like, comprising a hollow body having a smoothly contracted discharge end and having its other end closed and provided with an inlet, a perforated container housed in said body having an open end secured to the body adjacent its inlet end and having a closed contracted end located within said contracted end of the body and adjacent but spaced from the walls thereof to form a restricted passage therebetween, and a yieldable fabric container adapted to be detachably located in said perforated inner container and pressed toward the closed end thereof by water passing through said device.

1,806,026. SEAT ATTACHMENT. ADOLPH G. SEEDIG, Wheeler, Tex. Filed June 5, 1930. Serial No. 459,844. 1 Claim. (Cl. 155—51.)

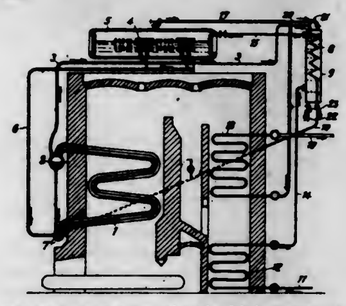


A seat attachment for a two row lister comprising a frame including a pair of spaced longitudinally extending arched side beams, a cross bar connecting said beams and supported on the throat portion of the latter, a seat bar consisting of angularly disposed flat spaced members extending in relatively vertical and horizontal planes about the said cross bar for positioning the latter in the crotch thereof, the horizontally extending member being secured to the under side of said cross bar and extending forwardly thereof and the vertically extending member extending rearwardly and upwardly above the said cross bar, a seat mounted on the upper end of said vertical member, the forwardly extending portion of said horizontal member being twisted intermediate its end to place the flat sides of its forward part in vertical planes and a foot rest member having its central part looped to embrace a portion of the said forward part and means for clamping the loop to the member.

1,806,027. ROTARY HEARTH FURNACE. EDWIN L. SMALLEY, Whitefish Bay, Wis., assignor to Hevi Duty Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 10, 1930. Serial No. 467,078. 20 Claims. (Cl. 266—1.5.)

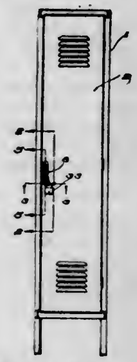
1. In a rotary hearth furnace, an annular hearth having portions thereof adapted to register with a discharging door, a swinging baffle member extending over said hearth and disposed adjacent said discharging door in impinging alignment with article on said hearth, and means for electrically heating opposite sides of said swinging baffle.

1,806,028. TUBE WELDING FURNACE. JOHN M. STAUDE, Pittsburgh, Pa., assignor of one-third to Adam I. Duval and one-third to Carl A. Knott, Pittsburgh, Pa. Filed Mar. 29, 1930. Serial No. 439,897. 3 Claims. (Cl. 263—10.)



3. A heating furnace bottom comprising a supporting structure of brick having a thin layer of fused powdered magnesite and slag, a relatively thin layer of dolomite and slag and a layer of fused magnesite and slag, and a final or top layer of burned lime in superposed relation.

1,806,029. PROCESS FOR WORKING UP CRUDE PHOSPHATE AND POTASSIUM SALTS TO MIXED FERTILIZER. CARL THEODOR THORSSELL, Cassel, Germany. Filed Aug. 7, 1930, Serial No. 473,778, and in Germany Aug. 14, 1929. 3 Claims. (Cl. 71—7.)

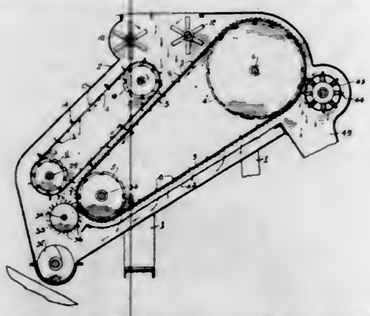


1. A process for working up crude phosphates and potassium salts into mixed fertilizers, consisting in stirring a liquor consisting of ammonium carbonate and ammonium chloride obtained in the process, with gypsum, also obtained in the process, separating off the calcium carbonate formed, treating the remaining liquor with potassium chloride and ammonia, thus precipitating potassium sulphate, employing the latter for the disintegration of crude phosphate with nitric acid in such a concentration as to produce a solution of potassium nitrate and phosphoric acid together with gypsum, further treating this solution to obtain a mixed fertilizer, the mother liquor from the potassium sulphate being cooled for the purpose of separating out a part of the ammonium chloride and saturated with carbonic acid, whereupon the gypsum obtained is stirred in as set forth.

1,806,030. BOILER GENERATING STEAM ACCORDING TO THE INDIRECT METHOD. ROBERT UHDE, Kassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft mit beschränkter Haftung, Kassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed Oct. 27, 1928, Serial No. 315,476, and in Germany Nov. 14, 1927. 6 Claims. (Cl. 122—33.)

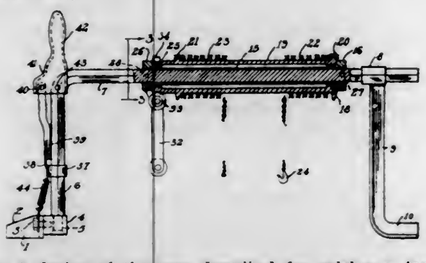
1. In a steam generator wherein high pressure steam is indirectly generated by means of a heat carrier passing through the heating elements of a working steam boiler and circulating in a closed circuit a portion of which is heated by hot gases, and a feed-water heater having heating elements therein, said feed-water heater heating elements and said heating elements of the working steam boiler being connected in parallel with respect to the heat carrier circuit.

1,806,031. LOCKING MECHANISM. PAUL VIGNOS, Canton, Ohio, assignor, by mesne assignments, to Republic Steel Corporation, Youngstown, Ohio, a Corporation of New Jersey. Filed Oct. 18, 1928. Serial No. 313,258. 14 Claims. (Cl. 70—14.)



3. In combination with a door, a cabinet-lock plate secured to the rear face of the door and having a slotted portion extending at right angles thereto, and a slotted padlock clip slidably secured to said portion.

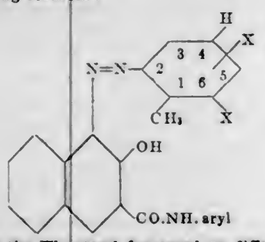
1,806,032. CLEANER AND HULL EXTRACTOR. JEFFREY JOHN WALLACE, Amite, La., assignor to Gullett Gin Company, Amite, La. Filed May 20, 1930. Serial No. 454,097. 5 Claims. (Cl. 19—37.)



1. A cleaner and hull extracting device comprising in combination an endless conveyor belt having outwardly directed teeth, an endless conveyor belt having outwardly directed spikes and brushes, said belts arranged parallel with each other and so that the spikes will pass between

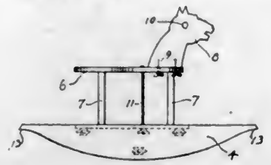
saw teeth and the brushes will wipe the saw teeth and at an inclination to the horizontal, means for feeding material between said belts at the top, means for re-

moving débris at the bottom, means for removing the cleaned material from the saw belt at the top, and means for operating said belts so that the adjacent reaches will travel at a differential speed but in the same direction.



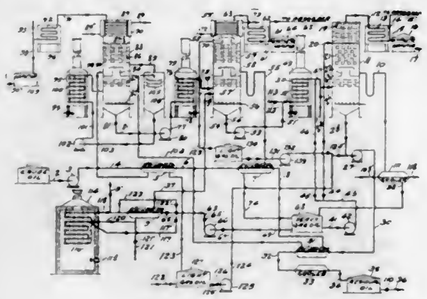
1,806,033. AUTOMOBILE TRANSMISSION LIFTING DEVICE. FRANCIS R. BEAL, Port William, Ohio. Filed Apr. 17, 1930. Serial No. 445,101. 3 Claims. (Cl. 254—145.)

1. A device of the type described for raising a transmission mechanism above the frame of an automobile, comprising a horizontal bar, a fixed vertical leg at one end of said bar, a vertical leg slidably secured to its other end, a drum carried by said bar between its legs, a chain secured at one end to the drum, with its other end free to be attached to said transmission mechanism, means for rotating said drum, a base member, and means pivotally connecting the lower end of the fixed leg to the base member whereby each may be moved about the axis of the other for the purpose specified.



1,806,034. WATER-INSOLUBLE AZO DYESTUFFS AND MATERIAL DYED THEREWITH. KARL BECK and HERBERT KRACKER, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1928, Serial No. 324,052, and in Germany Dec. 17, 1927. 16 Claims. (Cl. 260—95.)

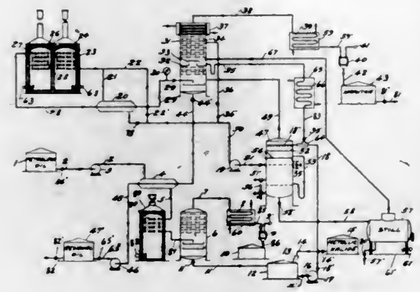
1. As new products, the water-insoluble azo dyestuffs of the following formula:



wherein both the X's stand for equal or different halogen atoms, of which the one not standing in a fixed position may stand in 3:- or in 5: position and wherein the aryl residue may be substituted or not, but must not contain any free sulfonic- or carboxylic groups, dyeing red shades fast to light.

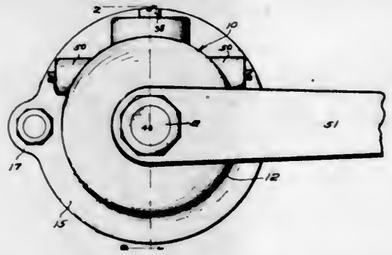
1,806,035. ROCKING HORSE. JOHN HENRY BERNS, Jr., Tampa, Fla. Filed June 28, 1929. Serial No. 374,367. 5 Claims. (Cl. 272—54.)

1. A collapsible or knockdown rocking horse adapted for being packed within mailing limits, comprising a flat platform, mortised to receive legs, flat rockers, detachable means for securing the rockers to the platform, a flat seat mortised to receive legs, legs adapted for detachable seating within the mortises in the seat and in the platform, and a flat head having detachable means for securing it to the seat.



1,806,036. PROCESS FOR DISTILLING AND CRACKING PETROLEUM OILS. JOHN C. BLACK, Los Angeles, Calif. Filed Oct. 8, 1928. Serial No. 311,140. 13 Claims. (Cl. 196—49.)

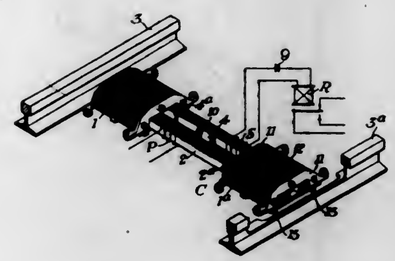
1. A process of producing a maximum percentage of gasoline boiling point stock and a residuum of marketable fuel oil quality from a crude petroleum oil, comprising, separately separating by distillation and fractionation gasoline boiling point stock and a higher boiling light gas oil stock from a crude petroleum oil; separately separating by a second distillation and fractionation a light and a heavy gas oil fraction and a synthetic gasoline boiling point stock, from the crude petroluem oil residuum resulting from the first distillation and a cracked petroleum oil continuously introduced at a distillation temperature into a fractionating tower, said cracked petroleum oil being continuously produced by cracking the heavy gas oil stocks collected from the said second distillation step and from a subsequent cracking and distillation step of the residual oil produced in the said second distillation step, and then reducing the viscosity of the residual oil after the final distillation by commingling the same with a light gas oil separated by the first distillation.



1,806,037. METHOD OF CRACKING OILS. JOHN C. BLACK, Los Angeles, Calif. Filed Nov. 14, 1928. Serial No. 319,396. 6 Claims. (Cl. 196—48.)

1. A process of producing gasoline boiling point hydrocarbons from higher boiling hydrocarbon oils, comprising, commingling petroleum oil with an anhydrous metallic halide suspended in petroleum oil at a temperature not greater than 300 degrees F., separating from the other products of the reaction, oil composed substantially of saturated hydrocarbons, subjecting the saturated hydrocarbons to thermocracking conditions by the application of heat under superatmospheric pressure to produce by thermomolecular decomposition, gasoline boiling point hydrocarbons, and higher boiling oils, separately separating

by fractionation and condensation, the gasoline boiling point hydrocarbons and a higher boiling distillate containing unsaturated hydrocarbons from a residual oil, continuously cooling the said separated higher boiling distillate containing unsaturated hydrocarbons, to a temperature not in excess of 300 degrees F. and commingling the same with the said petroleum oil containing the anhydrous metallic halide to be again processed.

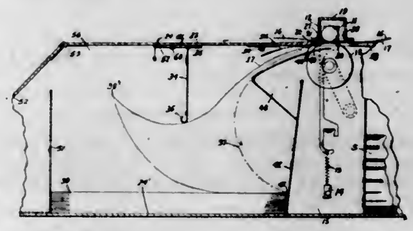


1,806,038. SHOCK ABSORBER. ADNA F. BLANCHARD, New York, N. Y., assignor to Guy C. Seaton, New York, N. Y. Filed May 11, 1929. Serial No. 362,329. 7 Claims. (Cl. 188—89.)

1. A case for devices of the character described comprising a body having a semi-circular piston chamber open on one side in the direction of its axis, a by-pass passage formed in the case adjacent the truncated side of the piston chamber and extending symmetrically with respect to the chamber and its axis, said passage having enlarged outer parts, and a reservoir formed in the body adjacent the passage and open at the upper side, openings being formed between respective sides of the piston chamber and ends of the passage, and between the reservoir and piston chamber.

1,806,039. APPARATUS RESPONSIVE TO THE PASSAGE OF RAILWAY VEHICLES. PAUL N. BOSSART, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1930. Serial No. 442,991. 3 Claims. (Cl. 246—63.)

1. Apparatus responsive to the passage of a railway vehicle, comprising two pole pieces so positioned in the trackway that the reluctance of the air gap between them is reduced by a magnetizable part of a passing vehicle, two parallel bars connecting said pole pieces and each provided with an air gap, a primary winding on one bar on one side of the air gap therein, a secondary winding on the other bar on the other side of the air gap therein, a source of alternating current connected with

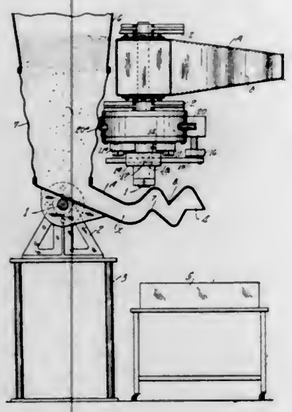


said primary winding and a relay connected with said secondary winding, said parts being so adjusted that in the absence of a vehicle sufficient current is induced in said secondary to keep said relay closed but that the effect of a passing vehicle is to reduce the current induced in the secondary below the release value of the relay.

1,806,040. AGE RESISTING VULCANIZED RUBBER COMPOSITION. HORACE G. BYERS, New York, N. Y., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 8, 1927. Serial No. 225,029. 6 Claims. (Cl. 18—50.)

3. The process of manufacturing a vulcanized rubber product possessing age resisting characteristics which comprises incorporating with said product prior to vulcanization p-phenyl amino p-hydroxy diphenyl amine.

1,806,041. MANIFOLDING MACHINE. HEZEKIAH W. CARROLL, Jr., Hoboken, N. J., assignor to Autographic Register Company, Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 21, 1927. Serial No. 169,697. 9 Claims. (Cl. 282—16.)

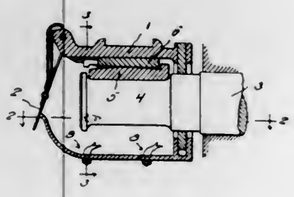


1. In a manifolding machine having a platen over which worksheets are fed; and means for feeding said worksheets over the platen: means located at said feeding means for separating certain of the worksheets from others as they approach and leave said feeding means.

1,806,042. MACHINE FOR FILLING MOLDING FLASKS. LIONEL A. CARTER, Webster Groves, Mo. Filed Oct. 31, 1929. Serial No. 403,826. 11 Claims. (Cl. 22—35.)

1. An apparatus for packing granular material in a receiving receptacle, consisting of a rockable member provided with a passageway through which the granular material travels, a discharge opening leading from said

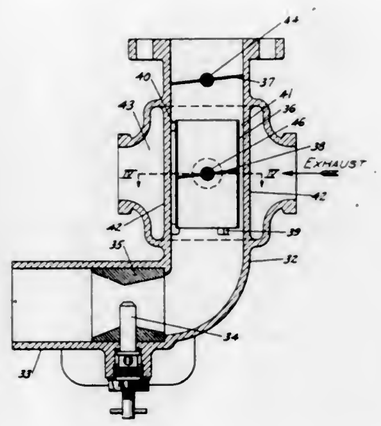
passageway and disposed substantially opposite to the receptacle being filled, means for vibrating said member, and means for causing the granular material traveling



through said member to be projected through said discharge opening in the form of slugs of approximately determined quantities.

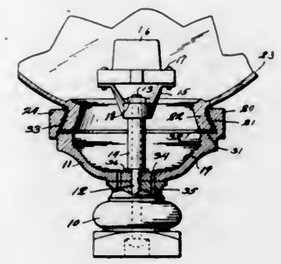
1,806,043. TREATMENT OF CELLULOSE DERIVATIVES OF PRODUCTS MADE THEREWITH. RENÉ CLAVEL, Basel-Augst, near Basel, Switzerland. Filed Jan. 29, 1926. Serial No. 84,764. 17 Claims. (Cl. 8—5.)

2. A process of dyeing cellulose acetate materials which comprises loading said materials by an operation comprising two stages, the first consisting in swelling and impregnating the materials with a solution of a salt of a loading metal, and the second consisting in treating the materials with a solution of a compound adapted to fix the metal therein as an insoluble salt, and thereafter dyeing the loaded materials with a dyestuff that has but little affinity for unloaded cellulose acetate material.



17. A fabric containing loaded cellulose acetate yarn dyed with a dyestuff that has but little affinity for unloaded cellulose acetate yarn.

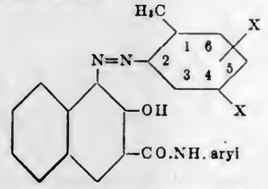
1,806,044. JOURNAL BOX. LESLIE L. COGAN, Peru, Ind. assignor of one-half to Russell R. Rhodes, Peru, Ind. Filed Mar. 18, 1929. Serial No. 348,003. 5 Claims. (Cl. 308—89.)



1. The combination with a journal box; of detachable and adjustable prongs extending from the walls of the box toward the journal, the inner end of each prong being directed laterally toward the inner end of the journal box.

1,806,045. CARBURETOR. WARD DECKER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed May 29, 1924. Serial No. 716,668. 4 Claims. (Cl. 261—13.)

1. In a carbureting tube, a mixing chamber having a pair of concentric passageways of uniform cross section, a throttle valve within said mixing chamber above said passageways for closing said chamber, a second throttle valve within one of said passageways for closing the same, and a lost motion linkage connecting said valves whereby both valves may be in the closed position simultaneously and opened in sequence, and means for heating one of said passageways.

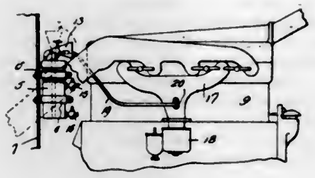


1,806,046. LIGHT GLOBE HOLDER. AMOS O. DEETER, Minot, N. Dak. Filed Jan. 11, 1930. Serial No. 420,256. 1 Claim. (Cl. 240—135.)

A combined light socket and globe holder comprising a base, a globe holding body, a light socket supporting member, and securing means extending through the base and the body and engaging the member whereby to hold said member and said body on the base, said securing means comprising an elongated threaded bolt, a sleeve positioned about the bolt and engaging at one end against the inner surface of the body, a nut for said bolt, and a socket supporting member interposed between the nut and the bolt.

1,806,047. WATER-INSOLUBLE AZO DYESTUFFS AND MATERIAL DYED THEREWITH. RICHARD DERESER and KARL MOLDAENKE, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1928, Serial No. 324,051, and in Germany Dec. 17, 1927. 20 Claims. (Cl. 260—95.)

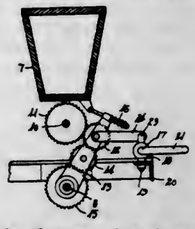
1. As new products, the water-insoluble azo dyestuffs of the following formula:



wherein both the X's stand for halogen, but at least one of which must be a bromine atom and wherein the aryl residue may be substituted or not, but is to contain no free sulfonic- or carboxylic groups, dyeing vivid red shades very fast to light.

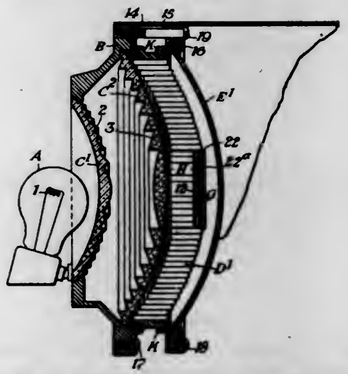
1,806,048. CELLULOSE FIBERS, FABRICS AND ARTICLES. CAMILLE DREYFUS, New York, N. Y., and HERBERT PLATT, Cumberland, Md., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Sept. 22, 1925. Serial No. 57,956. 25 Claims. (Cl. 8—13.)

1. A process for the weighting of material comprising an organic derivative of cellulose, which consists in swelling and impregnating said material with a salt of a weighting metal in solution, and subsequently treating to fix the metal in said material as an insoluble salt.



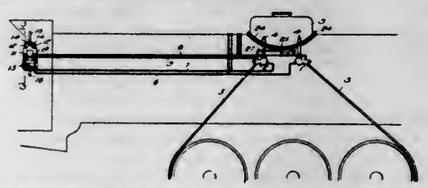
1,806,049. CHARGE HUMIDIFIER FOR EXPLOSIVE ENGINES. CHARLES EDWARD ENNIS, El Paso, Tex., and HARRY WALLACE CRAWFORD, Albuquerque, N. Mex. Filed Nov. 11, 1929. Serial No. 406,360. 3 Claims. (Cl. 261—121.)

1. A device to supply humidified air to the intake manifold of an explosive engine by inspiration, comprising a closed tank adapted to be partly filled with water, an air intake pipe leading into said tank in proximity to the bottom thereof and below the level of the water, an air intake and filler funnel swivelled to the upper end of said air intake pipe for selective horizontal or vertical positioning, and a conduit leading from the tank above the level of said water to said engine intake manifold.



1,806,050. FOOT CONTROL FOR SEED PLANTERS. BERNARD FISCHER, St. Charles, Mo. Filed Aug. 13, 1928. Serial No. 299,202. 1 Claim. (Cl. 275—9.)

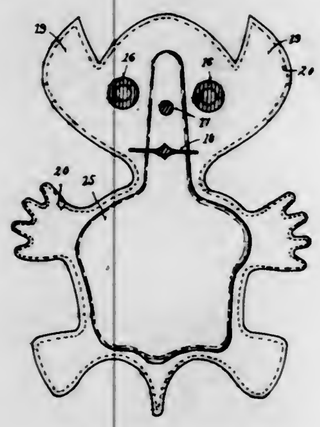
A drilling machine comprising a frame, a wheel-mounted axle supporting said frame, a bin mounted on the frame, right and left seed dropper shafts below the bin, two arms mounted for oscillation on said axle, gear wheels on said shafts, gear wheels on said arms geared to the axle and movable into and out of mesh with the firstnamed gear wheels, an operator's seat mounted on the frame behind the bin, right and left hand rock shafts journaled on the frame and having adjacent end portions bent back into hook formation to provide foot pedals, said pedals being arranged in front of the seat to be conveniently depressed by the feet of the operator, said rock shafts having arms,



links connecting the firstnamed and secondnamed arms whereby the depression of said foot pedals will swing the firstnamed arms away from the firstnamed gear wheels, and spring means for yieldingly swinging the firstnamed arms toward the firstnamed gear wheels.

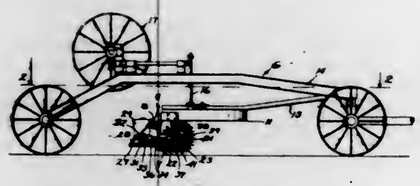
1,806,051. LIGHT SIGNAL. ARTHUR W. FISHER, Forest Hills Borough, and WESLEY B. WELLS, Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 29, 1927, Serial No. 202,194. Renewed Oct. 29, 1930. 1 Claim. (Cl. 177—329.)

A light signal comprising a frame, a doublet made up of two echelon lenses supported in said frame, an inner ring attached to said frame for holding the outer lens of said doublet in place in the frame, an L-shaped ring and an outer ring held together by screws, a cover glass mounted in said latter two rings, a channel-shaped ring located between said inner ring and said L-shaped ring, a screen structure supported in said channel-shaped ring for preventing phantom indications, and screws passing through said inner and outer rings and said L-shaped ring for holding all of the above-enumerated elements in place with respect to said frame.



1,806,052. LOCOMOTIVE SANDING DEVICE. VIRGIL L. FRANTZ, Roanoke, Va. Filed Aug. 12, 1929. Serial No. 385,230. 1 Claim. (Cl. 291—5.)

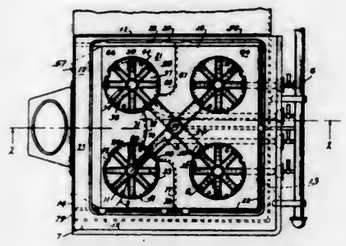
In a locomotive sanding arrangement of the pneumatic type, the combination with a plurality of sanders each hav-



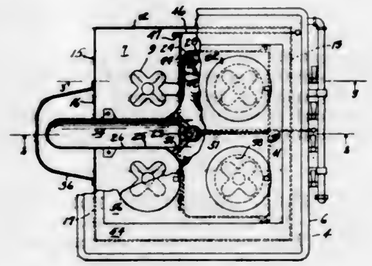
ing a sanding jet and a cleaning jet, of a sand box having outlets respectively communicating with said sanders, a valve device, pipes respectively connecting said valve device with each of said jets, pipes connecting each of the pipes interposed between the valve device and cleaning jets with the sand box, and check valves in the pipes leading to said box, said valve device having means for admitting fluid pressure to the sanding jets and for admitting a blast to the cleaning jets and sand box.

1,806,053. TOY. WALTER J. GALLAGHER, Cincinnati, Ohio. Filed May 1, 1929. Serial No. 359,647. 1 Claim. (Cl. 46—40.)

A toy comprising a flexible hollow body having a hollow head member provided with ears, a collapsible inflatable container within said body and head member, said ears having recesses communicating with said head member, whereby compression of said hollow body will cause movement of said ears by distension of a portion of said collapsible container into said recesses.



1,806,054. SWEEPING ATTACHMENT FOR ROAD GRADERS. GEORGE GARDNER, Redlands, Calif. Filed Feb. 15, 1928. Serial No. 254,430. 6 Claims. (Cl. 37—156.)



1. In a device of the character described, a bracket, a rotary brush mounted for rotation upon said bracket, means for removably mounting said bracket upon the mold board of a road grader, a motor adapted to be mounted on said grader and disconnectible means for operatively connecting said motor to said brush.

1,806,055. GAS STOVE. FREDERICK A. GERCICH, Oakland, Calif., assignor to Hammer-Bray Company, Oakland, Calif., a Corporation of California. Filed Nov. 17, 1927. Serial No. 233,864. 4 Claims. (126—39.)

1. In a stove having a top-gas-burner compartment defined beneath a closed cooking top, a member dividing said compartment into upper and lower chambers and having a perforation therein; a seat at said perforation; and a burner disposed in said compartment adjacent said perforation and directly engaging said seat whereby it may be supported in position by and entirely below the plane of said member.

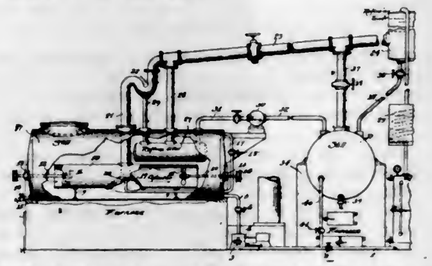
1,806,056. AIR FEED AND VENT DEVICE FOR CLOSED TOP GAS STOVES. GEORGE HAMMER, FREDERICK A. GERCICH, and WILLIAM S. SMITH, Oakland, Calif., assignors to Hammer-Bray Company, Oakland, Calif., a Corporation of California. Filed Dec. 22, 1926. Serial No. 156,304. 2 Claims. (Cl. 126—39.)

1. In a stove, a top gas burner chamber having a closed cooking top thereover, front and rear sets of burners in said chamber, partitions associated with said cooking top and arranged to prevent a flow of burnt gases from said front burners through the chamber spaces at said rear burners, a flue exteriorly of said chamber, and a rearward channel shaped extension of one of said partitions projecting horizontally through the chamber and into said flue, said extension with its upper side closed by said top except at the free end thereof and defining a passage for products of combustion from the front burners only.

1,806,057. TEMPORARY BOOKBINDER. WALTER F. HEER, Bexley, Ohio. Filed Apr. 16, 1930. Serial No. 444,780. 4 Claims. (Cl. 129—19.)

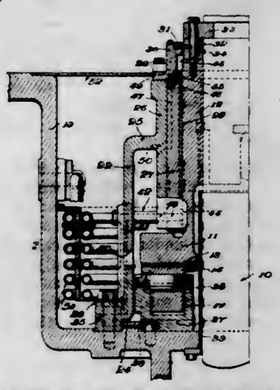
1. A temporary binder comprising a head embodying a back and front wall and a connecting top wall and having a slot extending across the front wall and terminating in a wider opening in said top wall, an article to be attached to the head provided with a projection passable into and out from said slot, and a latch mounted upon the head and comprising a plate having a lateral flange along its top edge to extend across and close the receiving end of the slot formed in the top of the head, and a finger piece connected with the latch and operable from a point without the head.

1,806,058. BERRY GATHERER. ELOF HOLMGREN, Red Deer, Alberta, Canada. Filed May 4, 1928. Serial No. 275,153. 3 Claims. (Cl. 56—330.)



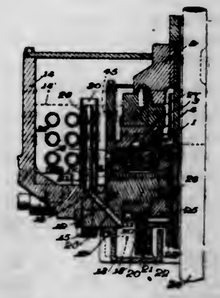
1. A berry gatherer including a one piece body having a transverse curved slot in one end portion of the top thereof; said top also having pairs of short parallel slots in its opposite end portion and directed toward the corners thereof; the sides of the body having longitudinal inwardly pressed portions near the upper edges thereof; a longitudinally adjustable flexible handle; a handle end member carried on said handle and adjustable in said transverse curved slot; a second handle member carried on the other end of said handle and removably engaged in one of said pairs of slots; the bottom of said body being divided into a plurality of integral spaced fingers directed forwardly and curved upwardly at their free ends; and a rearwardly inclined guard plate mounted on said fingers within said body.

1,806,059. ADJUSTABLE ANTIGLARE SHIELD. CHARLES I. HOOPLE, Honolulu, Territory of Hawaii. Filed May 14, 1928. Serial No. 277,631. 3 Claims. (Cl. 296—97.)



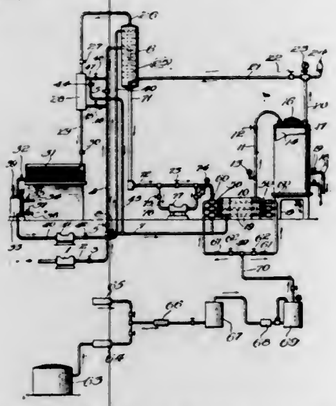
2. An adjustable anti-glare shield or the like comprising a support, a telescoping member having a universal connection with said support, a wedge-shaped member having a universal connection with said telescoping member, a bar slidable in said wedge-shaped member, a spring-pressed wedge disposed in said wedge-shaped member and frictionally contacting with said bar, whereby the latter may be adjusted along its length with respect to said wedge-shaped member and a glare shield or the like rotatably mounted on said bar.

1,806,060. APPARATUS FOR CONVERTING PETROLEUM OIL. WILLIAM R. HOWARD, Washington, D. C., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 27, 1921, Serial No. 525,094. Renewed Mar. 3, 1927. 5 Claims. (Cl. 196—99.)



1. In an apparatus for converting hydrocarbon oils, the combination with a main still, a reflux still therein, of dephlegmating and condensing means connected to the main still by a vapor line, means for causing the vapors evolved in the main still to pass through the oil body prior to their introduction to the vapor line, and means for returning condensate from the vapor line to said reflux still disposed within the main still, a separate still for retreating the returned reflux condensate delivered thereto from the reflux still, means for continuously supplying oil to the still, and means for retaining a vapor pressure upon the system.

1,806,061. BEARING. HARRY A. S. HOWARTH, Frankford, Pa., assignor to Kingsbury Machine Works, Inc., Frankford, Philadelphia, Pa., a Corporation of Delaware. Original application filed Apr. 12, 1927, Serial No. 183,135. Divided and this application filed Dec. 21, 1928. Serial No. 327,665. 30 Claims. (Cl. 308—160.)

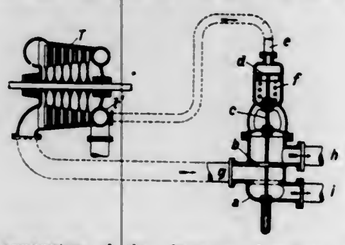


1. In a bearing, the combination with a vertical rotatable shaft, an oil reservoir surrounding the shaft, a nonrotatable bearing member for the shaft, and a self-aligning support for said bearing member mounted on the base of said reservoir.

1,806,062. BEARING. HARRY A. S. HOWARTH, Frankford, Pa., assignor to Kingsbury Machine Works, Inc., Frankford, Philadelphia, Pa., a Corporation of Delaware. Original application filed Apr. 12, 1927, Serial No. 183,135. Divided and this application filed Dec. 21, 1928. Serial No. 327,666. 28 Claims. (Cl. 308—160.)

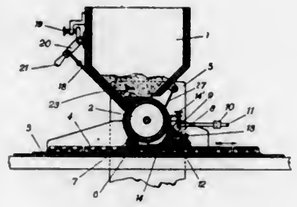
1. In a combined thrust and steady bearing for a shaft provided with relatively rotatable thrust and steady bearing members, in combination with a pot or housing for the thrust bearing, a support for the stationary bearing member of the steady bearing mounted on the base of said pot or housing and within an aperture therein, said support including a member unitarily associated with the thrust bearing members, and a shell for the stationary member of the steady bearing rigidly attached to said member.

1,806,063. PROCESS AND APPARATUS FOR HYDROCARBON OIL CONVERSION. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 21, 1926. Serial No. 82,640. 5 Claims. (Cl. 196—67.)



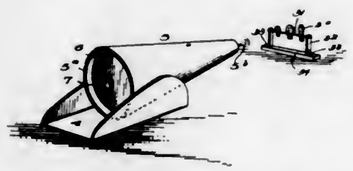
1. In a process for the pyrogenetic conversion of hydrocarbon oils from higher boiling point oils to lower boiling point products, the improvement in the step of heating the oil to a cracking temperature which comprises forcing the oil under mechanically applied pressure through an elongated, substantially horizontal passageway, introducing extraneous combustible fluid at spaced intervals along said passageway, and effecting combustion of said fluid submerged in the oil undergoing treatment.

1,806,064. TIRE CHAIN. FREIDRECK W. KERKMAN, St. John, Wash. Filed Jan. 23, 1928. Serial No. 248,778. 1 Claim. (Cl. 24—232.)



In a tire chain the combination with a pair of flat plates having a central rivet and relatively rotatable on the rivet, said plates having a boss and complementary recess on adjoining faces, and said plates having a pair of overlapping holes for the purpose described, of a series of tongues formed at the edges of the plates, said tongues being fashioned by oppositely extending bayonet slots in the two plates, and a link retained by each pair of complementary tongues.

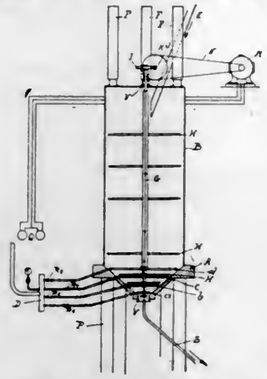
1,806,065. STEAM TURBINE APPARATUS. KARL FREY, Ennetbaden, Switzerland, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company. Filed Mar. 4, 1926, Serial No. 92,309, and in Germany Mar. 20, 1925. 4 Claims. (Cl. 60—89.)



2. In apparatus of the character described, a fluid-pressure motor having a fluid-inlet and a fluid-outlet, means providing a plurality of fluid passages, valve means disposed for movement to a given position and being operable thereat to provide for communication between said fluid-outlet and one of said passages and for movement to a different position and being operable thereat to provide for communication between said fluid-outlet and another of said passages, and means responsive to high and low-pressure conditions at said fluid-inlet and being operable at such high-pressure condition to effect movement of said valve means to said given position thereof and being operable at such low-pressure condition to effect movement of said valve means to said different position thereof.

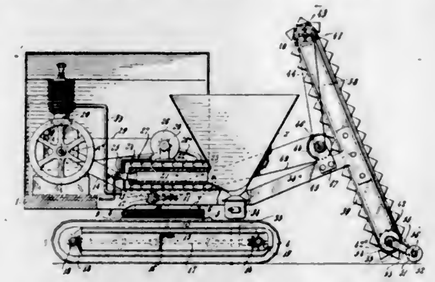
1,806,066. ART OF APPLYING FILLING MATERIALS TO PASTRY. OTTO KREMMLING, Hamersleben, near Oschersleben, Germany. Filed Apr. 30, 1928, Serial No. 274,015, and in Germany Apr. 30, 1927. 12 Claims. (Cl. 107—1.)

1. The method of filling fragile hollow forms open at one side which consists in filling the forms from a mass of material with a surplus of the material, wiping off a part of said surplus to form a crest of material, forcing the material into said forms and simultaneously wiping off the remainder of the surplus, and returning said remainder to the original mass.



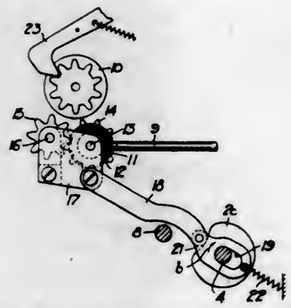
1,806,067. VORTEX RING TOY GUN. GEORGE J. LEJEUNE, Philadelphia, Pa. Filed June 17, 1929. Serial No. 371,456. 9 Claims. (Cl. 46—37.)

1. A vortex ring gun comprising a base, a barrel carried by said base, the barrel being open at both ends and decreasing in diameter in the direction of the discharge end, and movable closure means at the inlet barrel end for forcing air in the direction of the discharge end of the barrel.



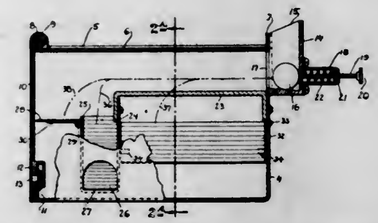
1,806,068. PROCESS FOR RENDERING HOMOGENEOUS FINELY PULVERIZED MATERIALS IN LARGE MASSES. MAX LEPERSONNE, Liege, Belgium, and EDOUARD HASTERT, Esche-sur-Alzette, Luxemburg, assignors to Société Anonyme des Ciments Luxembourgeois, Luxemburg, Grand Duchy of Luxemburg. Filed Oct. 11, 1926, Serial No. 140,986, and in France July 9, 1926. 1 Claim. (Cl. 83—73.)

The improvement in the process of rendering homogeneous a mass of pulverized material by incorporating with the mass a gaseous fluid to eliminate the mutual friction of the particles of the mass and mechanically stirring the mass, which improvement consists in introducing the gaseous fluid into the mass by injection at different heights from the bottom of the mass and simultaneously increasing the cross sectional area of the mass



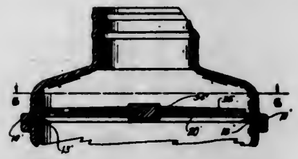
whereby the bridging layers are broken up and the mass has throughout the fluidity of a liquid, the mass being stirred at the same time and its fluidity maintained.

1,806,069. APPARATUS FOR MELTING SNOW. RICHARD LEWIS LLOYD, New York, N. Y. Filed Nov. 18, 1926. Serial No. 149,067. 1 Claim. (Cl. 126—343.5.)



A melting apparatus of the character set forth comprising a vehicle provided with means for propelling it, a receiver for frozen material, and means upon the vehicle for heating air and blowing it through the material in the receiver, the receiver having a water outlet, and a trap for water communicating with said outlet to retain water to resist flow of air from the receiver through the trap.

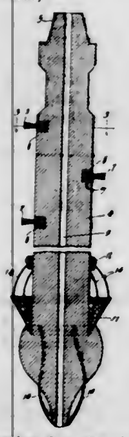
1,806,070. CALCULATING MACHINE. CONRAD LUTTROPP, Stockholm, Sweden, assignor of one-half to Anders Lindahl, Stockholm, Sweden. Filed Nov. 12, 1924, Serial No. 749,459, and in Sweden Nov. 27, 1923. 3 Claims. (Cl. 235—60.)



1. In a calculating machine of the type set forth including a totalizing mechanism comprising a set of numeral wheels, a shaft common to said wheels and a movable carriage in which the shaft is mounted; the combination with a crank shaft, of a spur gear for each numeral wheel, a stationary shaft on which the spur gears are loosely mounted, a swingable frame mounted on said shaft, a shaft carried by said frame, pinions on said last mentioned shaft in constant mesh with said spur gears, a counting drum from which to rotate said first mentioned spur gears upon rotation of siad crank, other means operated from the crank shaft when the latter is oscillated in one direction to upwardly swing said frame and the spur gears carried by the frame to cause each spur gear therein to mesh with a separate one of the numeral wheels and remain in mesh therewith during the major portion of the movement of the crank shaft and then be moved out of mesh, said means including a cam and a link longitudinally operated thereby and connected to said swingable frame.

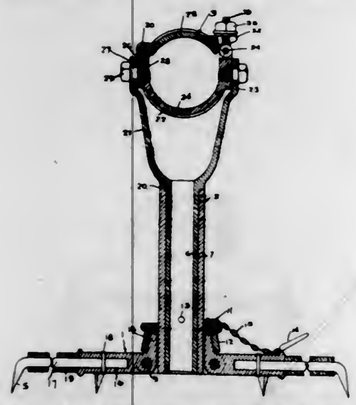
1,806,071. GAME OF SKILL. LOUIS MAASS, Hartford, Conn. Filed Sept. 22, 1928. Serial No. 307,733. 10 Claims. (Cl. 273—119.)

1. In a game of skill operated by rolling objects, the combination of a closed box, an open compartment and a plurality of separated closed compartments within said box, an unobstructed runway extending from the end of said box, and spanning lengthwise the top of some of said closed compartments, said open compartment being arranged at one end of said runway, an outlet in said open compartments discharging to the outside of said box, an opening in said box at the end of said runway adjacent said box end to accommodate the passage of said rolling objects therethrough, and spring restrained pressure actuated means, to rollably impel said rolling objects through said last mentioned opening and along said runway and into any of said compartments.



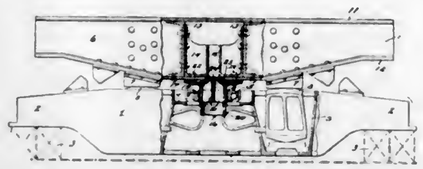
1,806,072. THERMOSTATIC VALVE. EDWARD J. LEVY, Cleveland, Ohio, now by judicial change of name Edward Levy Mayo, assignor to The Bishop & Babcock Mfg. Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 14, 1927. Serial No. 167,977. 3 Claims. (Cl. 236—34.)

1. In a thermostatic valve mechanism, the combination with a fluid conduit of a casing in the line of flow of the conduit, a transverse plate element in the casing, an annular valve seat on the plate, an aperture in the plate laterally of a central portion thereof and circumscribed by the valve seat, a thermostatic, dished, disk provided with an annular seat engageable peripheral edge portion and secured at a central portion thereof to the central portion of the plate and spaced axially therefrom, the disk being formed to snap the periphery thereof back and forth axially, in response to temperature changes of fluid in the



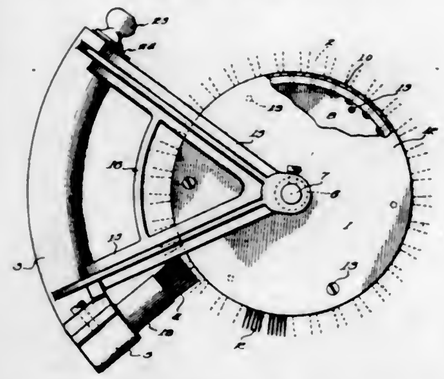
conduit, in one direction to move the peripheral edge into pressure sealing engagement with the valve seat to stop fluid flow in the conduit through the aperture, and in the other direction to unseal the edge portion and seat to permit said flow.

1,806,073. WELL CLEANING DEVICE. LAURENCE B. MACGREGOR, Long Beach, and ALBERT E. SPEAR, Olinda, Calif. Filed Jan. 14, 1928. Serial No. 246,690. 4 Claims. (Cl. 166—18.)



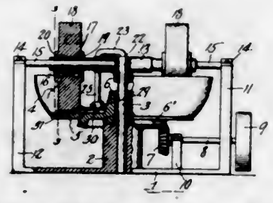
1. In a cleaning device for cleaning a screen in a deep well containing a liquid, the combination of a mandrel having a head at its lower end of considerably smaller diameter than the inside diameter of the screen with means for producing a swirling movement in the liquid as the cleaning device passes downwardly, a packing ring above the head having an outside diameter substantially equal to the inside diameter of the screen so as to rub the inner face of the wall of the screen, and a plurality of brushes carried by the mandrel above the head for engaging the screen.

1,806,074. SAFETY FIRE HOSE HOLDER. WALLACE MACGREGOR, Berkeley, Calif. Filed Mar. 9, 1927. Serial No. 173,806. 3 Claims. (Cl. 248—29.)



1. A safety fire hose holder comprising a base, an upright standard rotatably and adjustably mounted upon the base, a sectional circular clamp pivotally mounted upon the upper end of the standard and adapted to clamp around the coupling member which connects the nozzle with a flexible fire hose, said clamp conforming to the outline of the juncture between the fire hose and the nozzle, said clamp having openings therein conforming to projections of said coupling for locking the same.

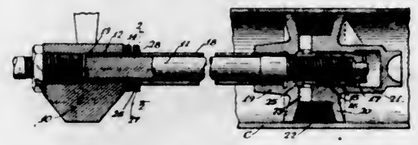
1,806,075. BODY BOLSTER CENTER PLATE AND MOUNTING. MARK H. MARTIN, Baltimore, Md., assignor to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Filed July 14, 1928. Serial No. 292,809. 13 Claims. (Cl. 105—189.)



1. In a railway car truck structure, a body bolster, a truck bolster, and connecting means therefor comprising a member mounted for movement longitudinally of the truck bolster and restrained against movement transversely thereof, a casting secured within the body bolster at its center and a center plate member secured to the bolster and said casting and having a depending portion and rotatably engaged within said slidable member.

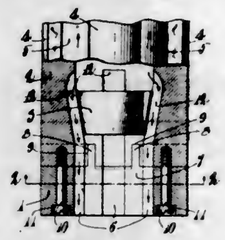
1,806,076. MEAT MARKER. HARRY HENRY MCKEE, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1928. Serial No. 289,292. 3 Claims. (Cl. 101—4.)

1. A meat marker comprising a roller, needles projecting from the periphery thereof, a pair of spaced side brackets in which said roller is journaled, a handle on said brackets lying in the plane of the roller and extending in the general direction of the periphery thereof, a brush carried by said frame for inking said needles and an ink reservoir mounted in said handle and communicating with said brush for supplying ink thereto.



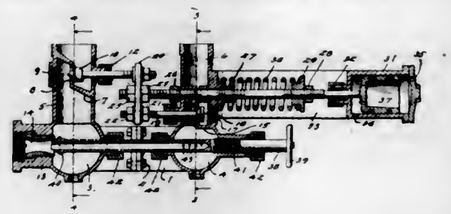
1,806,077. GRINDING AND MIXING PAN. WALTER E. MCMURRAY, Clearfield, Pa., assignor to Clearfield Machine Company, Clearfield, Pa., a Corporation of Pennsylvania. Filed Oct. 10, 1928. Serial No. 311,484. 21 Claims. (Cl. 83—45.)

1. In a rotary mill of the character described, the combination with a rotary pan, of a roll-supporting shaft,



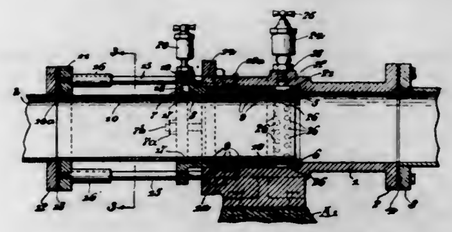
a bearing block movable eccentrically about the axis of said shaft, and a roll journalled on said bearing block and rotatable about an axis eccentric to the axis of said roll-supporting shaft.

1,806,078. EXPANSIBLE PACKER FOR HYDRAULIC PLUNGERS. ERWIN E. MILLER, Fullerton, Calif. Filed Oct. 20, 1926. Serial No. 142,885. 10 Claims. (Cl. 74—109.)



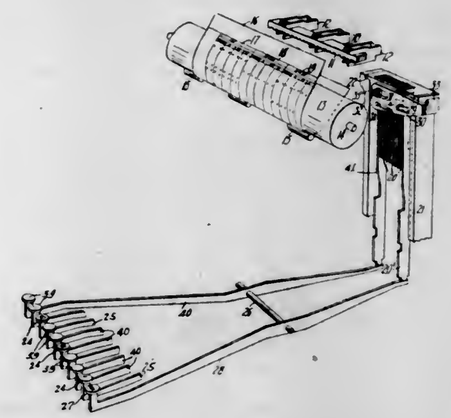
1. In a pump or the like, a plunger rod, a sleeve disposed about the plunger rod, a head rigidly mounted upon the sleeve, a second head threadedly mounted upon the plunger rod, an expansible packing disposed between the heads, there being projections on the opposed faces of the heads locking the heads against relative rotation, the projections on each head being tapered toward the opposite head.

1,806,079. CORE DRILL. JOSEPH S. MITCHELL, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 5, 1923. Serial No. 672,794. 7 Claims. (Cl. 255—72.)



7. A core barrel comprising a core receiving barrel member having an internally fluted conical bore and a tapered core lifter carried in said bore and directly engaging the walls of the latter, said internal flutes forming fluid passages externally of the core lifter.

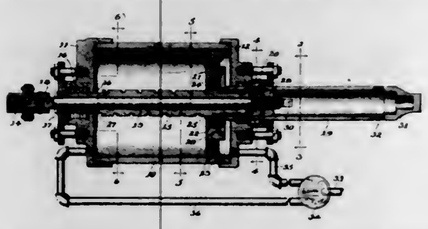
1,806,080. AUTOMATIC OIL BURNER REGULATOR. BENRY C. MOXLEY, Hequiam, Wash. Filed Oct. 3, 1928. Serial No. 309,932. 4 Claims. (Cl. 236—8.)



1. A fuel regulator for oil burners comprising an oil chamber, a mixing jet leading therefrom, a steam chamber, an inlet neck extending from each chamber and having a partition therein formed with a passage, valves for closing the passages in said partitions having stems projecting from the inlet necks transversely thereof and extending in opposite directions in overlapped and spaced relation to each other, a hollow stem extending through said steam chamber and entering said oil chamber and terminating in an open end adapted to enter the inner end of said jet when the stem is moved towards the jet and regulate flow of oil into the jet, steam inlet openings being formed in the stem within the steam chamber, and actuating means for said valves adjustably connected with the stems of the valves.

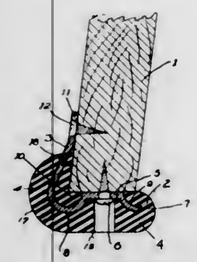
1,806,081. LUBRICATED EXPANSION JOINT. LOUIS L. PRATT, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1926. Serial No. 103,431. 4 Claims. (Cl. 285—162.)

1. The combination with expansion joint construction including male and female members having their respective free-end portions associated for relative movement longitudinally of said construction, and packing means interposed between said free-end portions, of means providing for application of lubricant to the outer surface of the free-end portion of said male member at a region in such construction intermediate said packing means and the free-edge portion of said male member such that applied lubricant is forced along the outer surface of said male member and between the same and said packing means under the influence of pressure conditions in said female member.



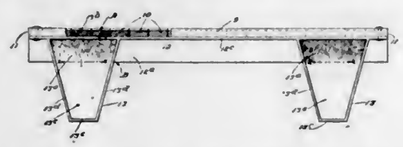
1,806,082. TYPEWRITING MACHINE. HENRY RESCH, Bayonne, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 19, 1926. Serial No. 149,339. 7 Claims. (Cl. 197—176.)

1. In a typewriting machine and in a tabulating mechanism for typing upon a work-sheet having a series of typing zones, with each zone subdivided into a series of columns, the typewriting machine including a carriage



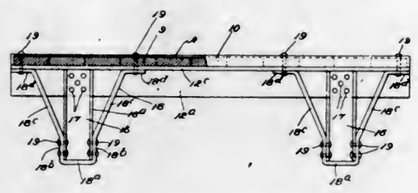
having zone-determining stops movable therewith, and the tabulating mechanism having a series of vertically-disposed denominational stops mounted within a stationary frame and operative to engage an advancing zone-stop to selectively arrest the carriage to permit typing within any column of the zone predetermined by the zone-stop, the combination of means for arresting the carriage in advance of a typing zone-position on the work-sheet prior to selectively tabulating the carriage denominationally into the zone to relieve the denominational stops from the carriage-impact, said means including an auxiliary key at the keyboard of the machine to operate a key-lever, a vertical push-bar liftable by the key-lever, and an auxiliary stop firmly mounted upon the stationary frame to be vibrated by the push-bar into the path of a zone-determining stop to arrest the carriage.

1,806,083. FLUID PRESSURE STARTING MECHANISM. THOMAS J. ROBERTS, Atlanta, Ga. Filed Nov. 21, 1927. Serial No. 234,868. 2 Claims. (Cl. 121—37.)



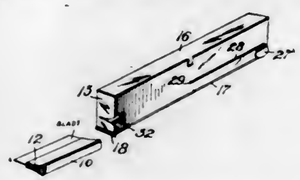
1. A starter comprising a cylinder, a piston mounted to reciprocate therein, an envelope carried rigidly by the piston and extending outwardly through one head of the cylinder and having an angular cross section and removable cap, a shaft extending longitudinally and axially through the cylinder and having one end enclosed within the envelope, means to apply a manual implement to the enclosed end when the cap of the envelope is removed, a worm mounted axially within the cylinder and rotating about the shaft and within the envelope, means carried by the piston to rotate the worm, separable clutch members, one of which is carried by the worm and one by the shaft, and means connecting the piston and worm providing an initial longitudinal movement of the worm for interengaging the clutch members.

1,806,084. TREAD. DE FOREST ROE, Cleveland, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed June 23, 1928. Serial No. 287,749. 2 Claims. (Cl. 45—137.)



1. A tread for the bottom ends of furniture legs, comprising a rubber body having two angularly disposed divergent arms integrally secured together and means to secure the two arms to the bottom surface and a lateral surface of a furniture leg, said means comprising a metallic strip imbedded in the body, said strip being of generally L-shaped form and comprising an arm substantially deeply embedded within each of the arms of the body, said arms being apertured to receive securing screws passed therethrough, the apertured portions of the arms being inwardly deflected from intermediate portions and having inner surfaces disposed substantially in plane alignment with their associated inner furniture leg engaging arm faces.

1,806,085. PORTABLE PLATFORM AND METHOD OF MAKING THE SAME. ROBERT T. ROMINE, Mount Clemens, Mich. Filed July 3, 1926. Serial No. 120,301. 3 Claims. (Cl. 248—41.)

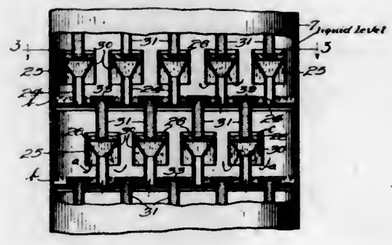


1. A portable platform comprising a load supporting floor, a longitudinal truss member at each side comprising a horizontal flange supporting the floor, and a vertical guide flange integral therewith, a depending channel leg comprising a central vertical web constituting an integral extension of said guide flange and extending in the plane of said guide flange.

1,806,086. PORTABLE LOADING PLATFORM. ROBERT T. ROMINE, Mount Clemens, Mich. Filed July 3, 1926. Serial No. 120,302. 5 Claims. (Cl. 248—41.)

2. In a portable platform, the combination of a platform floor, a pair of parallel T-shaped truss members mounted beneath said floor and extending along opposite sides thereof, each truss member comprising a vertical portion acting as a guide for a lift truck and also comprising inwardly and outwardly extending horizontal flanges united to said vertical portion, and supports located entirely at the outer sides of said vertical portions, each support comprising a vertical channel member having a central web secured to the vertical portion and outwardly extending parallel vertical flanges united to said web substantially the length of the support.

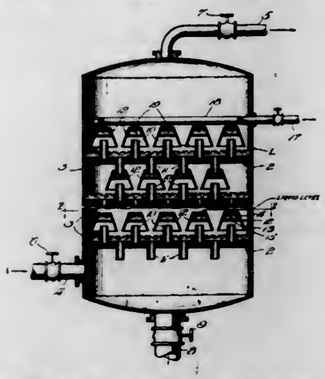
1,806,087. SHAVING EQUIPMENT. JACOB SCHICK, East Orange, N. J., assignor to Magazine Repeating Razor Company, a Corporation of New Jersey. Filed Oct. 8, 1926. Serial No. 140,408. 3 Claims. (Cl. 30—12.)



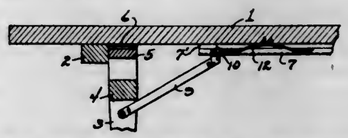
1. In razor equipment for transfer of razor blades, a razor blade magazine having an exit aperture, transfer means, in combination with a razor head, said head having a blade holding channel, cooperating means on said magazine and on said head, whereby either said magazine or said head may be guided bodily into longitudinal alignment and maintained in such alignment during the transfer of a blade from the magazine to the razor head.

1,806,088. FISH LURE. AUGUST F. SCHNELL, Kankakee, Ill. Filed Apr. 12, 1930. Serial No. 443,663. 6 Claims. (Cl. 43—45.)

1. A fish lure, comprising a lure body of rigid plate material having its greatest lateral enlargement near its rounded front end and tapering to its rear end at which point it is formed with a forked tail extension, said body being curved longitudinally in one direction and transversely in the other direction, with both curvatures ending at the junction with said tail extension, a fish hook secured at one end to said lure body, and means on said tail extension for holding the fish hook against lateral displacement.



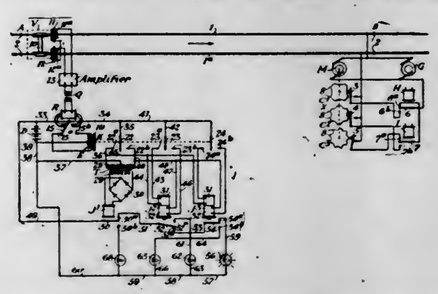
1,806,089. DEPHLEGMATOR. JEAN DELATTRE SEGUY, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 21, 1926. Serial No. 117,339. 7 Claims. (Cl. 261—113.)



1. A dephlegmator consisting of a casing, a plurality of spaced foraminated plates mounted therein, open ended vapor pipes extending from one side of each plate, and open ended liquid pipes extending from the opposite side of each plate, the vapor pipes of one plate being in substantial alignment with the liquid pipes of the next highest plate, and means for preventing the vapors passing through the liquid pipes.

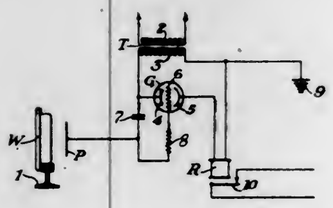
1,806,090. DEPHLEGMATOR. JEAN DE LATTRE SEGUY, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 9, 1926. Serial No. 153,491. 5 Claims. (Cl. 261—114.)

1. In a dephlegmator, the combination with a casing, of a plurality of spaced apart superimposed plates mounted therein, each of said plates having upwardly projecting open ended pipes, cap members mounted thereabove and spaced therefrom, said caps comprising an imperforate plate and flanges projecting above and below said imperforate plate to accumulate liquid pools above the plate and impart a downward movement of the vapors as they pass out of the open ended pipes.



1,806,091. FOLDING TABLE. ROBERT W. SIMPSON, Salem, Ohio. Filed May 3, 1929. Serial No. 360,243. 1 Claim. (Cl. 45—11.)

A foldable table comprising a top, legs hingedly connected with the under side of the top, a substantially V-shaped brace member pivotally connected with each pair of legs, a pair of strips connected with the under face of the top and spaced apart, an angle-shaped member having one flange connected with each strip and its other flange extending into the space formed by the strips, said flange having a notch therein adjacent each end thereof and the upwardly extending flanges being spaced apart, each brace member having an upwardly extending projection at its free end which extends into the space between the two flanges, a cross pin carried by each projection and engaging the upper edges of said flanges and spring strips in the space between the two strips for forcing the pins into the notches to hold the legs in folded and unfolded position.



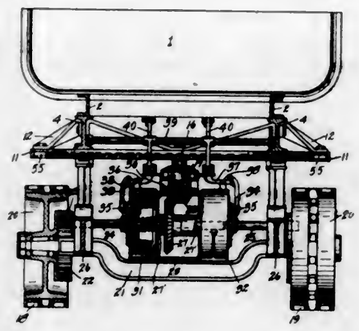
1,806,092. RAILWAY TRAFFIC CONTROLLING APPARATUS. ANDREW J. SORENSEN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1930. Serial No. 426,563. 16 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising means for supplying the trackway with alternating cur-

rent periodically varied at different frequencies, a plurality of train carried contacts operated by energy received from the trackway and selectively responsive to the frequency of such periodic variations, a plurality of relays one controlled by each said contact and one of such relays controlled by all such contacts, and governing means controlled by said relays.

1,806,093. APPARATUS RESPONSIVE TO THE PASSAGE OF RAILWAY VEHICLES. ANDREW J. SORENSEN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 7, 1930. Serial No. 459,713. 5 Claims. (Cl. 246—63.)

1. Apparatus responsive to the passage of a railway vehicle, comprising a plate mounted in the trackway in such position that when a vehicle passes it the plate and a portion of the vehicle form a condenser, a source of alternating current one terminal of which is connected with said plate through a fixed condenser and the other terminal of which is connected with ground, a grid glow tube the grid of which is connected with said plate, a relay, and a circuit for said relay including said source and the two electrodes of said tube in series, the parts being so proportioned that in the absence of a vehicle the tube is in conducting condition so that the relay is energized, whereas when a vehicle coacts with said plate, the relative potentials of the grid and one of the electrodes of said tube are changed so that the tube becomes non-conducting and the relay becomes deenergized.



1,806,094. RAIL AND TIE PLATE. FRANK C. STOWELL, Medford, Mass. Filed May 21, 1928, Serial No. 279,237. Renewed Oct. 10, 1930. 5 Claims. (Cl. 238—304.)

1. A railway track rail having a flat face base provided with a recess having plate engaging transverse members triangular in cross section, a plate having a longitudinal channel, and a locking key confined in said channel and having transverse members interengageable with those of the rail and of like cross section.

1,806,095. MOTOR VEHICLE. JOHN T. SULLIVAN, Lewiston, Idaho. Filed July 19, 1927. Serial No. 206,877. 1 Claim. (Cl. 180—9.2.)

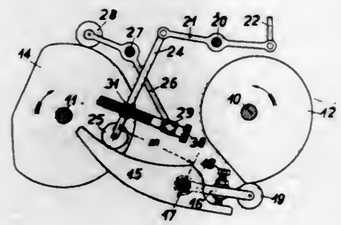
The combination in a motor truck with its frame, a central axle rigid with the frame, and driving belts at the outer sides of the frame, of a central housing supported on the axle and a transversely disposed driving shaft journaled in the housing, a drive gear on said shaft, a pair of clutch shafts alined with the drive shaft and journaled in the frame, clutch devices at the sides of the housing for the clutch shafts and means for independently operating the clutch devices, a longitudinally disposed pro-

peller shaft and a propeller pinion thereon, a vertical shaft journaled in the housing and a gear thereon for engaging the propeller pinion, and a pinion on the vertical shaft engaging the gear on the driving shaft.

1,806,096. PRODUCTION OF A CONCENTRATED CAUSTIC SODA PRODUCT. CARL SUNDSTROM and COKE S. LYKES, Syracuse, N. Y., assignors to Solvay Process Company, Solvay, N. Y., a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,879. 6 Claims. (Cl. 23—184.)

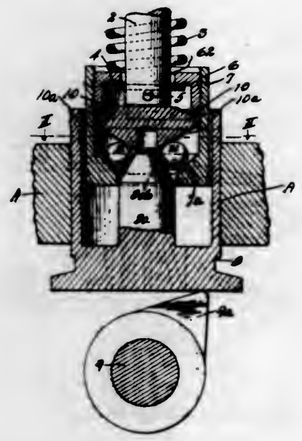
5. The process which consists in subjecting a concentrated crude caustic soda solution accompanied by undissolved suspended alkali metal salt impurities to cooling and vigorous mass agitation followed by settling of impurities and removal of the purified liquid product.

1,806,097. LATERAL MOTION MECHANISM. THOMAS H. SYMINGTON, Baltimore, Md., assignor to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Filed July 12, 1928. Serial No. 292,186. 9 Claims. (Cl. 105—186.)



1. In a railway car truck, a lateral motion roller mechanism supporting the truck bolster for permitting movement thereof laterally of the side frames of the truck, and means for increasing the lift and travel as compared with accepted standards whereby to reduce the shock and effect damping of rolling tendencies of the car.

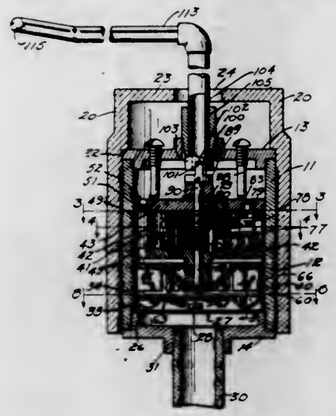
1,806,098. SPEED CONTROL APPARATUS FOR SPINNING MACHINES. HEINRICH TANNER, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company. Filed Feb. 6, 1926, Serial No. 86,594, and in Germany Feb. 7, 1925. 3 Claims. (Cl. 118—32.)



1. In speed control apparatus for spinning machines, a member supported for oscillatory movement and provided with a bearing edge, cam means for imparting such move-

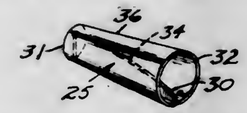
ment to said member, a transmission element supported in engaging relation with said edge and for such movement with said member and for movement with respect to said edge such as to vary its point of engagement therewith, cam means for imparting movement to said element with respect to said edge, means providing an operative connection between said element and said second-named cam

means, and means forming part of said connecting means and being operable to provide for relative adjusting movement between the same and said element; said adjusting means comprising a sleeve carried by said connecting means, a screw rotatably mounted in said sleeve, and a nut receiving said screw and being carried by said transmission element.



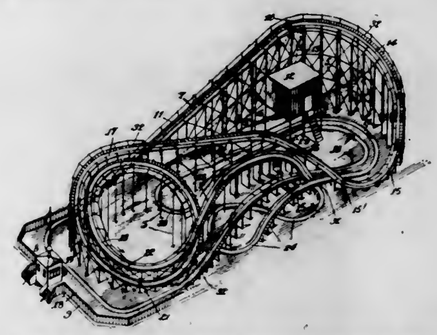
1,806,099. SELF ADJUSTING VALVE GEARING. HORACE T. THOMAS, Lansing, Mich. Filed May 10, 1929. Serial No. 361,951. 18 Claims. (Cl. 123—90.)

1. The combination of a valve stem, a part relatively movable within limits longitudinally of said stem and adapted to strike against, to actuate the same, said part being secured to and carried by said stem, a valve actuating means adapted to act through said part, and a clearance measuring and adjusting device forming a connection between said valve actuating means and said part.



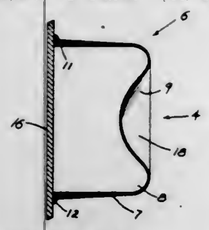
1,806,100. INTERMITTENT MOTION SPRINKLER. WALTER VAN E. THOMPSON, Los Angeles, Calif., assignor to Thompson Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed May 28, 1927. Serial No. 194,923. 25 Claims. (Cl. 299—69.)

1. In a sprinkler, the combination of: a reaction nozzle-unit adapted to move so as to supply water to an area to be irrigated; means for supplying water to said nozzle-unit; and an operating-unit actuated by the water sup-



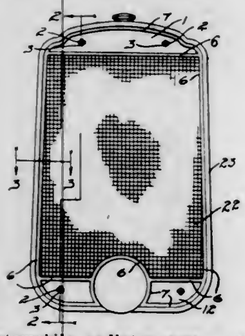
plied to said nozzle-unit adapted to stop the rotation of said nozzle-unit for periods of time to render the motion of said nozzle-unit intermittent.

1,806,101. TURBULENCE ARRESTER. WALTER VAN E. THOMPSON, Los Angeles, Calif., assignor to Thompson Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 30, 1927. Serial No. 236,748. 4 Claims. (Cl. 299—113.)



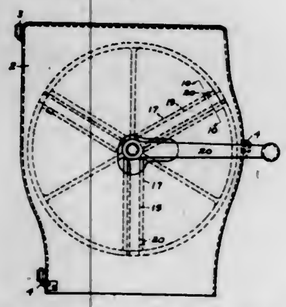
1. A turbulence arrester adapted to be placed in a fluid passage to arrest turbulence, comprising a sheet formed to provide a frusto-conical wall and an inwardly extended fin, said fin extending in the direction of the axis of said wall.

1,806,102. AMUSEMENT RIDE. HARRY G. TRAVER, Beaver Falls, Pa. Filed Sept. 20, 1928. Serial No. 307,246. 16 Claims. (Cl. 104—63.)



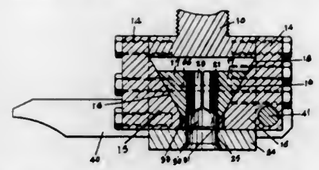
1. In an amusement railway, a continuous track having a loading and unloading station, an uptrack section extending from the loading station, a descending section leading from said uptrack section to a section interposed between said descending section and the unloading station and arranged with successive loops evolved about a common axis intermediate the perpendicular and horizontal.

1,806,103. VACUUM HEADREST FOR BATHTUBS. CARL E. TYLER, Los Angeles, Calif. Filed Feb. 26, 1930. Serial No. 431,396. 1 Claim. (Cl. 4—185.)



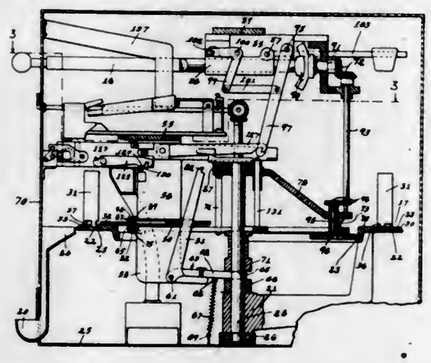
A vacuum cup headrest for a bather, comprising a hollow body of impervious material open at one end, said open end being conformable to a portion of the interior surface of a bathtub, to make intimate contact therewith throughout the periphery of said open end, and a resiliently flexible outer end on said body collapsible thereinto to define a cavity in its outer face adapted to receive and support a portion of a bather's head, said flexible end continuously pressing outwards when collapsed, to create a partial vacuum inside said body when said open end is engaged by said surface.

1,806,104. AUTOMOBILE RADIATOR SCREEN. GEORGE M. KENNEDY, Detroit, Mich. Filed May 26, 1930. Serial No. 455,533. 7 Claims. (Cl. 293—54.)



7. In an automobile radiator screen, a sheet metal frame having a central opening therein and formed to provide a channel about the opening, a screen covering the opening and pressed into the channel about the opening to place a tension on the screen, the channel being filled with solder to secure the screen to the frame and to maintain the screen taut on the frame.

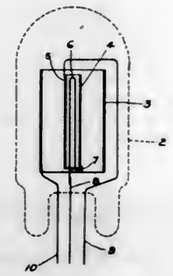
1,806,105. SLICING MACHINE. HENRY F. KOEPF, Fort Wayne, Ind. Filed Oct. 8, 1928. Serial No. 311,057. 1 Claim. (Cl. 146—114.)



In a slicing machine, a frame, a hopper on the frame, the frame having an opening coincident with the hopper, a shaft revolubly mounted on the frame and cutting means on the shaft comprising a radially slotted disk secured to the shaft and a spider loosely mounted on the shaft having one edge of each arm of the spider sharpened and adapted to extend into the slots in the disk and each arm having a lug adapted to engage one wall of a slot.

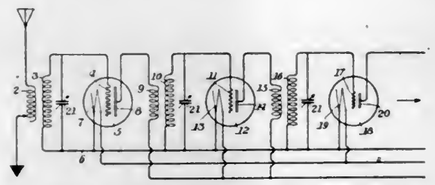
1,806,106. VERTICAL PULL BROACHING MACHINE. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Jan. 4, 1929. Serial No. 330,345. 5 Claims. (Cl. 279—29.)

1. In a draw head for vertically operated pull broaching machines, the draw head having a pair of inclined surfaces extending towards the axis of the draw head and downwardly, a pair of dogs slidably supported on the said surfaces and having inwardly extending engaging parts for engaging the broach, the inwardly extending engaging parts having surfaces inclined upwardly to and outwardly from the axis of the draw head, a release bar extending beneath the lower ends of the dogs for engaging the dogs, and means for raising the release bar, the last named surfaces operating to separate the dogs and release the broach when the release bar is operated.



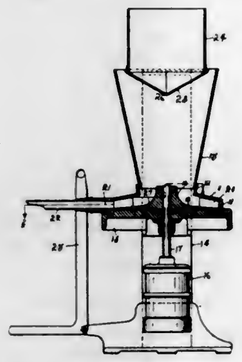
1,806,107. CHANGE MAKER. LOUIS H. LARSEN, Union City, N. J., and CLIFTON W. NIXON, New York, N. Y. Filed July 13, 1928. Serial No. 292,367. 12 Claims. (Cl. 194—2.)

3. In a change-maker, consisting of a rotary structure and a transmission connecter with coin-controlled devices adapted to be operated by different denominations of coins, actuators with connected slides arranged to be operated in one direction by said devices through the power of said connecter, a multiplicity of coin-holders on said structure provided with individual ejectors adapted selectively to be brought into position to be moved to and fro by said slides, and means effective for repositioning said actuators and connected slides.



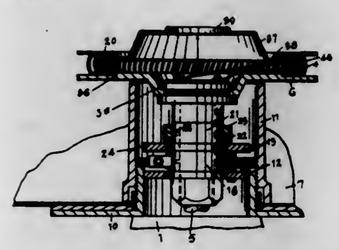
1,806,108. HOT CATHODE DEVICE. FREDERICK S. MCCULLOUGH, Edgewood, Pa. Filed Jan. 5, 1926. Serial No. 79,352. 1 Claim. (Cl. 250—27.5.)

An electron tube having a tubular cathode member, a heater wire having a loop inside the cathode member and extending longitudinally of said cathode tube, both ends of said wire being at the same end of the cathode, one end of said wire being connected to one end of the cathode, a heater current supply wire connected to the other end



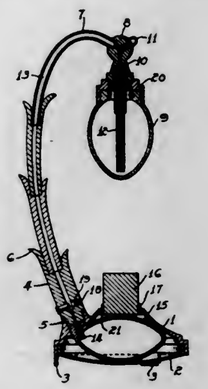
of the heater wire, and a second current supply wire connected to the cathode only at that end of the cathode opposite the end to which the heater wire is connected thereto.

1,806,109. AMPLIFICATION OF ELECTRICAL CURRENTS. FREDERICK S. MCCULLOUGH, Edgewood, Pa. Filed Nov. 2, 1926. Serial No. 145,775. 3 Claims. (Cl. 179—171.)



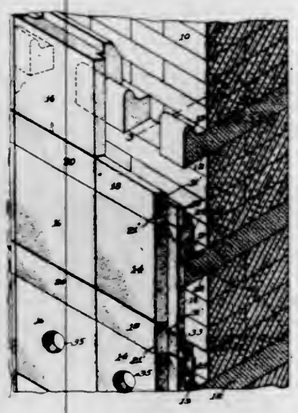
2. A system of radio frequency amplification having a plurality of amplifying stages, each of said stages having a thermionic tube, the capacity coupling between the grid and the plate in each succeeding stage being decreased toward the output end of the circuit.

1,806,110. AUTOMATIC CHARGE-FORMING AND FEEDING DEVICE. EDWARD W. MENKE and ESLI A. MARSH, Chicago, Ill., assignors, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed Nov. 2, 1928. Serial No. 316,690. 6 Claims. (Cl. 226—48.)



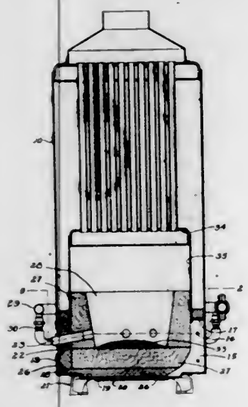
1. In combination, a casing having a vertical axis, a rotatable propeller within the casing and substantially concentric therewith, the casing having a discharge outlet substantially tangential thereof, a discharge spout connected with said outlet and adapted to enter a restricted opening in a receptacle, and a charge-forming device above the casing and adapted to discharge a separated amount of material forming a suitable charge for the receptacle, said propeller comprising a central hub, a disk extending from the lower side of the hub and blades on the upper side of the disk, the outer surface of the hub slanting gradually into the upper surfaces of the disk.

1,806,111. CANDY COTTON FORMING MACHINE. BUREN MOAD, Toledo, Ohio. Filed Sept. 10, 1929. Serial No. 391,687. 4 Claims. (Cl. 107—8.)



2. In a candy cotton machine, a spinner member formed channel-shape and having a bottom curved in its cross section and joined with the flanges by curved portions, the bottom of the channel having slots extending from the curved portion of the top to the curved portion of the bottom of the spinner member, a heat coil formed of a flattened spirulate band resting against the curved interior surface of the spinner member, a pair of rings connected to the band, a pair of arcuate contacts for making contact with each of the said rings, a pair of arms for supporting each pair of contacts; a pin for pivotally supporting the arms to locate the contacts on opposite sides of the ring, a tension spring for connecting the ends of the arms together for elastically pressing the contacts on opposite sides of each ring.

1,806,112. SPRAYING DEVICE. OSCAR J. MUTSCHEL, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 7, 1929. Serial No. 338,202. 4 Claims. (Cl. 299—88.)

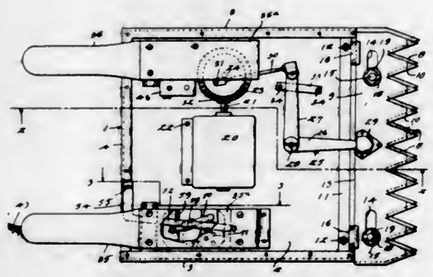


1. In a spraying device, a hollow base, a standard rising therefrom, a spray head supported by said standard, a liquid receptacle supported by said head, said standard having an air passageway therethrough operatively connected with said head, an air chamber housed within said base and connected to said passageway, and a plunger with its lower end housed within said base above the air chamber and depressible to compress said chamber and force air through said passageway.

1,806,113. FURNACE WALL. OSCAR NYGAARD, Saugus, Mass. Filed Feb. 4, 1926. Serial No. 85,916. 31 Claims. (Cl. 110—1.)

1. In combination with a permanent furnace wall a refractory lining comprising successive horizontal, vertically spaced tiers of bricks each being one brick in height suspended from the permanent wall, rows of filler bricks seated loosely in the spaces between said tiers, and means on the rear edge of each suspended brick for retaining said filler bricks within said spaces.

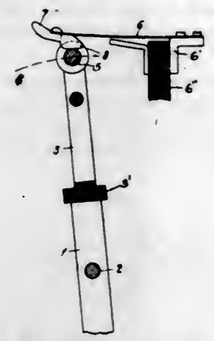
1,806,114. FURNACE. CHARLES B. PAGE, Evanston, Ill., assignor, by mesne assignments, to The G. W. Dulany Trust, Chicago, Ill., a Common-Law Trust. Filed June 21, 1929. Serial No. 372,605. 4 Claims. (Cl. 122—115.)



1. A furnace comprising, in combination, a circular casing having side and bottom walls and an inwardly extending flange at the top, heat insulating material lining the casing at the sides and bottom, refractory material inside of said heat insulating lining at the sides and bottom, said refractory material extending substantially above said inwardly extending flange, a plurality of openings through said side wall and linings, said openings being inclined inwardly and upwardly and also inclined in the same direction to the radii of said casing, and a burner in each of said openings.

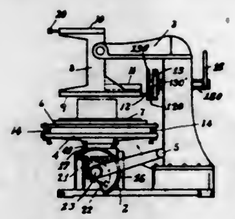
1,806,115. HEATER PORCELAIN. ROBERT J. PARSONS, Schenectady, N. Y., assignor to Consolidated Car Heating Company, Inc., Albany, N. Y., a Corporation of New York. Filed Mar. 12, 1929. Serial No. 346,463. 4 Claims. (Cl. 219—19.)

4. The combination with a holding block for resistance wire provided with two parallel surface grooves connected across at one end, of a coil in said grooves, said coil being continued through said cross connecting groove and providing with end terminals at the opposite end of the block, said grooves having laterally offset bends at intervals so as to provide pinching spots shaped to grip and prevent vibration of said coil.



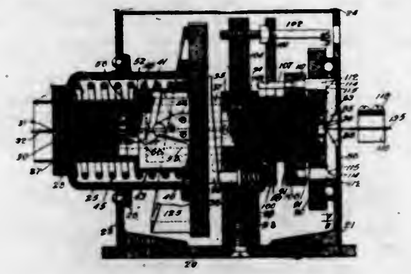
1,806,116. HEDGE TRIMMER. LOGAN S. PETERSON, McKeesport, Pa. Filed Apr. 22, 1930. Serial No. 446,344. 2 Claims. (Cl. 30—11.)

2. A hedge trimmer, comprising a casing, cutting mechanism at the front end of the casing, an electric motor in the casing, means connecting the motor to the cutting mechanism, a handle bar extending rearwardly from the casing, brackets extending upwardly from the bottom wall of the casing, a second handle bar extending rearwardly from the casing and provided with a shank secured to the brackets, a rheostat located below said shank and including a movable blade, leads connecting the rheostat to the motor, a lever located below said shank and pivoted to one of the brackets and limited in its movement in opposite directions by the other bracket, the lever extending through the rear end of the casing and provided at such end with an upstanding operating member, a guide secured to the blade, a post secured to the lever and engaging in the guide, and a spring secured at one end to said shank and at its other end to the lever.



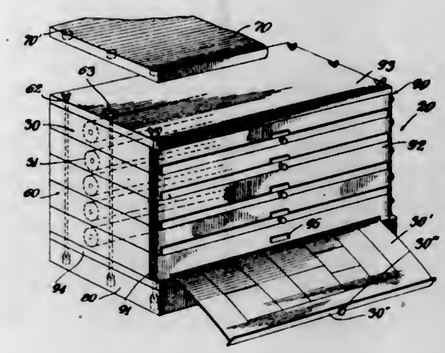
1,806,117. CONTACT DEVICE FOR ELECTRIC CIRCUIT BREAKERS. WILHELM HENNING PETERSÉN, Vasteras, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed June 12, 1929, Serial No. 370,182, and in Sweden June 23, 1928. 4 Claims. (Cl. 200—146.)

1. Electric contact device comprising a rotatable cylinder and a pair of contact fingers movable relatively to each other, said fingers bearing against said cylinder at the same side and bearing against one portion of said



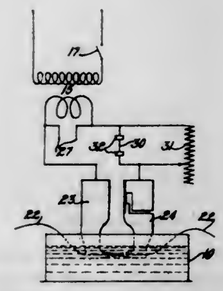
cylinder at the first contact and against another portion of said cylinder axially distant from the former at the final contact.

1,806,118. BRICK METER. STUART M. PHELPS, Pittsburgh, Pa., assignor to American Refractories Institute, a Corporation of Pennsylvania. Filed July 16, 1929. Serial No. 378,681. 1 Claim. (Cl. 33—143.)



A three-dimension gauge comprising opposite jaws of which one is movable relatively to the second, the second jaw including a tumbler movable from one to the other of two alternate service positions, and presenting in one such service position a single face opposed to the first-mentioned jaw and presenting in the other service position two faces opposed to and spaced at unequal distances from the first-mentioned jaw.

1,806,119. METHOD OF AND APPARATUS FOR PRODUCING TUBULAR ARTICLES. GEORGE L. ROCK, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1929. Serial No. 398,797. 10 Claims. (Cl. 92—55.)



1. A method of producing tubular articles, which consists in isolating a section of the covering of a continuous coated core, removing the isolated section of the covering, and then severing the stripped section of the core.

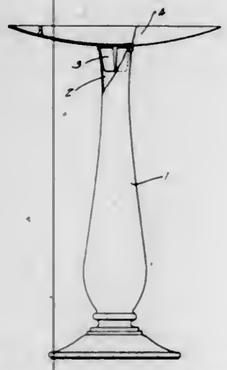
1,806,120. DISPLAY DEVICE. ARTHUR SCHIFF, New York, N. Y. Filed Mar. 26, 1929. Serial No. 349,978. 14 Claims. (Cl. 40—83.)

1. A filing cabinet for maps, plans and the like, comprising a plurality of sections each comprising a pair of opposed side members, a plurality of cooperating spring-roller supports carried on the inner faces of the side members of each pair of said opposed side members, and a pivotally mounted false front associated with each of said sections.

1,806,121. METHOD OF AND APPARATUS FOR WELDING. CLAUDE THEODORE SIEBS, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1926. Serial No. 110,888. 11 Claims. (Cl. 219—10.)

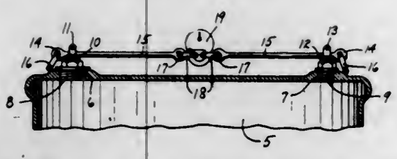
1. A method of welding and annealing, which consists of immersing the parts to be welded in a fluid to prevent oxidation and to aid in maintaining an annealing temperature, passing an electrical current through the parts to bring them to a welding temperature, and decreasing the current to prevent the temperature from exceeding a predetermined value and to anneal the parts.

1,806,122. CINEMATOGRAPH FILM. ALBERT HENRY SMITH, Edgbaston, England. Filed July 10, 1929. Serial No. 377,106. 4 Claims. (Cl. 88—19.5.)



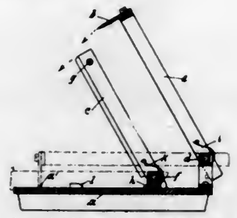
1. The combination with a cinematograph film having driving wheel perforations arranged in a longitudinal line adjacent the edge of the film, of a reinforcing strip extending longitudinally of the film having perforations registering with the perforations in the film, tongues secured to said reinforcing strip and extending through said film perforations to secure said strip to said film,

some of said tongues being bent rearwardly, while others are bent forwardly, the ends of the forwardly bent tongues



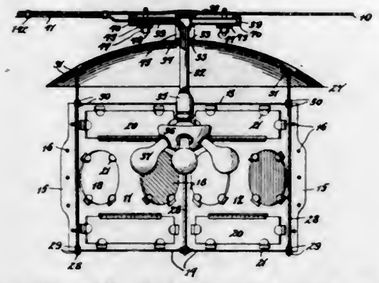
being extended beneath the ends of said rearwardly bent tongues in position to be protected thereby in passing through a camera or projecting machine.

1,806,123. BIRD BATH. EARLE S. SMITH, Toledo, Ohio, assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 20, 1929. Serial No. 348,406. 6 Claims. (Cl. 119—1.)



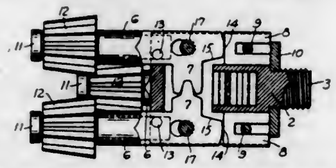
1. In a bird bath, in combination, a vertically disposed pedestal having an opening in its upper end, a removable water pan having a projection depending from its bottom, said opening in said column being adapted to receive said projection on said pan; and a receptacle formed by an integral partition in said pan adjacent to its periphery adapted to receive bird food.

1,806,124. LOCKING SYSTEM FOR CONTAINERS. WILLIAM H. SMITH, Copeland, Idaho. Filed Feb. 15, 1930. Serial No. 428,695. 1 Claim. (Cl. 70—125.)



A locking device for a container having a bung-plug and a vent-plug, a tap plug for said bung and vent plugs, and an elongated eye for each of said tap plugs, comprising a rod slidably disposed through each of said eyes, an eye on each end of each of said rods, a ring permanently disposed through each of said rod eyes, and locking means for securing the two juxtaposed rings together when said rods are disposed in alignment.

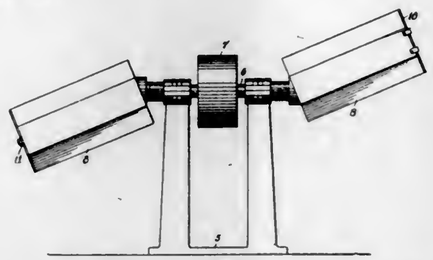
1,806,125. FOLDING DEVICE FOR LETTER SHEETS. GOTTLOB SPOHN, Pforzheim, Germany. Filed May 6, 1929, Serial No. 360,938, and in Germany May 9, 1928. 2 Claims. (Cl. 270—61.)



1. A device for folding letter sheets, comprising the table plate *a*, provided with the folding gutters *a'*, the brackets on the upper side of the table plate with the hand levers and folding bars *b*, *c*, registering with certain of said gutters and adapted to cooperate with them.

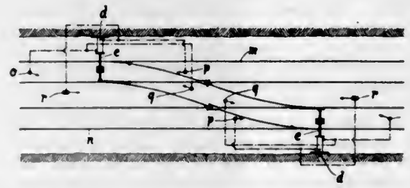
1,806,126. SAFETY TRAFFIC LIGHT. CHARLES F. SPRINGFELS, West Palm Beach, Fla. Filed Sept. 20, 1929. Serial No. 393,952. 9 Claims. (Cl. 40—132.)

1. A safety traffic light including a casing having an open upper end, a hood arranged over said casing and spaced therefrom, illuminating means arranged in said casing, signalling means arranged in the walls of said casing and illuminated by said illuminating means, the edges of said hood extending laterally beyond said casing whereby the light from said casing passes from said illuminating means between said casing and hood and is reflected downwardly around said casing by the marginal parts of said hood and means for suspending said casing from said hood comprising a plurality of rods depending from said hood and passing through openings provided in said hood and casing and means for rigidly and independently connecting said rods to said hood and casing.



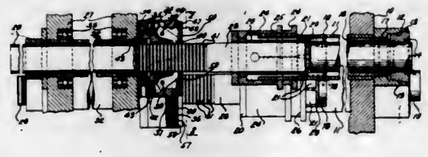
1,806,127. BOILER TUBE CLEANER. HARRISON L. STALEY, Martinsville, Ind. Filed Mar. 5, 1928. Serial No. 259,037. 4 Claims. (Cl. 15—104.13.)

1. In a tube cleaner, a head provided with a plurality of diametrically opposed longitudinal slots, transverse slots



connecting said longitudinal slots, arms carrying rotatable cutters pivoted in said longitudinal slots and means in said transverse slots to connect operatively the arms in pairs.

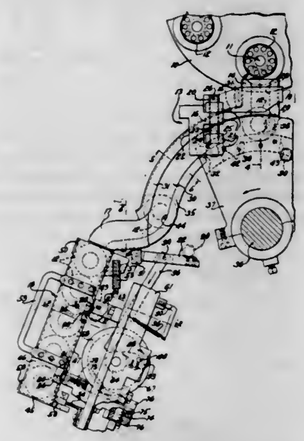
1,806,128. PROCESS OF COATING ARC WELDING ELECTRODES. SIGMUND S. STEWART, Passaic, N. J., assignor to Wilson Welder & Metals Company, Inc., Hoboken, N. J., a Corporation of New York. Filed Apr. 25, 1930. Serial No. 447,397. 1 Claim. (Cl. 91—68.)



A process of coating arc welding electrodes with a frangible coating which consists in tumbling the electrodes one upon the other in the presence of a coating material, while maintaining the electrodes substantially parallel, and alternately inclining the electrodes in oppposite directions during the tumbling, whereby said electrodes are caused to shift longitudinally over one another with a gentle sliding movement under the influence of gravity alone.

1,806,129. DEVICE FOR CHANGING OVER THE POINTS IN MINE TRACKS FROM THE TRAVELING VEHICLE. GUSTAV STRUNK, Essen-Ruhr, Germany. Filed July 14, 1930, Serial No. 467,737, and in Germany June 6, 1929. 6 Claims. (Cl. 246—257.)

1. In a device for changing over pneumatically controlled pit track points in mine tracks from the traveling vehicle, a hanging wall of a lode; an actuating valve provided on the hanging wall; and a releasing lever for said actuating valve, hanging down so that it can be struck by the vehicle in the direction of travel.

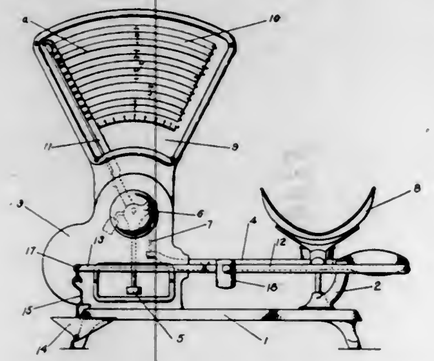


1,806,130. STOCK FEEDING DEVICE. JOHN S. STULL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1929. Serial No. 391,177. 11 Claims. (Cl. 29—62.)

1. In a stock feeding device for machines, means for advancing stock to a working position, including a movable member engaging the stock, an element engageable with the rear end of the stock for association with the movable member when the length of the stock is such that the movable member is not operable to feed it further, said element being provided with a specially formed surface and means cooperating with said surface for preventing the retraction of the element when the movable member is retracted.

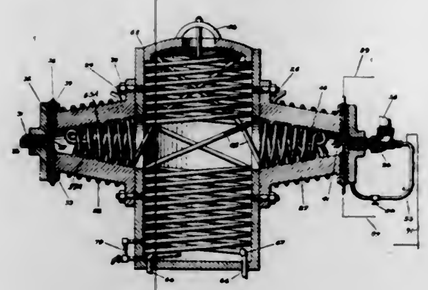
7. In a stock feeding device for machines, means for causing alternate holding and releasing of stock before and after working thereof, means operable in timed relation with the operation of the holding means for advancing the stock thereto, including a reciprocable contractile member for gripping the stock inserted therein, a hollow element engageable with the rear end of the stock for introduction into the reciprocable member when the length of the stock is such that the member is not operable to feed it further, and means cooperating with ratchet grooves formed peripherally upon the element for permitting the reciprocable member to advance the element therewith the stock, but rendered effective for preventing the retraction of the element when the member is retracted.

1,806,131. APPARATUS FOR HANDLING ARTICLES. JOHN S. STULL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1929. Serial No. 393,154. 9 Claims. (Cl. 29—60.)



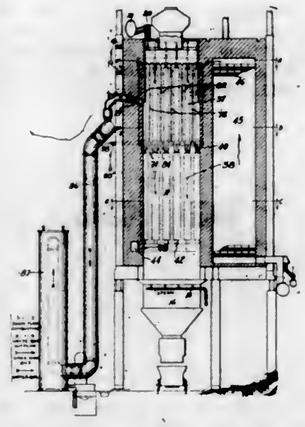
1. In an article handling and assembling apparatus, stationary and movable elements cooperating to provide means for receiving an article at a predetermined point, transferring and directing it to a predetermined discharge point, said movable element operable through an opening in the stationary element along a portion thereof intermediate the receiving and discharge points, a movable receptacle adjacent the latter point having a plurality of compartments each adapted to receive a predetermined number of articles, and means operatively associated with the movable element and the receptacle responsive after the transfer of a predetermined number of articles corresponding to the number of articles received by a compartment for moving the receptacle to present an empty compartment thereof to the discharge point for the reception of a similar number of articles.

6. In an article handling and assembling apparatus for attachment to an article working machine, an arcuate chute for receiving articles at predetermined intervals from the machine, an article carrier associated with the chute operable in timed relation with the reception of an article in the chute for receiving and transferring the article from the receiving end of the chute to the discharge



end thereof, a movable receptacle adjacent the discharge end of the chute having a plurality of compartments each adapted to receive a predetermined number of articles, and means operatively associated with the carrier and the receptacle responsive after the transfer of a predetermined number of articles corresponding to the number of articles received by a compartment for moving the receptacle to present an empty compartment thereof to the discharge end of the chute for the reception of a similar number of articles.

1,806,132. COUNTING SCALE. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 29, 1920. Serial No. 433,921. 7 Claims. (Cl. 265—36.)

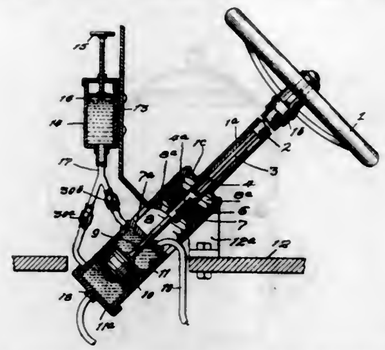


1. In a device of the class described, in combination, a chart, and an indicator co-operating therewith, said chart having a plurality of rows of graduations designated by index numbers adapted to be assigned to articles of various weights, said indicator bearing a count designation for each row of graduations.

1,806,133. POWER MECHANISM. WILLIAM M. THOMAS, Indianapolis, Ind. Filed Oct. 4, 1926. Serial No. 139,457. 2 Claims. (Cl. 60—46.)

1. In a power mechanism, a combustion products storage member, combustion chambers on opposite sides of said storage member, said chambers being tapered, a plurality of studs on the inner surfaces of said chambers, arranged in spiral formation, coiled water carrying members within said storage member and combustion chambers, the coils within said combustion chambers being spirally arranged for receiving said studs therebetween, nozzles in the said combustion chambers formed at the terminus of said spirally arranged coils, means for conveying fuel into the ends of said combustion chambers, and means for igniting said fuel as it enters said combustion chambers.

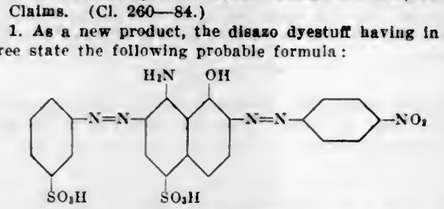
1,806,134. COKE OVEN. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 21, 1926. Serial No. 117,216. 12 Claims. (Cl. 202—121.)



1. In a vertical retort battery for the carbonization of coal, in combination: a plurality of side-by-side continuous vertical coking chambers each adapted to receive through its top substantially continuously the charge to be coked and to discharge through its bottom substantially continuously the coked charge; heating walls therefor between and contiguous to said coking chambers and respectively comprising vertical flame flues; regenerators communicably connected with the flame flues of the respective heating walls; each of said heating walls having its vertical flame flues disposed in upper and lower flue sections which respectively have fuel gas conduits and air regenerator conduits, adapted for separately regulating the heating of said sections so that the upper portions of the coking chambers may be regulably heated for coal gas production and the lower portions for water gas production, and each of the heating walls having flow duct means common to and in communication with both flue sections for commingling and passing waste gases therefrom to said regenerators; distillate-gas offtake means communicably connected with the upper portions of said coking chambers for offtake of coal-gases of distillation at the upper parts of said coking chambers; means for introducing steam into the lower portions of said coking chambers for water gas production in the lower portions thereof; water-gas offtake means communicably connected with the coking chambers below said distillate-gas offtake means and above said means for introducing steam, and adapted for offtake from said coking chambers, separately from and independently of gas off-flow through the distillate gas offtake means for the coking chambers, of water gas produced in the lower portions of said coking chambers from said steam; and means for leading water-gas from said water-gas offtake means to the fuel gas conduits of at least one of said upper and lower flue sections of each of the heating walls for combustion in the flues of said sections.

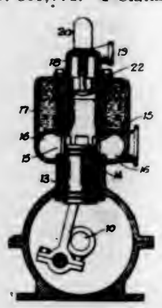
1,806,135. AIRSHIP. WILLIS C. WARD, Orchard Lake, Mich. Filed July 8, 1929, Serial No. 376,734. Renewed Jan. 23, 1931. 6 Claims. (Cl. 244—5.)

1. An airship comprising a series of gas inflated elongated envelopes arranged in tandem and telescopically collapsible connections between said envelopes.



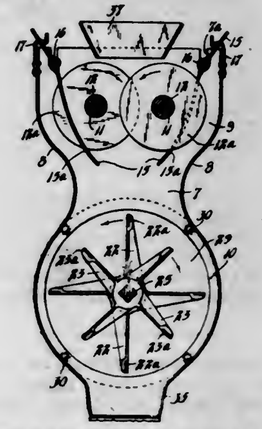
1,806,136. STEERING DEVICE. ABRAHAM WEISS, New York, N. Y. Filed Dec. 31, 1928. Serial No. 329,528. 2 Claims. (Cl. 280—87.)

1. A control for steering mechanism in motor vehicles, comprising a steering wheel, a squared shaft associated with said steering wheel, a hollow rod having a squared interior-coperating with said shaft, a casing having a fluid chamber, and a driving chamber through which said rod passes, means in said driving chamber and interlocked with said rod for causing the same to reciprocate upon rotation of said steering wheel, a plunger at the end of said rod contacting with fluid in said fluid chamber, ports through which fluid may pass upon displacement of said plunger, and means operable through displacement of fluid through one of said respective ports, to cause the contemplated directional displacement of a vehicle.



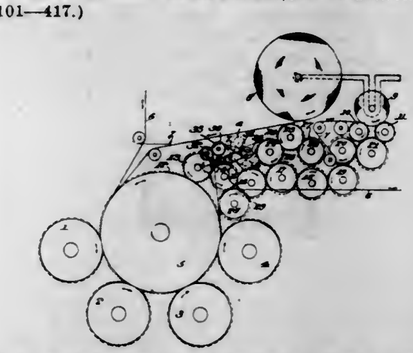
1,806,137. DISAZO DYE. BYRON L. WEST, Hamburg, N. Y., assignor to National Aniline and Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 12, 1930. Serial No. 443,922. 2 Claims. (Cl. 260—84.)

1. As a new product, the disazo dyestuff having in the free state the following probable formula:



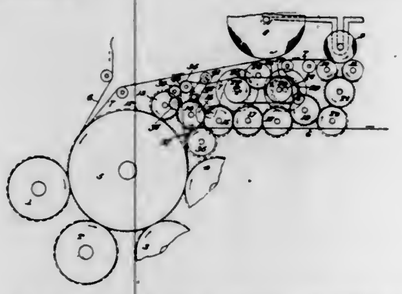
said dyestuff in the dry and pulverized state, and in the form of its sodium salt, being a brownish black powder, and dyes wool from an alkaline bath black shades.

1,806,138. TWO CYCLE INTERNAL COMBUSTION MOTOR. EDGAR C. WYCKOFF, Clinton, N. J. Filed Oct. 2, 1928. Serial No. 309,771. 4 Claims. (Cl. 123—59.)



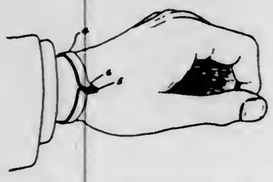
3. In a two cycle internal combustion motor the combination of a plurality of cylinders divided to provide communicating means for a surrounding common exhaust chamber, a jacket surrounding the cylinders and uniting the sections of the divided cylinders, a sleeve in each cylinder uniting its ends and whose walls constitute the bearing surface for pistons and having ports at the space between the divided cylinders, and intake valves.

1,806,139. MIXING MACHINE FOR PASTRY. CATHERINE L. ACKERMAN, Minneapolis, Minn. Filed July 17, 1929. Serial No. 378,938. 5 Claims. (Cl. 259—10.)



1. In a mixing machine, a casing having a receiving end and a delivery end, inner and outer, concentric, cooperating beaters in said casing each having circumferentially arranged horizontal beater bars, said inner beater being slidably fixed upon a joined two-piece shaft, one piece of said shaft being journaled in one side of said casing, a removable plate attached to an apertured portion of the opposite side of said casing and having a bearing wherein the other piece of said shaft is journaled, said outer beater being loosely mounted on said shaft within said casing and removable from said casing through said apertured portion thereof, and means for driving said beaters in opposite directions.

1,806,140. TENSION CONTROLLING MEANS FOR TRAVELING OFFSET WEBS. HOWARD M. BARBER, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed Jan. 2, 1930. Serial No. 417,897. 4 Claims. (Cl. 101—417.)

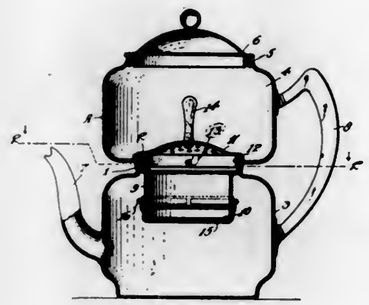


1. In a multicolor web perfecting printing press, a printing unit, a traveling offset web, an offset web rewinding mechanism, a web tension controlling mechanism therefor, and a web compensating device located between the printing unit and said web tension controlling mechanism.

1,806,141. TENSION CONTROLLING MEANS FOR TRAVELING OFFSET WEBS. HOWARD M. BARBER, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed Jan. 2, 1930. Serial No. 417,898. 5 Claims. (Cl. 101—417.)

1. In a multicolor web perfecting printing press, a printing unit, a traveling offset web, an offset web rewinding mechanism, a web tension controlling mechanism therefor, a variable speed drive for the web tension controlling mechanism, and a web compensating device located between the printing unit and web tension controlling mechanism.

1,806,142. DEVICE AND METHOD OF CLASSIFYING PATRONS. LUE OSCAR BECK, Buffalo, N. Y. Filed Mar. 30, 1929. Serial No. 351,290. 2 Claims. (Cl. 40—21.)



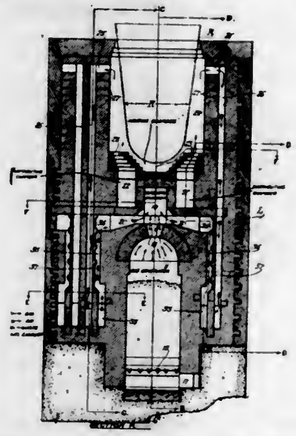
1. As an article of manufacture, a strip of light frangible sheet material forming an admission receipt, said strip having a length sufficient to encircle the human wrist and provide overlapping end portions, and a permanent metallic fastener having portions extending through and joining said overlapping ends to prevent removal of said strip from the wrist except by mutilation thereby destroying the receipt.

1,806,143. PISTON RING. HENRY E. BLOMGREN, Brooklyn, N. Y., assignor, by direct and mesne assignments, to The Simplex Piston Ring Company of America, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 14, 1923. Serial No. 624,960. 11 Claims. (Cl. 74—109.)

1. A packing ring comprising a body constructed to be fitted in the groove of a piston or the like, and having a multiplicity of longitudinally arranged slots therein opening through the inner and outer faces of the ring, and extending in overlapped relation a considerable distance circumferentially from adjacent one side of the ring to a like point adjacent the opposite side, whereby two continuous groove-fitting parts and intervening integral flexible elements are formed extending diagonally from one side part to the other of the ring and yieldable to longitudinal primary compression forces for the purposes indicated.

1,806,144. COFFEEPOT. HENRY BRUCKER, Maplewood, N. J. Filed Jan. 15, 1930. Serial No. 420,902. 1 Claim. (Cl. 53—3.)

Apparatus of the character described, comprising a body formed of one piece of material having an integral annular reduced portion intermediate its ends providing a downwardly tapered annular interior rib dividing said body into a top portion and a bottom portion, said bottom portion having an outlet opening, a perforate receptacle to contain a substance to be treated having one portion of a diameter less than said rib to pass therethrough and another tapered portion to removably fit said rib in substantially water-tight relation thereto so that said receptacle can be suspended directly upon said rib between said top portion and said bottom portion of the body, said top portion having an opening provided with a closure for application and removal of said receptacle, a perforated handled cover on said receptacle to retain the substance to be treated therein and serve as a handle for applying and removing said receptacle to and from said body, and means for removably securing said cover on said receptacle, whereby liquid placed in said top portion can trickle through said receptacle and drip into said bottom portion.

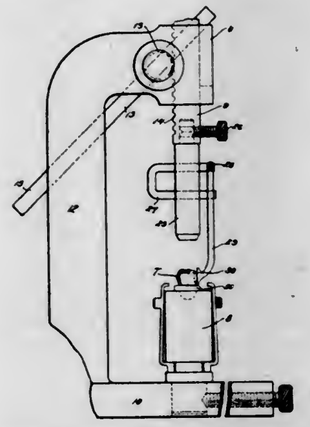


1,806,145. LADDER. HENRY H. BUSBY, Evanston, Ill. Filed Oct. 3, 1928. Serial No. 310,115. 6 Claims. (Cl. 228—34.)

1. As a new article of manufacture, a ladder formed from a flat strip of material bent transversely intermediate its ends and in alternately opposite directions

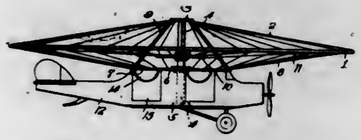
forming superposed steps, said strip being extended above and below the steps and such extensions being disposed substantially in a common plane, said steps being disposed directly above one another.

1,806,146. APPARATUS AND PROCESS FOR COKING LIQUEFIABLE CARBONACEOUS MATERIALS. EDGAR W. CLARKE and JOHN L. EIGENBROT, Evanston, Ill., assignors to American Tar Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 6, 1921. Serial No. 505,801. 18 Claims. (Cl. 202—12.)



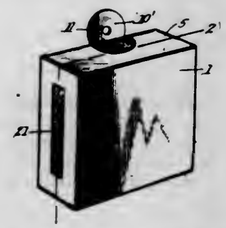
1. In a furnace construction for coking liquefiable carbonaceous materials, in combination: a gas generator; a long narrow combustion chamber receiving fuel gas from said gas generator; recuperators the inflow passages of which are communicably connected with said combustion chamber for supplying thereto the air required for the combustion of the gaseous fuel in said chamber; flues extending along the opposite sides of said combustion chamber and communicably connected therewith at the end opposite to the combustion chamber inlet; a heating chamber located above the combustion chamber and receiving products of combustion from said flues by series of ports respectively disposed on opposite sides of the longitudinal center of said heating chamber, the heating chamber being also communicably connected by outflow passages with the outflow passages of the recuperators; a metallic coking retort positioned in said heating chamber said retort having marginal flanging engaging in fluent sealing material to prevent passage of air therebetween; and means for preventing access of air past said coking retort into the heating chamber, whereby the coking of material contained in said coking retort is effected in a substantially non-oxidizing atmosphere by the combustion products discharged into the heating chamber from said flues; substantially as specified.

12. The process of coking liquefiable bituminous materials in metallic coking retorts which consists in surrounding a retort containing the material to be coked with a substantially non-oxidizing atmosphere maintained at a coking temperature and, when the coking is completed, cooling the retort and its contents in a substantially non-oxidizing atmosphere; substantially as specified.



1,806,147. METHOD OF AND APPARATUS FOR MOUNTING DIE TEETH. JOHN M. CRAIGO, Hartford, Conn. Filed Apr. 24, 1929. Serial No. 357,731. 8 Claims. (Cl. 113—39.)

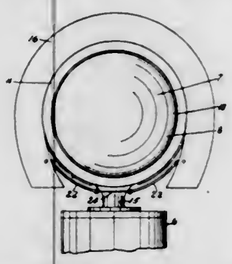
1. The herein described method which consists in positioning a tooth element upon a body of yielding, non-resilient material, then paralleling said element into predetermined alignment with a given line, then raising the tooth element on said line without disturbing its relation thereto, substituting for said body of yielding material a



member to which said tooth element is to be anchored, and then moving said tooth element on said line into anchoring relation to said member.

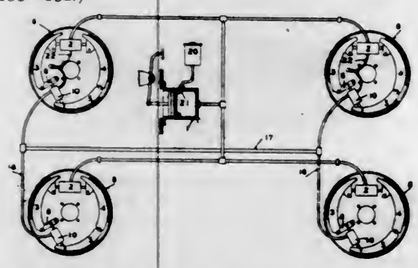
1,806,148. SAFETY WING FOR AIRCRAFT. BERENT O. DAHL, Viroqua, Wis. Filed July 13, 1925. Serial No. 43,380. 4 Claims. (Cl. 244—6.)

1. A safety-wing for air-crafts comprising a round rim, hub with flanges, three sets of wire spokes stretched between said rim and flanges, the center set of wire spokes being fastened to a flange fitting loose around said hub, and made to slide up or down on the hub, and stationed by mechanical means to adjust the under surface of said safety-wing, substantially as described.



1,806,149. CONTAINER. CHARLES S. DAUGHERTY, Philadelphia, Pa. Filed May 29, 1928. Serial No. 281,411. 2 Claims. (Cl. 206—46.)

2. A package, a deodorizer in said package, said package comprising a single sheet of cardboard died to form box sides, top, and bottom, means in said package for permitting limited contact of the deodorizer with the air, said means consisting of a restricted opening in the bottom of the package and restricted openings in at least two of the sides, and a flap cut from the top for suspending the container and providing an aperture for permitting vaporization.

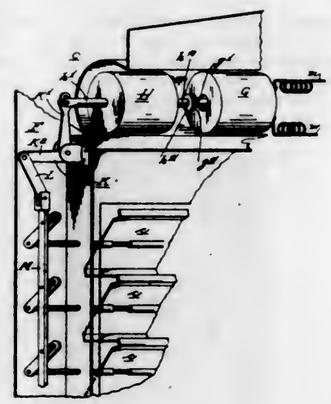


CARNEGIE LIBRARY OF ATLANTA

1,806,150. ADVERTISING DEVICE. HENRY E. DECKBACH, Cincinnati, Ohio. Filed Aug. 24, 1929. Serial No. 388,211. 4 Claims. (Cl. 40—131.)

1. The combination with a supporting body having a flange extending outwardly therefrom, of an advertising device comprising a plate having lugs secured to one side thereof adjacent the edge, portions of said lugs being spaced from the plate whereby channels are provided, the flange of the supporting body being receivable in the channels, and arms pivotally secured at one end to the plate, their free ends being attachable to the supporting body for holding the plate in an outwardly-extending position relative to the supporting body.

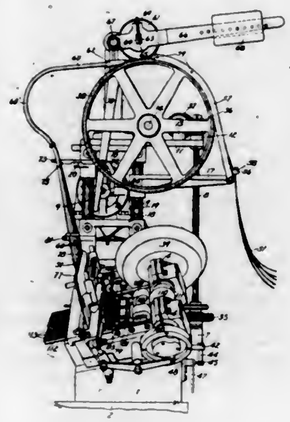
1,806,151. BRAKING APPARATUS. BURNS DICK, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 18, 1929. Serial No. 347,872. 5 Claims. (Cl. 188—152.)



4. Braking apparatus for a plurality of moving parts, comprising a brake element for each part for restraining its movement, a floating brake element for restraining the movement of one of said parts, means for actuating said last named element and including a liquid pressure chamber, fluid means for transmitting the pressure produced by the braking drag on said floating element to said first mentioned brake elements, and means for establishing fluid communication between said last mentioned fluid means and said pressure chamber.

1,806,152. COMPOSITION OF MATTER. HARRY B. DYKSTRA and WALTER E. LAWSON, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 9, 1928. Serial No. 291,485. 11 Claims. (Cl. 134—26.)

1. A composition of matter containing a vinyl ester polymer and a poly-benzyl ether of a polyalcohol.

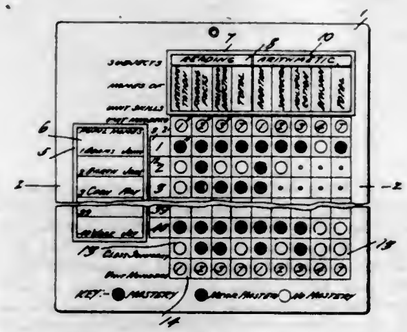


1,806,153. RADIATOR SHUTTER CONTROL FOR CONSERVING HEAT. WILLIAM A. EDWARDS, Chicago, Ill. Filed July 26, 1928. Serial No. 295,493. 8 Claims. (Cl. 123—174.)

1. In combination with an internal combustion engine having a circulatory cooling system and a radiator front provided with a shutter and connections for operating the same, a solenoid having its moving core member arranged for co-operating with the shutter-operating connections in the movement of said core resulting from energizing

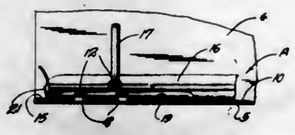
the solenoid, the solenoid winding being connected in an electric circuit of the engine, a temperature-responsive element comprised in said connections, said element being mounted in position for being substantially affected by the temperature of the circulatory cooling liquid.

1,806,154. STRIP-FEEDING MECHANISM. CHARLES J. FANCHER, Windsor, Vt., and ROBERT A. JOHNSON, Longmeadow, Mass., assignors, by mesne assignments, to Woodward, Hubbard Company, Hill, N. H., a Corporation of New Hampshire. Original application filed Jan. 12, 1927, Serial No. 160,639. Divided and this application filed Dec. 21, 1927. Serial No. 241,572. 15 Claims. (Cl. 271—2.1.)



1. In strip-feeding mechanism, feeding mechanism for a strip, and a tubular member adapted to guide said strip, which member has the form of a compound curve to interrupt and divert said strip in its movement through said guide member, and enable the resiliency of the strip to be utilized in feeding.

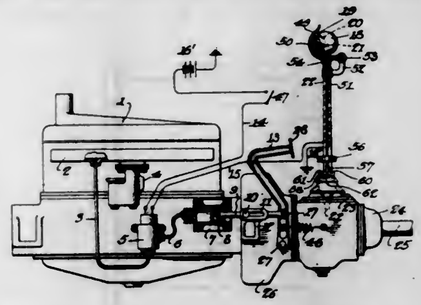
1,806,155. SHAMPOO CAP. ADALINE FARRELLY, Chicago, Ill. Filed Apr. 12, 1930. Serial No. 443,901. 2 Claims. (Cl. 4—159.)



1. In a device of the class described, a closed frame, an open frame having its ends attached to said closed frame, the points of attachment being spaced apart to permit draining off therebetween and the open frame being inclined from said points of attachment, connecting means between the closed frame and the inclined portion of the open frame and a sheet of elastic material impervious to the passage of water arranged over the closed frame and having an opening for the reception of the head, said sheet having its marginal portion turned up and secured to the open frame and between the points of attachment of the ends of the open frame to the closed frame having its edge secured to the closed frame.

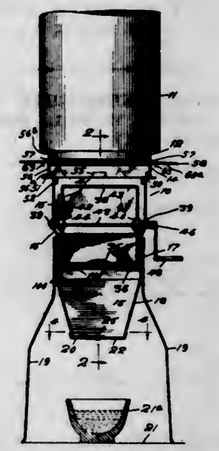
1,806,156. CHART. GUY FOX, Denver, Colo. Filed July 30, 1930. Serial No. 471,774. 4 Claims. (Cl. 116—136.)

1. A chart including a series of record spaces, each having an upstanding stud, and a series of flexible indicators formed with openings to engage said stud.



1,806,157. RING BINDER ATTACHMENT. CHARLES H. FRANZ, Jr., Milwaukee, Wis. Filed Aug. 8, 1930. Serial No. 473,816. 2 Claims. (Cl. 129—24.)

2. In a looseleaf binder, a cover including a back and sides, a base plate fitted against the inner face of the back, the marginal side edges of the back being folded over the base plate, attaching flaps formed on the inner edges of the sides and fitted against the folded edges of the back, reinforcing strips fitted against the flaps and means connecting the folded marginal edges of the back, the attaching flaps and the reinforcing strips to the base plate.

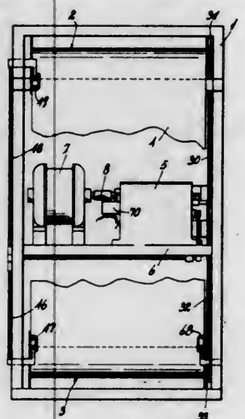


1,806,158. CLUTCH OPERATING MECHANISM. WALTER GIGER, Camden, N. J. Filed Apr. 1, 1929. Serial No. 351,531. 3 Claims. (Cl. 74—39.)

1. In a motor vehicle having a manifold and a transmission mechanism, a gear shift lever having a knob thereon, a clutch, a vacuum device connected to said clutch, an electric circuit including an electromagnetic valve positioned between the manifold and the vauum device and adapted to place the vacuum device in communication with the manifold in one position of the valve and in communication with the atmosphere in

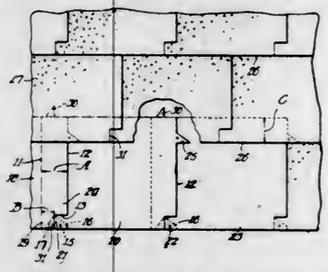
another position of the valve, switch means on said knob for closing and opening said circuit independent of the speed of the engine, means for locking the gear shift lever in position, and means connecting the switch means with said locking means for simultaneously operating said switch means and said locking means.

1,806,159. DENTAL EQUIPMENT. MEYER D. GOLDBERG, Philadelphia, Pa. Filed Aug. 28, 1929. Serial No. 388,878. 4 Claims. (Cl. 209—283.)



1. In combination, a sifter and dispensing device comprising a hopper having upper and lower open end portions, means within said hopper for sifting powdered material, an adjustable valved closure member removably mounted on said upper end portion of said hopper, a container having an open end and being otherwise closed, removably mounted on said member with the open end of said container adjacent said member, and an adjustable valved closure at the lower end of said device.

1,806,160. ADVERTISING MACHINE. THOMAS C. GRAHAM, Long Beach, Calif. Filed Aug. 9, 1929. Serial No. 384,740. 5 Claims. (Cl. 40—31.)

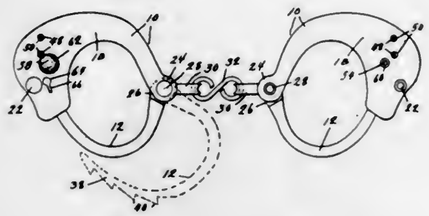


1. An advertising machine comprising a frame, upper and lower rollers journaled in the frame, a curtain positioned on the rollers, a gear box, a power shaft extending into the gear box, means to rotate said power shaft, a pair of sprocket shafts extending from the gear

box, sprockets on each of the last named shafts, one of said sprockets being adapted to rotate the upper roller and the other sprocket being adapted to rotate the lower roller, clutch means on each of said last named shafts, gear means between said power shaft and both of said clutches, timing means in the gear box, gear means adapted to rotate said timing means from the power shaft, clutch actuating means in the gear box, said clutch ac-

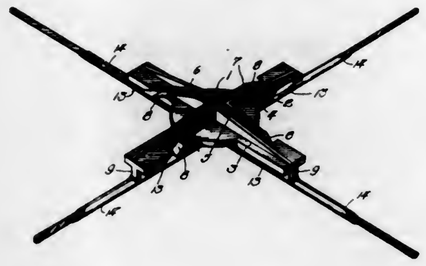
tuating means being operable from the timing means, clutch selector means in the gear box, means operable by the curtain to actuate said clutch selector means whereby one or the other of said clutches is actuated to drive a roller, means holding either of said clutches in engagement, and a second ceans operable by the curtain whereby said means holding the clutches is released.

1,806,161. SHINGLE MANUFACTURE. HARRY L. GUY, Chicago, Ill. Filed Jan. 19, 1931. Serial No. 509,702. 8 Claims. (Cl. 108—7.5.)



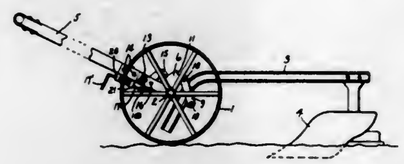
1. A roof covering comprising in combination, a plurality of horizontal courses of rectangular shingles made of flexible roofing material, one side edge of each shingle being straight andb eing provided with a notch extending inwardly of said side edge adjacent its lower edge and with a tab identical in outline with said notch and spaced downwardly from the top edge of the shingle and projecting outwardly from said side edge, the bottom edge of each shingle having an interlocking notch adjacent the other side edge, said notches of adjacent shingles being interlocked to overlap the side edges of said adjacent shingles with their lower edges in horizontal alinement, and a fastening nail driven through the corner of the shingle below the notch in the side edge of said shingle and being covered by a portion of the interlocked shingle, the side margin of the overlapping shingle extending laterally beyond the point of interlock and the side margin of the underlying shingle extending laterally inside the point of interlock, the overlying course of shingles being gauged by the said tabs on the next adjacent underlying course.

1,806,162. LACE AND LIKE FASTENING. PAUL HAHN, Berlin, Germany. Filed Feb. 20, 1930, Serial No. 430,072, and in Germany Sept. 8, 1928. 2 Claims. (Cl. 24—117.)



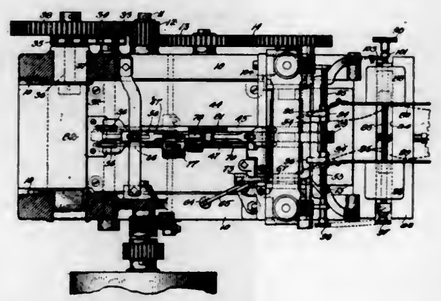
1. A lace and like fastening comprising two hingedly connected plates one of which has a straight clamping slit that is narrower than the thickness of the lace, a gateway for the lace leading at right angles into said slit at a point situated midway between the ends thereof, and an aperture through which the lace can be threaded, said aperture situated in alignment with said gateway.

1,806,163. TOY HANDCUFF. THEODORE JOHN HOGLUND, Gardner, Mass. Filed Nov. 19, 1928. Serial No. 320,363. 18 Claims. (Cl. 70—24.)



1. A toy hand cuff comprising an arcuate casing having an opening in one end, outer and inner walls, and opposed flat side walls, a cooperating arcuate shackle pivoted to said casing at the end opposite said opening and having a toothed end adapted to pass through said opening into said casing, a hooked locking member located within said casing on the outside of said shackle opposite the wrist-enclosure of the hand-cuff arranged releasably to engage the teeth of said shackle, and an unlocking member loosely extended through a flat side wall of said casing movable to raise said locking member from locking engagement with said shackle.

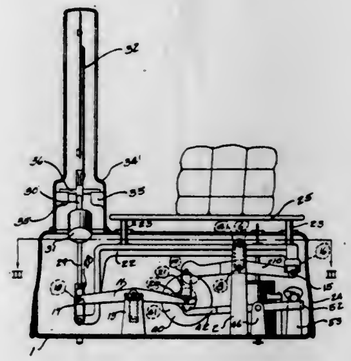
1,806,164. TROLLEY GUIDE. RICHARD ROY HOLDEN, Highland Park, Ill. Filed Oct. 10, 1930. Serial No. 487,671. 19 Claims. (Cl. 191—37.)



1. A trolley guide comprising an upper member for positioning the trolley wires and a lower member for guiding a trolley, the upper member having an upwardly bowed channel in its upper side to receive a trolley wire, and having means adjacent the ends of said channel for holding the wire down in said channel.

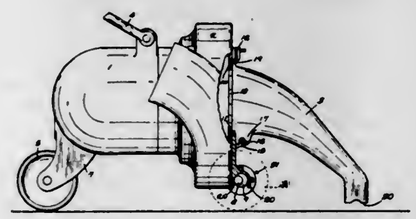
1,806,165. GARDEN IMPLEMENT. FRANK HURKA, Schenectady, N. Y. Filed Dec. 26, 1929. Serial No. 416,387. 6 Claims. (Cl. 97—59.)

5. An implement of the character described, comprising a pair of ground wheels, an axle therefor, a rocker member pivotally mounted on said axle and provided with a pawl engageable shoulder, a tool-supporting beam adjustably secured to said rocker member and extending rearwardly from said axle, a ground engaging tool secured to said beam, draft means pivotally mounted on said axle and extending forwardly therefrom when in the normal operating position, a latching pawl pivotally mounted on said draft means and adapted to engage the shoulder on said rocker member upon limited upward rotation of the draft means about said axle, and means for effecting the release of said pawl from engagement with the shoulder on said rocker member.



1,806,166. GRADING MACHINE. JAMES W. JOHNSTON, Manchester, N. H., assignor to Lacene Manufacturing Company, Manchester, N. H., a Corporation of Maine. Filed Feb. 4, 1929. Serial No. 337,245. 14 Claims. (Cl. 101—43.)

1. A grading machine of the kind having detecting mechanism for measuring successive blanks according to thickness, a normally open gate in advance of the detecting mechanism, grading mechanism, setting mechanism responsive to the detecting mechanism and controlling the grading mechanism and normally inoperative to preserve the grade measurements determined by the detecting mechanism, and a trip in the path of the blanks for controlling the gate, said trip being independent of and in advance of the grading mechanism, including in combination a second trip in the path of the blanks adapted to be operated by the blanks independently of the first named trip to render the setting mechanism operative to preserve said grade measurements.



1,806,167. WEIGHING SCALE. LEONARD O. KELLEY, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 10, 1929. Serial No. 398,755. 9 Claims. (Cl. 265—36.)

1. In a weighing scale, in combination, indicating, counterbalancing mechanism and load receiving means in operative relation to each other, said load receiving means including a pair of even armed levers, each of

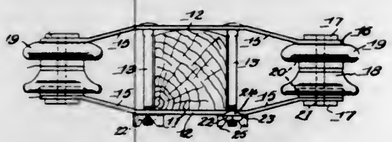
said levers having fulcrum, load and connecting pivots, one of said levers having a nose pivot, the edge of which is on a line coincident with the edges of its load pivots.

1,806,168. SUCTION CLEANER. JAMES B. KIRBY, West Richfield, Ohio. Filed Nov. 5, 1927. Serial No. 231,197. 21 Claims. (Cl. 15—16.)

1. In a suction cleaner, in combination, a casing having a recessed bracket, a shaft removably mounted in the recess and having eccentric portions on its ends, wheels journaled on said portions, means for securing said shaft in said recess, and means carried by said shaft and removable therewith for rotating said shaft and for holding it in different angular positions.

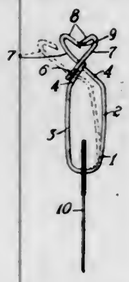
8. In a suction cleaner, a casing comprising a fan-housing and a motor-housing and a nozzle, said nozzle being detachably secured to said fan-housing, a bracket carried by said fan-housing separate from said nozzle and having a downwardly opening recess, a horizontal shaft removably fitting in said recess, a snap spring overlapping said recess for holding said shaft, and wheels carried by said shaft.

1,806,169. ADJUSTABLE LEG FOR SINKS AND THE LIKE. WALTER J. KOHLER, Jr., Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed June 20, 1927. Serial No. 200,145. 5 Claims. (Cl. 45—139.)



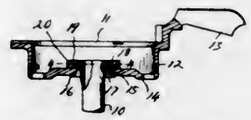
1. An adjustable support for sinks and the like comprising the sink or like member having a deep apron flange forming a roll rim, and a leg member having a

jack-screw threaded therein, said jack-screw engaging the under surface of the rim of the sink and thereby being



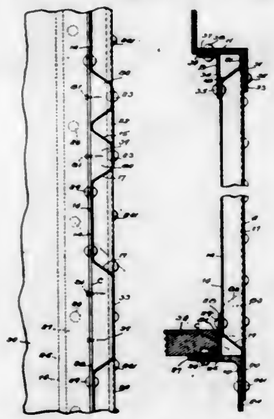
prevented from turning and the upper end of the leg member being hidden behind the apron flange in all the adjustments thereof.

1,806,170. BRACKET AND DEAD-END INSULATOR. STANLEY W. LAW, Mahtomedi, and WILLIAM J. EAMES, St. Paul, Minn. Filed Aug. 22, 1927. Serial No. 214,496. 3 Claims. (Cl. 173—321.)



1. In an insulator of the class described, the combination with a bracket adapted to be secured to a support, a pair of rigid arms projecting from said bracket, portions of said arms disposed in spaced relation, means on said portions for engaging an insulator between them and an insulator formed to be supported at its ends by said engaging means and to positively interlock therewith, whereby separation of the arms and insulator is prevented without breakage when in use, said arms being without a connecting member extending through said insulator.

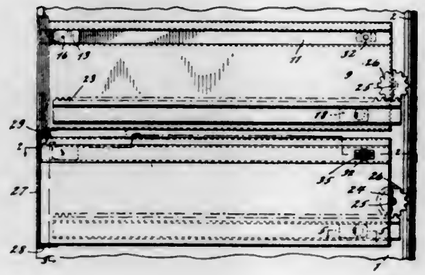
1,806,171. TAG FASTENER. FRANK MAGIDSON, Pittsburgh, Pa., assignor to Pittsburgh Tag Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1929. Serial No. 404,883. 3 Claims. (Cl. 24—261.)



1. A device of the character described consisting of a single piece of wire bent intermediate its ends to form legs of unequal length substantially parallel for the greater part of the extent of the finished fastener, the legs thereafter converging and crossing, the longer leg being bent over the shorter one at the point of crossing and extending back coextensively with and parallel to its own converging portion, thereafter again reversing and following the original direction, thus forming a guiding and limiting loop in which the shorter leg operates, said legs thereupon diverging to a width approximately that of the parallel legs, subsequently curving inwardly and downwardly into contact below a line connecting the highermost points.

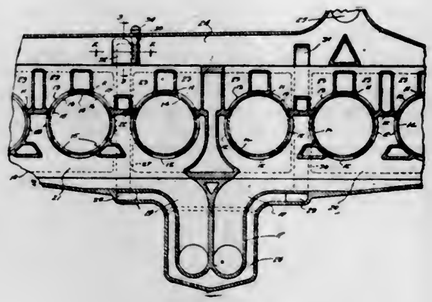
1,806,172. STEERING COLUMN CONSTRUCTION. HENRY MARLES, Detroit, Mich., assignor to Gemmer Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 7, 1928. Serial No. 275,949. 3 Claims. (Cl. 74—39.)

1. In combination, a control rod having a struck out portion adjacent one end forming a spline, an operating member for said control rod having an opening provided with tapered walls forming a conical seat, a split sleeve surrounding said control rod with the spline of said rod positioned in the slot formed by the opposite longitudinal edges of said sleeve, said sleeve being provided with a tapered portion engaging said conical seat and a threaded portion projecting through said opening, and a nut engageable with the threaded portion of said sleeve and adapted to draw the same longitudinally of said opening for clamping the sleeve to said control rod and for locking the operating member to said sleeve.



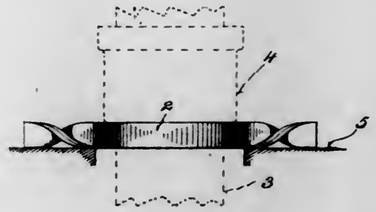
1,806,173. CAR. JOHN P. MCWILLIAMS and FRANK DITCHFIELD, Cleveland, Ohio, assignors to The Youngstown Steel Door Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1928. Serial No. 276,337. 33 Claims. (Cl. 105—409.)

1. In a wall construction, the combination with a floor-framing element having sections at right angles to each other; of a wall-forming metal sheet having strengthening indentations incorporated therein and provided with a lower flat margin; means securing said margin to one of said sections; and a metal element having one section secured to the other section of said framing element and another section secured at spaced intervals to said sheet in a plane offset from the plane of said flat margin.



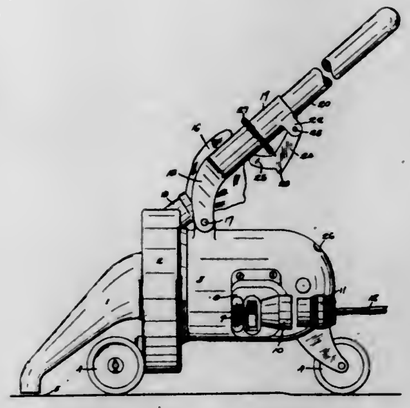
2. In car construction, the combination with a floor-framing element having sections at right angles to each other; of a wall-forming metal sheet having strengthening indentations incorporated therein and provided with a lower flat margin; means securing said margin to one of said sections; and a metal element having one section secured to the other section of said framing element and another section secured to said sheet in a plane offset from the plane of said flat margin, said metal element extending continuously across the sheet.

1,806,174. DRAWER AND SUPPORTING MEANS. LOUIS H. MORIN, New York, N. Y., assignor to Doehler Die-Casting Co., a Corporation of New York. Filed Mar. 21, 1928. Serial No. 263,407. 11 Claims. (Cl. 45—77.)



1. In combination, a drawer having a horizontal groove, drawer supporting means comprising a horizontally grooved member, said grooves being on opposite sides of a horizontal plane passing through the center of the drawer, and pivotal shoes in said grooves for transmitting the weight of the drawer to the supporting means.

1,806,175. INTERNAL COMBUSTION ENGINE. ARCHIE MACPHAIL NIVEN, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Feb. 16, 1928. Serial No. 254,642. 14 Claims. (Cl. 123—122.)

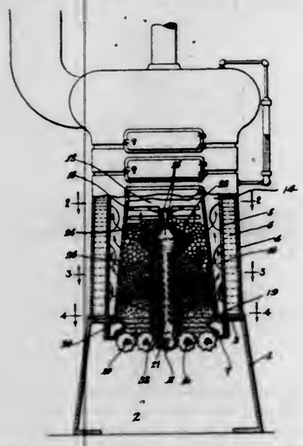


1. In an internal combustion engine, a cylinder block having a plurality of engine cylinders and a cored passage extending transversely therethrough, intake and exhaust manifolds for the engine respectively located on opposite sides of the engine, a heater jacket for the intake manifold, and means by-passing a portion of the exhaust gases from the exhaust manifold through the said passage in the cylinder block to the heater jacket.

1,806,176. PIPE REST. JOHN H. OWENS, Racine, Wis. Filed June 27, 1927. Serial No. 201,627. 2 Claims. (Cl. 248—35.)

1. A pipe rest comprising two members formed of strap metal and having semi-circular body portions and projecting twisted detachably interlocking ends.

1,806,177. SUCTION CLEANER. LLOYD W. PARDEE, Lakewood, Ohio, assignor to The Scott and Fetzer Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1928. Serial No. 268,144. 6 Claims. (Cl. 15—16.)



1. In a suction cleaner, a casing having a fan chamber, and a collecting nozzle, a handle device having its forward end pivoted to said casing upon a horizontal axis, the exterior of said handle device having a hand-grip portion and a part of said handle device being hollow for the reception of an extension handle, and means for detachably securing a part of said handle-device to the cleaner casing in rigid relation.

1,806,178. BOILER. JOSEPH J. RATHGEB, Jr., New York, N. Y. Filed Nov. 1, 1928. Serial No. 316,376. 4 Claims. (Cl. 126—163.)

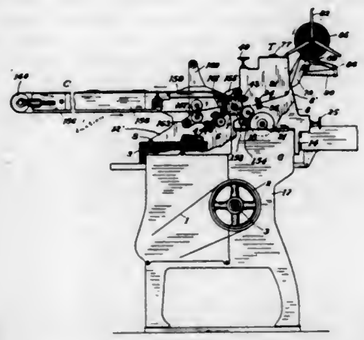
1. In a furnace, a lower grate structure, a heat-absorbing wall, an upwardly extending fire pot within the furnace spaced from said heat-absorbing wall and formed with means of communication between the interior of

said fire pot and the space between said fire pot and wall and radial, vertically arranged flanges extending from

said fire pot to said heat-absorbing wall to provide a plurality of separate combustion chambers between said fire pot and said wall.

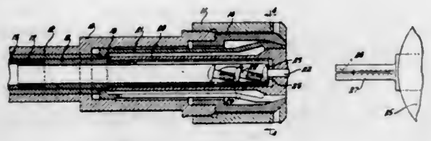
1,806,179. JEWEL BEARING MOUNTING. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a Corporation of New Jersey. Filed Jan. 24, 1927. Serial No. 163,008. 4 Claims. (Cl. 308—2.)

1. In a device of the class described, in combination, a bearing element having a V-shaped groove therein, and a clip of phenolic condensation product composition moulded around said bearing element having a portion of its surface spherical in form.



1,806,180. METHOD OF DRYING STORAGE BATTERY PLATES. WILLARD L. REINHARDT, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Mar. 7, 1927. Serial No. 173,354. 8 Claims. (Cl. 136—33.)

1. The method of drying wet charged negative storage battery plates which comprises feeding them through an externally heated space of such proportions that a substantially inert atmosphere is maintained in said space by the vapor driven off from the plates, the plates entering said atmosphere before the drying is initiated to any material extent, and being substantially dried before emerging from said atmosphere.

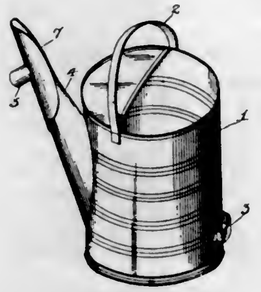


1,806,181. WRAPPER TABBING MECHANISM. ERNEST G. RIDER, Philadelphia, Pa., assignor to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 19, 1927. Serial No. 227,144. 52 Claims. (Cl. 93—36.)

16. Wrapper tabbing and coating mechanism comprising means for coating an individual wrapper with adhesive, and means to apply tabs to the wrapper during said coating thereof.

31. In tabbing mechanism, a movable adhesive-coated member, means to feed the free end of a tab strip into wiping engagement therewith, and means to cut individual tabs from said strip whereupon each tab as cut is drawn by the adhesive coating of said member into engagement therewith.

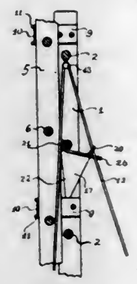
1,806,182. WORKHOLDER FOR MATERIAL WORKING APPARATUS. WILLIAM SELIGMANN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1927. Serial No. 240,126. 16 Claims. (Cl. 29—60.)



1. In a work holder, means operable to clamp an article moved relatively thereto, and means carried thereby for receiving the article after a portion of the article has been moved through the clamping means and holding it in a predetermined position for a subsequent operation of the first means to clamp the article.

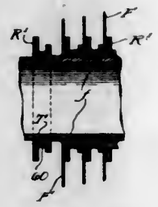
16. In a work holder for article forming apparatus, resilient means for receiving an article, means for clamping the article in position to be worked upon, a slotted article holding member having an article clamping portion and positioned within the clamping means for receiving an article from said resilient means and holding said article in a predetermined position, and means for actuating the clamping means and the slotted article holding member to permit the passage of a portion of the article through the clamping means and into engagement with the article holding member, said clamping means and article holding member being positioned to permit an article in the resilient means to force the article previously worked on out of engagement with the article clamping portion of the article holding member.

1,806,183. SUSPENSION. LEON IRWIN SHAW, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 29, 1928. Serial No. 258,135. 8 Claims. (Cl. 106—36.2.)



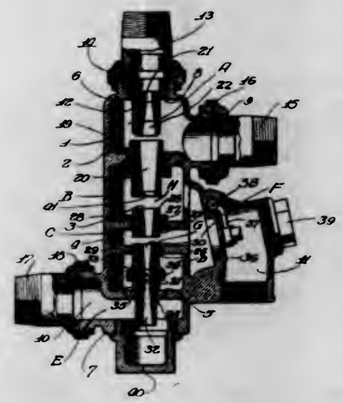
1. In an enameling composition, a fusible glass, and a floating agent comprising a volatile, soluble alginate.

1,806,184. RECEPTACLE ATTACHMENT. ALEXANDER C. SLADKY, Milwaukee, Wis., assignor to National Enameling and Stamping Company, Inc., Milwaukee, Wis. Filed July 19, 1929. Serial No. 379,542. 3 Claims. (Cl. 221—11.)



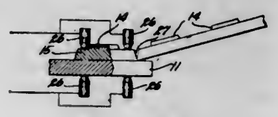
1. In combination with a spout of a receptacle having a lateral extension, of an oval shaped body having a central opening to receive the lateral extension with one end of the body embracing the spout and the other end projecting beyond the lateral extension and in alignment with the spout.

1,806,185. EXTENSION LADDER. HENRY E. SKEELS, Rochester, N. Y., assignor of one-half to William R. Hughes. Filed Aug. 10, 1928. Serial No. 298,703. 1 Claim. (Cl. 228—25.)



An extension ladder comprising a lower section, a sliding section guided on the lower section and a latch pivotally mounted on the lower section and extending upwardly from its pivotal axis, said latch carrying means cooperating with the rung to limit the swinging movement of the latch in two directions, and a controlling cable for effecting the raising and lowering of the sliding section, slidably connected with the latch to move and hold the latter out of latching position.

1,806,186. RADIATOR. REUBEN N. TRANE, La Crosse, Wis. Original application filed Apr. 23, 1926, Serial No. 104,196. Divided and this application filed May 31, 1928. Serial No. 282,002. 3 Claims. (Cl. 257—262.)

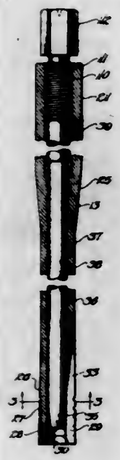


2. In combination a tube, a plurality of heat radiating fins provided with apertures for receiving said tube, flanges on said fins adapted to fit against the tube, rings adapted to space said fins and to reinforce said flanges, and a continuous annular cam portion on said rings whereby said ring pinches said flange against the tube.

1,806,187. JET DEVICE. HOWARD D. YODER, Detroit, Mich., assignor to Penberthy Injector Company, Detroit, Mich., a Corporation of Delaware. Filed July 20, 1929. Serial No. 379,599. 5 Claims. (Cl. 103—275.)

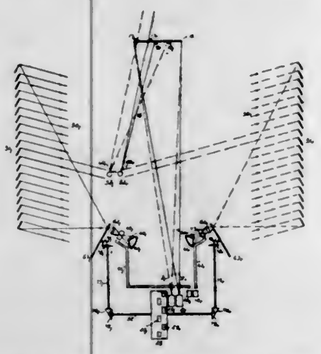
1. A jet device or injector of the automatic open overflow type having a plurality of sliding nozzle sections constituting a delivery tube, said sections defining gaps between the same when separated, said gaps providing spillage areas, one of said sections being responsive to the pressure created by the established jet for moving said tube against another of said sections for varying the gaps.

1,806,188. METHOD OF MANUFACTURING ELECTRICAL SWITCHING APPARATUS. ARTHUR HERMAN ADAMS, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1927. Serial No. 229,557. 12 Claims. (Cl. 219—10.)



1. The method of producing switching apparatus contact members, which consists in welding a section of a strip of contact metal to a base member, and breaking away the unwelded portion of the strip to determine the strength of the weld.

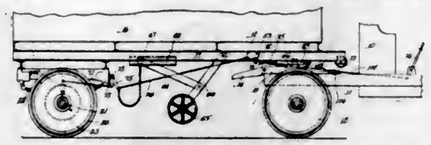
1,806,189. VALVE SEAT RECONSTRUCTION TOOL. FRANS O. ALBERTSON, Sioux City, Iowa, assignor to Albertson & Company, Inc., Sioux City, Iowa, a Corporation of Iowa. Filed Oct. 5, 1928. Serial No. 310,600. 2 Claims. (Cl. 90—12.5.)



1. A pilot member for valve tools, comprising an elongated body having a bearing surface at its upper end for rotatively receiving and supporting a valve tool holder, said body having a slender integral lower stem adapted to be received and fixedly secured in a valve stem guide in centered position, said body and stem having an axial bore, means for engaging the upper end of a valve stem guide, an expansion rod threaded in said bore and projecting from the upper end thereof, said rod having a camming surface

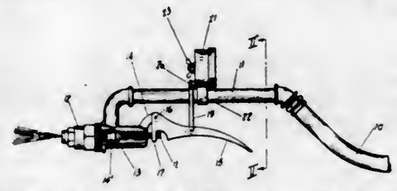
at its lower end, and said stem being split at its lower end, and camming surfaces formed in said bore on the split ends of said stem to reduce the size of the end of said bore, said rod being adapted to be threaded into said bore to initially expand said split ends into engagement with a

valve stem guide, and said camming surfaces finally acting as abutments on further movement of said rod into said bore, to effect a substantial compression of said rod against corresponding tension in said stem and body, to stiffen said pilot against bending forces.



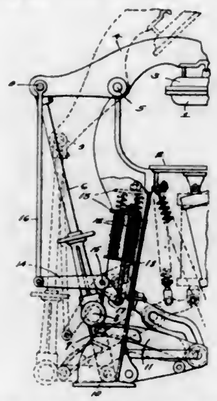
1,806,190. METHOD OF OBTAINING STEREOSCOPIC IMPRESSIONS OF MOVING PICTURE IMAGES. NEWTON ARFSTEN, New York, N. Y. Filed Jan. 6, 1928. Serial No. 244,849. 4 Claims. (Cl. 88—16.6.)

1. The method of producing stereoscopic pictures which comprises producing light of different wave lengths for each eye, so as to bring the eyes into different states of adaptation forming right and left images with sufficient rapidity to produce persistence of vision, and directing into each eye of the observer a beam of light neutralizing the image which that eye should not see.



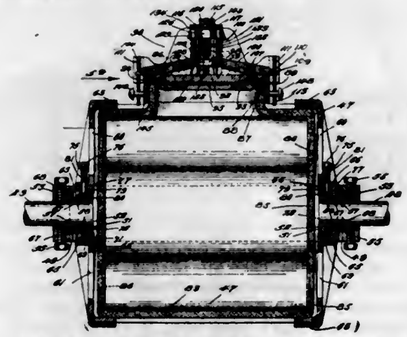
1,806,191. TRAILER VEHICLE. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Mfg. Co., South Beloit, Ill., a Corporation of Michigan. Filed July 14, 1927. Serial No. 205,607. 13 Claims. (Cl. 280—33.1.)

2. A combined vehicle of the character described comprising, in combination, a tractor, a trailer, coupling mechanism by which the tractor and trailer may be connected together, a locking element for said coupling mechanism mounted on the trailer, a control device on the tractor adapted to be operated by hand, and means providing a connection between said element and said device for moving said element into unlocking position upon the actua-



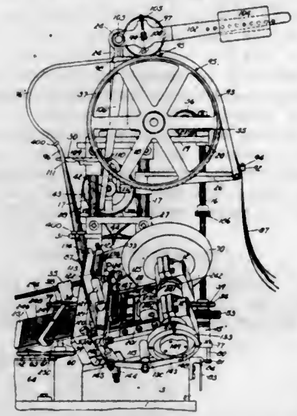
tion of said device, said connecting means including two normally disengaged hooked members, one mounted on the trailer and connected to said element and the other mounted on the tractor and connected to said device, and means operating in the initial movement of said device for causing interengagement of said members.

1,806,192. APPARATUS FOR SPRAYING. CHARLES D. COLLINS, New York, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Aug. 21, 1925. Serial No. 51,560. 4 Claims. (Cl. 299—95.)



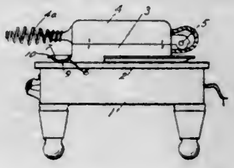
1. Apparatus for spraying which comprises a container for liquid, means for placing pressure thereon, a spray nozzle connected to said container to receive liquid therefrom, means for controlling the flow of liquid through said nozzle, and means actuated by said controlling means for indicating the amount of liquid flowing through said nozzle.

1,806,193. COUNTERBALANCING MECHANISM FOR HEADS OF PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 12, 1927, Serial No. 183,197. Renewed Mar. 14, 1929. 6 Claims. (Cl. 68—9.)



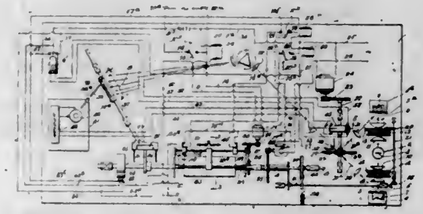
5. In a pressing machine, the combination of cooperating pressing elements, one of which is movable toward and from the other, means for actuating the movable element to close the press, a counter-spring, motion transmitting mechanism connected to the movable element and the spring to open the press and including means for compensating for the tensioning of the spring during the closing of the press whereby the force of the spring tends to remain constant in all positions of the movable element, said compensating means including a lever with arms operatively connected to the counter spring and the movable element, the arms being disposed so that the leverage on the spring will lessen as the movable element of the press closes.

1,806,194. TUMBLING MACHINE. ADOLF ENSSLIN, North Attleboro, Mass. Filed Sept. 29, 1928. Serial No. 309,285. 2 Claims. (Cl. 51—164.)



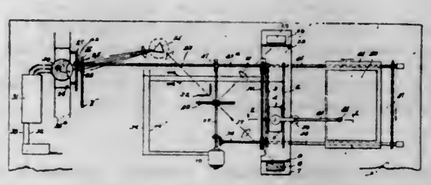
1. In a tumbling machine, a driving shaft, a driven shaft, a carrier comprising a frame fast at one end to the driven shaft, segmental clamping plates rigid with the ends of the frame projecting in one direction, segmental clamping plates disposed oppositely to the first plates, laterally projecting longitudinal shoulders upon the noncurved edges of the second plates provided with holes, clamping screws in the frame passing through the holes projecting above the shoulders, heads upon the screws, springs upon the screws with their ends pressing against the heads and the shoulders, and peripheral retaining flanges upon all the plates, and a container embraced by all the flanges.

1,806,195. GLAZIER'S-POINT MACHINE. CHARLES J. FANCHER, Windsor, Vt., and ROBERT A. JOHNSON, Longmeadow, Mass., assignors, by mesne assignments, to Woodard, Hubbard Company, Hill, N. H., a Corporation of New Hampshire. Filed Jan. 12, 1927. Serial No. 160,639. 18 Claims. (Cl. 10—32.)



1. The combination, in a glazier's-point machine, with transversely-inclined reciprocating strip-cutting mechanism in a fixed plane, of a vertically grooved guide plate for the strips, and means to support said plate adjacent to the cutting parts of said mechanism, the bottom edge of said plate being inclined to correspond with the inclination of said mechanism.

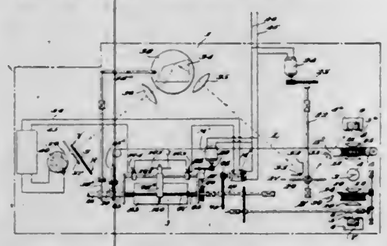
1,806,196. WAFFLE IRON. BERNARD M. FROMKNECHT, Erie, Pa., assignor to The Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed July 20, 1929. Serial No. 379,612. 4 Claims. (Cl. 53—10.)



1. The combination of a cooking plate; an annular skirt extending downwardly and outwardly from the plate; and a detachable annular drip catcher fitting the wall of the skirt and forming a closure therewith.

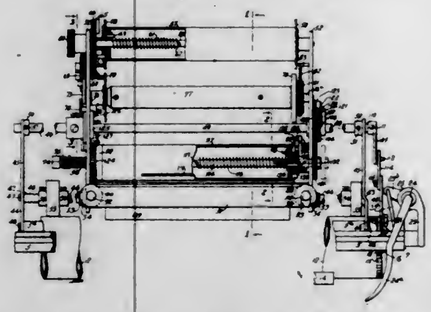
1,806,197. METHOD OF AND APPARATUS FOR COMPARING AND RECORDING RELATIVE INTENSITY OF RADIANT ENERGY. ARTHUR C. HARDY, Wellesley, Mass., and FREDERICK W. CUNNINGHAM, Stamford, Conn., assignors to General Electric Company, a Corporation of New York. Filed June 1, 1927. Serial No. 195,848. 48 Claims. (Cl. 234—5.5.)

1. That method of determining the color characteristics of a test sample which comprises as steps delivering beams of light from said sample and from a standard of comparison, dispersing said beams to form extended spectra, exposing a sensitively responsive device in which an electric current varies in accordance with the luminous energy received by said device alternately to a corresponding part of each spectrum, amplifying the current in said device, rectifying said amplified current by means synchronized with the alternations of exposure of the device to said spectra, and employing the rectified current to cause such exposures of said sensitive device successively to occur at different portions of the spectra.



1,806,198. METHOD OF AND APPARATUS FOR COMPARING AND RECORDING RADIANT ENERGY. ARTHUR C. HARDY, Wellesley, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 2, 1928. Serial No. 274,448. 59 Claims. (Cl. 234—5.5.)

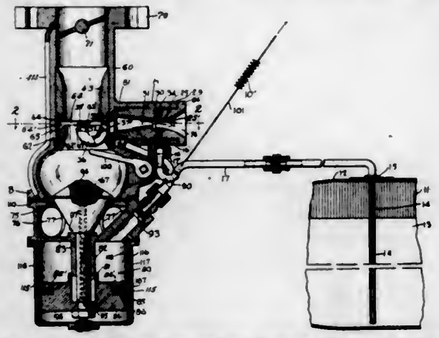
1. That method of comparing radiant energy from a test sample with energy from a standard which comprises as steps alternately delivering energy from the sample and standard to a sensitively responsive device in which an electrical current varies in accordance with the amount



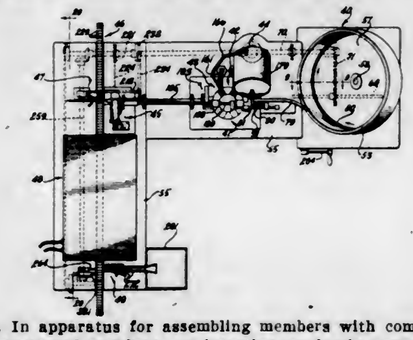
of radiant energy delivered to said device, progressively varying the energy delivered from both of said sources of energy until the current in said device substantially ceases to fluctuate, and automatically recording the point in such progressive variation in energy at which the current in said device substantially ceases to fluctuate.

1,806,199. METHOD AND APPARATUS FOR COMPARING RADIANT ENERGY. ARTHUR C. HARDY, Wellesley, Mass., and FREDERICK W. CUNNINGHAM, Stamford, Conn., assignors to General Electric Company, a Corporation of New York. Filed May 3, 1928. Serial No. 274,729. 53 Claims. (Cl. 234—5.5.)

1. Means for comparing radiant energy from two sources, said means including a reversible electric motor, means for changing the phase relation of the current in the rotor and field respectively of the motor in accordance with reversals in relative intensity of energy from said sources, whereby the motor turns in one direction when one source is more energetic and in the opposite direction when the other source is more energetic and means actuated by said motor for varying the relative intensity of energy delivered by the two sources.



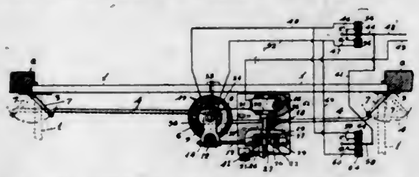
1,806,200. TYPEWRITING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 19, 1927. Serial No. 169,560. 31 Claims. (Cl. 197—132.)



1. In a typewriting machine, the combination of a platen, a rotary material-carrying holder, a stop for limiting turning movements of said holder to rewind the material thereon, a sheet-receiving holder, a spring for turning said last named holder, and means for variably setting said stop and also for tensioning said spring.

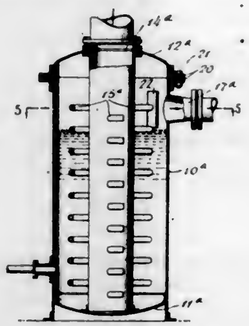
1,806,201. CARBURETING SYSTEM. CASPAR E. HORBAUER, New York, N. Y., assignor to Paramount Carburetor Corporation, New York, N. Y., a Corporation of New York. Filed May 2, 1928. Serial No. 274,421. 5 Claims. (Cl. 261—72.)

1. In a fuel feeding system for internal combustion engines operable by the engine induction, a throttle valve for said system, an air valve at all times responsive to variations in suction conditions as may be formed by said throttle valve, a fuel mixing chamber disposed between said throttle valve and said air valve, an annularly formed fuel feeding chamber, means for leading fuel from said annular chamber to said mixing chamber comprising an annular slot, a priming connection from said annular chamber to said mixing chamber, means for feeding a primary mixture to said annular chamber comprising a fuel lifting venturi connected directly to a low level storage chamber, said venturi being open to the atmosphere and being operated by the induction of said engine.



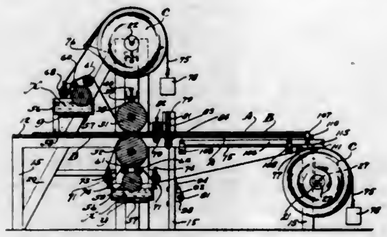
1,806,202. APPARATUS FOR ASSEMBLING MEMBERS. ROBERT HOFSTETTER, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 15, 1927. Serial No. 168,313. 14 Claims. (Cl. 18—1.)

1. In apparatus for assembling members with companion apertured members, an inserting mechanism operable to insert a member within the aperture of a companion member, bonding material supplying means for supplying a charge of material to a predetermined localized area of adjacent portions of members preliminarily assembled by the inserting mechanism, actuating means therefor, and means for heating the bonding material to effect the fusion thereof.



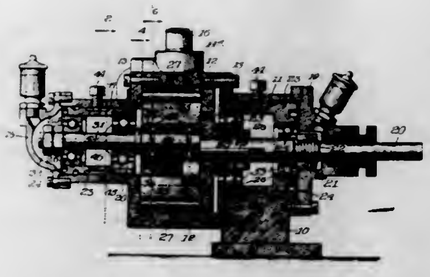
1,806,203. DOOR OPERATING MECHANISM. JACK HUSTON, San Francisco, Calif. Filed Nov. 16, 1929. Serial No. 407,635. 13 Claims. (Cl. 268—63.)

1. A door operating mechanism comprising the combination with a door movable between open and closed



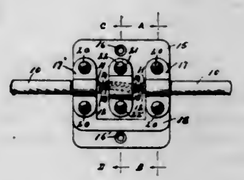
positions, of a door actuating member mounted adjacent the door; door operating means connecting the actuating member and the door; electrically actuated driving means connected to the actuating member; reversing means mounted in connection with the electrically actuated driving means and engaged by the door operating means for automatically reversing the movement of the actuating member when the door is moved to either extreme position; control means mounted remote from the electrically actuated driving means and electrically connected thereto for making and breaking an electric circuit therethrough; and means connected into the electric circuit to automatically break the circuit when the door is moved to either extreme position.

1,806,204. DIRECT CONTACT DESUPERHEATER. SVEND M. JORGENSEN, Elizabeth, N. J., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed June 18, 1928. Serial No. 286,366. 13 Claims. (Cl. 122—459.)



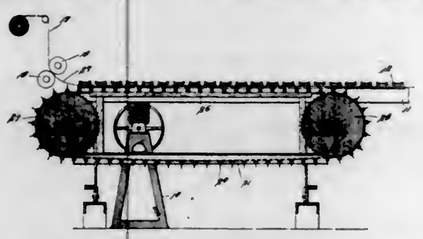
1. The method of desuperheating superheated steam, which consists in continuously injecting a major portion of the superheated steam in a plurality of jets into a body of water at different distances below the surface level thereof while simultaneously passing, in a plurality of jets, a minor portion of such steam in a restricted zone above said surface, to cause it to blend with the desuperheated steam rising from said body of liquid.

1,806,205. MACHINE FOR MAKING PAPER COVERED IRONING BOARDS. JOHN E. KALGREN, Minneapolis, Minn., assignor to The J. R. Clark Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 10, 1928. Serial No. 298,770. 13 Claims. (Cl. 154—41.)



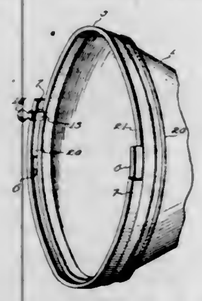
1. A machine of the class described including a board supporting deck, a pair of pressure rolls for successively feeding boards on the deck and applying thereto under pressure an unwound portion of a roll of normally flexible surfacing material, means for applying an adhesive material between the boards and surfacing material to be pressed by the pressure rolls into the boards and surfacing material to connect the same, driving connections including a normally set clutch for operating one of the pressure rolls, a knife for severing the surfacing material connecting two adjacent boards after having passed from between the pressure rolls, a trip arranged to be actuated by successive boards during their movement on the deck for releasing the clutch to stop the movement of the boards on the deck at the time the joint between two adjacent boards is substantially aligned with the knife, and operating means for the knife.

1,806,206. ROTARY PISTON MACHINE. JOHN W. LEES, Chicago, Ill. Filed May 5, 1928. Serial No. 275,483. 10 Claims. (Cl. 103—121.)



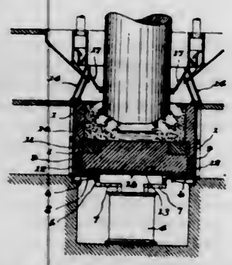
1. In a machine of the character set forth, a stationary cylindrical casing equipped with inlet and outlet ports and provided with a drive-shaft bearing and also with a rotor-shaft bearing, a drive-shaft mounted in said bearing, a sleeve member closed at one end and supported by said drive-shaft, a rotor-shaft mounted in said rotor bearing, a rotor supported by said rotor-shaft eccentrically in said sleeve member and in abutment with the internal surface of said sleeve member, and a vane pivotally connected with said sleeve member and slidable in a slot in said rotor.

1,806,207. SPLICING AND TERMINAL DEVICE FOR FIRE DETECTING CABLES. WILLIAM DALES LINDSEY, South Orange, N. J., assignor to Garrison Fire Detecting System Incorporated, New York, N. Y. Filed June 11, 1927. Serial No. 198,057. 2 Claims. (Cl. 173—263.)



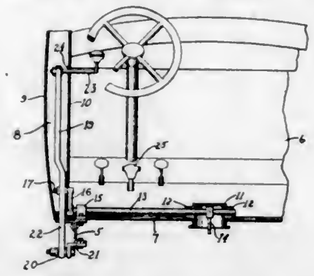
1. The combination with cable ends, each cable comprising an electricity-conducting core and an electricity-conducting sheath normally insulated therefrom, the cores of said cable ends being disposed in alinement in side-by-side relation immediately adjacent each other and the sheaths thereof being disposed in spaced relation, of means for electrically connecting said cores and sheaths independently of each other, said means comprising a supporting member of insulating material, spaced U-shaped clamps contacting, respectively, directly with said sheaths and carried by said supporting member, another clamp contacting directly with said cores and carried by said supporting member, the sheath openings of said spaced clamps being larger in cross-section than the core opening of said other clamp, and means constituting an electrical connection between said spaced clamps.

1,806,208. TENTERING MACHINE. HARR A. MACKNIGHT, Providence, R. I., assignor to Winsor & Jerauld Mfg. Co., a Corporation of Maine. Filed June 23, 1930. Serial No. 463,022. 23 Claims. (Cl. 26—57.)



1. In a machine for treating textile webs, traveling edge clamps, a web supply, means intermediate said supply and said clamps for treating said web to shorten it by folding it in the direction of its length prior to engagement with said edge clamps, and means for presenting the edges of said shortened web to said clamps.

1,806,209. ROUNDEL HOLDER. ROSCOE E. MAJOR, Chicago, Ill., assignor to Major Equipment Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1930. Serial No. 426,297. 5 Claims. (Cl. 240—41.55.)



1. A holder of the class described comprising a plurality of normally inseparable annular coaxial members united in mutually rotary relation, each having an inwardly facing segmental arcuate channel formed edgewise thereon, said annular members being mutually nested and the channels thereof being formed to accommodate mutual telescopic adjustment for locking and for release action.

1,806,210. ELECTRIC FURNACE. PAUL LOUIS JOSEPH MIQUET, St.-Julien-de-Maurienne (Savoie), France. Filed Mar. 20, 1929, Serial No. 348,645, and in France June 7, 1928. 7 Claims. (Cl. 266—1.5.)

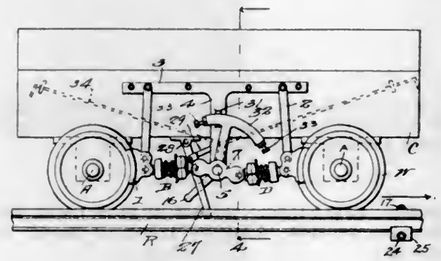
1. An electric furnace comprising a casing to which current is supplied, a movable electrode in contact with the casing and a conducting furnace bottom insulated from the casing.

1,806,211. GEAR SHIFT CONTROL MECHANISM. ARTHUR H. MUMAUGH, Toledo, Ohio, assignor of one-half to William J. Jacobs, Toledo, Ohio. Filed June 20, 1930. Serial No. 462,482. 1 Claim. (Cl. 74—39.)

In a motor vehicle, the combination of a tonneau having a hollow side wall, a transmission gear case, a gear shift yoke, a slidable rock shaft on which the yoke is secured, said rock shaft extending transversely of the tonneau and contiguous with the floor thereof, a crank arm on said rock shaft extending into the cavity in the side wall, and a hand lever having a universal connection at its lower end to the frame of the vehicle, said lever extending upwardly within said cavity and inwardly through the lining of the side wall to a point in front of and above the driver's seat, said lever having an intermediate operative connection with the crank arm to shift the shaft in the direction of its length.

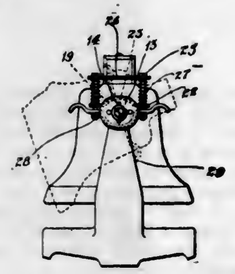
1,806,212. NONSKID DEVICE FOR BOOTS AND SHOES. JAMES M. NAHON, Madrid, Spain. Filed Aug. 1, 1930, Serial No. 472,248, and in Spain Jan. 17, 1930. 7 Claims. (Cl. 36—66.)

1. An anti-skid device for boots and shoes, comprising a plurality of supporting or securing members fastened to the inner sole of the shoe; and a chain adapted to be removably attached to the supporting members over the sole of the shoe.



1,806,213. BUCKLE FOR WRIST WATCH STRAPS. NELS T. NELSON, Attleboro, Mass., assignor to J. F. Sturdy's Son Co., Attleboro Falls, Mass., a Corporation of Massachusetts. Filed May 9, 1930. Serial No. 450,967. 1 Claim. (Cl. 24—77.)

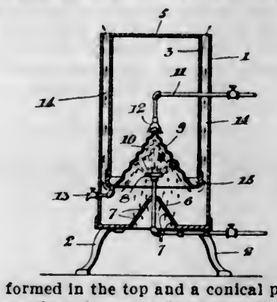
A strap buckle comprising a body member having a bottom wall having spaced slots extending transversely with



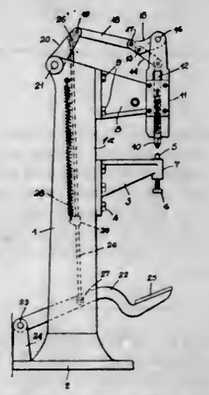
respect to the longitudinal extent of the strap, side walls secured to said bottom wall to extend along the side edges of the strap and having two pairs of oppositely disposed openings in its side walls located in line with said slots, an L-shaped clamp lever provided with trunnions pivotally mounted in one of said pairs of openings and provided with detents adjacent one end of the lever arm to be releasably received in the other pair of openings to hold the lever in clamped position, knobs mounted on said side walls, said lever being provided with side notches to prevent its contact with said knobs, and a plate member adapted to be secured to an end of the strap and provided with notches to receive said knobs and hold said plate and body secured together.

1,806,214. RAILWAY CAR BRAKE. OLLIE P. PERRY, Jackson, Ky. Filed May 19, 1928. Serial No. 279,063. 4 Claims. (Cl. 188—111.)

1. The combination with a pair of brake shoes and a rock shaft of a double brake arm on the shaft and resilient couplings between said arm and shoes, a brake lever on the shaft, a release lever connected with the shaft, a hanger for the shaft and a stop lug thereon, and a control lever on the shaft for co-action with said stop lug.



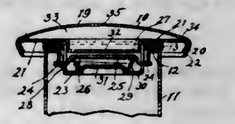
1,806,215. CONTROLLING DEVICE FOR LOCOMOTIVE OR ENGINE BELLS. ORVILLE BOYER PETERS, Winnipeg, Manitoba, Canada. Filed Nov. 5, 1930, Serial No. 493,595, and in Canada Sept. 16, 1930. 11 Claims. (Cl. 116—165.)



1. A controlling device for bells in combination with a bell oscillatably mounted on a support through trunnions, comprising a control member mounted upon one of the trunnions and adapted to contact with the bell supporting structure at a predetermined point to arrest the motion of the bell.

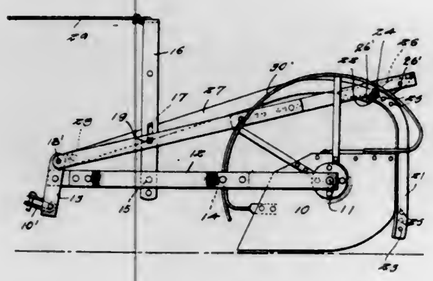
1,806,216. HEATER. EDGAR PERCY PLUMMER, Regina, Saskatchewan, Canada, assignor of one-half to Paul Fayolle, Regina, Canada. Filed Aug. 20, 1930. Serial No. 476,653. 3 Claims. (Cl. 126—350.)

1. A heater comprising an outer cylinder open at the top and having a conical projection in the bottom, said conical projection having ports formed therein, an inner cylinder of smaller diameter than said outer cylinder having a port formed in the top and a conical projection in the bottom thereof, and means for generating heat extending upwardly into said last mentioned conical projection.



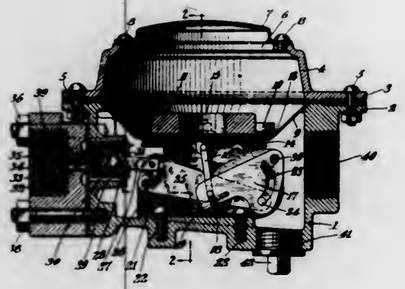
1,806,217. RIVET SETTING AND PUNCHING PRESS. WILLIAM EDWARD REES, Ganahoque, Ontario, Canada. Filed Oct. 16, 1928. Serial No. 312,792. 1 Claim. (Cl. 218—1.)

In a machine of the class described, including a plunger, a pedal for operating the same, a trunk for supporting the plunger and pedal, an arm extending laterally from the top of the trunk, a housing extending above the arm in which the plunger is mounted, a curved lever pivoted at one end to the top of the housing and arranged with its convexity downward, a link connecting the lever to the plunger, an operating lever pivoted to the trunk and to which the pedal is connected, a second link connecting the outer end of the operating lever with the outer end of the curved lever, the pivotal connections of said second link and the curved lever, and the first link connecting the curved lever with the plunger being so arranged that when the curved lever and the second link connecting it with the operating lever are in substantial alinement, the pivotal connection of said second link with the curved lever will be below the pivotal connection of said curved lever and the first link connecting it with the plunger.



1,806,218. CLOSURE. JAMES S. REID, Cleveland, Ohio, assignor to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 27, 1929. Serial No. 366,167. 4 Claims. (Cl. 220—40.)

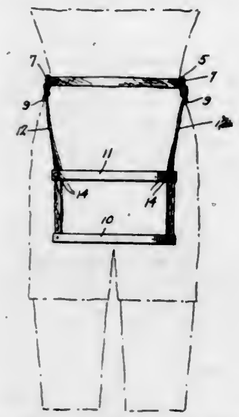
1. A closure having a body portion comprising a top part, and a bottom part, said top part having a depending



skirt portion, said bottom part having a flange engaged by said skirt portion for holding said parts together, an integral hollow boss formed centrally of said bottom part, a hollow extension member carried by said boss, a substantially rigid locking member disposed in said extension member and having laterally extending fingers, and resilient means for urging said locking member toward said boss.

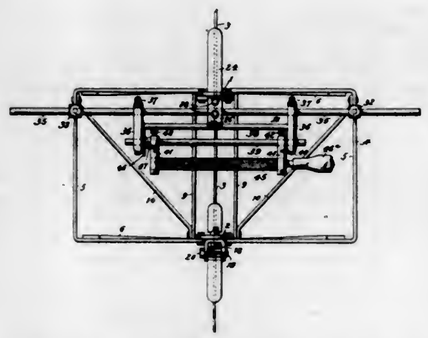
1,806,219. SCRAPER. HYRUM RICKS, Los Angeles, Calif. Filed Feb. 16, 1927. Serial No. 168,751. 4 Claims. (Cl. 37—140.)

1. In a scraping and leveling device, the combination with a rotary scoop having a stop pin, a movable arm having an end adjacent said stop pin and having a detent engaging with one side of said stop pin for preventing retrograde rotation of said scoop, and a lever having one end pivotally mounted on said arm adjacent said detent and having a nose on said pivoted end engaging the other side of said stop pin.



1,806,220. VALVE OPERATING MECHANISM. EDWARD A. ROCKWELL, New York, N. Y. Filed June 8, 1926. Serial No. 114,584. 4 Claims. (Cl. 50—26.)

1. A valve operating mechanism comprising an inlet for fluid pressure, a valve for controlling the same, a leverage mechanism for operating the valve having a low leverage ratio in the open position of the same, and a shipping block for holding the valve in open position.

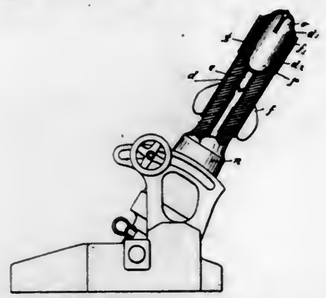


1,806,221. CLOTHING RETAINER. ALFRED G. ROSS, Cincinnati, Ohio. Filed Mar. 4, 1930. Serial No. 433,068. 2 Claims. (Cl. 2—47.)

1. In a device of the class described, a waist encircling member, a pair of flexible strips, means connecting one end of said strips with said waist encircling member, an arcuate flexible member secured at its ends to said strips remote from the first mentioned ends of the strips, and a

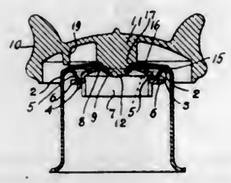
second arcuate member having its ends adjustably engaged with said strips intermediate said first mentioned arcuate member and said waist encircling member.

1,806,222. SAW FILER. EDWARD A. ROSS, Gernt, Tenn. Filed Feb. 28, 1925. Serial No. 12,313. 2 Claims. (Cl. 76—31.)



1. A saw filer including a pair of spaced members having slots to receive the saw, a horizontal frame carried by said members, a yieldable arm secured to one of the members, a bracket secured to the other of the members, a yieldable arm suspended from the bracket and connected thereto for swinging movement, said arms extending longitudinally of the edge of the saw and engageable therewith at spaced points, a file, and means for connecting the file to the frame for sliding movement and for engagement with the teeth of the saw.

1,806,223. BOMB FOR USE WITH A SPECIAL BOMB-THROWER, OR WITH FIREARMS ALREADY EXISTING AND HAVING A SMALLER CALIBER THAN THE BOMB. DINO SAMAIA, Milan, Italy. Filed May 6, 1929, Serial No. 360,954, and in Italy May 22, 1928. 6 Claims. (Cl. 89—1.)

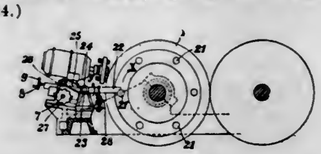


1. A bomb for firearms of smaller caliber than that of the bomb itself, including a bomb body, a ring carried with the body near the outer end thereof, a tube carried by the ring and surrounding the bomb in spaced concentric relation and projecting rearwardly from the body, the space between the body and tube being sufficient to accommodate the barrel of a firearm of proper caliber

in order to allow the gases, on the explosion of the charge and before the inertia of the bomb has been overcome, of exerting their propelling action against the ring so that

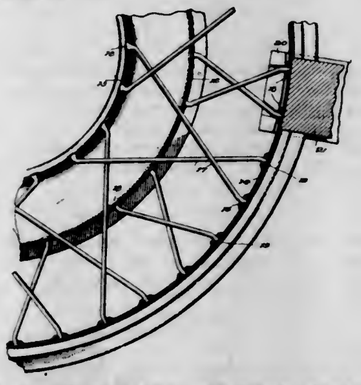
the bomb may be acted upon by the gases from the beginning and simultaneously for its entire length, this action being then continued when the bomb body has left the barrel of the firearm within the tube.

1,806,224. RADIATOR CAP. KYLE E. STANT, Connersville, Ind., assignor to The Stant Machine Company, Connersville, Ind., a Corporation of Indiana. Filed Oct. 25, 1928. Serial No. 315,031. 12 Claims. (Cl. 220—40.)



1. In a closure for receptacles, a filler spout having locking members, a radiator cap having a depending, non-rotatable, cooperating locking member and locking fingers thereon, a sealing means for sealing the cap to the filler spout, and yielding means backing the said sealing means in engagement with the filler spout and the radiator cap, said yielding means being rotatably mounted on the radiator cap, and portions of said yielding means being spaced from the cap during rotation of said cap up to its locked position.

1,806,225. CAP. FREDERICK L. VERNON, Newton, Iowa. Filed Apr. 26, 1930. Serial No. 447,625. 2 Claims. (Cl. 2—200.)

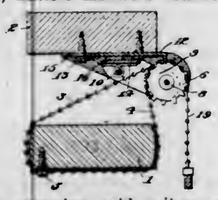


1. A blank for a cap having side panels and adapted to be folded upon a central transverse line, securing flaps at diagonally opposite corner portions of the panels each adapted to be folded across the meeting edges of the panels when they are brought together and secured to the companion panels, the panels having folding lines marked thereon diverging from the central transvrese line to the adjacent end edges of the respective panels whereby a single coupling fold may be formed within the crown of the cap, and the panels being further scored on short lines diverging inwardly from the last-mentioned fold line and on other short lines parallel with the central transverse fold line arranged in pairs and spaced from said diverging scores.

1,806,226. APPARATUS FOR GRINDING THE ROLLS OF ORE CRUSHING OR LIKE MILLS. AUGUST VOEGEL, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Mar. 29, 1929, Serial No. 350,988, and in Germany Apr. 2, 1928. 3 Claims. (Cl. 51—254.)

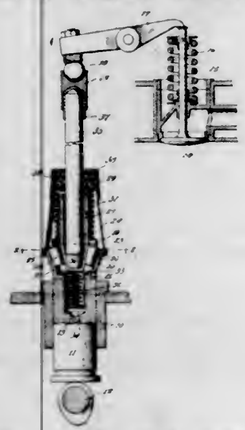
1. In an apparatus for grinding the rolls of ore crushing and like mills the combination with a rotary grinding tool arranged at right angles to the roll under treatment, so that the front face of said tool is presented to the roll, of means for revolving the latter, spring actuated means for resiliently keeping in contact the grinding tool with the roll under treatment, a screw and nut drive adapted to move the grinding tool along the roll under treatment parallel to its axis and of feeding means cooperatively associated with the roll under treatment and with the screw and nut drive so as to periodically actuate the latter.

1,806,227. METHOD OF MAKING WIRE SPOKED WHEELS. JAMES H. WAGENHORST, Detroit, Mich. Filed Feb. 10, 1930. Serial No. 427,350. 11 Claims. (Cl. 29—174.)



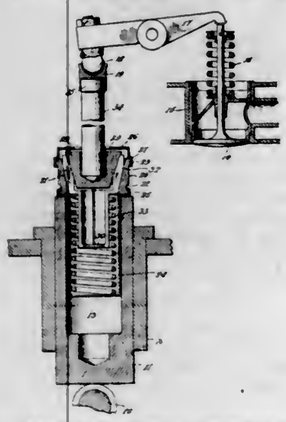
1. The method of making wire-spoked wheels which comprises assembling a hub member within a rim member, inserting spokes through holes formed in said hub and rim members, anchoring said spokes in one of said members with their free ends extending through the holes of the other member, and pressing the metal which bounds the holes in the latter member to contract each hole in order to grasp the spoke end inserted therethrough and also pressing said metal radially outwardly to tension the spoke thus grasped.

1,806,228. VENETIAN BLIND. LAWRENCE THOMAS WARD, Kane, Pa., assignor to Kane Manufacturing Company, Kane, Pa., a Corporation of Pennsylvania. Filed Feb. 9, 1931. Serial No. 514,643. 9 Claims. (Cl. 156—17.)



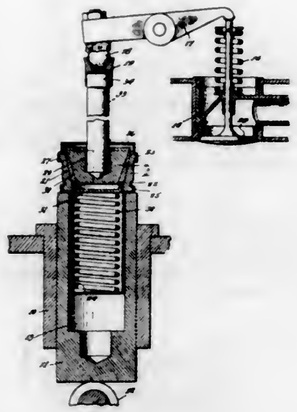
8. In a Venetian blind in combination, a tilt bar, a fixed support adjacent said bar, a pair of rollers mounted on

said support, said rollers being in frictional engagement with each other, flexible members connected to said bar



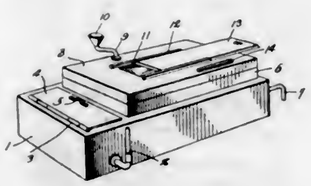
and respectively engaging said rollers, whereby a pull on one of said flexible members is effective to rotate an associated roller and said bar.

1,806,229. VALVE ACTUATING MECHANISM. CALVIN C. WILLIAMS, Philadelphia, Pa. Filed Oct. 26, 1927. Serial No. 228,893. 6 Claims. (Cl. 123—90.)



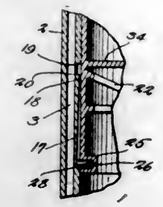
1. An automatic take-up device including relatively movable male and female members, wedging means shiftable for spacing said members, primary yieldable means exerting a lifting action on one of the members and tending to advance said wedging means for lifting said member, and auxiliary yieldable means disposed to exert a lifting action directly on said member for assisting in the spacing of the members.

1,806,230. VALVE ACTUATING MECHANISM. CALVIN C. WILLIAMS, Philadelphia, Pa. Filed Sept. 6, 1928. Serial No. 304,370. 10 Claims. (Cl. 123—90.)



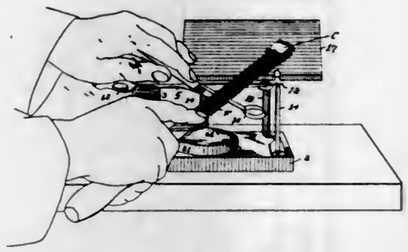
1. An automatic take-up device including nested conical clutch members comprising rigid inner and outer members and a coacting intermediate member movable axially between the inner and outer members, the intermediate clutch member including a plurality of clutch elements having flat contact with the inclined faces of the inner and outer members and shiftable for spacing said inner and outer members.

1,806,231. VALVE ACTUATING MECHANISM. CALVIN C. WILLIAMS, Philadelphia, Pa. Filed Sept. 6, 1928. Serial No. 304,371. 5 Claims. (Cl. 123—90.)



1. An automatic take-up device including nested conical clutch members comprising rigid inner and outer members and a coacting split annular intermediate member shiftable axially between said inner and outer members for spacing said inner and outer members and having flat contact with the inclined faces thereof.

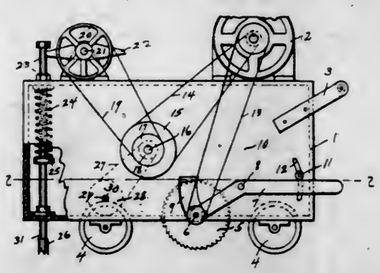
1,806,232. PHOTOGRAPH DEVELOPING DEVICE. SHOTARO ABE, Hongoku, Japan. Filed July 24, 1928, Serial No. 294,962, and in Japan Aug. 22, 1927. 1 Claim. (Cl. 95—90.)



A photograph developing apparatus, comprising an outer casing having a top provided near one end of said casing with an opening and a cover therefor, the top of said outer casing being also provided with a larger opening, an inner casing fitted in said larger opening and arranged with its bottom spaced from that of the outer casing, a cover for the inner casing hermetically fitted thereon and provided with an opening, a colored glass pan in said opening and an opaque closure for said opening arranged above said colored glass pan.

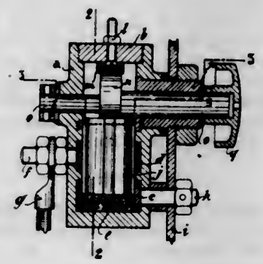
1,806,233. GASOLINE MOTOR. HARRY LEE ADAMS, Elvins, Mo. Filed Apr. 22, 1929. Serial No. 357,232. 2 Claims. (Cl. 123—45.)

2. In an internal combustion engine, a cylinder having a zig-zag groove, the base walls of the constituent members of the groove slanting longitudinally of the cylinder, so that the shallowest part of one member of the guide groove is immediately adjacent to the deepest part of an adjoining member of the guide groove, whereby to form a rigid, integral shoulder, a piston mounted to reciprocate in the cylinder and having a socket, the piston and the cylinder having ports so located as to be capable of registration, a projection slidable in the socket and cooperating with the guide groove, to rotate the piston and cause the ports of the piston and the cylinder to register, and a spring housed in the socket and constituting means for advancing the projection and keeping the projection engaged with the base of the guide groove, the spring constituting means for advancing the projection with respect to the shoulder, thereby to prevent retrograte rotation of the piston.



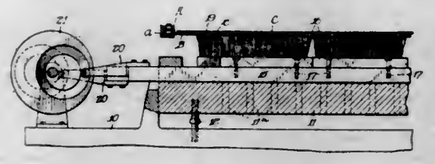
1,806,234. SHEARS SHARPENING DEVICE. LOREN C. BOYD, Warren, Ohio. Filed Dec. 12, 1927. Serial No. 239,607. 1 Claim. (Cl. 76—82.2.)

A shears sharpening device, comprising a base, a clamping holder having an inclined clamping surface, an upright member having a rest surface for the end of the shear blade and a guide table mounted for vertical adjustment rearwardly of said clamping holder and said upright member, the surface of said guide table and the rest surface of said upright member being inclined in opposite directions with respect to said clamping surface of said clamping holder.



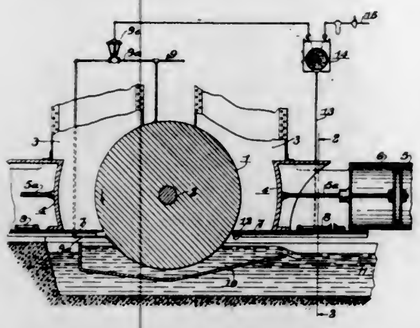
1,806,235. GROOVING MACHINE. ANDREW T. BUTKEY, Youngstown, Ohio, assignor to The Safety Processing Company, a Corporation of Ohio. Filed Oct. 19, 1927. Serial No. 227,320. 1 Claim. (Cl. 144—136.)

In a device of the class described, a body member, wheels carrying said body member, a movable horizontal shaft, a plurality of circular cutter members functioning on said movable horizontal shaft, a plurality of spring tension per-



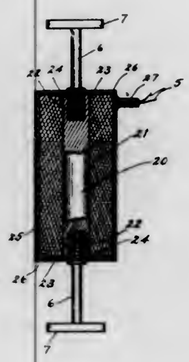
pendicular pickers positioned ahead of said cutters and so spaced apart that each picker is in alignment with each cutter, means for energizing said pickers and cutters.

1,806,236. SAFETY SWITCH. MAURICE CHARLÈS, Courbevoie, France. Filed Aug. 29, 1928, Serial No. 302,681, and in France Sept. 27, 1927. 9 Claims. (Cl. 200—52.)



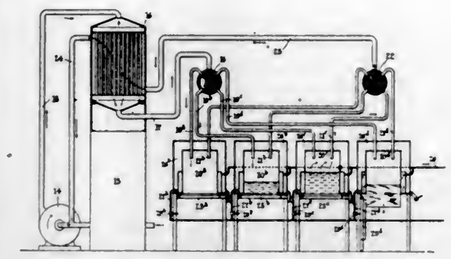
1. In a safety switch of the types described, the combination of a magneto ground terminal, a battery circuit ground terminal, fluid contact means connected in series with said last-mentioned ground terminal and manually operable means for simultaneously disconnecting said magneto ground terminal and closing said fluid contact means, said battery ground terminal being adapted to be disconnected and said magneto ground terminal connected upon inversion of said switch.

1,806,237. CARPET CLEANING MACHINE. STEPHEN CHASE, 4th, GEORGE H. PALM, and RUDOLF S. PFEIFFER, Chicago, and BENJAMIN S. PFEIFFER, Winnetka, Ill., assignors, by direct and mesne assignments, to Chase Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1925. Serial No. 12,516. 3 Claims. (Cl. 15—40.)



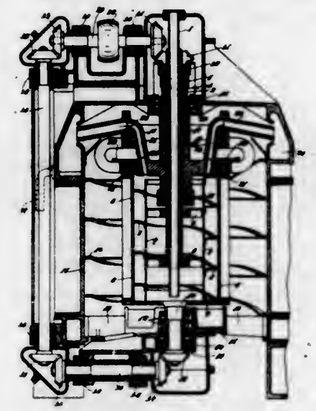
1. In a fabric cleaning machine, in combination, a retaining plate for a sheet of fabric, means for moving fabric progressively on said plate, brushes arranged collaterally below the plate for contact with fabric thereon, means for reciprocating juxtaposed brushes simultaneously in opposite directions and means for adjusting the brushes toward and from the plate.

1,806,238. MEANS FOR CONTROLLING THE OPERATION IN PULP GRINDING. CLAYTON D. DE MERS, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed May 31, 1930. Serial No. 458,030. 4 Claims. (Cl. 83—75.)



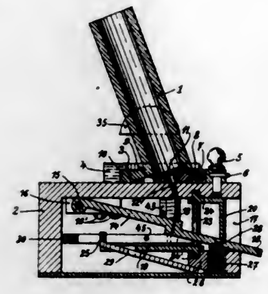
1. In a pulp grinder, the combination with a grinding stone, means for forcing the material to be ground into contact with the stone, means for applying a cooling liquid to the stone, including a receptacle below the stone for maintaining the cooling liquid in flowing contact with the lower portion of the stone and a temperature-sensitive bulb disposed above the level of the liquid in the receptacle in the path of the liquid thrown off from the rotating stone and means controlled by the bulb for controlling the application of the cooling liquid to the stone.

1,806,239. PICKLING APPARATUS. ALBERT DIETZEL, Pittsburgh, Pa. Filed Apr. 8, 1930. Serial No. 442,498. 4 Claims. (Cl. 266—7.)



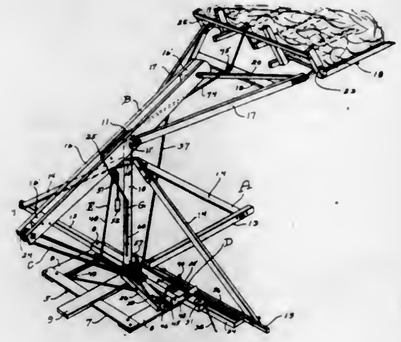
1. In pickling apparatus including a tank containing a bath of acid, the combination of an electro-magnetic device for supporting work in said acid, which device includes an electric coil upon a central body, said central body having an acid-resisting flange at each end, an acid-resisting sleeve covering said coil along its length, which sleeve at each end is burned into liquid-tight engagement with one of said flanges, opposed magnetizable shanks extending one from each end of said coil and projecting from its acid-resisting covering, which shanks at their outer ends are provided each with a work-supporting head, and means for supporting said electro-magnetic device over said bath of acid, which last-named means are revoluble to effect movement of said device from one to another of several operative positions.

1,806,240. PRODUCTION OF CARBON DIOXIDE ICE. JAMES RICHARDSON DONALD, Montreal, Quebec, Canada. Filed Nov. 1, 1928. Serial No. 316,518. 2 Claims. (Cl. 62—121.)



1. A process of producing solid carbon dioxide which comprises compressing and cooling the gas to liquefy it, conveying the liquefied gas to a closed, heat-insulated chamber, simultaneously evaporating the liquefied gas in another previously filled heat-insulated chamber and employing the resulting gas to effect the first mentioned cooling, and simultaneously removing from another heat-insulated chamber a block of solidified carbon dioxide.

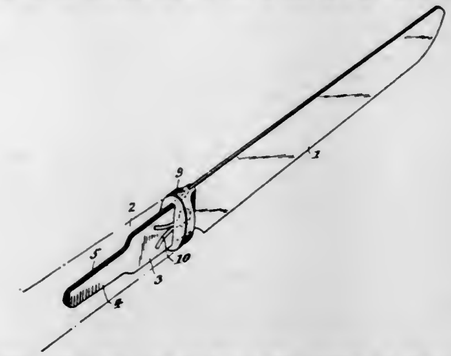
1,806,241. CENTRIFUGAL SEPARATOR. FERNAND DUPUIS, Charleroi, Belgium. Filed Mar. 6, 1930, Serial No. 433,740, and in Belgium Mar. 9, 1929. 6 Claims. (Cl. 233—7.)



1. A centrifugal separator for separating solids from liquids, comprising a rotary vessel closed at the bottom, a tubular feed element centrally located in said vessel and extending to near the bottom thereof, a rotary worm in said vessel, a cover for the top of said vessel, ports in said cover for the clarified liquid outwardly inclined, conduits in the top part of the covered vessel and arranged outside said ports for the separated solid matter and valves normally closing said conduits, said valves being arranged and guided so as to be deprived from centrifugal action and openable under the influence of the thrust of the said solid matter forced upwards by said worm into said conduits.

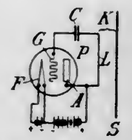
1,806,242. SAFETY APPARATUS FOR PROTECTION AND DEFENSE AGAINST BURGLARY AND VIOLATION OF HABITATIONS. FERDINAND ALEXANDRE DUQUESNE, St. Maur des Fosses, France. Filed July 10, 1929, Serial No. 377,268, and in France July 12, 1928. 10 Claims. (Cl. 116—15.)

1. Burglar alarm apparatus comprising a fire alarm including a spring operated hammer, a detent to hold the hammer, a trigger bar to release the detent from the hammer and door actuated operating means for the trigger bar, whereby upon opening of the door the fire arm is discharged.



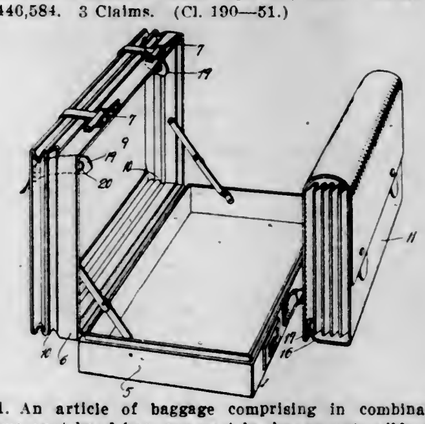
1,806,243. HAYSTACKER. DAVID H. EASTERLY, Detroit, Mich. Filed Jan. 2, 1929. Serial No. 329,843. 8 Claims. (Cl. 214—140.)

1. A hay stacker comprising a supporting structure including a rotatable mast, a control arm rigidly connected at one end to the lower end of the mast, a beam pivotally mounted intermediate its ends upon the upper end of the mast, a rack pivotally mounted forwardly of the mast for vertical swinging movement therewith, a hoist rope connected with the rear end of the beam for imparting vertical swinging movement thereto, latch means engageable with the control arm, means for releasing the latch means upon limited vertical movement of the rack, means for swinging said control arm when released to rotate said mast, and means for automatically tripping said rack at predetermined positions of horizontal swinging movement of the rack.



1,806,244. KNIFE TANG. ELCHANAN ECHIKSON, Newark, N. J. Filed Aug. 15, 1930. Serial No. 475,588. 2 Claims. (Cl. 30—9.)

1. In combination with a blade, a tang formed on the rear end thereof and comprising a body portion of uniform thickness, the forward end portion of the body being of greater width than the rear end portion, a bolster mounted on the forward end portion of the tang at its juncture



with the blade, the forward end portion of the tang being provided with a cut-out portion for the reception of solder to secure the bolster in a rigid manner.

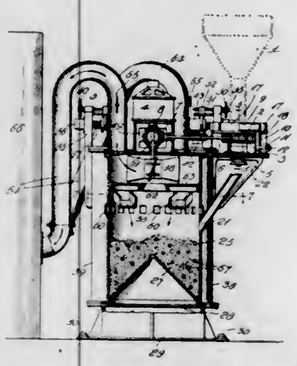
1,806,245. SHORT WAVE OSCILLATOR. ABRAHAM ESAU, Jena, Germany. Filed Feb. 12, 1927, Serial No. 167,650, and in Germany Feb. 18, 1926. 5 Claims. (Cl. 250—36.)

4. The method of generating and transmitting ultrashort waves, which consists in generating a fundamental short wave, splitting said fundamental wave into a plurality of waves, one at least of which is shorter than the fundamental wave, and transmitting the ultrashort wave so produced.

1,806,246. HAND BAGGAGE. JOSEPH FELDMAN and JACOB LESSEM, New York, N. Y.; said Lessem assignor to said Feldman. Filed Apr. 23, 1930. Serial No. 446,584. 3 Claims. (Cl. 190—51.)

1. An article of baggage comprising in combination, a two part hand bag, one part having an extensible wall, a flange member mounted on and extending along one edge of said extensible wall and having an edge portion spaced therefrom, a portfolio having a portion adapted to be received behind the edge portion of said flange member, and tabs carried by said extensible wall and adapted for engagement with the portfolio to secure the same to the said extensible wall.

1,806,247. PROCESS FOR THE MANUFACTURE OF OXIDATION PRODUCTS OF SICCATIVE OILS. FRITZ FRAUNBERGER and GEORG KNÖFFLER; Premnitz, Germany. Filed July 24, 1925, Serial No. 45,939, and in Germany Aug. 11, 1924. 4 Claims. (Cl. 87—12.)

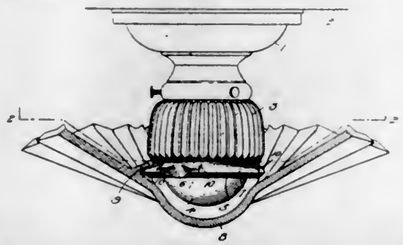


1. A process for the oxidation of siccative oils consisting in finely dispersing the oils in a liquid in which the oils are not soluble and of oxidizing the thus dispersed siccative oils by means of air.

1,806,248. DEVICE FOR USE IN DRESSING THE HAIR. HENRY FREEMAN, Tottenham, London, and HARRY DUNDONALD THURGAR, London, England. Filed Mar. 25, 1930, Serial No. 438,868, and in Great Britain Mar. 26, 1929. 3 Claims. (Cl. 132—48.)

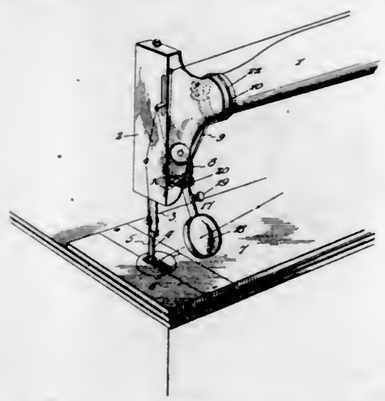
1. A device for use in dressing the hair comprising a base member having teeth, a clip hinged to the base member and having a slot to receive said teeth, said clip coacting with the base member to hold the loose ends of hair against the inner side of the base member while the device is rotated to form the hair into a roll, and an auxiliary clip member hinged to said base member and adapted to engage the first named clip and coact therewith to engage the rear of the roll to maintain the formation thereof.

1,806,249. PULVERIZING OR DISINTEGRATING EQUIPMENT. WARREN C. S. GRAHAM, New Orleans, La. Filed Feb. 23, 1929. Serial No. 342,167. 18 Claims. (Cl. 83—9.)



1. In a pulverizing apparatus, a receptacle having a downwardly inclined base, means for depositing material in bulk in said receptacle, means for subjecting said material in bulk to successive bombardment by the gravitational effects of a multiplicity of weights directed upon the material from diametrically opposite directions for reducing the material from bulk to a substantially powdered state and gravitating the reduced material down said inclined base, and means for continuously withdrawing the powdered material by flotation from the remaining bulk.

1,806,250. PRODUCTION OF MATERIAL TO BE USED IN THE FORMATION OF ROADWAYS AND THE LIKE. ERNEST BARTON HACK, East Melbourne, Victoria, Australia, assignor of one-half to Arthur Victor Leggo, Melbourne, Australia. Filed Sept. 8, 1926, Serial No. 134,331, and in Australia Sept. 23, 1925. 3 Claims. (Cl. 106—31.)

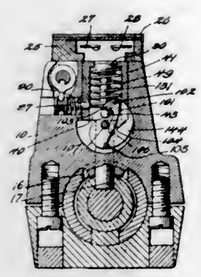


1. A method of treating bitumen for use in the formation of roadways and the like consisting in heating the bitumen and subjecting it to the action of a solution of an emulsifying and foam assisting agent to effect an ebullition of bubbles throughout the whole mass of the bitumen and subsequently agitating or disturbing the mass to substantially increase the volume of the effervescent bitumen, said emulsifying agent consisting of a solution of soap and water having approximately the proportions of 1 oz. of soap to 1 gallon of water.

1,806,251. LIGHTING FIXTURE. REUBEN HALEY, Beaver, Pa. Filed Oct. 18, 1928. Serial No. 313,273. 1 Claim. (Cl. 240—100.)

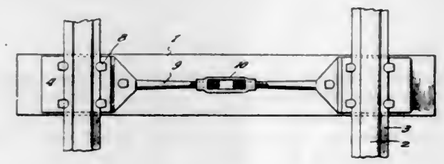
A two part lighting fixture comprising a lamp enclosing member of substantially cylindrical form, a concave open bowl member of greater diameter than the lamp enclosing member and having a free edge extending substantially midway the height of the lamp enclosing member, and means for securing said lamp enclosing member and said bowl together.

1,806,252. SEWING MACHINE ATTACHMENT. GEORGE C. HOHEIN, Clarendon, Va. Filed Nov. 26, 1928. Serial No. 322,013. 2 Claims. (Cl. 88—39.)



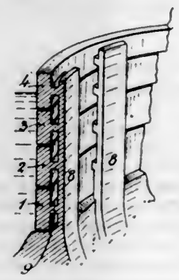
1. An attachment for sewing machines comprising a band conforming to a sewing machine head to lie close to the front and side of the same, a lens carried by the band, a supporting arm rising from the band at the side of the sewing machine head, and a clamp collar at the upper end of said arm to encircle the sewing machine arm and thereby support the entire device.

1,806,253. CAM SNAP LOCK. CHARLES N. FAIRCHILD, New Haven, Conn., assignor to Fairchild Lock Corporation, New York, N. Y., a Corporation of Delaware. Filed June 27, 1927. Serial No. 201,781. 14 Claims. (Cl. 70—127.)



1. In a coincidental lock, a locking bolt, an ignition circuit, a spring for urging said locking bolt to locking

position, means for moving the bolt against the urge of the spring to unlocked position, means carried by the bolt for closing the ignition circuit upon movement

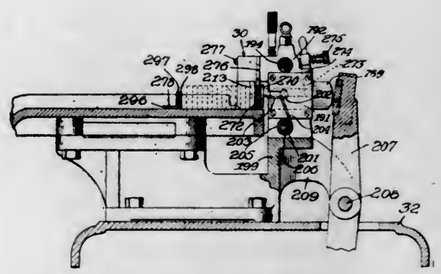


of the bolt in one direction and for opening the ignition circuit upon movement of the bolt in the opposite direction, and means carried by said means for latching the bolt in locked position.

1,806,254. COMBINATION CHAIR PLATE AND RAIL BRACE. FRANK ANTONIO GRAZIANI, Fairmont, W. Va. Filed Oct. 17, 1929. Serial No. 400,330. 1 Claim. (Cl. 238—52.)

A device of the character described including chair plates each thickened from a medial transverse plane toward opposite ends thereof, the plates being provided at their outer end portions with rail seats and at their inner ends with shanks, and means engaging said shanks and connecting the plates to form a rail brace.

1,806,255. ARCH DAM. CHRISTIAN FREDRIK GRÖNER, Oslo, and SIGURD KLOUMANN, Snarogen, near Oslo, Norway. Filed Apr. 17, 1929. Serial No. 355,719½. 3 Claims. (Cl. 61—30.)

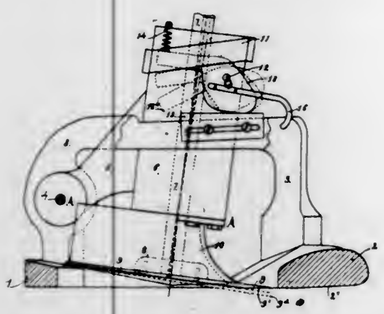


1. In an arch dam a dam vault comprising a number of horizontal continuous and uninterrupted arches, supporting columns for transmitting the weight of said arches to a foundation, said supporting columns being individually connected with each of said arches, so as to support the same independently of each other.

1,806,256. CLOSURE RECEPTACLE FOR BOTTLES AND JARS. JOSÉ LEANDRO MONTALVO GUENARD, Ponce, Porto Rico. Filed Dec. 13, 1928. Serial No. 325,781. 12 Claims. (Cl. 215—7.)

1. In a device of the character described, a receptacle, and means associated therewith for securing thereto a prize token, said means including a crown sealing device having a token receiving chamber associated therewith and removable therefrom, said chamber having projecting prongs adapted to extend through said crown for retaining said chamber in association with said crown.

1,806,257. MACHINE FOR MAKING PRINTERS' LEADS, SLUGS AND RULES. ARTHUR H. HEDLY, Chicago, Ill., assignor to Ludlow Typograph Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 30, 1929, Serial No. 351,369. Divided and this application filed Feb. 21, 1930. Serial No. 430,315. 12 Claims. (Cl. 164—48.)



1. In a machine of the character described, the combination of means for intermittently advancing a strip to be cut, means for severing the strip comprising cooperating mechanisms normally out of cooperating relationship and operable into cooperative relationship through the medium of the advancing strip, and means actuated by said first-named means for restoring said mechanism to normally inoperative relationship.

1,806,258. APPARATUS FOR FLESHING HIDES, SKINS OR THE LIKE. LUCIEN NICOLAS HENRY, Soissons, France. Filed Dec. 28, 1927, Serial No. 243,195, and in France Feb. 14, 1927. 5 Claims. (Cl. 149—15.)

1. In an apparatus for fleshing hides, skins and the like, a circular cutting blade, a rotary axle for said

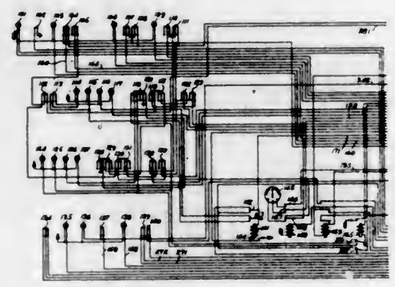
blade, a tool holder carrying the axle, a frame, a pivot for the tool holder upon said frame, wedges provided with an inclined bearing surface secured upon the frame, means for controlling the position of said wedges upon

the frame, cams bearing upon the wedges, pivotal axes for said cams upon the tool holder, a resilient connection between the latter and said cams and means for controlling the rotation of said cams and causing the inclination of the tool holder to vary.

1,806,259. SOFA BED. CHARLES HULTGREN, Chicago, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed June 11, 1926. Serial No. 115,199. 3 Claims. (Cl. 5—22.)

2. In a sofa-bed structure: a main frame; a pair of parallel links near each end of said frame having pivotal supports on the frame at one horizontal plane; a pair of angular levers at each end of the structure having short arms having pivotal supports on the frame at a higher horizontal plane; a rear bed-section mounted on said links; a non-invertible front bed-section having pivotal connections with the long arms of said levers; and links connecting one pair of said levers with said first-mentioned links whereby the rear bed-section is actuated by swinging the front bed-section.

1,806,260. PROCESS FOR THE PRODUCTION OF SOLID ALCOHOLIC IODINE SOLUTIONS IN PENCIL FORM AS A SUBSTITUTE FOR TINCTURE OF IODINE. KARL JUNGMANN, Aussig, and OSWALD KOLBERT, Nestomitz Czechoslovakia. Filed July 11, 1927, Serial No. 205,029, and in Germany Sept. 21, 1926. 5 Claims. (Cl. 167—70.)

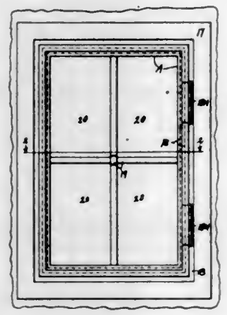


1. Process for making a solid stable alcoholic solution of iodine in pencil form as a substitute for tincture of iodine, said process consisting in melting solidified alcohol by means of heat, adding iodine and a water-soluble iodide to said molten product, the amount of iodide added being sufficient to prevent subsequent liquefaction of the alcoholic solution after it congeals and to produce the desired rubbing consistency when congealed, causing the alcoholic solution to congeal due to reduction of its temperature, the iodine being added to the solution only shortly before it congeals, and forming the congealed product into pencils.

1,806,261. WINDOW POLE. SIMEON C. LAWLOR, Chicago, Ill. Filed Jan. 4, 1929. Serial No. 330,322. 2 Claims. (Cl. 268—134.)

1. A window pole comprising a handle, a brass sleeve riveted over one end of the handle, a rod inserted through holes in the sleeve and handle, one end of the rod forming a straight projection and the other a curved hook, said rod rigidly fastened to the handle.

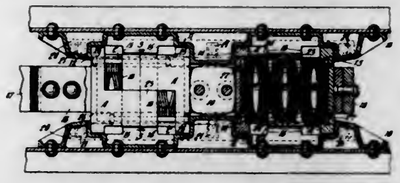
1,806,262. SUPERVISORY CONTROL SYSTEM. ALBERT L. MOREAU, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1927. Serial No. 211,682. 12 Claims. (Cl. 177—353.)



2. In a supervisory control system, a first station, a second station, apparatus units at said second station, synchronous selectors at each of said stations for sequentially associating said apparatus units for operation from said first station, means operative following the selection of one of said apparatus units for operation, for transmitting a code combination of impulses, means for operating said selected apparatus unit in response to said code combination of impulses, means including said synchronous selectors for selecting another of said apparatus units for operation and means automatically responsive to said selection for operating said other apparatus unit only after the transmission of an impulse code for said first mentioned unit.

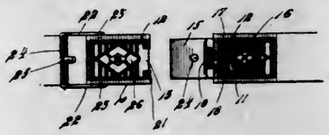
3. In a signalling system, a first station, a second station, a plurality of groups of relays at each of said stations, means for operating said relays at each of said stations in synchronism, means including a check circuit for transmitting a code of impulses individual to each relay in a group for identifying the relay in said group which is energized, said check circuits being repeated in the succeeding group and means for preventing energization of corresponding relays in non-associated groups simultaneously at each station to control the check circuits.

11. In a supervisory control, a first station, a second station, synchronous selectors at each of said stations, apparatus units at said second station, signalling devices individual to said apparatus units at said first station, a drive line connecting said stations, means for transmitting impulses over said drive line, means responsive to said impulses for operating said selectors in synchronism, means including said selectors at each selecting position for transmitting supervisory signals in accordance with the condition of the apparatus unit associated with the selecting position in the event that the signal device individual to said unit does not agree with the condition of said unit, means responsive to the transmitting of said impulse for momentarily preventing further transmission of said drive line impulses and means responsive to the operation of said signalling device in accordance with the impulse transmitted by said apparatus unit for starting said drive line into operation again.



1,806,263. METAL WINDOW SASH AND FRAME. OTTO A. MUNSON, St. Paul, Minn. Filed Oct. 8, 1928. Serial No. 311,053. 1 Claim. (Cl. 189—64.)

In combination, a window sash comprising a quadrangular frame of joined metal bars, a window frame comprising a main frame with inwardly opening channel members and said sash arranged to fit snugly between said channels, said channels comprising for each sash a continuous quadrangular frame with a wide outwardly exposed flange and narrower inwardly exposed flange in spaced relation to said wide flange, said sash frame bars having each an outer ledge and an adjacent glass retaining groove normally engaging the edge part of the wide channel, a ridge formed in each bar inwardly of said groove, muntin bars fixed with their opposite ends in said ridged parts of the sash bars and means for holding panes of glass in the sash with their adjacent edges at the muntin bars in spaced relation and removable auxiliary muntin bars arranged to lie over said adjacent edges of the panes, the outer ends of said auxiliary bars adapted to be removably engaged in the grooved parts of the sash bars.

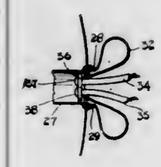


1,806,264. DRAFT GEAR. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 27, 1928. Serial No. 295,652. 2 Claims. (Cl. 213—30.)

1. In a shock absorbing mechanism, the combination with relatively movable followers, each follower having a pair of inwardly extending arms at diagonally opposite corners thereof, the arms of one follower engaging between the arms of the other follower, each of said opposed arms having a flat interior abutment surface and two angularly extending abutment surfaces at opposite sides of said flat surface; of means for yieldingly opposing relative approach of said followers interposed between the same, said means including a plurality of sets of spring plates, the plates of each of certain of said sets at opposite ends thereof being shaped to fit the abutment surfaces of

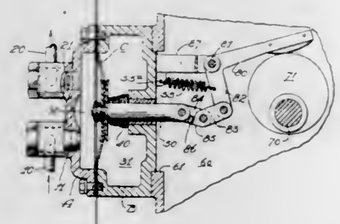
the opposed arms of one of said followers to limit movement of the plates toward and from said arms and laterally of said arms.

1,806,265. BRACELET CLASP. WILFRID J. ROY, East Orange, N. J., assignor to Gemex Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 30, 1930. Serial No. 448,562. 13 Claims. (Cl. 24—230.)



1. In an ornamental chain including terminal shells, each having a top wall ornamented by pierced openings therein, a connecting member having a resilient part located in one of said shells with a portion extending into one of said openings to retain it in position, and cooperating resilient means between the member and other terminal shell for detachable connection therewith.

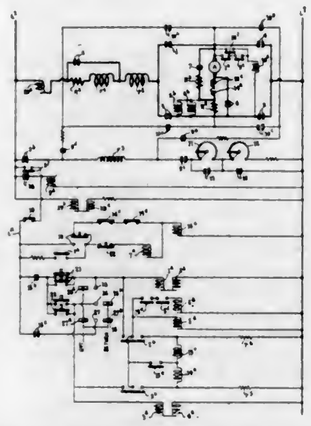
1,806,266. PUNCHING TOOL. WILLIAM S. SAWLE, Chicago, Ill. Filed Apr. 29, 1929. Serial No. 358,828. 6 Claims. (Cl. 164—32.)



1. A punching tool of the character described, comprising a body provided at one end thereof with a handle and having formed at its other end a circular cutting edge and a longitudinally extending open-ended cylindrical socket, and a wad ejector consisting of a block of elastic material located in the socket, said block being polygonal in cross section and having the corners thereof engaging frictionally the wall of the body that defines the socket.

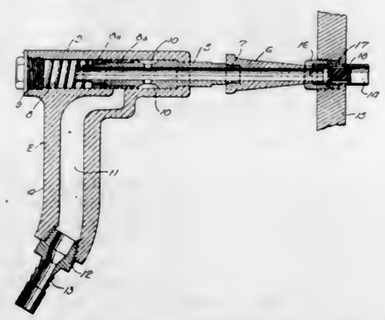
1,806,267. CONNECTER. JOHN F. SCHMIDT, LOUIS F. ERHART, and OSCAR E. WRIGHT, Cincinnati, Ohio, assignors to The Thos. J. Corcoran Lamp Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 29, 1927. Serial No. 222,890. 4 Claims. (Cl. 173—328.)

1. A connecter in combination with a mounting element, comprising a connecter shell having a flange at its rear end crimped upon the mounting element and arranged for attaching the ends of a spring thereto, a bulb contact in the shell, and a spring having its ends attached to the shell flange and adapted between its ends yieldingly to retain the contact within the shell.



1,806,268. FUEL PUMP. WILLIAM H. SCHULZE, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 8, 1929. Serial No. 345,396. 3 Claims. (Cl. 103—38.)

1. A pumping device adapted for mounting on an engine casing for protruding thereinto an operating element to be actuated by an engine cam, said pumping device comprising a casing having a pumping chamber and a pumping member therein with an operating stem protruding from the casing at the side thereof arranged for mounting on the engine casing at an aperture in the latter; operating connections for said stem carried by the pump casing on the outer side of said casing within the area registered with the engine casing aperture, said connections comprising a lever fulcrumed on the pump casing and having operating connections with the pumping member stem, said connections consisting of a pair of toggle links pivotally connected respectively to said stem and said lever and pivoted together and having co-operating stops arranged for encounter to stop the relative pivotal movement of the links in the direction for aligning all their pivots, with the pivot-in-common out of such alignment, said links being free for relative pivotal movement in the direction for folding them together.



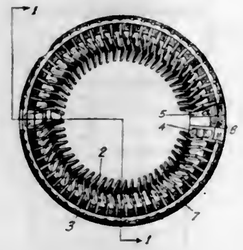
1,806,269. CONTROLLER FOR ELECTRIC MOTORS. CARROLL STANSBURY, Wauwatosa, and NIELS L. MORTENSEN, Milwaukee, Wis., assignors, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Dec. [illegible] 1928. Serial No. 327,347. 9 Claims. (Cl. 172—[illegible])

1. The combination with a reversible driving motor, of means for selectively controlling reverse power connections for said motor for operation thereof in opposite directions between given limits and for plugging thereof at said limits, and means for establishing a dynamic

braking circuit for said motor upon failure of said former means to establish plugging connections for said motor within a given interval at said limits.

1,806,270. APPARATUS FOR CLEANING TUBES. NEIL THOMPSON, Jeannette, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 19, 1928. Serial No. 293,842. 1 Claim. (Cl. 15—104.06.)

A device for driving slugs through tubes, comprising a hollow casing having a port communicating with a fluid pressure supply pipe, a hollow plunger slidably mounted in said casing carrying a nozzle at its forward end, said plunger normally closing the port in said casing, resilient means to hold said plunger in normal position, said plunger having a port adapted to communicate with the port in said casing when said casing is forced forward on said plunger against said resilient means.



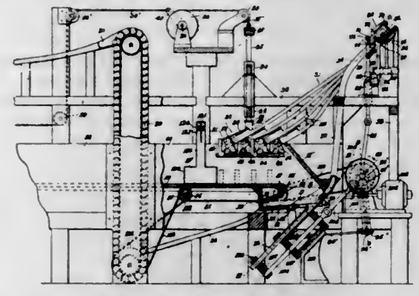
1,806,271. STEEL TRUCK. DANIELS W. VOORHEES, Jr., Peru, Ill. Filed July 10, 1930. Serial No. 466,973. 1 Claim. (Cl. 280—80.)

A steel truck including in combination a steel axle, a circular ring attached to and rigidly braced upon said axle, a steel bolster pivotally related to said axle and means for maintaining the bolster in a suspended and non-

tipping relationship to the axle, irrespective of the angular position of the bolster upon the axle, said means including lugs secured to the bolster and riding at all times upon said ring, and means for detachably connecting the lugs to said bolster.

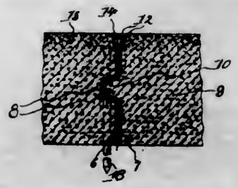
1,806,272. MACHINE FOR REFINING PAPER AND PULP. LUDWIG H. WESSEL and HOMER N. BOOKER, Lancaster, Ohio, assignors to The Hermann Manufacturing Company, Lancaster, Ohio, a Corporation of Ohio. Filed July 10, 1928. Serial No. 291,626. 4 Claims. (Cl. 92—27.)

1. The method of securing a plurality of knives in such relative position as to form a hollow shell which comprises assembling the knives in a form or jig and bending a portion thereof over a ring clamp.



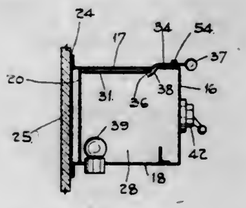
1,806,273. PAPER MANUFACTURE. HARRISON R. WILLIAMS, New York, N. Y. Filed Apr. 3, 1929. Serial No. 352,063. 2 Claims. (Cl. 283—62.)

1. A strip of paper for toilet purposes having a plurality of spaced lines of perforations dividing said strip into readily separable sheets, each line of perforations comprising letters constituting an identification of the product.



1,806,274. BOWLING ALLEY. RAYMOND A. WILLIAMS, Arlington, Mass. Filed Dec. 29, 1928. Serial No. 329,146. 42 Claims. (Cl. 273—143.)

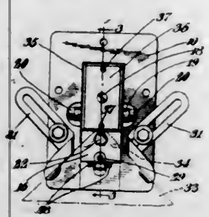
15. A bowling alley provided with a magazine above the alley and containing a plurality of pins; automatic means for releasing the pins when the magazine is filled; a plate lower than said magazine adapted to be vertically raised and lowered; immovable tubes to receive said pins when released from the magazine; weighted gates pivoted to the lower ends of said tubes; pockets on said plate adapted to receive pins from said tubes; means for simultaneously opening all of said gates; means for retaining the pins in said pockets until said plate approaches its lowest position; and means for actuating said retaining means and releasing said pins from said pockets prior to the return of said plate to its elevated position.



24. A bowling alley provided with a pin magazine; a conduit extending from the bottom of one end of said magazine and adapted to be filled with pins; means at the opposite end of said conduit for inserting another pin into said conduit and simultaneously discharging a pin from the opposite end of said conduit into said magazine; and means for pushing sidewise towards the opposite end of said magazine each pin when inserted into said magazine.

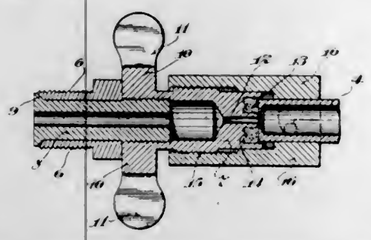
1,806,275. INSERT FOR CONCRETE ROADS AND THE LIKE. ROBERT ADLER, St. Paul, Minn. Filed June 17, 1929. Serial No. 371,451. 2 Claims. (Cl. 94—18.)

1. An insert for dividing concrete or similar roads comprising, a pair of stiff, metal strips normally disposed in face to face contact with each other throughout their length and connected together at their lower edges, said strips being adapted to be imbedded in the road body in substantially upright position and their upper edges being separable upon contraction of said body and registering, longitudinal corrugations in said strips perforated to receive upright supporting means.



1,806,276. DIRECTION INDICATOR. ALFRED BENJAMIN BAILEY, Verdun, Quebec, Canada. Filed Feb. 25, 1929. Serial No. 342,552. 1 Claim. (Cl. 116—42.)

In a direction indicator, a casing having a slotted top wall and an opaque front containing stencilled openings in the shape of arrow heads indicating right hand and left hand directions separated by a stencilled opening, indicating a mid-direction, partitions separating the casing into compartments, a reflecting plate in each compartment having an offset stem extending through a slot in the top

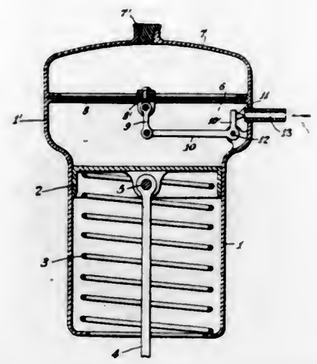


wall of the casing and extending rearwardly therefrom and having a pair of lateral projections resting on the top wall of the casing and forming stops, and spring clips secured to the casing top and releasably holding said stems in position.

1,806,277. METAL BINDING MACHINE. MAURICE M. BALSAM, Brooklyn, N. Y. Filed Mar. 14, 1928. Serial No. 261,483. 13 Claims. (Cl. 153—1.)

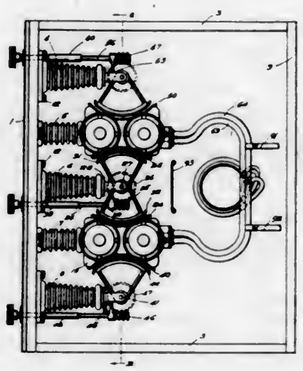
3. In a machine for attaching binding clips to the corners of pocketbooks or the like, a bed, a head movable toward and away from said bed, a pressure foot carried by said head, and a resilient member movable with said head and slanting toward said presser foot.

1,806,278. LUBRICATOR COUPLING MEANS. VITUS A. BOKER, Minneapolis, Minn., assignor to Min-A-Max Co., Minneapolis, Minn., a Corporation of Minnesota. Filed May 4, 1929. Serial No. 360,528. 2 Claims. (Cl. 285—176.)



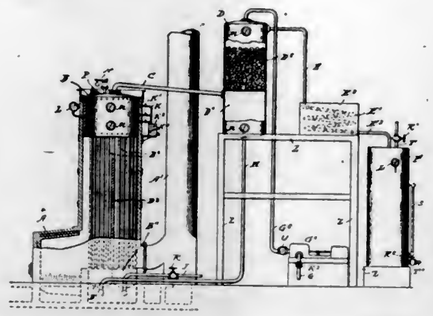
1. The combination with the terminal member of a grease pipe, of a nozzle having a stem swivelled in said termnal member, said nozzle at its extended end having an axial delivery passage and a surrounding inset annular gasket set directly and solidly into said nozzle, and a sleeve-like coupling head having threaded engagement with said nozzle and provided with bayonet slots adapted to engage projecting lugs on a nipple for interlocking engagement therein, whereby rotation of said nozzle will clamp the end of said nipple against the gasket of said nozzle.

1,806,279. ROLLER BEARING. AUGUSTUS D. BOOTH, Columbus, Ohio. Filed Sept. 17, 1928. Serial No. 306,506. 8 Claims. (Cl. 308—217.)



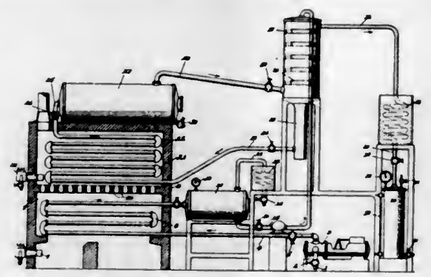
1. A roller bearing comprising a plurality of rollers having annular grooves formed therein, and flat rings having mortices or grooves for interfitting with such annular grooves, the mortices or grooves extending radially and then laterally into said rings and being of such structure that the rollers seat therein with a snap action.

1,806,280. ALTIMETRIC AUTOMATIC CONTROLLING DEVICE FOR CARBURETORS FOR AEROPLANE MOTORS. ANTONIN BOULADE, Lyon, France, assignor to Société du Carburateur Zenith, Lyon, France. Filed Apr. 10, 1924, Serial No. 705,651, and in France Apr. 12, 1923. 7 Claims. (Cl. 137—153.)



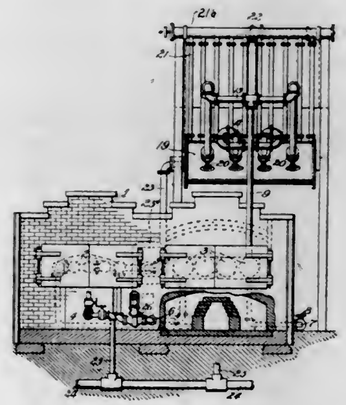
1. Altimetric automatic controlling device for aeroplane motor carburetors, comprising, in combination, a cylinder open at its lower end and terminating at its upper extremity in a chamber, a piston movably mounted in said cylinder, a spring operating to move said piston towards said chamber, a rod connecting said piston to the operating control for the carburetor, means for supplying a fluid medium to said chamber, the pressure of said medium in said chamber compressing the spring according as the external pressure exercised on the lower surface of the piston diminishes, and pressure responsive means in said chamber for controlling the admission of said medium thereto.

1,806,281. AMPLIFIER. ROBERT L. DAVIS, Pittsburgh, Pa., and DONALD G. LITTLE, Long Meadow, Mass., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 3, 1928. Serial No. 258,778. 11 Claims. (Cl. 179—171.)



1. In combination, means adapted to support a thermionic device, and movable means electrostatically cooperating therewith to constitute a variable condenser.

1,806,282. APPARATUS FOR TREATING PETROLEUM. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed Jan. 2, 1920, Serial No. 348,789. Divided and this application filed Sept. 6, 1921, Serial No. 498,888. Renewed May 28, 1928. 2 Claims. (Cl. 196—107.)



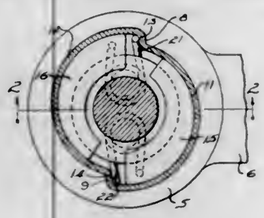
2. In an oil cracking apparatus, the combination with a plurality of vertical tubes arranged in a cylindrical formation between an upper drum and a plurality of lower drums, said tubes extending through a furnace, of a dividing wall in said furnace for directing heating gases longitudinally of the tubes, a vapor outlet connected to said upper drum, and a dephlegmator connected to the vapor outlet pipe from said upper drum, means for introducing raw oil to said dephlegmator, means for passing mixed raw oil and reflux condensate from said dephlegmator to one of said lower drums, means for withdrawing residue from another of said lower drums, condensing and collecting means connected with said dephlegmator, and means for maintaining a regulated pressure on the system.

1,806,283. PROCESS FOR CONVERTING PETROLEUM OIL. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 8, 1922. Serial No. 534,858. 4 Claims. (Cl. 196—48.)

1. A process of oil conversion, consisting in initially passing a stream of charging oil through that portion of a furnace maintained at the lowest temperature, to heat such oil sufficiently to cause vaporization of the lighter constituents and any water contained in the oil, in collecting the heated liquid oil in a body, from which body the vaporized light constituents and water are removed, to be isolated from the process, in simultaneously passing a second stream of oil through that portion of the furnace maintained at the highest temperature, wherein said second stream of oil is raised to a conversion temperature, in passing vapors evolved from oil heated in said second stream to a dephlegmator, in introducing heated liquid oil from said body to said dephlegmator, to act as a dephlegmating medium for the vapors therein, in taking off dephlegmated vapors from said dephlegmator for condensation and collection and in withdrawing unvaporized charging oil and reflux condensate from said dephlegmator, to form the charging oil for said second stream, and in maintaining a superatmospheric pressure on the oil undergoing conversion.

1,806,284. PROCESS OF AND APPARATUS FOR CONVERTING HEAVY INTO LIGHTER HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Continuation of application Serial No. 266,397, filed Dec. 12, 1918. This application filed May 2, 1923, Serial No. 636,103. Renewed May 28, 1928. 2 Claims. (Cl. 196—58.)

1. A continuous process for cracking hydrocarbon oil, consisting in passing the oil in a confined stream through a heating zone wherein the oil is subjected to a conversion temperature, in discharging the heated oil into an elongated vaporizing zone, in discharging vapors progressively from said vaporizing zone as the oil passes therethrough, in combining the progressively withdrawn vapors, in subjecting them to a dephlegmating action, in returning the reflux condensate under a mechanical pressure to the heating zone for re-treatment, in continuously withdrawing unvaporized residual oil from said vaporizing zone to be isolated from the system, in normally maintaining a uniform regulated superatmospheric pressure on the oil throughout the process and in maintaining constant the pressure on the oil in the heating zone in the event of a temporary decrease in pressure on the oil in the remaining zones of the process.



1,806,285. PROCESS OF PREPARING CHLORACETALDEHYDE. OTTO ERNST and HEINRICH LANGE, Frankfort-on-the-Main-Hochst, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Oct. 9, 1928, Serial No. 311,412, and in Germany Oct. 22, 1927. 6 Claims. (Cl. 260—138.)

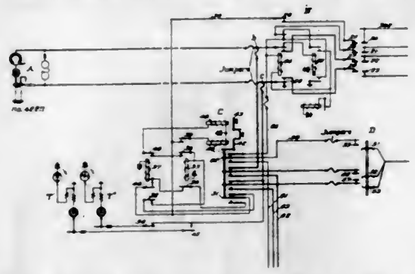
1. In the process of preparing chloracetaldehyde, the step which consists in introducing into water chlorine gas and vaporous vinyl chloride.

1,806,286. JOINT. WILLIAM A. FLUMERFELT, Columbus, Ohio, assignor to The Columbus Auto Parts Company, a Corporation of Ohio. Filed Apr. 26, 1930. Serial No. 447,512. 5 Claims. (Cl. 287—90.)

1. In a ball and socket joint construction, an inner ball member, an outer member comprising two semi-cylin-

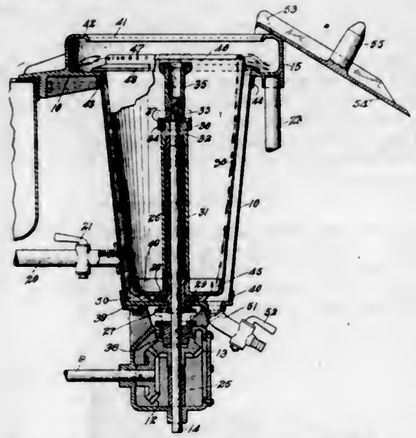
drical portions offset with respect to each other in an axial plane, eccentric wedge members circumferentially slidable in said semi-cylindrical portions, said wedge

members having ball sockets in their inner faces for embracing opposite sides of said ball member and means for sliding said wedge members to snugly embrace said inner member.



1,806,287. EJECTOR. JOHN HADDOW FORREST, Seattle, Wash., assignor to The Universal Lifting Appliance Co., Seattle, Wash., a Corporation of Washington. Filed Mar. 13, 1929. Serial No. 346,719. 2 Claims. (Cl. 103—262.)

1. An ejector comprising a conically tapered housing with openings at opposite ends and having an inlet for connection with a source of fluid pressure medium at its larger end, the axial line of said inlet intersecting the axial line of the housing near its smaller end, said housing having a coaxially extending discharge pipe mounted in the opening at the smaller end, a supply conduit connected with the housing through the opening at its larger end, a tube mounted in the housing as a continuation of the supply conduit and terminating in spaced relation to the inner end of the discharge tube and producing, with the discharge tube, an ejector passage that is straight and of uniform diameter; the spaced ends of the said tubes being beveled to form an annular, intermediate passage whereby the fluid pressure medium will be delivered in an elongated, conical jet into the discharge tube toward its outer end.



1,806,288. AUTOMATIC TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Chicago, Ill.; Milton S. Friendly and Central Trust Company of Illinois executors of said Herbert M. Friendly, deceased. Filed Feb. 27, 1928. Serial No. 257,480. 56 Claims. (Cl. 179—18.)

8. In an automatic telephone system, automatic switch mechanism, an impulse sending device, means for setting up a stored condition in said device, means for directively operating the switch mechanism responsive to sending a train of series of impulses from said sending device due to said stored condition, automatic means for measuring a minimum space between the respective series of im-

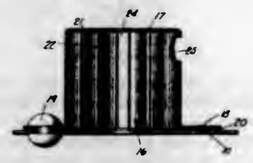
pulses of the train, and means including a relay therefor for measuring a said space having additional minimum length between the last impulse of one series and the first impulse of the next successive series regardless of the number of impulses in the first one of said successive series.

1,806,289. WASHING MACHINE. BENJAMIN E. GETZ, Morton, Ill. Filed July 19, 1929. Serial No. 379,407. 11 Claims. (Cl. 210—67.)

1. In an extractor, a housing, an extracting member, means to rotatably mount the extracting member in the housing which means extends adjacent to the upper end of the housing, a combined drainboard and cover having hinged connection with the housing, and adapted to be swung outwardly of the housing to form a drainboard, or to be moved to overlie the housing to form a cover therefor, and centering means on the board adapted to engage the mounting means when used as a cover, so as to stabilize the member during rotation thereof.

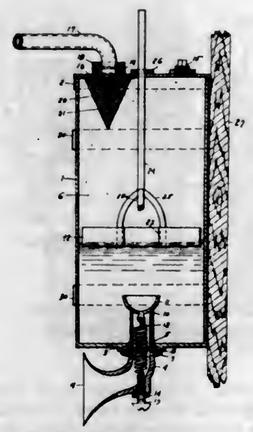
1,806,290. CATTLE FODDER. ROBERT GRIESSBACH and OTTO AMBROS, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 4, 1928, Serial No. 244,553, and in Germany Jan. 8, 1927. 4 Claims. (Cl. 99—11.)

1. A process for the production of feeding matter for animals which comprises degradating micro organisms by autolysis, neutralizing the acids formed with ammonia and cautiously drying the product.



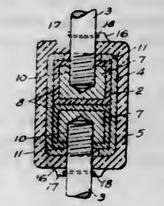
3. A feeding matter for animals comprising a mixture of ammonium salts of the amino acids from the autolysis of micro organisms.

1,806,291. RAILWAY SIGNALING SYSTEM. JAY C. HOFFMAN, Akron, Ohio. Filed Apr. 7, 1930. Serial No. 442,100. 7 Claims. (Cl. 246—41.)



2. In a railway signaling system, a normally-closed track circuit, a source of electric current, means for regulating the amount of current supplied to said circuit, a signaling circuit, a relay in said track circuit for controlling said signaling circuit, a resistance in series with said relay, and automatic means controlled by said relay for short-circuiting said resistance under predetermined settings of said current regulating means.

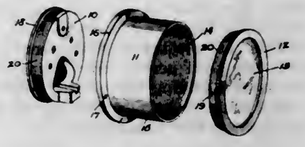
1,806,292. AIR VENT FOR FUEL TANKS. GEORGE HUNT, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed June 5, 1929. Serial No. 368,648. 7 Claims. (Cl. 220—44.)



4. In combination with a liquid fuel tank having an opening therein, a cup-shaped casing having an opening in its side wall secured to said tank, and a baffle having its walls substantially parallel with the side wall of said casing and extending the depth thereof mounted therein, the free end of said baffle surrounding the opening in said tank and formed to provide a slot through which air is permitted to pass through the opening in said tank, circulate around said baffle, and escape through the opening in said casing.

1,806,293. HUMIDIFIER FOR GAS ENGINES. KORNEL ISSAR, Detroit, Mich. Filed Apr. 3, 1930. Serial No. 441,203. 3 Claims. (Cl. 261—126.)

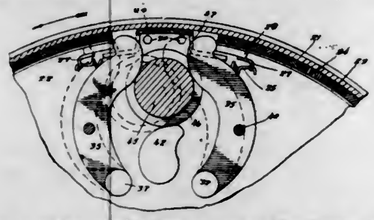
1. A humidifier adapted for introducing moisture within the fuel intake manifold of a gas engine and used in combination therewith, comprising a closed liquid tank having means for entering air through the tank bottom, said tank having an outlet port formed through the top thereof, double screen cone filters of different screen mesh mounted over said outlet port within the tank chamber, a float water indicator mounted within said tank chamber, a feed pipe mounted on said tank connecting same with the engine fuel intake manifold through the screened port and filters, valve means mounted within said feed pipe for regulating the flow of moisture therethrough.



1,806,294. STRAIN INSULATOR. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1927. Serial No. 181,326. 9 Claims. (Cl. 173—366.)

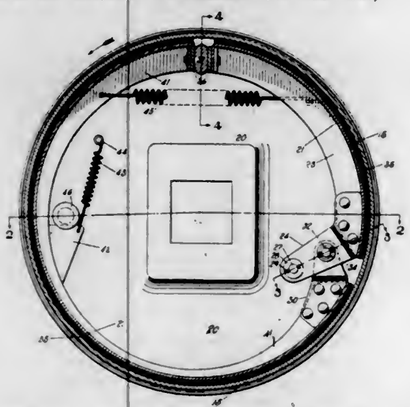
2. A strain insulator comprising rectangular block elements, including rectangular metal core members and rectangular tubular insulating coverings thereon, disposed in adjacent flat-surface relation, means for holding the element to each other and terminal portions projecting from the core members.

7. An insulator including tubular insulating portions disposed in side-by-side relation, a tubular element surrounding said tubular portions in substantially parallel relation thereto and terminal means having anchor portions in said tubular portions and portions extending through said element transversely to the axis thereof.



1,806,295. INTERCHANGEABLE INSTRUMENT CASE. ISAAC F. KINNARD, Lynnfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 12, 1929. Serial No. 392,238. 7 Claims. (Cl. 73—151.)

1. In combination, a supporting panel provided with a hole and having a surface for mounting an instrument thereon, an instrument casing having a main body portion adapted to fit in said hole and provided with openings and similar engaging surfaces at its opposite ends and a supporting flange with two shoulders, back and front cover portions each provided with engaging surfaces fitting the engaging surfaces at either end of the main body portion, and means for securing said instrument to said panel so that either shoulder of said flange rests against said panel surface.

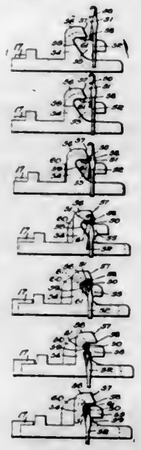


2. An instrument casing having a main body portion provided with openings at its opposite ends and radially extending supporting means at one end, a back cover portion, a front cover portion provided with an observation window, said main body portion having similar engaging surfaces at both ends thereof, and the back and front cover portions having similar engaging surfaces thereon fitting the engaging surfaces on the main body portion whereby said parts may be assembled with the supporting means at the front or rear of the casing.

1,806,296. BRAKE. ROBERT F. KOHR, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed June 28, 1927. Serial No. 200,944. 14 Claims. (Cl. 188—78.)

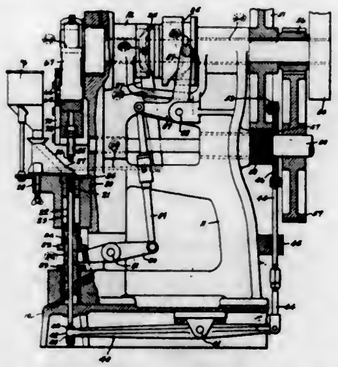
1. In a brake mechanism, a rotatable drum, braking means movable to engage said drum, a pair of members engageable with said braking means, and an unattached means engaging said members for actuating one or both of said members to move said braking means into engagement with said drum.

1,806,297. BRAKE. ROBERT F. KOHR, South Bend, Ind., assignor to The Studebaker Corporation, South Bend., Ind., a Corporation of New Jersey. Filed Jan. 16, 1928. Serial No. 247,224. 11 Claims. (Cl. 188—78.)



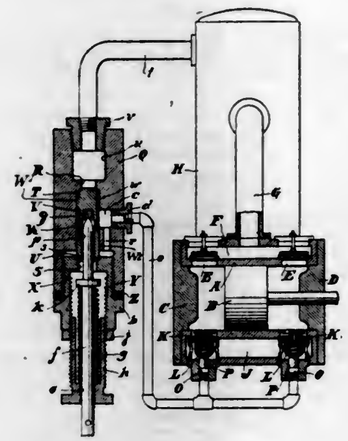
1. In a vehicle brake, a rotatable brake drum, a brake element pivotally supported at one end engageable with said drum comprising rigid end portions integrally connected by a flexible intermediate portion, operating means for moving the free rigid portion into engagement with said drum, and means holding the pivoted portion out of contact with said drum to permit said intermediate portion to flex for allowing said engagement.

1,806,298. SASH VENTILATOR. JOHN F. LEVAN, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 6, 1928. Serial No. 310,766. 5 Claims. (Cl. 98—97.)



1. In a sash ventilator, a hollow sheet metal sash rail provided with openings in the side walls thereof, a screen plate mounted over the opening in the outer side wall against the exterior face of the latter and provided with a row of air openings, a shutter plate mounted over the opening in the inner side wall against the exterior face of the latter and provided with a row of air openings, a sheet metal frame positioned in the rail about the openings, connecting means between the screen plate and one side of the frame, and other connecting means between the shutter plate and the other side of the frame.

1,806,299. MECHANISM FOR EFFECTING REVERSE PLATING. JOHN LAWSON and ROBERT H. LAWSON, Pawtucket, R. I., assignors to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Original application filed Mar. 8, 1927, Serial No. 172,331. Divided and this application filed Jan. 8, 1929. Serial No. 330,990. 5 Claims. (Cl. 66—108.)

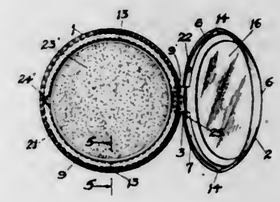


1. Mechanism for effecting plating and reverse plating in a knitted fabric including a series of independent needles, thread engaging instrumentalities for each needle respectively and including special instrumentalities where reverse plating is to be formed, said instrumentalities being movable individually transversely of the needle series, each of said special instrumentalities having an upper nib sloping upwardly and backwardly from its lower edge, said sloping edge being adapted to effect thread engagement in reverse plating during the loop forming operation, each said instrumentality directly below the upper nib having a front edge which extends from the most outward portion of the lower edge of the nib at a downward, inward slope until it merges with the base portion of the instrumentality.

1,806,300. BRIQUETTING MACHINE. JOHN C. LEMMING, Dayton, Ohio, assignor to Moraine Products Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 1, 1930. Serial No. 425,290. 8 Claims. (Cl. 18—16.)

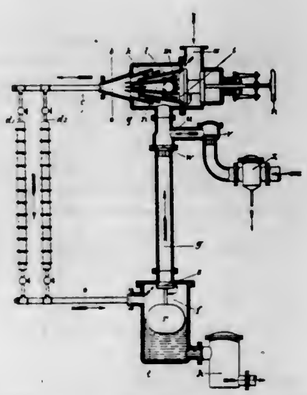
1. In a briquetting press, a die mold having a die cavity and a reciprocatable core therein, means for filling said cavity with a loose charge of material to be briquetted, and a briquetting punch for compacting said material in said cavity, said punch having a core forming projection thereon which on its compacting stroke abuts the end of said core and displaces it from the briquetted article.

1,806,301. PRESSURE CONTROLLED VALVE. JOHN LE VALLEY, Painted Post, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 14, 1928. Serial No. 246,792. 1 Claim. (Cl. 251—118.)



A pressure controlled valve comprising a valve chest having an inlet opening therein, a port in the valve chest for supplying pressure fluid to an element intended to be controlled, a bore in the valve chest having a seat at one end, a hollow plug threaded into the valve chest and having a valve seat arranged coaxially with the bore, an outlet opening in the plug, a valve in the form of a plug movable in said bore and cooperating with the first said seat to prevent the flow of pressure fluid through said bore to the outlet opening, peripheral guiding surfaces adjacent the ends of the valve and cooperating slidably with the bore to maintain the valve in coaxial alignment with the valve seats, spring means for holding said valve in position to close the inlet opening, restricted openings in said valve to convey pressure fluid from said inlet opening to the port, a by-pass passage of large area as compared to said restricted openings and leading from said port to the seat in the plug, and shims between the plug and the valve chest for adjusting the valve seats with respect to each other to vary the travel of the valve an thus also vary the range between pressures at which the valve is actuated.

1,806,302. FOOD PRODUCT. ALEXANDER LEE MAGRILL, Dallas, Tex. Filed Dec. 31, 1928. Serial No. 329,664. 1 Claim. (Cl. 99—11.)

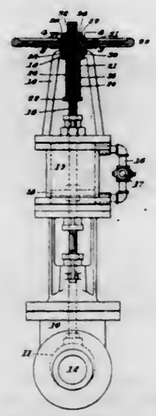


The process of preparing tuber-cheese chips which comprises first cooking the raw chip in hot fat, draining off the excess hot fat from the chip, and while the chip is still hot, sprinkling grated cold cheese thereon, whereby, as a result of the heat contained within the hot chip free of hot fat, the grated cheese fuses and firmly adheres to the chip.

1,806,303. VANITY CASE. JOHN L. MCATEER, Brooklyn, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 17, 1928. Serial No. 262,533. 7 Claims. (Cl. 132—83.)

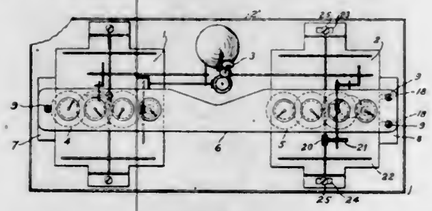
1. In a vanity box, the combination of a body and a cover pivotally associated by a hinge, an inturned peripheral flange on one of the members, a recess in the flange, an inturned peripheral flange on the other member, the faces of said flanges engaging each other when the box is closed, a projection on the other member arranged to enter the recess in one position of the parts, and to be concealed beneath the first named flange in another position of the parts, to lock the parts together, the locking movement being effected by a relative rotation of the body and cover.

1,806,304. STEAM HEATING PLANT. ADOLF MIERSBE, Raderthal, near Cologne-on-the-Rhine, Germany. Filed June 18, 1927, Serial No. 199,839, and in Germany July 24, 1926. 7 Claims. (Cl. 237—67.)



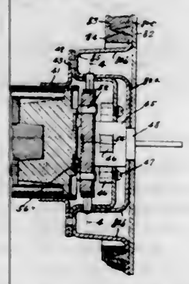
1. A steam heating plant comprising, in combination, a live steam conduit; a mixing device communicating with said conduit; a distributing conduit connected to said mixing device; radiators connected to said distributing conduit; and a collecting conduit receiving the waste steam from said radiators and opening into said mixing device; said mixing device including a double nozzle comprising a fixed outer nozzle shell, and a hollow nozzle core within said shell, the interior of the core and the space between the core and shell being in communication, said live steam conduit being arranged to feed steam into said space and into the interior of said core, and a casing surrounding said shell and communicating with said distributing conduit, said collecting conduit opening into the space between said casing and shell; said nozzle core and shell being movable relatively to each other.

1,806,305. OPERATING MECHANISM FOR VALVES. RICHARD W. MUELLER, Pittsburgh, Pa., assignor to Kerotest Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1927. Serial No. 242,358. 10 Claims. (Cl. 137—139.)



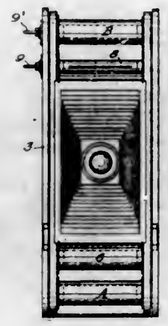
1. A valve structure comprising a valve having a threaded valve stem, a plurality of independently operable means both located outside of the valve structure and operable independently of the fluid pressure in the valve

structure positioned to operate the valve, and a displaceable device comprising a threaded sleeve forming part of



one of said means and cooperating with the stem to enable operation of either means while both means are connected for operation.

1,806,306. MOUNTING CONSTRUCTION FOR METERS. WALTER G. MYLIUS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 24, 1927. Serial No. 201,175. 5 Claims. (Cl. 248—30.)

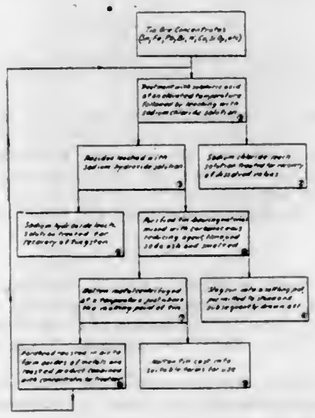


1. In combination, a main base support, a plurality of primary mechanism units independently mounted thereon, secondary mechanism cooperating with said units, a bridge unit support for said secondary mechanism extending between said mechanism units, and means providing adjusting movement of one of said units.

1,806,307. LOCK SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed Mar. 25, 1926, Serial No. 97,457. Divided and this application filed Jan. 28, 1928. Serial No. 250,104. 10 Claims. (Cl. 200—44.)

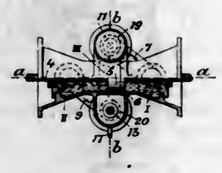
1. An electric switch, comprising in combination, a switch case having separable members; means for attaching the members together; cooperating switch contacts within the case; means for rendering the attaching means inaccessible for removal; and key operated devices for controlling the engagement and disengagement of the contacts and for locking the switch case to the means which renders the attaching means inaccessible.

1,806,308. CAMERA. JOHN B. PAUL, Pittsburgh, Pa. Filed Jan. 29, 1920. Serial No. 335,788. 3 Claims. (Cl. 242—71.)



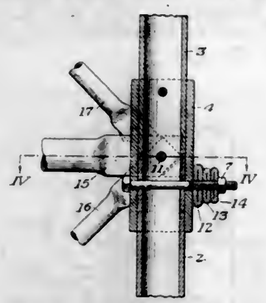
1. A camera of the continuous film type having a flat casing enclosing a middle exposure portion and provided at opposite sides of the exposure portion with plural active and inactive spool mounting devices.

1,806,309. TREATMENT OF PULP AND PRODUCT OF SAME. GEORGE A. RICHTER and MILTON O. SCHUR, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 5, 1927. Serial No. 210,999. 14 Claims. (Cl. 92—9.)



1. A process which comprises deresinifying previously liberated cellulose pulp, and then classifying the deresinified pulp into portion of different fiber lengths.

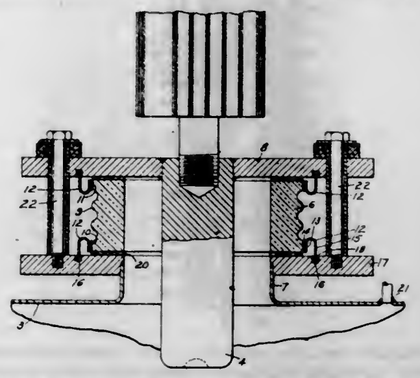
1,806,310. RECOVERY OF METALS. PRESTON ROBINSON, New York, N. Y., assignor to Guggenheim Brothers, New York, N. Y., a Copartnership. Filed Feb. 16, 1928. Serial No. 254,888. 19 Claims. (Cl. 75—17.)



1. The method of recovering tin from tin-bearing material containing tungsten compounds which comprises eliminating substantially all of the tungsten from the material by treatng the material successively with acid and alkaline solutions, and subjecting the material thus substantially freed of tungsten to a reducing operation in which a higher recovery of tin is directly effected as a consequence of the tungsten elimination.

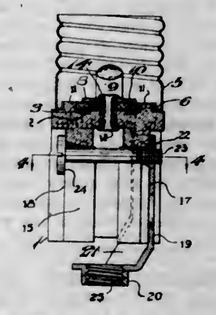
1,806,311. HIGH PRESSURE RECIPROCATING COMPRESSOR. CHARLES SCHAER, Langenthal, Switzerland, assignor to the Firm: Sulzer Frères Société Anonyme, Winterthur, Switzerland. Filed Nov. 20, 1928, Serial No. 320,553, and in Switzerland Dec. 12, 1927. 4 Claims. (Cl. 230—49.)

1. Apparatus of the class described comprising a primary cylinder, a primary piston within the primary cylinder, two secondary cylinders, a secondary piston within each secondary cylinder, conduits connecting each end of the primary cylinder with an end of each of the secondary cylinders and the opposite ends of the secondary cylinders with each other, liquid filling the space in the conduits and the primary and the secondary cylinders, and means for reciprocating the primary piston whereby motion is transmitted from the primary piston to the secondary pistons through the liquid.



1,806,312. SECTIONAL TUBULAR TOWER. MORGAN B. SCHILLER, Pittsburgh, Pa., assignor to American Tubular Elevator Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 25, 1929. Serial No. 380,818. 7 Claims. (Cl. 189—19.)

1. In a sectional tubular tower, alined leg sections, a sleeve surrounding the adjacent ends of the sections, a bolt passing through the sleeve and one of the leg sections to which a system of bracing for one side of the tower is secured, and a bolt passing through the sleeve between the abutting ends of the leg sections at right angles to the first bolt to which a system of bracing for another side of the tower is fastened.



1,806,313. SEAL FOR METAL-TANK RECTIFIERS AND THE LIKE. ERROL B. SHAND and LLOYD SMEDE, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1927. Serial No. 209,539. 5 Claims. (Cl. 250—27.5.)

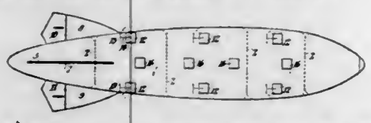
1. A mercury-vapor space-current discharge device comprising an evacuated metal tank having a tubular projection, a tubular ceramic member in alinement with said tubular projection, said ceramic member being susceptible of receiving a metallic glaze, a metallic glaze on that part of its outer surface which adjoins said tubular metal-tank projection, a metal sleeve soldered to said metallic glaze and said metal-tank projection, respectively, thereby providing a vacuum-tight joint, said joint being incapable, however, of withstanding the attacks of mercury, the abutting end surfaces of said ceramic and metal tubular members being smooth, plane surfaces, a compressed fiber washer

therebetween, said washer comprising closely wound spiral fibers tightly compressed in a direction parallel to the axis of the spiral and of a material which is impervious to mercury or mercury vapors, and mechanical clamping means for tightly drawing the parts together to compress said washer, said metal sleeve being so shaped as to admit the necessary motion between the two tubular members.

1,806,314. ELECTRIC LAMP HOLDER OR SOCKET. HAROLD E. SLADE, Glen Ridge and JOHN GEHRING, Jersey City, N. J., assignors to Beaver Machine & Tool Co., Inc., Newark, N. J. Filed Mar. 10, 1927. Serial No. 174,177. 2 Claims. (Cl. 173—358.)

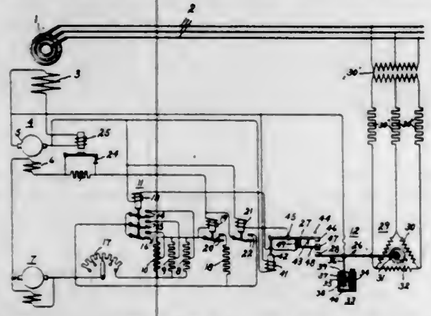
2. An electric socket comprising a lamp holding shell, a plurality of wire terminals, a base, and a supporting member; said base being provided with a transverse slot substantially the length of the base and channels situated either side of said slot; said support member being provided with flanges which slide in said channels; together with means passing thru said slot to maintain in fixed relationship said support to said base.

1,806,315. CHUCK FOR ROCK DRILLS. WILLIAM A. SMITH, Sr., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 25, 1928. Serial No. 315,020. 2 Claims. (Cl. 121—32.)



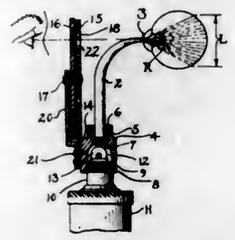
1. In combination with a rock drill cylinder and a front head having a bore therein and an introverted flange at its front end, of a hollow chuck in the bore extending beyond the rear end of the front head into the cylinder and seating with its front end against the flange, an in-

ternal flange in the chuck, a chuck bushing in the chuck and seating against the internal flange, and a chuck



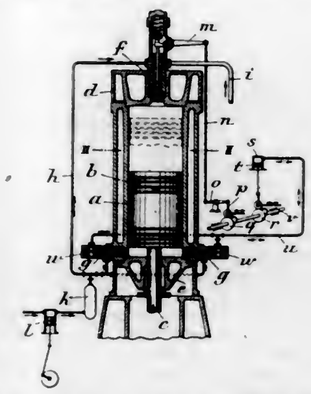
jaw threaded into the front end of the chuck and bearing against the chuck bushing to clamp said chuck bushing fixedly in the chuck.

1,806,316. AIRCRAFT. RUSSELL THAYER, Philadelphia, Pa. Refile of abandoned application Serial No. 749,898, filed Nov. 14, 1924. This application filed Feb. 11, 1929. Serial No. 339,190. 9 Claims. (Cl. 244—6.)



6. In an aircraft, the combination with a rotary propeller, arranged to propel said craft; of means, including a rudder, arranged to change the direction of progression of said craft; and a rotary gyroscopic body arranged to oppose changes in the direction of progression of said craft; said body having means suspending it from said craft, in stable equilibrium, but with its axis of rotation free for limited automatic movement altitudinally; whereby, wind pressure tending to turn the aircraft from a predetermined direction of traverse, may be opposed by the gyroscopic effect of said rotary body, so that such wind pressure may be utilized to propel the aircraft in directions oblique to the direction of the wind pressure.

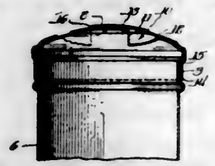
1,806,317. REGULATING SYSTEM. LOUIS W. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1929. Serial No. 364,183. 10 Claims. (Cl. 171—229.)



1. The combination with a dynamo-electric machine having a field winding, of a plurality of parallel resistors connected in series with said field winding, an adjustable resistance connected in series relation with said parallel resistors, and a regulator arranged for controlling simultaneously the effective value of a portion only of each of said parallel resistors and said adjustable resistance.

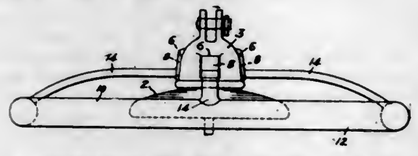
1,806,318. DIAGNOSTIC INSTRUMENT. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 2, 1928. Serial No. 274,489. 6 Claims. (Cl. 88—20.)

1. In a device of the character described, a handle, a source of light on the handle, a member attached to the handle and extending over the source of light, said member having a light opening therethrough and a lens seat therein and an extending arm having a sight opening therethrough, an elongated rod lens in the lens seat having a curved tapered upper portion terminating in a small rounded end portion in alignment with the sight opening, the cross section of the lens in alignment with the sight opening being of such a dimension as to permit sight of the eye around the lens.



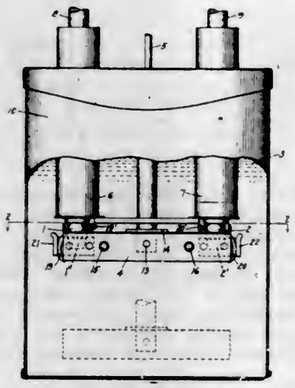
1,806,319. DOUBLE ACTING INTERNAL COMBUSTION ENGINE. MAX TRECHSEL, Winterthur, Switzerland, assignor to the Firm Sulzer Frères Société Anonyme, Winterthur, Switzerland. Filed May 22, 1928, Serial No. 279,693, and in Switzerland June 24, 1927. 3 Claims. (Cl. 123—61.)

1. In a double acting internal combustion engine of the fuel injection type, the combination with a device for injecting fuel with air to the upper combustion chamber of means for injecting fuel without air into the lower end of the cylinder adjacent to the crank.



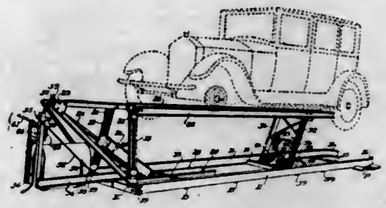
1,806,320. CONTAINER. FRED C. TRUESDALE, Rockford, Ill., assignor to J. L. Clark Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed July 23, 1928. Serial No. 294,729. 2 Claims. (Cl. 220—24.)

1. A container for permitting different measured quantities of its contents to be withdrawn by a spoon, said container having a side wall, an end wall having an opening therein large enough to enable a spoon to be inserted therethrough, and a closure plate mounted on said end wall to turn about the center thereof in sliding contact with the wall and also having an opening therein large enough to receive a spoon, said opening being shaped to form an



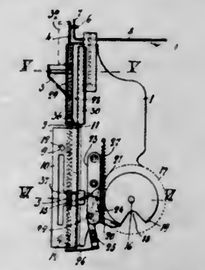
elongated mouth corresponding in shape to the cross-section of the bowl of the spoon when the openings are in register whereby either a level or heaping spoonful of the contents may be withdrawn by the spoon, said mouth being disposed wholly to one side of the axis of said cover whereby the mouth can be completely closed by turning the cover through a partial revolution.

1,806,321. TRANSMISSION LINE DEVICE. NILS A. WAHLBERG, Derry, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1929. Serial No. 337,249. 10 Claims. (Cl. 173—318.)



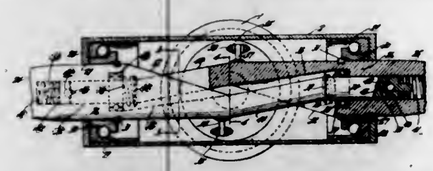
1. A transmission-line device comprising an insulator of the cap-and-pin type and a field-control element, one of said cap and field-control elements having a substantially plug portion and the other a cooperating substantially socket portion for positioning the field element relative to the insulator.

1,806,322. ELECTRIC CIRCUIT BREAKER. LUDVIG S. WALLE, Lansdowne, Pa., assignor to General Electric Company, a Corporation of New York. Filed May 21, 1930. Serial No. 454,442. 4 Claims. (Cl. 200—87.)



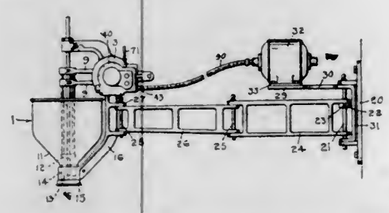
1. A circuit breaker comprising a stationary contact, a pair of movable contact blades adapted to engage opposite sides of said stationary contact, said blades being biased toward each other, an auxiliary contact connected to said stationary contact, and a co-acting auxiliary contact connected to and mounted upon one of said contact blades whereby arcing current during the switch opening movement traverses but one of said contact blades.

1,806,323. LIFTING APPLIANCE. GAILARD E. WEAVER and ALBERT R. SQUYER, Springfield, Ill., assignors to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed June 9, 1927. Serial No. 197,689. 6 Claims. (Cl. 254—91.)



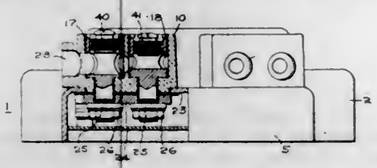
1. In an automobile lifting-appliance, the combination of a main-frame, a load-lifting frame adapted to engage the under side of an automobile and to raise and lower it, a triangular front frame hinged at one angle to said main-frame and hinged at an adjacent angle to said load-lifting frame, a cylinder rockingly mounted at its lower end on said main-frame, a plunger reciprocatory in said cylinder, a plunger-rod connected to said plunger and hinged at its other end to the third angle of said triangular frame, an electric-motor on said main-frame, a pump operated by said motor, a fluid supply-tank, a conduit connecting said tank to said pump, a conduit connecting said pump to said cylinder below said plunger therein, a valve-controlled by-pass connecting said conduits together around said pump, an electric-switch in the circuit of said electric-motor, means to open said electric-switch automatically when said load-lifting frame reaches its uppermost position, a hook on said main-frame arranged to engage said triangular front-frame automatically when said load-lifting frame reaches its uppermost position to prevent unintentional descent of the latter, a rear link longer than the corresponding side of said triangular frame pivotally connected at its back end to said load-lifting frame, a first downwardly forwardly inclined cam-track means terminating in an abutment, roller means at the lower end of said rear link cooperating with said cam-track means, a second upwardly forwardly sloping cam-track means, and roller means on an intermediate portion of said rear link, coacting with said second cam-track means, whereby when the motor is operated the pumped fluid forces said plunger upwardly causing the elevation of the front part of said load-lifting frame at first more rapidly than its rear part, the final elevated position of said load-lifting frame being substantially horizontal.

1,806,324. SAVINGS BOX CLOCK. AAGE GEORG PETER WIINGAARD, Copenhagen, Denmark. Filed June 22, 1928, Serial No. 287,409, and in Germany June 29, 1927. 2 Claims. (Cl. 194—1.)



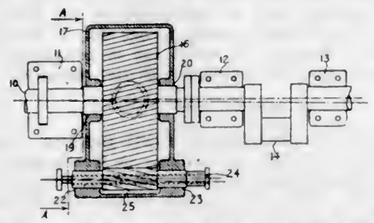
1. A coin chute for a savings box clock having a fixed longitudinal side wall, a movable longitudinal side wall parallelly adjustable relatively to said fixed wall, a movable narrow front wall integral with said movable side wall and a narrow rear wall adjustably secured to said fixed side wall.

1,806,325. ADJUSTABLE AND REVERSIBLE PROPELLER FOR AEROPLANES OR OTHER AIRCRAFT. ROY F. WOODEN, Mount Vernon, Ill. Filed Mar. 12, 1930. Serial No. 435,070. 5 Claims. (Cl. 170—163.)



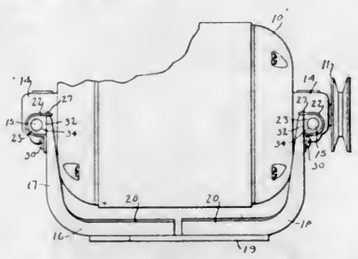
1. In a device of the kind described, a hub, an elongated cylindrical shell transversely mounted on the hub, a pair of propeller blades with rounded inner end portions journaled in the said shell, the said rounded inner end portions having channels in one side and having bores opening out into the said channels, journals on the same ends of the said propeller blades, the journal of each blade being journaled in the bore of the other blade, and means for rotating the blades on their longitudinal axis.

1,806,326. DOUGHNUT MACHINE. WALTER BELSHAW, Seattle, Wash. Filed Oct. 21, 1930. Serial No. 490,175. 8 Claims. (Cl. 107—14.)



4. In a doughnut machine having a pair of cam-actuated pistons and an outwardly projecting piston cylinder for forming raw doughnuts, and a driving shaft; a motor, a casing secured to said machine and adapted to house said shaft, speed reduction gearing for transmitting motion from said motor to said shaft, comprising a driven shaft journaled in the casing and operatively connected with said motor, a worm mounted on said driven shaft and rotatable therewith, a worm wheel mounted on said driving shaft and rotatable thereon, said wheel meshing with said worm and provided with an opening for a clutch pin, a clutch collar fixedly secured to said driving shaft, a clutch pin disposed in said collar and engageable with said opening, and means associated with said collar and pin for withdrawing said pin from said wheel at a predetermined point and whereby said pistons may be stopped in raised positions above the outer terminal of said cylinder.

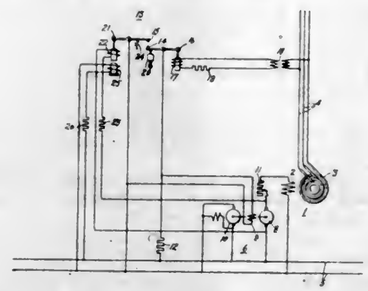
1,806,327. METER TERMINAL. WILLIAM BRADSHAW and WALTER G. MYLIUS, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 27, 1925. Serial No. 40,078. 5 Claims. (Cl. 173—259.)



1. The combination with electrical apparatus comprising an insulating body, spaced insulated terminal members embedded therein having contact surfaces longitudinally spaced along, and disposed different distances laterally from, the axis of an opening in the insulating body, said body also having lateral openings therein opposite said contact surfaces, threaded metal sleeves in said lateral openings and binding screws in said sleeves, of a terminal lead comprising a plurality of conductors insulated from each other and with one conductor thereof projecting longitudinally beyond an end of another conductor and along said axis to adapt said conductors for individual cooperation with said contact surfaces.

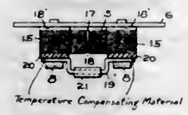
1,806,328. GEAR POWER TRANSMISSION. ERIC BROWN, Baden, Switzerland. Filed Feb. 16, 1929, Serial No. 340,548, and in Germany Mar. 12, 1928. 4 Claims. (Cl. 74—7.)

1. In means for transmitting power from a plurality of prime movers, a main shaft having one of the prime movers connected directly thereto, a gear attached to said shaft, a pinion gear for driving said first-mentioned gear, said pinion being connected with a second prime mover and having the axis thereof so supported as to be maintained in parallel with the axis of said first-mentioned gear, and means for supporting said pinion in dependence on the position of said shaft.



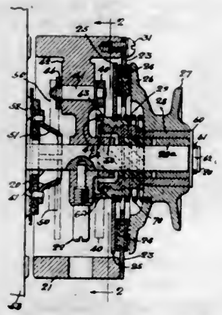
1,806,329. MOTOR MOUNTING. HERBERT L. BAUMP, Dayton, Ohio, assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 27, 1929. Serial No. 358,654. 7 Claims. (Cl. 248—16.)

1. An electric motor mounting comprising a support embodying upwardly extending end members adapted to lie along opposite ends of a motor, said end members each having a pair of laterally spaced apart holders provided adjacent the upper ends thereof, blocks of yielding material held in said holders, said blocks having openings adapted to receive and enclose motor projections, the blocks being restrained in said holders against movement in both upward and downward directions.



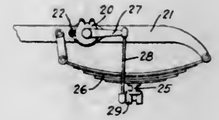
1,806,330. ELECTRICAL REGULATING SYSTEM. FRANK A. BYLES, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1930. Serial No. 431,594. 5 Claims. (Cl. 171—225.)

1. In an electrical regulating system, a vibratory contact regulator, said regulator including a multi-coil antihunting magnet, means under the control of said magnet for varying an electrical condition to be regulated inversely as the net magneto motive force of said magnet varies, one of said coils being connected across a voltage which is controlled by said regulator and which varies inversely with regulated changes in said regulated



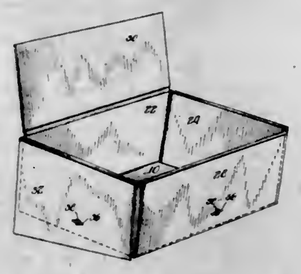
quantity, another of said coils being connected across a voltage which is controlled by said regulator and which varies inversely with regulated changes in said regulated quantity, another of said coils being connected to a substantially constant voltage source of energy so that its magneto motive force is opposite to and greater than that of said first mentioned coil.

1,806,331. INDUCTION METER. ALBERT CALLSEN, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 15, 1928. Serial No. 261,895, and in Germany Apr. 4, 1927. 19 Claims. (Cl. 171—264.)



1. An inductance coil provided with a core having an air gap, means including a member of a material having a negative temperature coefficient of permeability shunting said air gap, and a closed-circuit winding encircling said member.

1,806,332. CENTRIFUGAL CLUTCH. WILLIAM A. CHRYST, Dayton, Ohio, assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 5, 1928. Serial No. 290,417. 14 Claims. (Cl. 192—105.)

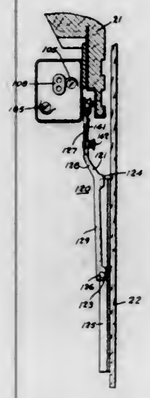


1. A centrifugal clutch comprising, in combination, coaxially rotatable driving and driven members, one having axial movement relative to the other; nut-and-screw provisions connected with the driven member for frictionally engaging the members by threading one part relative to the other; and a speed responsive device connected with the driving member for frictionally connecting one part of the nut-and-screw provisions with the driving member in order to effect relative movement between the nut-and-screw to cause the clutch members to be engaged.

1,806,333. SHOCK ABSORBER. WILLIAM A. CHRYST, Dayton, Ohio, assignor to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 4, 1929. Serial No. 337,190. 22 Claims. (Cl. 188—89.)

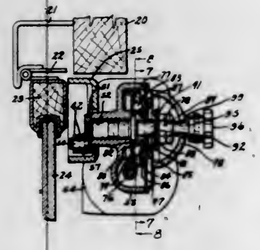
1. A shock absorber comprising, in combination, a casing providing a cylinder; a piston reciprocable in said cylinder, dividing it into two compartments; a fluid flow controlling means adapted to establish a flow of fluid from one compartment to the other in response to the movement of the piston in one direction only; and a second fluid flow controlling means adapted to establish a flow of fluid from the said other compartment to the first mentioned compartment in response to the movement of the piston in the other direction.

1,806,334. DISPLAY AND SHIPPING CONTAINER. JAMES H. CLARK, Chicago, Ill., assignor to Swift and Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1929. Serial No. 410,370. 1 Claim. (Cl. 206—44.)



A combined shipping and display container, comprising, in combination, a bottom, vertical walls extending upwardly from the bottom, and flaps secured to the upper edges of the vertical walls of the container to serve in supporting the container in a display position, and a plurality of fasteners carried by the vertical walls and adapted to engage the flaps to maintain them in supporting position.

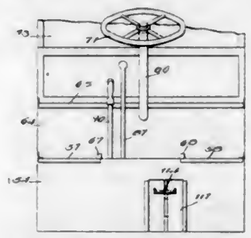
1,806,335. WINDSHIELD WIPER. ROBERT M. CRITCHFIELD, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 12, 1929. Serial No. 332,112. 5 Claims. (Cl. 15—253.)



1. In a windshield cleaner, the combination comprising, an operating shaft, means for operating the shaft, a wiper arm connected to the shaft for operation therewith,

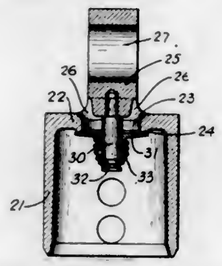
yet capable of angular displacement with respect to the said shaft, and means engaging the shaft end and wiper arm tensioning the wiper arm toward the surface to be cleaned said means including a U-shaped spring clip

seated in the shaft end, and having ears engaging the arm to hold it in spaced relation therefrom, and a spring coupled to the clip and a part of the wiper arm remote therefrom.



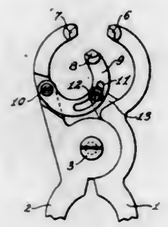
1,806,336. WINDSHIELD CLEANER. ROBERT M. CRITCHFIELD, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed July 27, 1929. Serial No. 381,516. 5 Claims. (Cl. 15—253.)

1. In a windshield cleaner the combination comprising, a motor, means supporting said motor, wiper mechanism adapted for engagement with the windshield also supported by said means and driven by said motor, and a clutch connecting said motor to said wiper mechanism comprising, a crankshaft provided with a recessed driving plate, a worm wheel driven by said motor and providing a circular row of holes coincident with said plate recesses, balls disposed in said holes and a spring retainer acting to maintain said plate, wheel and balls in coupled engagement only when said wheel is driven by said motor, whereby said wiper mechanism will be actuated when said motor is energized and may be actuated without energization of said motor.



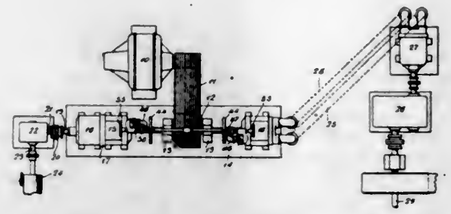
1,806,337. VEHICLE. JAMES E. DUNLAP, Chicago, Ill., assignor to Walker Vehicle Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1929. Serial No. 385,835. 1 Claim. (Cl. 280—2.)

In a motor delivery vehicle the combination of a body provided with a transverse aisle therethrough forming a passageway for the operator of the vehicle, there being steering and control mechanism at the front of the aisle accessible to the operator standing in the aisle, a front wall for the lower part of the aisle, there being a recess in the front wall for receiving the foot of the



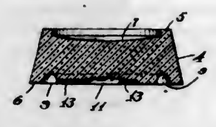
operator and a vehicle controlling a pedal disposed in said recess and accessible for manipulation by the foot of the operator standing in said aisle.

1,806,338. PISTON. GEORGE W. ELSEY, Dayton, Ohio, assignor to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 21, 1929 Serial No. 348,910. 4 Claims. (Cl. 230—221.)



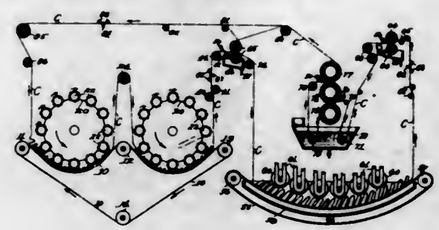
4. A fluid displacement device comprising in combination, a cup-shaped body portion having a cylindrical skirt and an end wall provided with an opening; a mounting lug on said end wall having the narrower side centrally disposed of one plane passing through the axis of the body portion, the axis of the broader side of the lug, however, being offset from the plane passing through the axis of the body portion at right angles to the aforementioned plane; a ridge on the end wall providing a valve-seat about the opening therein; a valve-stem attached to the lug and extending through the opening in the end wall; a valve slidably supported upon the valve-stem; and a spring yieldably urging the valve into engagement with the valve-seat.

1,806,339. EXPANDING DEVICE. WHEATON C. FERRIS, University City, and ROSE M. BRENNAN, St. Louis, Mo. Filed Aug. 7, 1930. Serial No. 473,689. 3 Claims. (Cl. 81—5.1.)



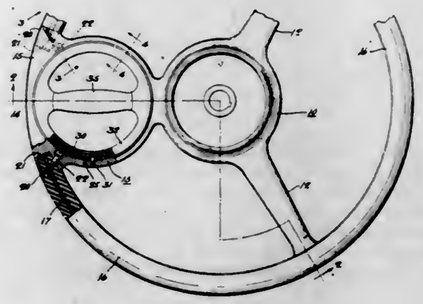
1. An expanding device, comprising a pair of movable arms, a third arm pivoted to one of said arms and movably connected with the other, expanding elements on the ends of said arms, said ends being normally adjacent, and means for moving said arms so as to separate said elements.

1,806,340. ADJUSTING MEANS FOR HYDRAULIC GEAR DRIVES. DANIEL ROBERT FRANCIS, Waterbury, Conn., assignor to The Waterbury Tool Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 6, 1929. Serial No. 390,702. 8 Claims. (Cl. 74—7.)



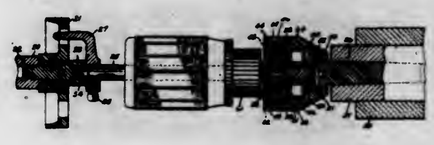
1. In a hydraulic driving gear installation, a plurality of driving gear units each provided with an adjustable control shaft, an individual controlling device for each of said control shafts, a master controlling device, and normally inactive clutch means interposed between said master device and said control shafts and automatically rendered active upon operation of said master device, and means whereby said clutch means is automatically restored to its normal inactive condition when the operation of said master device ceases.

1,806,341. CUSHION. GEORGE V. GAVAZA, Quincy, Mass. Filed Jan. 8, 1929. Serial No. 331,062. 3 Claims. (Cl. 248—16.)



1. A cushion for motor-driven household machines, radio sets and musical instruments comprising a body formed of elastic material having a pocket in its top face in which the leg or caster of the machine is supported and having in its bottom face an annular recess for causing the cushion to grip a supporting surface and a central air-pocket communicating with the recess for absorbing the vibrations of the machine.

1,806,342. FULLING AND WASHING MACHINE. DAVID GESSNER, Worcester, Mass. Filed Apr. 7, 1930. Serial No. 442,088. 20 Claims. (Cl. 26—20.)



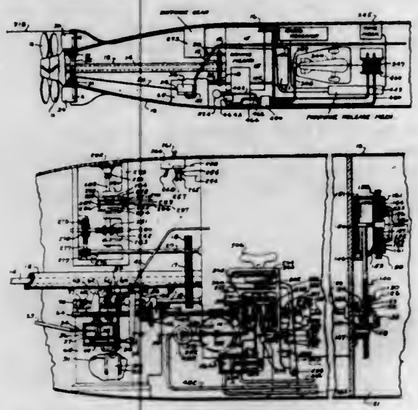
1. In a fulling machine, a movable supporting surface adapted to receive cloth at full width and transversely folded, a plurality of fulling rolls, a carrier in which said rolls are mounted in a circular series, means to rotate said carrier and said rolls with said carrier, said rolls engaging the folds of cloth on said supporting surface and having a rolling movement in engagement therewith.

1,806,343. STEERING WHEEL WITH SWIVEL SPOKE. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 3, 1928. Serial No. 266,936. 2 Claims. (Cl. 74—33.)

2. A steering wheel comprising: a cast metal spider having a relatively large central hub and having integrally cast to the periphery thereof an annular ring portion extending radially outward to the rim circle, a rim fixed to the outer edge of said annular ring, and a hand grip rotatably mounted within said annular ring.

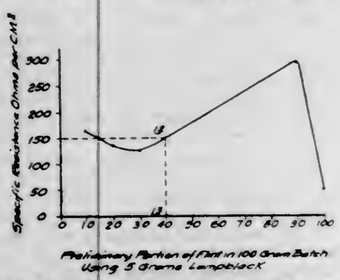
1,806,344. SHAFT CENTERING SUPPORT. LOUIS C. GOAD, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 29, 1928. Serial No. 329,216. 13 Claims. (Cl. 82—45.)

1. A shaft centering support for a lathe stock, comprising in combination, a bearing outer-race member; a bearing inner-race member; tapered anti-friction members between the race members, the bearing surfaces of said members being so shaped that axial movement of one race member relative to the other tends to align the axes of the race members; means for supporting the outer race member coaxially with the lathe stock; and a cylindrical socket provided coaxially within the bearing track of the inner race member for receiving a cylindrical body, a cylindrical surface of which is to be supported concentric to the axis of the lathe stock.



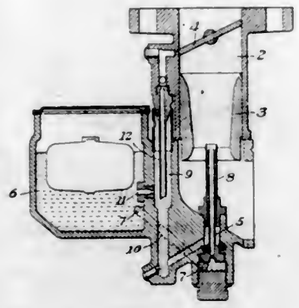
13. A shaft centering support for a lathe tail stock, comprising in combination, a cup-shaped member having a shank adapted to be received by a tail stock; an anti-friction bearing including inner and outer races and intermediate rolling members constructed and arranged to provide lateral and axial support, the outer race being held by the cup-shaped member coaxially with the shank; and the inner race providing an internal conical surface coaxial with the outer race; a split bushing having a central, interrupted, cylindrical recess for receiving a cylindrical body and an exterior, interrupted, conical surface concentric with the recess and engageable with the internal conical surface of the inner race; and means for limiting relative endwise movement between the body and bushing to cause the bushing to engage said internal conical surface of the inner race and to cause the bushing to grip the body in response to relative endwise movement between the body and the bearing.

1,806,345. SCREW PROPELLER. OLE G. HALVORSEN, Chicago, Ill. Filed Mar. 19, 1929. Serial No. 348,253. 8 Claims. (Cl. 170—159.)



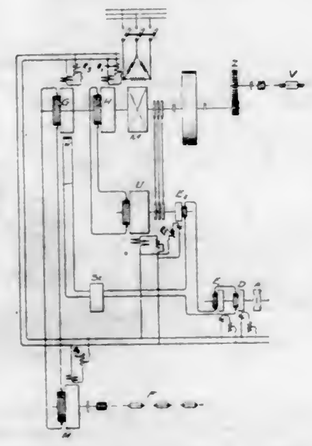
1. In a screw propeller the combination of a propeller blade and a hub, a neutral line on said blade, the portion of the surface of said propeller blade lying inside of said neutral line being curved in a plane perpendicular to the axis of rotation, and the portion of the surface of said propeller blade lying outside of said neutral line being curved in a plane through the axis of rotation.

1,806,346. PARAVANE TORPEDO. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Feb. 8, 1928. Serial No. 252,716. 39 Claims. (Cl. 114—21.)



1. In a torpedo a pair of auxiliary members, means for directing said torpedo in response to the influences received by one of said auxiliary members, and means for releasing both of said auxiliary members after said torpedo has been directed in response to influences received by one of the members.

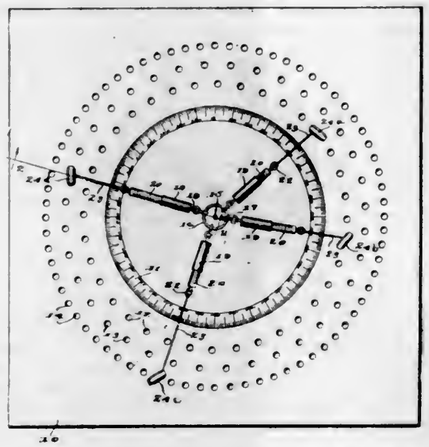
1,806,347. RESISTANCE MATERIAL AND METHOD OF MAKING SAME. EARL J. HAVERSTICK, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 3, 1926. Serial No. 120,457. 8 Claims. (Cl. 201—76.)



1. A method of manufacturing a resistor consisting of first mixing a portion of flint with a portion of lampblack and water, then adding another portion of flint, mixing, adding a binder, forming and baking.

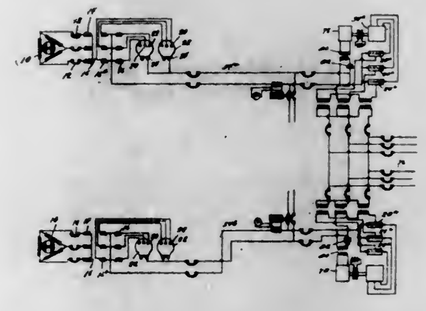
1,806,348. CARBURETOR. VICTOR R. HEFTLER and HARRY B. NORRIS, Detroit, Mich., assignors to Zenith-Detroit Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 12, 1925. Serial No. 49,726. 4 Claims. (Cl. 261—41.)

1. In a carburetor having a constant level chamber and a carbureting passage, a venturi in said passage, an atmospheric well receiving a restricted amount of fuel from said chamber, a fuel feeding device adapted to deliver only fuel throughout the entire range of operation of the carburetor, a plurality of other fuel feeding devices adapted to separately receive fuel from said well at different levels and separately discharge the same within said venturi, a restriction in said well between the levels at which said last mentioned fuel feeding devices receive fuel therefrom, and an idling feed device positioned in said well and terminating adjacent said restriction, substantially as described.



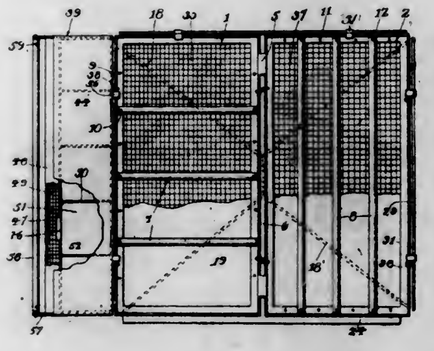
1,806,349. ELECTRIC ROLLING MILL DRIVE WITH LEONARD CONTROL. HUGO HEYMANN, Friedenau, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 5, 1926, Serial No. 139,729, and in Germany Nov. 17, 1925. 1 Claim. (Cl. 172—239.)

In combination in an adjustable speed electric drive for a rolling mill and the like having a plurality of stands,



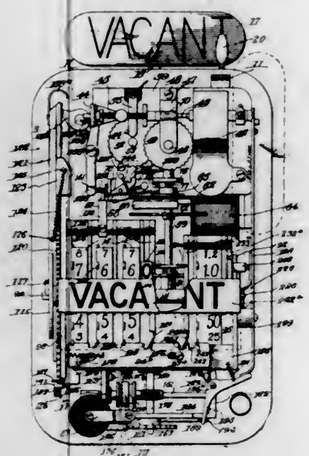
an alternating current motor for driving one of said stands, a Leonard drive for another of said stands comprising a separately excited generator driven by said motor and a separately excited motor connected to said other stand and supplied with armature current from said generator, a Krämer cascade regulating control for said alternating current motor, said control comprising a separately excited converter motor mechanically connected with said alternating current motor and an intermediate converter electrically interconnecting the secondary of said alternating current motor and said converter motor, means for varying the excitation of said converter motor and said generator to adjust the basic speeds of both said stand drive motors, and means for automatically regulating the excitation of said generator to compensate for variations in the slip of said alternating current motor comprising a separately excited exciter driven by said intermediate converter and two independently driven separately excited exciters, the armatures of said exciters being connected in series relation, means for adjusting the excitation of said exciters for different basic speeds of the drive whereby the voltage of said exciter driven by said intermediate converter neutralizes the voltage of one of said separately driven exciters while the slip of said alternating current motor is a predetermined value.

1,806,350. FORCE TABLE. CHARLES HIRE, Murray, Ky. Filed Aug. 28, 1928. Serial No. 302,586. 8 Claims. (Cl. 85—12.)



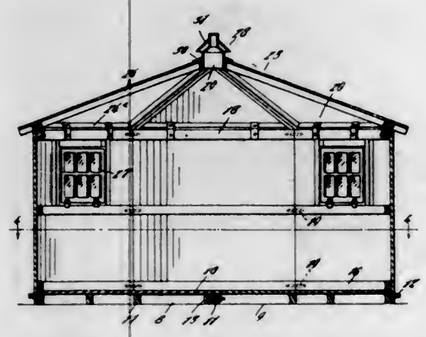
1. In a device of the class described, a base, a circular degree scale centered on said base, a reference member rising from said base at the center of said scale, an annular member loosely encircling said reference member, a plurality of flexible members each attached at one of its ends to said annular member and adapted to be radiated therefrom to intersect graduations on the scale indicative of the length of arc between the angles at which given forces act, graduated scale balances carried by said flexible members and keys for tensioning certain of said flexible members to adjust said balances so that they indicate the forces in the ratios corresponding to the said angles, so that the resultant value shall be zero, each force being the resultant of all others taken in opposite directions, as will be indicated when said annular member is centered relatively to said reference member, said base having a plurality of circular groups of spaced apertures formed in the same at the outer side of said circular scale whereby to be interchangeably engaged by said keys, said aperture groups being arranged concentrically of said circular scale and one with respect to the other.

1,806,351. HIGH TENSION DIRECT CURRENT TRANSMISSION. GUSTAV E. JANSSON, Wolaston, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed July 15, 1927. Serial No. 206,070. 18 Claims. (Cl. 171—97.)



16. A power generating and distributing system including a transmission line extended between remote points, a source of multiphase high tension alternating current connected to said line at one end thereof, rectifying means to convert said high tension alternating current to a high tension direct current having a superimposed alternating current component of small magnitude, and converting means disposed at the remote end of said transmission line to convert said high tension direct current to a low tension alternating current including means influenced by said superimposed alternating current component to control the frequency of said low tension alternating current.

1,806,352. POULTRY ROOST. KRISTOFFER M. JENSEN and CASPER B. HUSCHKE, Morgan, Minn. Filed Mar. 16, 1928. Serial No. 262,218. 7 Claims. (Cl. 119—22.)

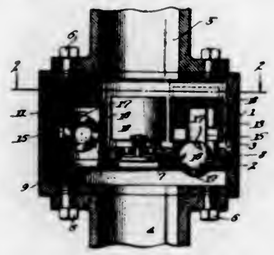


1. A poultry roost comprising an integral skeleton structure providing a pair of spaced, sidewise aligning, horizontally disposed, rectangular frames, said frames having certain of the rails thereof provided with spaced openings below the top edges of the rails, a set of spaced perch poles housed within each frame and mounted on those rails of the frame provided with openings, said perch poles positioned below the top edges of the rails, and spaced depending pins carried by each of said poles and extending through a pair of opposed openings for detachably securing the pole in position to arrest the shifting thereof when arranged in a frame.

1,806,353. REGISTERING MECHANISM. CLARENCE E. JOHNSON and FRED C. KOESTNER, Chicago, Ill. Filed Oct. 6, 1921. Serial No. 505,787. 9 Claims. (Cl. 235—30.)

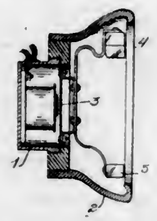
1. A registering device having registering mechanism, electro-magnetic means to actuate the same including normally spaced contacts, a base, a stub shaft journaled in said base, means carried by the stub shaft abutting the base exteriorly, a disk slidable on the stub shaft and abutting the inner surface of the base, an expansive spring on the stub shaft to maintain the disk in frictional engagement with the base, and means to control the operation of the contacts carried by said disk.

1,806,354. PORTABLE BUILDING. HARRY G. LANOE, St. Elmo, Ill. Filed Oct. 12, 1929. Serial No. 399,258. 3 Claims. (Cl. 20—2.)



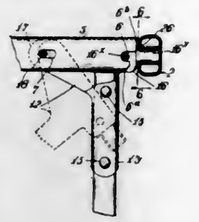
1. The portable building comprising an octagonal floor consisting of a pair of symmetrical half sections disposed in abutting relation, a marginal ledge at the peripheral portion of the floor and projecting outwardly therefrom in a plane below the floor surface, a plurality of separable side walls attached to and rising perpendicularly from said floor to form an octagonal enclosure, and a sectional roof mounted on said side walls, said side walls being provided on their inner faces and adjacent the lower ends with mop boards engaged over the outer edge portions of the floor sections and supporting the side walls with their lower ends seated upon the said ledge.

1,806,355. HAIR WAVING APPLIANCE. CARRIE O. LONG, Chicago, Ill. Filed June 11, 1929. Serial No. 370,127. 6 Claims. (Cl. 132—38.)



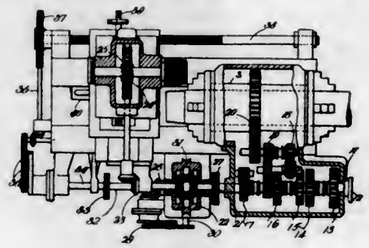
1. A hair waving comb comprising a strip of material shaped to conform to the contour of the head and to extend from one side thereof to the other, said strip of material having a series of obliquely directed teeth formed integral therewith.

1,806,356. METHOD AND APPARATUS FOR TREATING MOTOR FUEL. ROSS M. LYNN and WILLIAM M. MALOUF, Salt Lake City, Utah, assignors to Atomic Power Corporation, Salt Lake City, Utah, a Corporation of Delaware. Filed Oct. 26, 1929. Serial No. 402,760. 12 Claims. (Cl. 48—180.)



1. In a fuel stream conduit, means for subdividing a fuel stream passing through the conduit into a plurality of sub-streams, rotary means for agitating each of said sub-streams, and means for varying the number of sub-streams in accordance with variations in the volume of the total fuel stream.

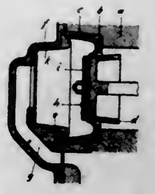
1,806,357. APPARATUS FOR AND METHOD OF CULTIVATING AND IMPROVING THE HEARING. JOEL W. MACDONALD, Houston, Tex., assignor to the Tactiphone Company, Houston, Tex., a Corporation of Texas. Filed June 17, 1929. Serial No. 371,557. 7 Claims. (Cl. 179—107.)



1. A method for improving the hearing which comprises vibration in the air column leading to the inner ear synchronously with vibration positively affecting the mastoid eminence behind the ear.

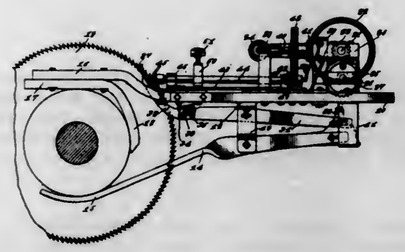
1,806,358. FOLDING COT. FRED G. MANLY, Chicago, Ill., assignor by mesne assignments, to George I. Goldwyn and Herman Goldwyn, Chicago, Ill., Copartners, doing business as Goldwyn Brothers. Filed Apr. 20, 1925. Serial No. 24,328. 1 Claim. (Cl. 5—117.)

A folding cot comprising horizontally disposed sectional side frame members, each provided at its ends with a longitudinally extending slot and a longitudinally extending notch, crossed leg members supporting said side frame members, a bracket fixed to each leg member and carrying parallel pins, one of said pins extending through one of the slots in the side frame member and the other pin being adapted to engage one of the notches of the side frame member when one of the leg members is in a certain position and moved lengthwise of the side frame member, a sheet connecting the side frame members, and end bars connected to the sheet and bearing against said brackets for holding certain of the pins in said notches.



1,806,359. THREAD MILLING MACHINE. ROBERT JAMES MCLEOD, West Drayton, England. Filed Oct. 2, 1928, Serial No. 309,777, and in Great Britain July 18, 1928. 4 Claims. (Cl. 10—154.)

1. In a machine for milling screw threads by hobs of the same pitch as the work in which after the thread has been cut to depth a finished cut multiplies the facets, a main driving shaft, change speed gear on said shaft, a spindle carrying the work, a spindle, the axis of which is parallel to said work spindle, carrying said hob, means by which said change speed gear imparts an equal and relatively slow speed to both of said spindles on cutting to depth and an equal and relatively faster speed to said spindles on the return motion and a differential gear interposed between said change speed gear and said hob spindle by which an additional speed of rotation, of not more than one in 200 revolutions, is imparted to the hob spindle relatively to the work spindle in the final cut in multiplying the facets, a lead screw and means by which the additional rotation is imparted to the said lead screw.



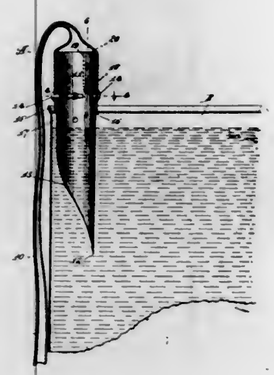
1,806,360. DIAPHRAGM PISTON, IN PARTICULAR FOR CONTROL VALVES FOR AIR BRAKES. ERNST MÖLLER, Karlshorst, Berlin, Germany. Filed Sept. 28, 1929, Serial No. 395,825, and in Germany Aug. 14, 1928. 2 Claims. (Cl. 60—62.6.)

1. In a compressed air brake mechanism, the combination of a casing or housing, a piston reciprocable in said casing, a flexible diaphragm connecting the head of the piston and the peripheral wall of the casing, and a closure for the end of said casing remote from the piston having formed therein a channel, for supplying

air under pressure to the casing, which communicates with the casing at a level above the lower surface of the casing chamber, and a bore for returning to said channel moisture that may collect in the casing adjacent the diaphragm.

1,806,361. SAW FILING MACHINE. JOSEPH JACKSON MOORE, Karnack, Tex. Filed July 24, 1929. Serial No. 380,598. 2 Claims. (Cl. 76—32.)

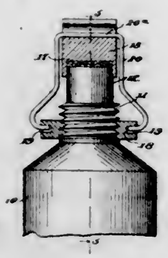
1. A saw filing machine comprising a frame, means carried by the frame for supporting the saw for rotation, a pair of spaced parallel shafts, filing disks carried by said shafts and arranged slightly in advance of each other for simultaneously filing each tooth of the saw from opposite sides thereof, means including an operating handle for rotating said shaft, means controlled from said handle for intermittently rotating the saw to bring each successive tooth into proper relation with the filing means, means for shifting the said shafts and filing disks to an out of the way position while the saw is being rotated and means for returning said shafts and disks to normal operative position after each rotation of the saw.



1,806,362. CONCENTRATION OF ORES BY FLOTATION. FREDERICK G. MOSES, New York, RAYMOND W. HESS, Buffalo, and ROBERT L. PERKINS, East Aurora, N. Y., assignors to the Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1927. Serial No. 193,055. 8 Claims. (Cl. 209—166.)

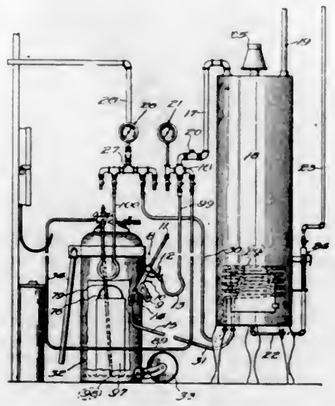
1. In effecting the concentration of minerals by flotation, the process which comprises incorporating with the mineral pulp a mercaptothiazole compound containing a monovalent organic radical as a substituent attached to the thiazole nucleus, and subjecting the resulting mixture to a froth flotation operation.

1,806,363. DISPENSING DEVICE. LAURITZ MARTIN NARBO, Brooklyn, N. Y. Filed June 27, 1929. Serial No. 374,128. 4 Claims. (Cl. 221—23.)



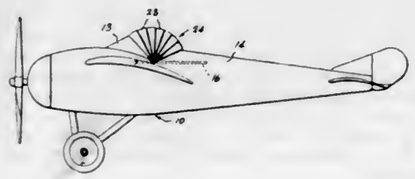
1. A dispensing device including a flexible conduit and a hollow cylindrical member fitted within one end of, secured to said conduit and protruding therefrom, said

protruding end being cut to form a pointed terminal having diverging cutting edges for perforating a wall of, removing therefrom and ejecting into the container a circular portion of the wall to afford an outlet opening, the said cylindrical member being of gradually increasing



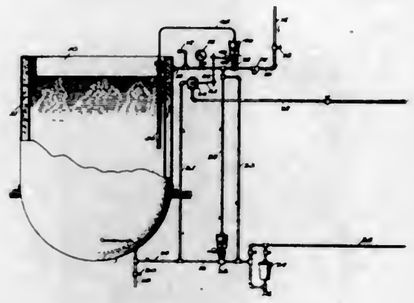
diameters from its pointed terminal to its juncture with the conduit, whereby to snugly fit the outlet opening formed in the container, the attached end of the conduit presenting a shoulder for limiting the insertion of the member into the container.

1,806,364. CLOSURE CAP FOR COLLAPSIBLE AND OTHER CONTAINERS. THOMAS S. NEWMAN, Okmulgee, Okla. Filed Sept. 25, 1929. Serial No. 395,037. 1 Claim. (Cl. 221—60.)



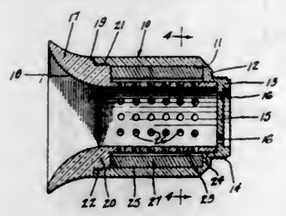
A collapsible tube comprising a body portion and a closure therefor, said body portion terminating in a nozzle having external threads at its base and an upstanding reduced cylindrical unthreaded portion at the outer end thereof, said closure member having a cavity adapted to receive said unthreaded portion, a nut adapted to engage said screw threads, and a U-shaped wire bail connected to both said cap and said nut in loose double pivotal relationship therewith, said cap being disengaged from said unthreaded portion by a slight outward movement of the nut on said screw threads which movement leaves said nut engaged with said threads, and said nut adapted to act through the bail to draw said cap down upon said unthreaded portion when said nut is moved inward on said screw threads.

1,806,365. SYSTEM AND APPARATUS FOR SPRAYING. JENS A. PAASCHE, Wilmette, Ill. Filed May 18, 1925, Serial No. 30,913. Renewed Oct. 13, 1930. 3 Claims. (Cl. 299—84.)



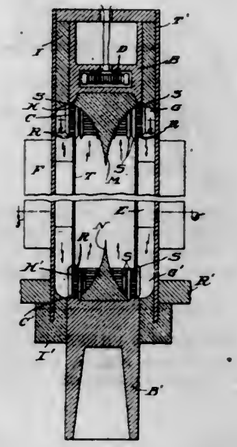
1. Apparatus for the purpose specified comprising in combination a compressed air header, a pressure gauge in conjunction therewith, a water header, a pressure gauge in conjunction therewith, means for supplying compressed air to said compressed air header, means for supplying hot water to the water header, an air tight container, a receptacle for cleaning liquid therein, means for delivering compressed air to the container under control of the operator, a pressure gauge for indicating the pressure within said container, an air gun, couplings for liquid and air thereon, means for preheating air, a connection from the air header thereto, a connection from said preheating means to the air coupling of the air gun, a connection from the receptacle within the compressed air container to the water header for supply of cleansing liquid thereto, means under control of the operator for regulating the pressure of cleansing liquid so supplied to the water header, and a connection from the water header to the liquid coupling of the air gun, substantially as described.

1,806,366. ADJUSTABLE COVER FOR COCKPITS. JOEL L. PIVAK, New York, N. Y. Filed Aug. 11, 1930. Serial No. 474,518. 8 Claims. (244—30.)



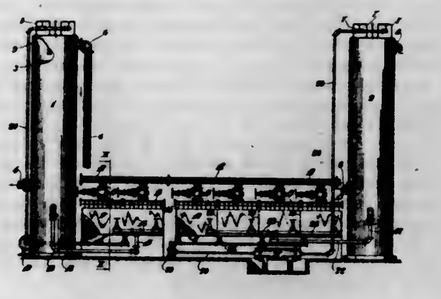
1. A cockpit protector, comprising in combination a collapsible hood, a hood carrier, carrier supporting and guide means, adapted to be secured to the interior of the cockpit of a vehicle, said hood carrier in slidable engagement with said supporting and guide means and adapted to be adjustable relative to the latter.

1,806,367. AUTOMATIC REGULATOR. FRANK C. REEDER, Knoxville, Tenn., assignor to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed July 10, 1929. Serial No. 377,243. 19 Claims. (Cl. 257—4.)



1. In a device of the character described, in combination with a container, a jacket therefor and connections leading to and from said jacket and communicating with sources of heating and cooling medium, a valve controlling the admission of heating medium, a valve controlling the admission of cooling medium, a thermostat for operating said first named valve, and connections including a movable member between said valves whereby said second named valve is opened and said first named valve is closed by the movement of said member.

1,806,368. MOUTHPIECE FOR TELEPHONES OR SPEAKING TUBES AND LIKE INSTRUMENTS. EDWARD W. ROBERTS, Chicago, Ill. Filed Oct. 21, 1929. Serial No. 401,244. 1 Claim. (Cl. 179—185.)

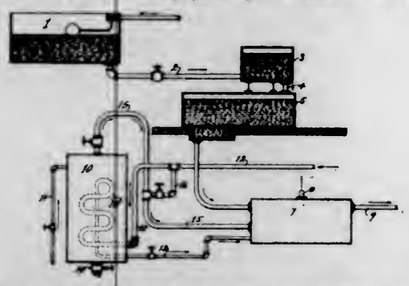


A mouthpiece for telephones or like instruments comprising a tubular member having an outwardly flared lip at one end and a perforated disc at the other end to permit sound vibrations to pass therethrough, said tubular member being perforated from said shoulder to a point adjacent said disc, said tubular member having an annular shoulder on the outer surface thereof adjacent the flared lip, a sleeve threadedly mounted on said tubular member and including an offset portion extended over the perforated area of said tubular member so as to define a chamber above the perforated area of said tubular member so that an antiseptic and absorbent body may be disposed in said chamber whereby the fumes thereof will pass through the perforations in said tubular member.

1,806,369. GAS PUMP. CHARLES G. SMITH, Medford, Mass., assignor, by mesne assignments, to Cambridge Laboratories, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed May 22, 1925. Serial No. 32,023. 14 Claims. (Cl. 230—69.)

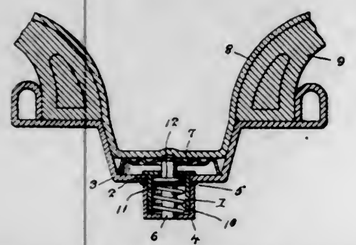
1. Apparatus of the character described having a gas passageway, a grid across said passageway, one surface of the grid being a good reflector and an opposite surface being a poor reflector, and a gas in the passageway having a low accommodation coefficient with respect to said good reflector.

1,806,370. GAS PURIFICATION PROCESS. FREDERICK W. SPEAR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, a Corporation of Pennsylvania. Filed July 30, 1926. Serial No. 125,836. 3 Claims. (Cl. 23—3.)



1. The process of purifying gas containing hydrogen cyanide and hydrogen sulphide which comprises purifying said gas to an extent sufficient to remove the hydrogen cyanide and subsequently subjecting the gas to contact with an alkaline solution containing nickel sulphide for the removal of the bulk of the hydrogen sulphide.

1,806,371. BOILER FEED WATER SYSTEM. ARTHUR SPYER, London, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Oct. 19, 1925, Serial No. 63,208, and in Great Britain June 16, 1925. 6 Claims. (Cl. 183—2.5.)

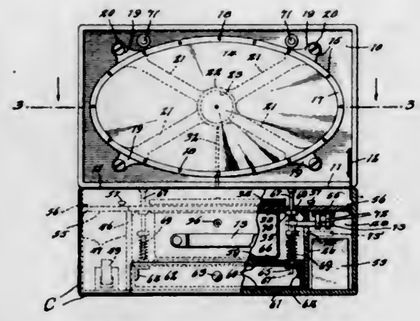


1. The method of treating feed water for a steam boiler of a power plant, which comprises passing condensate

from the exhaust steam of the plant into a deaerating tank, evaporating make-up water by steam out of contact with the make-up water, passing the steam therefrom

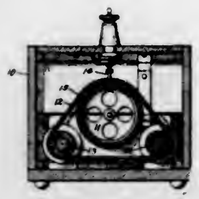
and the condensate from such evaporating steam into and mingling them with the condensate in said tank to heat the same, and permitting the air and gases free by such heating to pass out of the deaerating tank.

1,806,372. ADJUSTABLE PRESSURE INDICATOR FOR TIRES. CORSVILLE E. STILLE, Tuckahoe, N. J. Filed Oct. 4, 1929. Serial No. 397,265. 1 Claim. (Cl. 152—11.5.)



An adjustable pressure indicator for ties comprising a cylindrical shaped body extending through a rim and having one end closed and flanged to engage one face of the rim and provided with a centrally arranged opening in the closed end, a second cylindrical shaped body threaded on the first body and bearing against the opposite face of the rim from that engaged by the flanged end of the first body and having one end closed and provided with a centrally arranged opening aligning with the first opening, a rod slidable in the openings, a diaphragm member secured to one end of the rod and engaging the pneumatic tube of a tire mounted on the rim, a disk fixed to the rod within the bodies, a coil spring to counteract the action of the diaphragm member and mounted on the rod between the disk and the closed end of the second body, and adjusting washers on the rod between the disk and one end of the spring to permit varying of the tension of the spring and consequently vary the movement of the rod by the action of the diaphragm member.

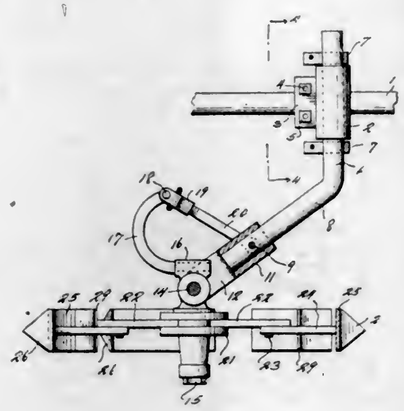
1,806,373. WINDOW SHADE STOP. JACK C. STICH, New York, N. Y. Filed June 10, 1930. Serial No. 460,173. 2 Claims. (Cl. 156—26.)



1. A window shade stop comprising a disc like body adapted to be secured to a window casing, and an integral extension portion projecting outwardly from one face of said disc like body and having a slot therein for the passage of one edge of a window shade.

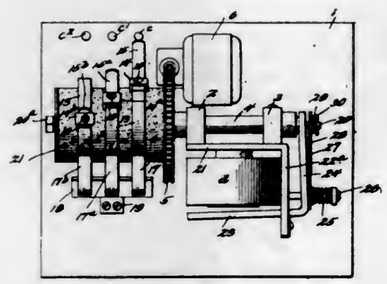
1,806,374. ELECTRIC PHONOGRAPH. ADOLPH A. THOMAS, New York, N. Y. Filed Dec. 4, 1926. Serial No. 152,525. 15 Claims. (Cl. 179—100.41.)

1. An electric phonograph comprising a substantially flat carrying case of rectangular shape, said case having a pivoted lid and a top board provided with a turntable, the shallow space between said topboard and the bottom of the case comprising at least two chambers arranged side by side, one of said chambers containing driving mechanism for the turntable and the other chamber containing electric devices adapted to form a system for transmitting electric impulses, an electric reproducer mounted on said topboard and operatively connected with said devices, a loudspeaking diaphragm secured to the inside of said lid and spaced therefrom, said diaphragm and reproducer being so arranged as to permit closing of the lid, and an electromagnetic driving unit carried by said lid for vibrating said diaphragm, said unit being operatively connected with said devices.



1,806,375. RECORDING METHOD AND APPARATUS. JOHN A. TIEDEMAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 3, 1927. Serial No. 172,486. 2 Claims. (Cl. 234—1.)

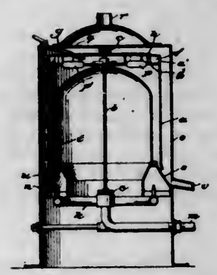
1. A recording instrument comprising in combination with a photosensitive film, a rotary drum over which such film is moved, and means for timing such film comprising marks of radio active material equally spaced about the periphery of said drum representative of the divisions of a unit of time, and means for rotating said drum one revolution during each such unit of time, the radio active material being of sufficient strength to photographically produce timing records on said film while in contact therewith.



1,806,376. COTTON CHOPPER. FRANK A. VESELKA, Mart, Tex. Filed May 29, 1930. Serial No. 457,402. 4 Claims. (Cl. 97—22.)

1. A cotton chopper comprising a plurality of arms, means for connecting said arms for rotation around a common center, a plate carried by the outer end portion of each of the arms and providing an outstanding cut-

ting blade at one extremity, and an inwardly disposed guard plate carried by said first named plate at the opposite extremity thereof.

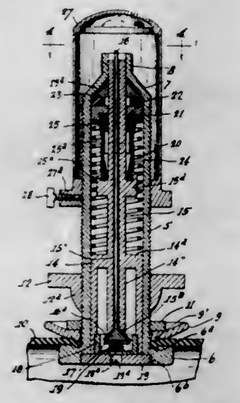


1,806,377. FRICTION SWITCH MECHANISM. GEORGE H. WHITTINGHAM, Baltimore, Md. Filed Apr. 25, 1930. Serial No. 447,317. 14 Claims. (Cl. 200—17.)

1. In an electric slip-switch mechanism, a shaft, means for rotating the shaft, a stationary switch-member, a movable switch member comprising a metal body journaled upon the shaft and having a contact adapted to engage said stationary contact, said movable member being biased to open position, friction disks on opposite sides of said body, said disks secured to the shaft so as to rotate therewith and being relatively movable longitudinally of the shaft, and means for clamping said disks frictionally against said body to cause rotation of the movable member to closed position.

1,806,378. WATER HEATER. WILLI WITZLER and PAUL FRIEDRICH GUSTAV GÜTH, Hamburg, Germany. Filed Apr. 23, 1928, Serial No. 272,208, and in Germany Sept. 13, 1927. 8 Claims. (Cl. 126—355.)

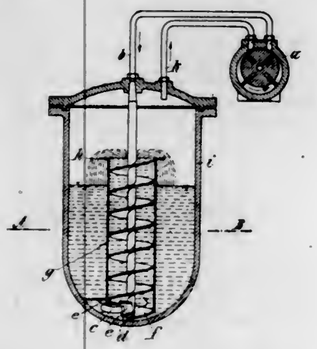
1. A water heater comprising a vertical drum mounted to rotate about the central axis, a water pipe arranged to direct a jet of water against the upper end of the drum whereby the water may run down the walls of the drum,



means for producing a heating current of gases to move upwardly along the drum to heat the film of water passing down said drum, and means for collecting the heated water.

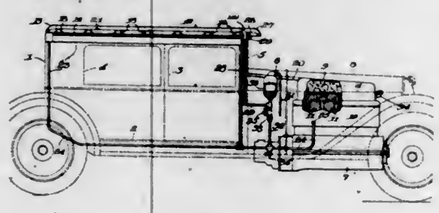
1,806,379. WINGS AND OTHER AEROFOILS OF AIRCRAFT. RONALD MCKINNON WOOD, South Farnborough, England, assignor to Handley Page Limited, Cricklewood, Middlesex, England. Filed Jan. 23, 1928, Serial No. 248,920, and in Great Britain Jan. 25, 1927. 9 Claims. (Cl. 244—12.)

1. In association with a main aerofoil adapted to advance through the air at various angles of incidence, brackets projecting forward from such main aerofoil adapted to support pivots, a pilot plane pivoted near its leading edge on such pivots and adapted to rotate under the influence of the air about the axis of said pivots, the trailing edge of such pilot plane being free to pass to either side of the leading edge of said main aerofoil, and means adapted to limit the angular movement of the said pilot plane to such an angle relatively to the said main aerofoil that when restrained by said means the said pilot plane directs a flow of air over that surface of the main aerofoil most remote from the direction of the air flow into which the said main aerofoil is advancing.



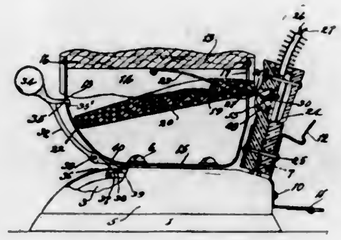
1,806,380. PRESSURE GAUGING TIRE VALVE. FRANK G. ARNOLD, New York, N. Y. Filed Oct. 15, 1929. Serial No. 399,824. 1 Claim. (Cl. 152—11.5.)

In an air valve comprising a holding tube having a slidable plunger, sliding movement of the plunger being re-



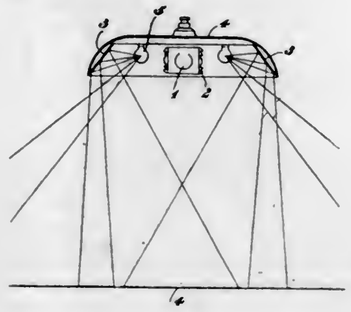
sponsive to air pressure in the tube, a sleeve positioned in the tube and relatively slidably engaging the inner wall of the latter and the periphery of the plunger, said sleeve having an annular recess therein, a shoulder on said plunger and having also a recess therein, a rigid tubular member engaged in said first recess and having a free tapered terminal, a resilient tubular member engaged in said second recess and having also a free tapered terminal, said latter terminal being of greater diameter than said first terminal, whereby on relative sliding movement of said plunger and said holding tube, said resilient terminal is effective to embrace said rigid terminal for sealing the joint between said plunger and said sleeve.

1,806,381. AGITATING DEVICE. WALTER BAENSCH, Berlin, Germany, assignor to Schering-Kahlbaum A.-G., Berlin, Germany. Filed July 11, 1928, Serial No. 291,975, and in Germany July 18, 1927. 2 Claims. (Cl. 259—95.)



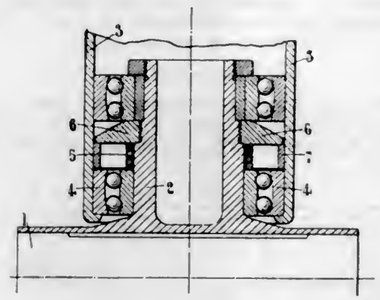
1. An apparatus for mixing gas and liquid, comprising a receptacle having a liquid therein, a rising pipe in said receptacle which is open at the top and at the bottom and extends above the liquid level in said receptacle, a fixed helical conveyor in said rising pipe, a pipe for supplying gas under pressure to the lower end of said rising pipe, and an injector nozzle at the lower end of said conveyor surrounding the lower end of said gas supply pipe and opening into said conveyor.

1,806,382. VAPOR COOLING SYSTEM FOR INTERNAL COMBUSTION ENGINES. LESTER P. BARLOW, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed June 27, 1927. Serial No. 201,684. 16 Claims. (Cl. 123—174.)



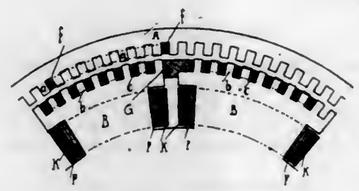
1. In a motor vehicle, a vapor cooling system for the vehicle engine, including the cylinder jacket with a steam dome above the same, a condenser, conduit means connecting the condenser to the jacket and its dome, respectively, for conveying steam from the dome to the condenser and for returning condensate from the condenser to the jacket, and a condensate collecting trap connected with the return conduit between its connections with the condenser and the jacket, said trap extending above and below the normal water level in the jacket and being constantly open to the atmosphere to vent the condenser thereto, said condenser being disposed in a substantially horizontal position at an elevation above the jacket so as to drain condensate thereto by gravity.

1,806,383. ELECTRIC IRON. WALTER E. BELCHER, Winnipeg, Manitoba, Canada. Filed Aug. 10, 1929. Serial No. 384,901. 8 Claims. (Cl. 219—25.)



1. The combination with an electrically heated flat iron, of a normally open circuit controlling switch therefor, a spring pressed latch pivotally carried by the iron handle and having operating connections with the switch and arranged in the pressing of the latch towards the handle to close the switch and in the release of the latch to open the switch under the action of the latch spring, gravity operated means for locking the latch against movement in the closed position of the switch and upon the iron being swung into a resting position butt down and means controlled by the rising temperature of the iron for releasing the latter locking means upon a preselected temperature being reached.

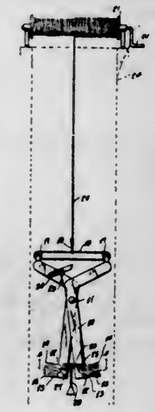
1,806,384. SHADOWLESS LIGHTING APPARATUS. HENRI LUGLIEN MARIE JOSEPH BÉNARD, Paris, France, assignor to Anciens Etablissements Barbier, Benard & Turenne, Société Anonyme, Paris, France, a Joint-Stock Company of France. Filed Apr. 19, 1928, Serial No. 271,277, and in France Feb. 10, 1928. 4 Claims. (Cl. 240—78.)



1. In a lighting device, the combination with a principal light source, an optical condensing means adapted to condense light rays emitted by said source, and a system of reflecting mirrors adapted to reflect said rays on to a surface so situated relative to said principal lighting source as to receive shadowless illumination, of emergency light sources completely independent of said principal source and so disposed with respect to said reflecting mirrors as to contribute substantially shadowless illumination to said surface.

1,806,385. VARIABLE PITCH PROPELLER. MOGENS LOUIS BRAMSON, Hendon, London, England. Filed Mar. 25, 1926, Serial No. 97,391, and in Great Britain Mar. 30, 1925. 14 Claims. (Cl. 170—162.)

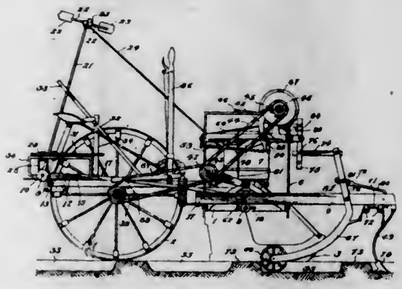
1. A propeller of the type set forth comprising a boss, a blade, and thrust bearings of different types for taking the centrifugal load upon the blade in two different manners depending upon whether the speed of rotation of the propeller is below or above a certain predetermined value, whereby the pitch of the blades may be varied to any extent at any speed of rotation of the propeller below the predetermined value and at all speeds above the predetermined one the propeller blade and boss form in effect a rigid structure to maintain the pitch of the blades at the set value.



1,806,386. ROTARY FREQUENCY TRANSFORMER. PAUL EMMANUEL BUNET, Versailles, France, assignor of one-half to Société Acieries de Gennevilliers, Gennevilliers, France, a Corporation of France. Filed May 25, 1928, Serial No. 280,583, and in France June 2, 1927. 3 Claims. (Cl. 172—281.)

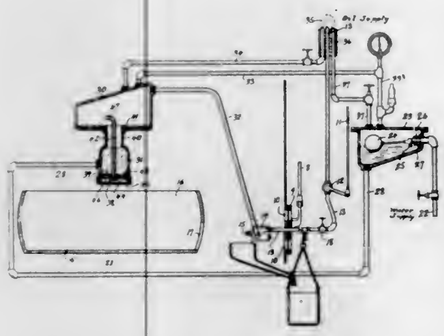
1. A rotary transformer for obtaining high frequency polyphased current comprising a circumferentially and uniformly slotted stator, a series of field poles rotatable relative to the stator, an inducing winding in said stator, an exciting winding for each of the field poles, slots having the same pitch as the stator slots provided in the face of each of the said field poles, the said slots of the field poles being arranged in sets, the respective slots of the said successive sets of slots of the rotor being staggered with respect to each other by a distance equal to a whole number of pitches increased by a friction equal to the pitch of the slots divided by the number of phases to be obtained, and high frequency windings provided in the slots of each set.

1,806,387. CHIMNEY CLEANER. JAMES J. CARNEY, Bethel, Vt. Filed June 4, 1929. Serial No. 368,243. 4 Claims. (Cl. 15—163.)



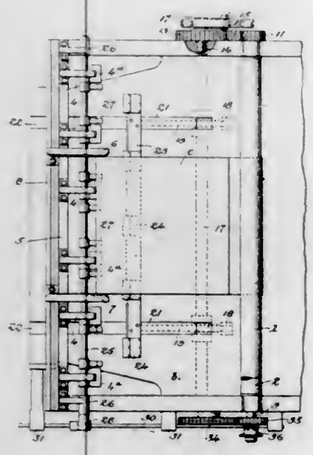
1. A device of the class described comprising two levers generally of L-shape, means pivotally connecting said levers together, said levers at their lower ends having cross arms, cleaning devices carried by said arms, rollers at the upper ends of the levers, an endless loop trained over said rollers, a draw means attached to the loop, a latch carried by one of the levers and engaging the other lever to maintain the cleaning elements against separation as the device is lowered into a chimney, a pendant on said latch to engage the bottom of the chimney to thereby retract the latch, and means to limit the outward movement of the cleaning members.

1,806,388. AQUEOUS RUBBER DISPERSION AND METHOD OF MAKING SAME. RICHARD A. CRAWFORD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1927. Serial No. 211,263. 5 Claims. (Cl. 134—1.)



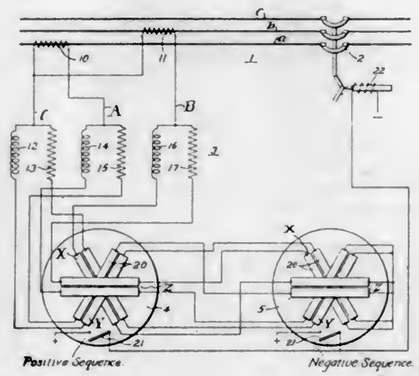
2. The method of preparing an aqueous dispersion of rubber which comprises adding at least four percent of an alkali soap of a liquid higher fatty acid to a rubber composition during mastication, thoroughly masticating the rubber composition, adding slowly thereto while continuing the mastication a water solution of ammonia until the rubber is embodied in the dispersed phase of the batch, then admixing thereinto one percent or more of a nitrogenous protective colloid.

1,806,389. PLANTER. RALPH W. DICKERSON, Roscoe, Ohio. Filed Nov. 14, 1929. Serial No. 407,212. 9 Claims. (Cl. 111—15.)



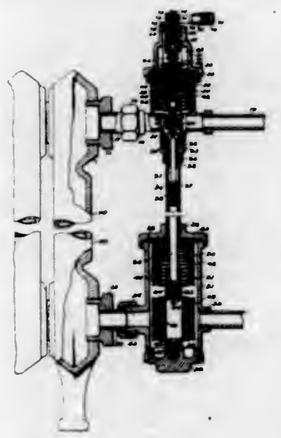
1. In a planter, means for forming a line of trenches separated by knolls, seed-dropping mechanism, a controlling device adapted to run in the line of trenches and over said knolls, means actuated by said device for operating the seed-dropping mechanism, and a clearer arranged to run in a trench in advance of the trench receiving the said controlling device for clearing the first-mentioned trench, said clearing device being operatively connected with the controlling device to be lifted from the trench prior to reaching a knoll at the end of the same.

1,806,390. STEAM GENERATOR. FREDERICK G. FARR, New York, N. Y., and GEORGE H. DIDINGER, Philadelphia, Pa., assignors to Frederick G. Farr, Donald Slingluff, and George H. Dilinger, trustees. Filed Apr. 16, 1927. Serial No. 184,206. 4 Claims. (Cl. 122—40.)



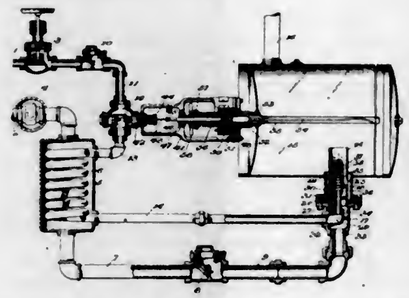
1. A steam generator comprising receptacles mounted one above the other, means connecting together the receptacles by which a predetermined amount of water is maintained in the upper receptacle and by which excess water in the upper receptacle returns to the lower receptacle, a restricted water boiling chamber within the lower receptacle, a tube leading from the chamber to the upper receptacle, said lower receptacle being provided with water inlets leading to the chamber, and a movable disc mounted within the chamber to close the inlets in rapid succession to force the water through the tube into the upper receptacle, and said disc being provided with an aperture through which the tube projects to guide the disc in pulsating movement.

1,806,391. SKIP-FEED ATTACHMENT FOR SLOTTING and CREASING MACHINES. THOMAS S. FITCHETT, Glenarm, Md., assignor to F. X. Hooper Company, Inc., Glenarm, Md., a Corporation of Maryland. Filed May 6, 1929. Serial No. 360,880. 6 Claims. (Cl. 271—44.)



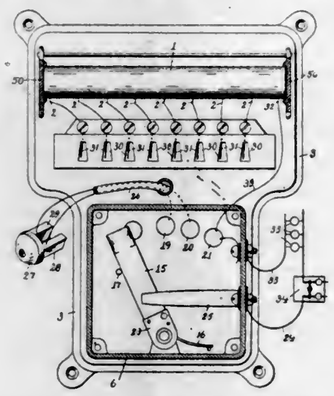
1. In a machine for operating upon cardboard box blanks, the combination with a feed table adapted to support a stack of blanks, a feeding device adapted to feed a blank from the bottom of the stack at each forward movement of said device, and means for operating said device, of means timed to the movements of the feeding device, for alternately changing the relative vertical positions of the rear end of the stack and said device, to cause said device to feed blanks only on its alternate forward movements.

1,806,392. POLYPHASE ELECTRICAL INSTRUMENT. VLADIMIR GENKIN, Marseille, France. Filed Aug. 14, 1926. Serial No. 129,251. 11 Claims. (Cl. 175—294.)



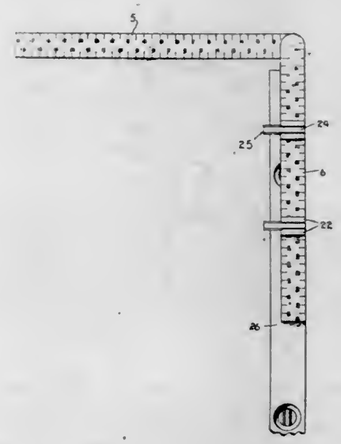
1. In combination with a polyphase circuit, means for segregating the effects of the symmetrical phase-sequence components of an electrical quantity of the circuit including two instruments having polyphase windings so connected as to be energized in accordance with the positive and negative phase-sequence components of the quantity, respectively.

1,806,393. RADIATOR CONTROLLING MECHANISM. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Nov. 27, 1926. Serial No. 151,216. 9 Claims. (Cl. 236—40.)



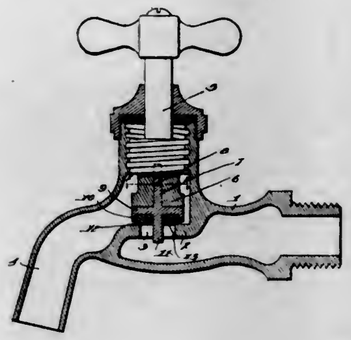
1. In a radiator controlling mechanism, in combination with a radiator having a constantly open outlet, a vapor pressure thermostat controlled by the temperature of the condensate flowing through said outlet, a housing for said thermostat located adjacent to and in open communication with the outlet of said radiator, a throttling valve in the inlet to said radiator, operative connections extending from said inlet valve to said thermostat and manually operable means including said operative connections for varying the pressure on said thermostat.

1,806,394. FLUID MIXER. JEAN V. GIESLER and WILLIAM W. CARSON, Jr., Knoxville, Tenn., assignors to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Feb. 11, 1928. Serial No. 253,779. 42 Claims. (Cl. 261—77.)



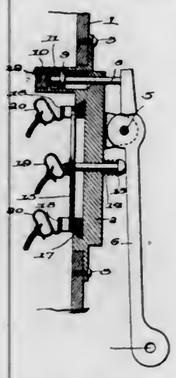
1. In apparatus of the class described, the combination of a stabilizing receptacle, a device for mixing a heating fluid with a liquid to be heated and delivering the mixture to said stabilizing receptacle, said receptacle having a volume which is relatively large as compared with the volumes of the fluid being mixed at any one time, and thermostatic control means subjected to the temperature of the mixture within said stabilizing receptacle to control the supply of said heating fluid.

1,806,395. POULTRY LIGHT CONTROL. JOSEPH B. HARRIMAN, North Reading, Mass. Filed Feb. 11, 1927. Serial No. 167,546. 8 Claims. (Cl. 161—1.)



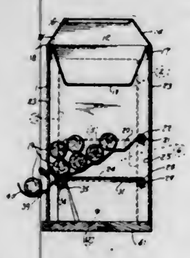
4. A current control comprising a resistance element having several taps, contact connected with a tap at one end and also with one pole of the circuit, a switch arm co-operating with said contact, a plurality of other contacts co-operating with said arm and adapted to be variously connected with the others of said taps, said arm being connected with the other pole of said circuit, and adapted to co-operate with all of said contacts, and time-controlled means for moving said arm from the first contact to each of the others in successive periods of time.

1,806,396. MITER SQUARE. HUBERT HARTWELL, Evanston, Ill. Filed Nov. 12, 1927. Serial No. 232,758. 2 Claims. (Cl. 33—89.)



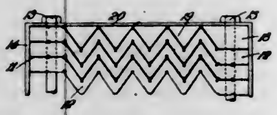
2. A miter square of the class described, comprising two blades pivoted together at one end for adjustment through an angle relative to each other; a stud and nut for securing said blades in adjusted position; a protractor on one of said blades; means on the other blade cooperating with said protractor for indicating the angle between said blades; parallel guides on one of said blades forming a dove tailed channel therebetween; a U-shaped clamping member having one portion thereof slidable in said channel; a wing bolt passing through another portion of said clamping member for securing a lever between said blade and said clamping member.

1,806,397. COMPRESSION VALVE AND FAUCET. ELMER J. HENTSCHEL and SAMUEL E. MILLER, Springfield, Ohio. Filed June 12, 1928. Serial No. 284,739. 1 Claim. (Cl. 251—27.)



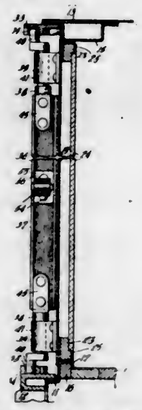
In a faucet, a movable valve member having a head with a bore, a gasket having a hole, a plate engageable by the gasket, a tapering stem extending from the plate receivable by the bore, and a smooth-sided imperforate stud projecting from the plate and through the hole, said stud having the gasket formed thereon and providing means to be gripped for abstracting the stem from the bore.

1,806,398. CIRCUIT CLOSER. FRANCIS MARION JACOB, Columbus, Miss. Original application filed Mar. 22, 1927, Serial No. 177,446. Divided and this application filed Dec. 14, 1927. Serial No. 239,919. 4 Claims. (Cl. 200—163.)



1. A circuit-closer for a device of the character described, including a plate having a sleeve thereon, a lever pivotally mounted on the plate, a pin slidably mounted in the plate and having an end thereof in position to engage and actuate the lever, the opposite end of said pin extending into the sleeve, a spring mounted in the sleeve for normally tending to force said pin outwardly, means for adjusting the tension of said spring, and a switch-arm carried by the plate and operatively connected with the lever for actuation thereby.

1,806,399. COMBINED CIGARETTE DISPENSER, MATCH BOX HOLDER, AND ASH RECEIVER. ADOLPH B. JIPPSON, Cleveland, Ohio. Filed Feb. 24, 1930. Serial No. 430,801. 4 Claims. (Cl. 312—75.)

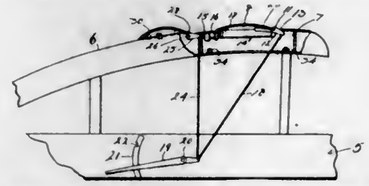


1. An article delivery device comprising a casing forming a holder and having an opening at the front, a pivoted inclined flap forming the bottom of the holder and on which the articles rest, a spring-pressed support under said flap, and means to depress said support and permit the flap to lower, to deliver one of the articles at said opening.

1,806,400. FILTER FOR AIR AND OTHER GASES. EDWARD LIONEL JOSEPH, Westminster, England. Filed Feb. 25, 1930, Serial No. 431,093, and in Great Britain Apr. 24, 1929. 3 Claims. (Cl. 183—21.)

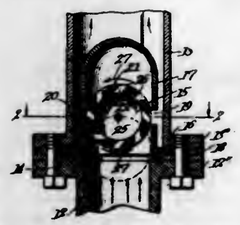
1. A filter for air or like fluids comprising a tank, a series of deformed metal plates arranged in spatial relationship with their general planes vertical, a series of grooved spacer bars corresponding in configuration with the deformation of said plates arranged in alternation with said plates at the upper ends of the latter, and means for clamping together said plates and said spacer bars, said spacer bars and the upper edges of said plates constituting a perforated bottom for said tank, inlets for fluid to be filtered between the lateral edges of said plates at one side of the assemblage and outlets for filtered fluid at the other side of the assemblage.

1,806,401. DOOR CONSTRUCTION FOR RAILWAY CARS. JAMES E. LINDEMAN, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 12, 1929. Serial No. 392,020. 14 Claims. (Cl. 189—46.)



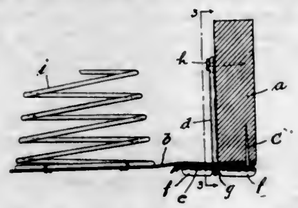
3. In a combined door operating and locking means for railway cars having a swinging door hinged along one edge, the combination with a rotary operating member mounted on the door and extending lengthwise of the free edge of the same; keeper means fixed to the car; keeper-engaging means rigid with the operating member, said operating member being in the form of a beam having a longitudinally extending web and transverse flanges on said web extending lengthwise of the same, said web being disposed in a plane transverse of the door when the operating member is rotated to the limit of its movement in locking the door.

1,806,402. MOP HEAD. HENRY J. LORANG, St. Louis, Mo. Filed Mar. 31, 1930. Serial No. 440,260. 3 Claims. (Cl. 15—229.)



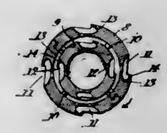
1. A mop head comprising a body of mopping material having a central bound portion adapted to be secured in a holder, a pocket formed on the under side of said bound portion for housing a member of the holder, and yarn strands secured on the under side of said pocket and covering the entire surface thereof.

1,806,403. SAFETY APPLIANCE FOR AIRPLANES. THOMAS B. LYLES, Terre Haute, Ind. Filed July 19, 1930. Serial No. 469,042. 5 Claims. (Cl. 244—21.)



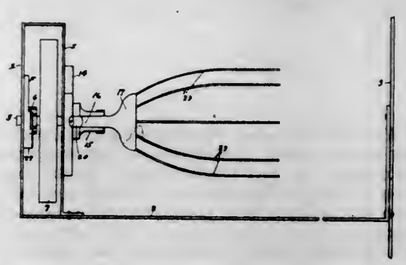
5. In a device of the kind described, an airplane, a main parachute secured to the airplane and adapted to be housed within the wing structure, a pilot parachute connected with the main parachute and adapted to rest upon the wing structure to the rear of the main parachute, means normally covering said parachutes to prevent them from being affected by currents of air and means to hold the covering means normally in closed positions and releasable manually to permit the pilot parachute to be affected by air currents and to permit the main parachute to be withdrawn from its housing by the pilot parachute.

1,806,404. MOTOR FUEL TREATING DEVICE. ROSS M. LYNN and WILLIAM M. MALOUF, Salt Lake City, Utah, assignors to Atomic Power Corporation, a Corporation of Delaware. Filed Nov. 30, 1928. Serial No. 322,913. 7 Claims. (Cl. 48—180.)



1. A gaseous fuel homogenizing device comprising a housing, adapted to be positioned in a conduit for supplying gaseous fuel to the intake manifold of an internal combustion engine and to permit such fuel to pass therethrough, and a substantially spherical shaped body in said housing, said body being disconnected from the housing to permit free rotation and having a series of abutments thereon facing in a direction opposing the flow of gaseous fuel through the housing and conduit, for the purpose described.

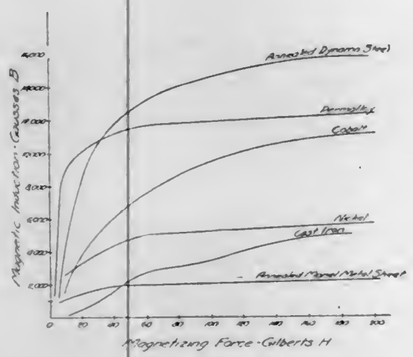
1,806,405. WEBBING FASTENER RETAINER. HARVEY A. MAILLOUX, Haverhill, Mass. Filed Mar. 22, 1930. Serial No. 437,999. 4 Claims. (Cl. 155—179.)



2. In an upholstery construction of the character described, a frame, a seat-supporting webbing strip extending crosswise of the frame and engaged with the normally under side thereof, headed fasteners, extending upwardly through the strip and driven into the frame, to connect the strip thereto, a stiff metal plate having one portion thereof engaged with the strip portion directly beneath the frame and another portion thereof engaged with the adjacent strip portion within the frame, and a hanger device connected to the frame and engaged with the under side of the plate within and adjacent the inner side of the frame, to provide a pivotal support for said plate so arranged that depression of the strip within the frame will tend to press upwardly the plate portion directly beneath the frame.

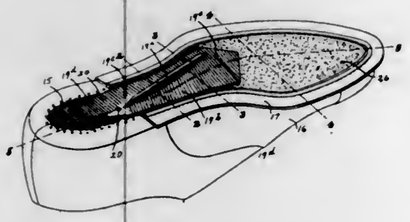
1,806,406. ATTACHMENT FOR INTERNAL COMBUSTION ENGINES. WILLIAM M. MALOUF, Salt Lake City, Utah, assignor, by direct and mesne assignments, to Atomic Power Corporation, Salt Lake City, Utah, a Corporation of Delaware. Filed Mar. 20, 1928. Serial No. 263,151. 5 Claims. (Cl. 48—180.)

1. A gaseous fuel homogenizing means comprising a conduit adapted to be connected with the intake manifold of an internal combustion engine, and a body of substantially spherical shape within said conduit and free to rotate in any direction therein, said body being provided with means with which the gaseous stream passing through the conduit will co-act to rotate the body, for the purpose described.



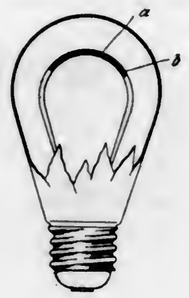
1,806,407. SHOCKING ATTACHMENT FOR GRAIN BINDERS. WYTHE MCCONNELL, El Paso County, Colo. Filed Aug. 20, 1929. Serial No. 387,160. 7 Claims. (Cl. 56—401.)

1. In combination with a grain binder; a horizontally disposed rectangular frame provided with an extension bar attached to the binder main frame; bearings in said rectangular frame; a horizontally disposed axle journalled in said bearings; a gear keyed on said axle; a traction wheel rotatably mounted on said axle; a dog pivoted on said wheel, adapted to engage said gear and provided with a roller; an intermittent cam member slidably mounted in said frame, provided with a lug adapted to engage said gear and a semi-circular cam adapted to engage said roller; a stationary cam rigidly mounted on



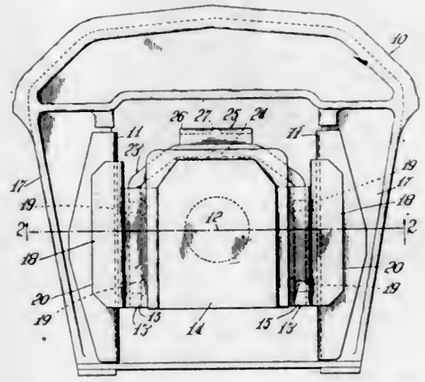
said rectangular frame; a yoke rigidly mounted on said axle; a pair of diverging arms pivoted in each end of said yoke, one arm of each pair cooperating with said stationary cam and the other arm carrying a plurality of tines extending towards said binder.

1,806,408. TRANSFORMER. WILLIAM ALVIN MUDGE, and CLARENCE GEORGE BIEBER, Huntington, W. Va. Filed Oct. 2, 1928. Serial No. 309,843. 1 Claim. (Cl. 175—356.)



A transformer having a core composed at least in part of Monel metal.

1,806,409. ORTHOPEDIC FOOTWEAR. WILLIAM H. NICKERSON, Newton, Mass. Filed Aug. 7, 1929. Serial No. 384,026. 2 Claims. (Cl. 36—76.)

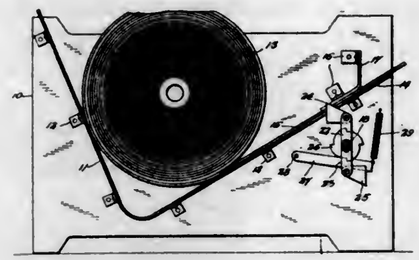


1. An orthopedic shoe comprising an insole, an outsole, and a shank stiffener located between the shank portions of said soles, the foot bearing surface of the insole including a normal fore portion, a normal heel portion, a narrow normal outer edge portion extending between and merging into the normal fore and heel portions, and a raised modified portion underlying the group of keystone bones and the metatarsal arch of the foot, said modified portion being inclined upward crosswise of the insole from the normal outer edge portion to the inner edge of the insole, and inclined upward lengthwise of the insole from the normal fore portion to the normal heel portion, the shank stiffener being formed to support the portions of the insole, which include the narrow normal outer edge portion, and the modified raised portion, said stiffener having a stiffening rib extending obliquely from the inner edge of the stiffener near the heel end, to a point near the outer edge of the forward end, and underlying the group of keystone bones, the forward end of the stiffener being widened to provide an approximately triangular inner wing at one side of the rib.

1,806,410. ELECTRIC INCANDESCENT BODY. WALTER NODDACK and IDA NODDACK, Berlin-Grunewald, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, Near Berlin, Germany, a Corporation of Germany. Filed Mar. 13, 1929, Serial No. 346,766, and in Germany Apr. 12, 1928. 2 Claims. (Cl. 176—132.)

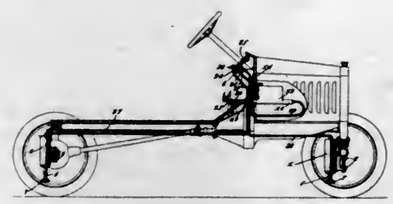
1. An electric incandescent body applicable to electric incandescent lamps, vacuum tubes and similar purposes, consisting of a core of tungsten with a coating containing eka-manganese 75.

1,806,411. PEDESTAL FILLER UNIT. KARL F. NYSTROM, Milwaukee, Wis., assignor to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Filed Nov. 12, 1928. Serial No. 318,709. 13 Claims. (Cl. 105—224.)



6. A pedestal filler unit adapted to fit over the top of the journal-box of a railroad truck and to extend down opposite sides of the journal-box, said unit comprising a narrow yoke portion and relatively wide metallic plates secured to the ends of the yoke portion, said plates being formed to engage the sides of the pedestal of a car truck and the sides of the journal-box.

1,806,412. PAPER TAPE MACHINE. JOSEPH OLSEN, Portland, Oreg. Filed Dec. 23, 1926. Serial No. 156,743. Renewed Oct. 14, 1930. 4 Claims. (Cl. 164—36.)

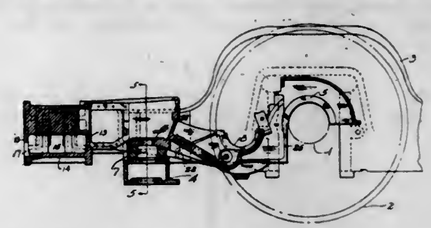


1. In a paper tape machine, a guide member for a strip of paper provided with a plurality of slots, a shaft

disposed opposite the guide member and carrying a plurality of cutter blades, operating means carried by the shaft to selectively project the blades into operating

position through the slots, and means associated with the shaft to maintain the cutter blades in operative position.

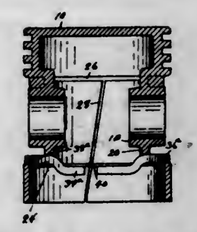
1,806,413. LIFTING JACK. ENRIQUE D. PAÉZ, Jr., San Diego, Calif. Filed Feb. 11, 1929. Serial No. 339,131. 1 Claim. (Cl. 138—9.)



A lifting device for vehicles including hydraulic jacks secured to a vehicle, a control means connected to the jacks, a pump cylinder having one end connected to the control means and the other end internally screw-threaded, a plug threaded in the last named end of the cylinder and secured in an opening of the dash of the vehicle and having a flange portion abutting said dash and the end of the cylinder, a fluid reservoir formed on the cylinder and held against a dash by said cylinder and having communication with the cylinder adjacent the supported end thereof, a piston in the cylinder, a stem on the piston and extending through the plug to be manually actuated, and a tension means bearing against one end of the stem and the plug to normally urge the piston in one direction.

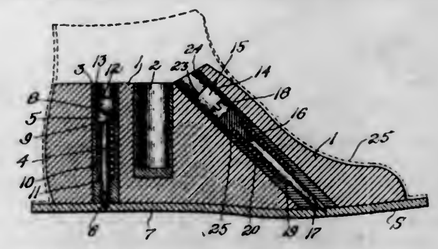
1,806,414. PROCESSES OF POLISHING CHROMIUM. JAMES CLARENCE PATTEN, Indianapolis, Ind., assignor to Metals Protection Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 9, 1926. Serial No. 134,580. 2 Claims. (Cl. 51—278.)

1. The process of producing lustre on surfaces of chromium which comprises polishing such surfaces with a fine grained product comprising calcined hydrated alumina, the said product having a hardness materially less than that of emery.



1,806,415. RAILWAY BOOSTER MOTOR. HARRY M. PFLAGER, St. Louis, Mo., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Filed Mar. 17, 1927. Serial No. 176,105. 7 Claims. (Cl. 105—115.)

1. A booster engine bed plate construction comprising a substantially horizontally disposed main body, an integrally formed transversely extending wall at the rear end of said main body, the central portion of said wall



being bulged rearwardly, and a longitudinally extending web extending rearwardly from the ridge of said bulged central portion as an integral continuation therefrom.

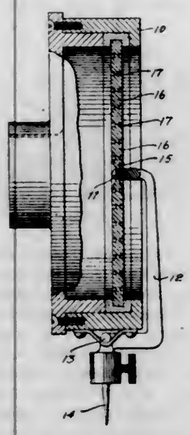
1,806,416. PISTON AND SKIRT EXPANDING RING THEREFOR. HAROLD F. PHILLIPS, Belmont, Mass. Filed May 16, 1930. Serial No. 452,936. 19 Claims. (Cl. 74—108.)

1. A piston having a slotted skirt, wrist pin bosses, and other parts essential to the construction thereof, in combination with an expansion ring which is located concentrically within the piston at the skirt thereof and has opposed sections that bear outwardly upon the inner face of and hold said skirt resiliently expanded and other opposed sections that lie between and project circumferentially beyond said first opposed sections and which engage on the top and bottom sides thereof parts of the piston that constitute abutments by which said ring is retained in position against displacement axially of the piston.

1,806,417. LAST. ROSCOE D. POOLE, Danvers, Mass., assignor of one-half to Herbert A. Miller, Danvers, Mass. Filed Feb. 5, 1930. Serial No. 426,120. 3 Claims. (Cl. 12—141.)

1. A last having its forepart made with an obliquely disposed chamber extending from the top of the last forwardly to the bottom thereof and its heel-part made with a vertically disposed chamber extending from the top of the last to the bottom thereof; a sole-engaging spike-member adjustably mounted within said obliquely disposed chamber, and a sole-engaging screw-member adjustably mounted within said vertically disposed chamber, said two members being operable to engage and disengage a sole and when in engagement with the latter serving to hold said sole against displacement in any direction relatively to the last.

1,806,418. SMOKER'S RECEPTACLE. BENJAMIN PUTTERMAN, Brooklyn, N. Y., assignor, by mesne assignments, to Yankee Metal Products Corp., a Corporation of New York. Filed Sept. 7, 1927. Serial No. 217,902. 2 Claims. (Cl. 131—51.)

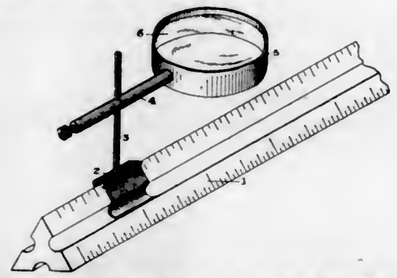


1. In a device of the character described, comprising a smoker's stand having secured to the top portion of the stand a holder for a cigar or other article, said holder being composed of substantially rigid U-shaped body portion, having two spring members securely fastened thereto, said spring members having indentations therein between which the cigar or other article can be wedged and firmly gripped in position on the stand.

1,806,419. PURIFICATION OF ACETYLENE. FRANZ RAHN, Nieder-Ingelheim-on-the-Rhine, Germany, assignor to the Firm C. H. Boehringer Sohn, Chemische Fabrik, Nieder-Ingelheim-on-the-Rhine, Germany, a German Society. Filed Sept. 23, 1925, Serial No. 58,187, and in Germany June 19, 1925. 5 Claims. (Cl. 260—170.)

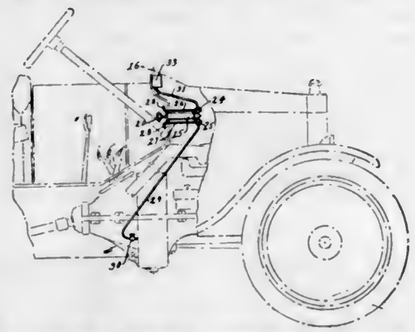
1. Process which consists in passing through an active adsorption agent an impure acetylene product consisting of acetylene in admixture with gaseous toxic impurities which are detrimental to the use of said product as a therapeutic and narcotic, said operation being conducted in the absence of any oxidizing gases and of other oxidizing materials.

1,806,420. SOUND REPRODUCING DIAPHRAGM. GEORGE G. ROCKWELL and CHARLES L. WALTERS, Danbury, Conn. Filed May 28, 1926, Serial No. 112,391. Renewed Apr. 23, 1930. 12 Claims. (Cl. 181—32.)



1. A sound reproducing diaphragm comprising a disk made up of a series of radially spaced concentric rings of substantial thickness in an axial direction joined together by intervening web-like rings of a thickness in an axial direction substantially less than that of said first rings.

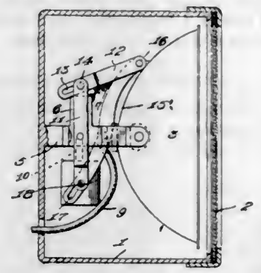
1,806,421. CELLULOSE DERIVATIVE MANUFACTURE. MILTON O. SCHUR and ROBERT A. WEBBER, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 20, 1927. Serial No. 207,314. 7 Claims. (Cl. 260—10.)



1. A process which comprises separating the finely divided and colloidal cellulose together with associated impurities from the longer fibers in fibrous cellulosic materials, then converting the long fibers into cellulose derivatives.

1,806,422. SCALE READER FOR DRAFTSMEN. ROBERT H. SHAEN, Ambler, Pa. Filed Sept. 5, 1928. Serial No. 304,054. 3 Claims. (Cl. 88—39.)

1. The combination of a scale or rule having grooved portions, a one-piece clamping member having surfaces adapted to engage said grooved portions, a post fixed to and projecting from said clamping member, and a magnifying lens adjustably mounted on said post.

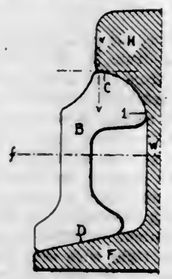


1,806,423. LUBRICATOR INDICATOR. PHILIP SHAPIRO, Los Angeles, Calif. Filed Apr. 13, 1927. Serial No 183,601. 6 Claims. (Cl. 184—6.)

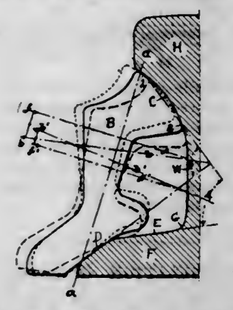
4. A lubricator indicator comprising a pump, a pipe connected to the pump and adapted for connection to the drain cock of a crank case, a second pipe connected to the pump and adapted for connection to an oil display device, and manually operable valves in the pipes by which they may be separately placed in communication with the pump to first draw oil from the crank case and then discharge the oil to the oil display device.

1,806,424. AUTOMOBILE HEADLIGHT. HERBERT SIRY, Newport, Ky. Filed Dec. 28, 1928. Serial No. 329,029. 1 Claim. (Cl. 240—41.6.)

An automobile headlight including a casing rigidly mounted on a vehicle and a reflector carrying an illuminating means, spaced horizontally disposed arms secured to the casing and pivotally supporting the reflector in the casing for movement about a horizontal axis, an upwardly extending yoke formed on said arms, a spring between said yoke and the reflector, a depending weight pivoted to said arms, a lever secured to the pivot of the weight and movable with the latter, a link pivotally and slidably connected to the upper end of the lever and pivoted to the reflector to tilt the reflector downwardly on movement of the weight in one direction caused by the vehicle travelling up hill, and a curved link pivotally and slidably secured to the lower end of the lever and pivoted to the reflector to tilt the reflector downwardly by the movement of the weight in an opposite direction when the vehicle is travelling down hill.

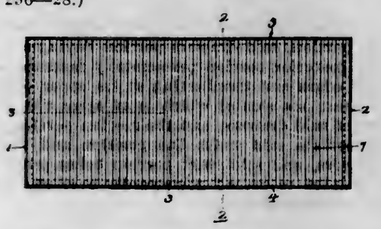


1,806,425. METAL JAR CLOSURE. THOMAS L. TALIAFERRO, Chicago, Ill., assignor to Phoenix-Hermetic Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 8, 1927. Serial No. 159,895. 1 Claim. (Cl. 215—43.)



A metal closure for jars comprising a top and a depending flange formed integral therewith, said flange having a thread formed therein adapted to engage a thread on the jar, the upper portion of said depending flange being knurled and the lower portion of the depending flange being curved outwardly and downwardly, thence inwardly to form a strengthening bead, the outer surface of said depending flange being continuous and extending in a downward direction, the extreme inner diameter of said inturned edge portion being greater than the diameter of the threads on the jar, said threads in the depending flange being disposed between the knurled portion and said bead, said bead being of substantially uniform cross section throughout.

1,806,426. RAILWAY RAIL AND RAIL-JOINT. SAMUEL G. THOMSON, Flushing, N. Y. Filed Apr. 18, 1930. Serial No. 445,264. 19 Claims. (Cl. 238—243.)

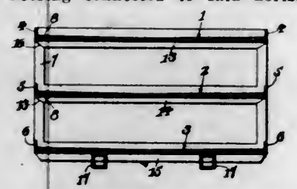


1. A railway rail having an under corner of its head lying nearer to a vertical plane at the outermost portion of its head than to a vertical plane at the innermost face portion of its web, a concave surface adjoining and extending inwardly from said corner, and a splice bar contacting with said surface and with the rail foot outside of a vertical plane at the outer edge of said upper contact.

1,806,427. RAILWAY RAIL AND RAIL JOINT. SAMUEL G. THOMSON, Flushing, N. Y. Filed May 6, 1930. Serial No. 450,112. 18 Claims. (Cl. 238—243.)

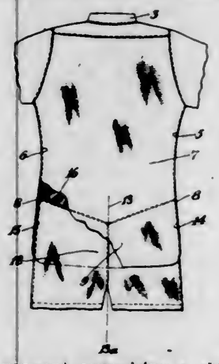
1. In a rail-joint, a T-rail having gradually and continuously converging faces extending from the under corner of its head to its web, the width of one of said faces being greater than the distance between horizontal planes at the top of the rail and through said under corners, and a splice bar contacting with a portion of said face, said rail having the top surface of one side of its foot comprising an inner face at its juncture with the rail web and two other faces of substantial width differing from each other in inclination, only one of said faces forming a seat for the splice bar.

1,806,428. METALLIC TRUCK BODY. SIMEON E. TRAVIS, Jr., Hattiesburg, Miss., assignor to The Weldmech Steel Products Co., a Corporation of Mississippi. Filed Jan. 23, 1928. Serial No. 248,839. 4 Claims. (Cl. 296—28.)



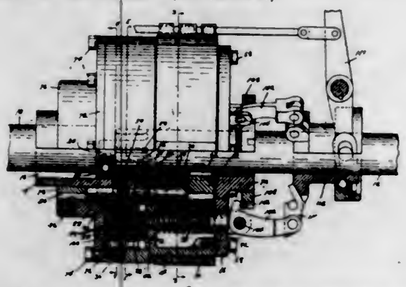
1. A truck body comprising side and end sills, each of said sills being of angle-shaped cross section to provide a vertical and a horizontal leg, said horizontal legs extending inwardly from the lower ends of said vertical legs, a corrugated floor secured to said sills, abutting the upper faces of the horizontal legs and the inner faces of the verical legs, and spaced, parallel brace members secured to the lower faces of the horizontal legs of opposed sills and to the lower bends of said flooring, the lower bends in said flooring provided with spaced drain openings.

1,806,429. UNDERFRAME FOR TRUCK BODIES. SIMEON E. TRAVIS, Jr., Hattiesburg, Miss., assignor to The Weldmech Steel Products Co., a Corporation of Mississippi. Original application filed Jan. 26, 1928, Serial No. 249,693. Divided and this application filed Mar. 5, 1929. Serial No. 344,532. 2 Claims. (Cl. 296—3.)



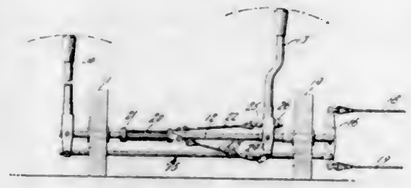
1. A truck body comprising an upper, an intermediate and a lower deck, each of said decks including side and

end rails of angle-shaped cross section to provide vertical and horizontal legs and with the latter extending inwardly from the inner end of the former, corner rails common to the side and end rails of said decks, each of said decks including a flooring connected to said horizontal legs,



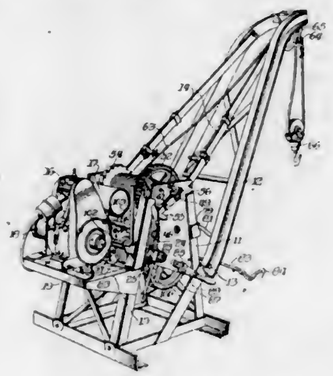
transversely extending, spaced brace members of T-shaped cross section secured to and depending from the lower faces of said floorings, and spaced sub-sills extending longitudinally with respect to the lower face of the flooring of the lowermost of said decks, said sub-sills secured to the heads of the braces which depend from the flooring of the lowermost of said decks.

1,806,430. COMBINATION GARMENT. WILLIAM M. TRAYNOR, Cornwall on the Hudson, N. Y. Filed Mar. 17, 1930. Serial No. 436,267. 2 Claims. (Cl. 2—77.)



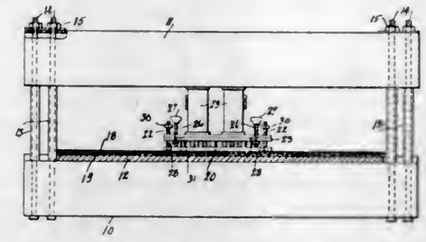
1. A unitary garment comprising a shirt portion and drawers portion, said drawers portion having a relatively inelastic posterior portion permanently fastened along its marginal edges and terminating at its upper edge on the bias at least one side of which is adjacent the waist line position of said drawers, and the median portion of which is intermediate said waist line position and the seat of said drawers, and said shirt portion being provided with a tail adapted to extend downwardly over the lowermost portion of said biased edge.

1,806,431. REVERSING MECHANISM. HENRY A. TUTTLE, deceased, Upton, Mass., by Jennie L. Tuttle, executrix, Upton, Mass. Filed Dec. 28, 1929. Serial No. 417,246. 12 Claims. (Cl. 74—34.)



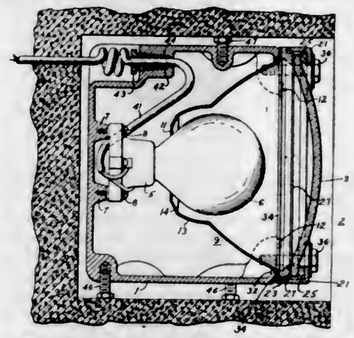
1. Reversing mechanism having the combination of axially aligned driving and driven shafts, a clutch plate carrier having spaced confronting plates one of which is carried by and has a flexible driving connection with said driving shaft, clutch plates located between said carrier plates some of which are connected with said carrier and others of which are connected with said driven shaft, means to effect the engagement of said clutch plates to connect said shafts directly for forward drive, reversing gearing connecting said other plate of said clutch plate carrier and said driven shaft, and means to condition said reversing mechanism for reverse drive.

1,806,432. AIRPLANE CONTROL MECHANISM. RALPH H. UPSON, Red Bank, N. J. Filed Apr. 18, 1929. Serial No. 356,114. 10 Claims. (Cl. 244—29.)



1. A device for neutralizing and counter-balancing a control surface, comprising a pivoted operating lever, a spring means having one end secured to produce initial strain and connected to said lever on opposite sides of the pivot in unequally spaced relation so as to maintain the control surface rigidly at a desired neutral point of operation except when said system is manually actuated.

1,806,433. WRECK CRANE. GAILARD E. WEAVER and ALBERT J. VETTEL, Springfield, Ill., assignors to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed May 26, 1928. Serial No. 280,811. 4 Claims. (Cl. 254—145.)

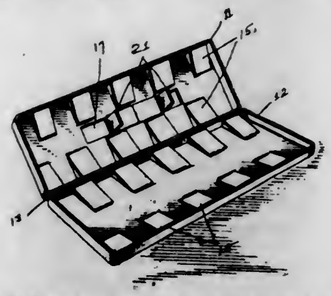


1. In a wreck-crane, the combination of a slotted frame, a revoluble winding-drum, a cable adapted to be wound upon and unwound from said drum, a shaft on which said drum is mounted rockingly supported on said frame near one end of the shaft and occupying said slot near its other end, releasable means to hold said drum from turning to pay out the cable, a gear on said shaft near that one of its ends capable of the greater rocking movement, a drive-pinion with which said gear is adapted to mesh and unmesh by the rocking movement of said shaft, means to revolve said drive-pinion, a slotted handle fastened to said shaft, a fulcrum lug rigid with said frame occupying said handle slot, and means to lock said handle in either of two positions corresponding to the meshed and unmeshed relation of said gear and pinion.

1,806,434. PUNCTURING APPARATUS. LUDWIC A. WILCZEK, New York, N. Y. Filed Dec. 20, 1929. Serial No. 415,402. 2 Claims. (Cl. 164—90.)

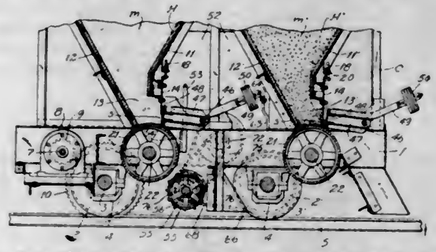
1. In a perforating device of the nature described, a perforated die plate, extending posts secured thereto, a second plate slidably mounted on the said posts, piercing pins in the second plate normally extending partway into the perforations of the die plate, a cover plate on the second mentioned plate overlying the piercing pins, and a pair of screws threaded into the pin carrying plate adapted to limit the downward movement of the said plate and also to raise the said plate by screwing same against the die plate after the piercing operation is performed.

1,806,435. LIGHTING UNIT. OSCAR WERNER, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 26, 1929. Serial No. 395,212. 2 Claims. (Cl. 240—26.)



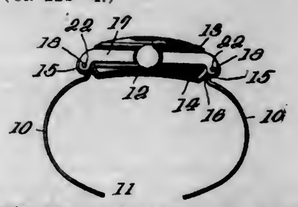
1. In an under-water projector adapted to fit into a recess in the wall, a housing, a lighting unit and reflector therein, means including a lens for closing the case watertight, a plurality of adjustable supporting screws at the bottom of said casing to adjustably mount the casing in said recess, and means on the upper side of the casing for rigidly maintaining the casing in adjusted position.

1,806,436. MANUFACTURE OF BRUSHES. ROBERT MORSE WITHYCOMBE, Sydney, New South Wales, Australia. Filed Dec. 12, 1928, Serial No. 325,573, and in Australia Dec. 23, 1928. 4 Claims. (Cl. 15—194.)



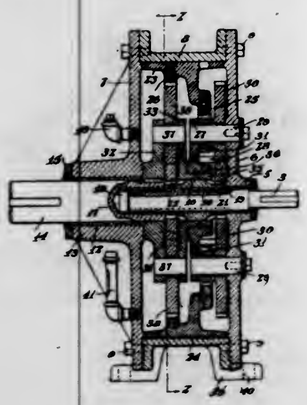
1. A brush comprising a small bundle of fiber; a handle having a socket to removably receive one end of said bundle of fiber; and resilient means surrounding said end and maintaining said bundle under compression and itself held under compression by the wall of said socket for removably retaining said end of said bundle in said socket.

1,806,437. BLADE SHARPENER. WILLIAM B. WOODWARD, Washington, D. C., assignor to Joseph Shapiro, Baltimore, Md. Filed July 9, 1928. Serial No. 291,357. 4 Claims. (Cl. 76—89.2.)



1. A blade sharpener comprising a shallow box like container, sharpening elements formed on the longitudinal edges of the top and bottom of the box, said sharpening elements inclined toward the central portion of said top and bottom members of said box, there being an elongated opening in the top of said box, a recpirocating blade carried slidably secured in said elongated opening, said carrier having means extending through said elongated opening for moving said blade carrier to and fro.

1,806,438. CHARGE CAR FOR SINTERING APPARATUS. THOMAS M. ALEXOVITS, Bayonne, N. J., assignor to John E. Greenawalt, New York, N. Y. Filed Apr. 30, 1929. Serial No. 359,372. 8 Claims. (Cl. 214—18.)



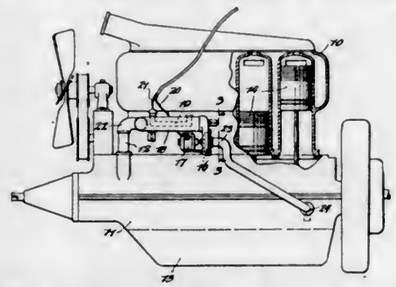
1. In a charge car, a holder for the charge, said holder having an open bottom, a shut-off gate for said open bottom, a feed roller adjacent to the open bottom, means for coupling the feed roller to the running gear of the car for actuating the feed roller and means for opening and closing the shut-off gate at predetermined points in the car's travel.

1,806,439. WRIST WATCH SPRING STRAP. ROBERT B. BARTON, River Forest, Ill., assignor to Elgin National Watch Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1928. Serial No. 304,743. 2 Claims. (Cl. 224—4.)

1. In a wrist strap and watch case assembly, a band having loops formed therein and directed outwardly away from the position of the wearer's arm, sleeves held in said loops by the resiliency of said band, supporting means on the watch case, and means carried by the sleeves and engaging said supporting means to hold the watch case and band together.

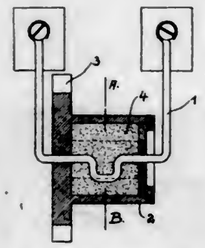
1,806,440. SPEED TRANSMISSION MECHANISM. JAMES W. BATCHELDER, Brookline, Mass. Filed Nov. 27, 1929. Serial No. 410,051. 27 Claims. (Cl. 74—34.)

1. Speed reduction mechanism, comprising a casing, a slow speed shaft, a high speed shaft, a pair of pinions rotatable by said high speed shaft, a plurality of opposed compound gears rotatable by one of said pinions, a plurality of opposed simple gears rotatable by the other of said pinions, and a pair of internal gears, one of said internal gears being in mesh with said compound gears and the other of said internal gears being in mesh with said simple gears, whereby an epicyclic movement will be imparted to one of said sets of gears, said casing constituting a support for all of said pinions and said gears, whereby said high speed shaft is relieved of all radial loads and tangential forces.



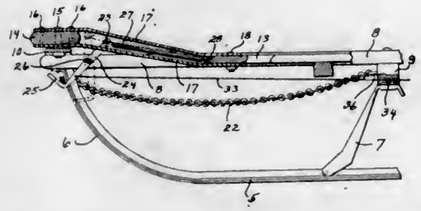
1,806,441. UNIVERSAL KITCHEN TONG. KARL BAUER and EUGEN KADE, Bronx, N. Y. Filed Mar. 27, 1930. Serial No. 439,382. 1 Claim. (Cl. 294—99.)

In a pair of universal kitchen tongs, a pair of parallelled spring shanks of substantial V-shape in cross-section, a knee formed intermediate the ends of said shanks, an integral loop formed with the shanks, and lower gripper-members at the ends of said shanks angularly disposed thereto, each of said members substantially elliptical and bowl-shaped and having an opening in its center to present a seat for an article to be lifted from a boiling pot.



1,806,442. MEANS FOR PRELIMINARILY HEATING INTERNAL COMBUSTION ENGINES. ALONZO C. BELL and THADDEUS R. BELL, Westfield, N. J. Filed Apr. 26, 1929. Serial No. 358,207. 6 Claims. (Cl. 184—104.)

1. In an internal combustion engine having a crankcase associated therewith, and breather pipe opening thereinto: heating means for the engine adapted to be installed at the crankcase and comprising an electric heating unit, an electrically driven fan associated there-

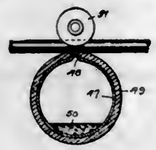


with to direct air over the heating unit into the outer end of the breather pipe, and means for connecting the heating unit and fan to a source of electricity.

1,806,443. THERMAL RELEASE DEVICE. ERNST BESAG, Baden-Baden, Germany, assignor to Schiele & Bruchsaler Industriewerke A. G., Baden-Baden, Germany. Filed Dec. 27, 1928, Serial No. 328,811, and in Germany Dec. 28, 1927. 5 Claims. (Cl. 200—124.)

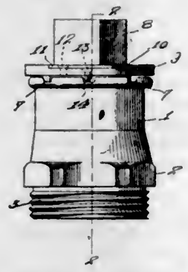
1. In a thermal release, a resistance wire, a drum directly supported thereon, the resistance wire extending therethrough, fusible material filling said drum, the wire having a radially directed portion, the said material embedding the portion of the wire which is within the drum and also the said radially directed portion thereof, whereby to normally prevent rotation of the drum and whereby the fusing of the said material by heating of the wire upon the passage of an abnormally high current will permit the rotation of the drum.

1,806,444. BRAKE FOR SLEDS. JOHN Z. BOUTIN, Troy, N. Y. Filed Jan. 18, 1928, Serial No. 247,720. Renewed Oct. 11, 1930. 7 Claims. (Cl. 188—8.)



1. The combination with a steerable hand sled comprising a pair of runners and side rails arranged longitudinally above each runner, of a brake for the sled comprising a flexible braking element anchored at opposite ends to the intermediate portion of the sled to extend about the sled runners, a keeper for releasably retaining the braking element in an elevated position at the forward end of the sled embodying arms pivotally connected

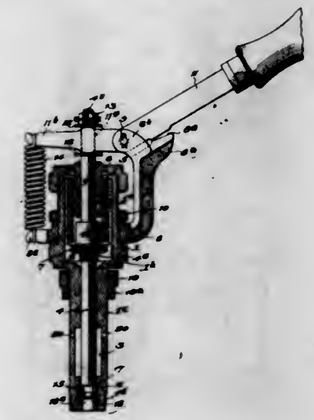
CARNEGIE LIBRARY OF ATLANTA



inwardly of each side rail and a rod connecting the upper ends of the arms to extend transversely of the sled, and spring means acting upon the keeper to normally urge the same into a position for operatively engaging the braking element.

1,806,445. METHOD AND APPARATUS FOR USE IN THE MANUFACTURE OF GLASSWARE. LÉON JEAN BROCHE, Verrieres-le-Buisson, France, assignor to Tropenas Company, New York, N. Y., a Corporation of Delaware. Original application filed Sept. 20, 1926, Serial No. 136,632. Divided and this application filed Dec. 27, 1928, Serial No. 328,770. Renewed Oct. 15, 1930. 5 Claims. (Cl. 49—48.)

1. In the manufacture of glass products, the step of severing a continuous product into lengths, which comprises advancing the material while hot upon a movable support and bringing a defined chilled area of said support intermittently into contact with the product to fracture the latter.

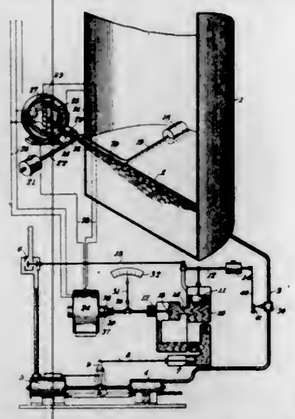


1,806,446. GREASE CUP. ZINA L. CARD, Milwaukee, Wis. Filed Aug. 5, 1927. Serial No. 210,952. 1 Claim. (Cl. 184—48.)

A grease cup comprising a hollow body having a threaded portion, a flange formed with said body and together with the top of the body being provided with radiating grooves, a hollow plug threadedly received in said body, a flange formed with said plug and having opposed recesses in its top, leaf springs arranged in said recesses and having one of their ends secured, headed locking studs slidably mounted through the plug flange with the heads thereof countersunk and being engageable by the free ends of the leaf springs to normally retain the studs in the grooves, a wrench engaging head formed with said plug, projections formed with said body and presenting flat portions, and said springs having flat and rounded sides to conform to the shape of the plug flange and adjacent walls of the plug head respectively.

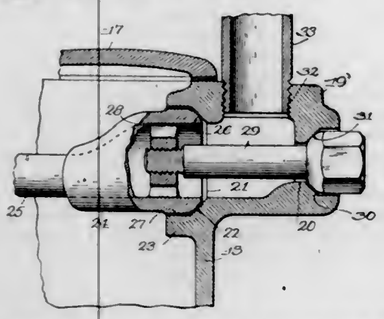
1,806,447. STEAM VALVE. WILLIAM W. CARSON, Jr., Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Sept. 28, 1925. Serial No. 59,219. 9 Claims. (Cl. 251—134.)

1. In a steam valve for pressing machines, in combination, a housing, valve means movably mounted in the housing, a valve seat in the housing composed of material softer than said valve means whereby it will take the wear arising from the cooperation of said valve means and said valve seat, means separate from said valve seat for removably securing said seat in the housing, said seat being removable to permit replacement of said seat without displacing any other part of the valve



structure, means for opening the valve, and resilient means positioned exteriorly of the housing and engaging said last-named means for normally maintaining the valve in closed position, said resilient means being removable without removal of any other parts of the valve structure.

1,806,448. DISPLAY TOY. HENRY O. COSTELLO, Providence, R. I. Filed Oct. 25, 1929. Serial No. 402,368. 3 Claims. (Cl. 46—14.)



1. An article of manufacture comprising a disk having one side thereof divided into sectors, each of said sectors comprising a plurality of concentric colored bands, the corresponding band of one sector differing in color from that of the same band in one or more of the other sectors, an elastic cord member having one end secured to said disk for supporting the same in a horizontal plane, said cord being capable of being twisted whereby it will impart rotative movement to said disk and cause the colors making up each of the several concentric bands, to blend and produce the effect upon the eye of an observer of uniformly colored concentric bands, and a vane member having a limited portion of its surface engaging said disk and rotatably mounted upon said cord in frictional engagement therewith whereby upon rotation of said disk said vane member will rotate at a different speed than said disk to progressively conceal from view the colors of certain sectors whereby the concentric colored bands are given the appearance of changing color during the rotation of the disk.

1,806,449. FLOAT CONTROLLED PUMPING SYSTEM FOR OIL REFINERIES. LUIS DE FLOREZ, Pomfret, Conn. Substitute for appplication Serial No. 238,017, filed Dec. 6, 1927. This application filed Mar. 17, 1930. Serial No. 436,635. 3 Claims. (Cl. 103—18.)

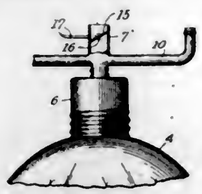
1. In apparatus of the character disclosed, the combination with a liquid container in which it is desired to maintain a normal liquid level and a pump connected with said container and by which the liquid level in the container is governed, of means for maintaining said liquid level within close limits and for preserving the pump flow substantially continuous, smooth and as nearly even as possible, comprising a power governor for regulating the speed of the pump and having a controller by which operation of said power governor may be accurately determined, an electrical transmitter at the container, a shaft connected for operating said transmitter, a lever arm connected with said shaft and disposed within the container, a float member connected with said lever and by which rising and falling movements of liquid level in the container are imparted to the transmitter, a synchronously operating electrical receiver motor at the power governor and connected to operate the controller of said power governor and electrical connections from the transmitter at the container to the receiver at the power governor, whereby variations in liquid level in the container are instantly translated into accurate control of the power governor for effecting corrective regulation of the pump necessary to keep the liquid level and circulation substantially constant, irrespective of the distance of the power governor from the container.

1,806,450. CASING AND COIL ASSEMBLY FOR HEAT TRANSFER DEVICES. JOHN EDWARD ERCANBRACK, Chicago, Ill. Filed Nov. 8, 1929. Serial No. 405,588. 5 Claims. (Cl. 257—248.)

1. A casing and coil assembly in heat transfer devices comprising a casing provided with a pair of spaced hollow embossments having communication with the compartment within the casing, the casing side of the openings providing such communication being provided with a ground seat surrounded by an annular shoulder, a coil and fittings for the ends thereof, said batten provided with interior spider brackets and ground seats cooperating with the seats in said casing, and provided with cylindric portions entering said annular shoulders, said hollow embossments being bored and provided with ground seats opposite their points of communication with said casing, and bolts the heads whereof have seats co-operating with said last mentioned seats extending into co-operation with said spiders.

1,806,451. PROCESS FOR MOLDING ARTICLES. THEODORE J. FLACK, Brooksville, Fla. Filed Mar. 6, 1929. Serial No. 344,900. 1 Claim. (Cl. 22—190.)

The process of producing molded articles consisting of a base having an outstanding border and overlapping outstanding characters within the border, which process comprises arranging upon the upper face of a mold member of the form of the base and its outstanding border, core elements of the form of certain of the characters to be molded upon the base and superficially connecting said elements with the base, arranging the assemblage within a mold flask to form, in the sand in the flask, and effecting an impression of the mold member of the form of the base, and the core elements, removing the assemblage, separating the said character representing core elements from the face of the said mold member, moistening the sand in the flask, similarly arranging upon the face of the said mold member another core element of the form of another character to be molded upon the face of the base, utilizing the border of the base mold member in symmetrically positioning the last mentioned core element, and effecting a reimpression of the snid mold member and the last mentioned core element.

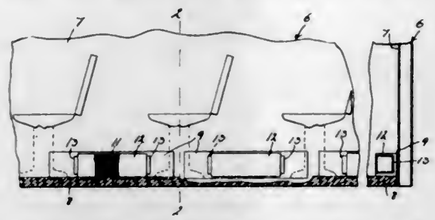


1,806,452. METHOD OF PRODUCING A BACKGROUND FOR MOVING PICTURES. FRED FULGORA, Pittsburgh, Pa. Filed Jan. 31, 1928. Serial No. 250,910. 1 Claim. (Cl. 88—24.)

The method of presenting a moving picture with a background, consisting in projecting with an ordinary moving picture machine a given picture substantially centrally of the screen, using a dissolving lantern slide projector at the same time for projecting different still pictures on said screen around the moving picture without overlapping the moving picture, and simultaneously using a second dissolving lantern for projecting a still picture around the second picture projected whereby the picture on the screen will consist of a moving picture and two projected still pictures.

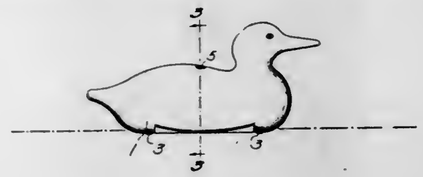
1,806,453. VAPORIZING DEVICE FOR TREATING ASTHMA. JOSEPH D. GIBSON, Logan, W. Va. Filed Jan. 20, 1930. Serial No. 422,076. 1 Claim. (Cl. 128—198.)

In an inhaling device, a receptacle, a cap, means for detachably connecting the cap with the receptacle, a tubular member, means for detachably connecting the tubular member intermediate its length with the cap, a tube ex-



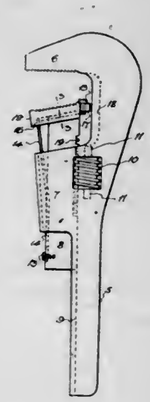
tending laterally from the tubular member in alinement with the cap, a butterfly valve carried in said tube, and means for controlling the position of the butterfly valve.

1,806,454. HOLDING SUPPORT FOR BABY SWINGS. ERIC O. GOUDEAU, Detroit, Mich. Filed Oct. 20, 1928. Serial No. 313,829. 1 Claim. (Cl. 248—43.)



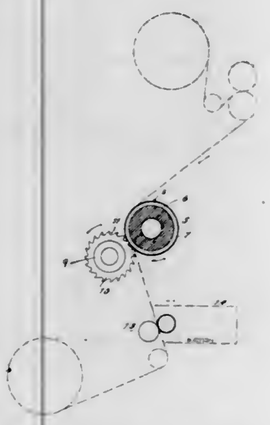
A tripod of the class described comprising a circular supporting block, a plurality of brackets each being provided with an intermediate arcuate portion conforming to the curvature of the block and secured circumferentially to the edge thereof, said brackets having their ends projected radially from the block and in spaced parallel relation to the projected ends of the adjoining bracket, pins connecting the spaced ends of each pair of brackets, legs having one end inserted between the spaced ends of each pair of the brackets and pivotally mounted on said pins and stop pins also connecting the spaced ends of each pair of brackets and engaging the inner edges of the legs to limit outward swinging movement of the free end thereof, said connecting pins and said stop pins combining to secure the ends of the brackets in uniformly spaced relation.

1,806,455. HEAT CONDUIT AND PROTECTOR THEREFOR. ANDREA GRAZIANI, Camden, N. J. Filed Aug. 27, 1930. Serial No. 478,031. 2 Claims. (Cl. 98—40.)



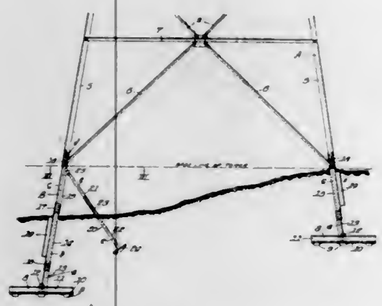
1. In a heat conduit and protector therefor, a panel for disposition across an opening leading from a compartment containing an electric heater, said panel having an opening therethrough, a conduit supported by said panel and having an open portion in communication with the opening in said panel, the ends of said conduit being reduced in size and being open for the exit of heated air, a protector of flexible material including covers to pocket the reduced end of the conduit and temporarily close the same, a connecting strip to which the covers are attached and pliable fastening devices secured to said covers and adapted to be wound about said covers when on the reduced ends of the conduit to hold said protector in place.

1,806,456. DECOY. CLAUDE C. HAIGLER, San Jose, Calif. Filed Aug. 12, 1929. Serial No. 385,175. 3 Claims. (Cl. 43—3.)



1. A decoy comprising two body sections, annular members hingedly connecting the sections at their lower meeting edges, said members serving for anchor-cord connections, a weight in each section, and a buoyant chamber in each section immediately adjacent the weight therein.

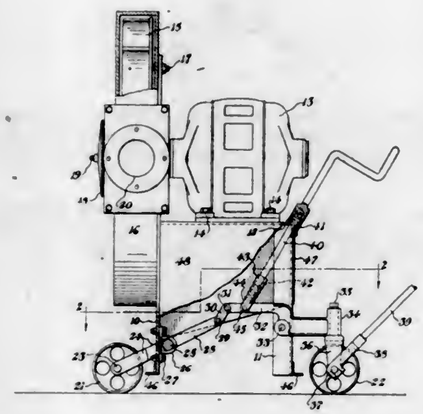
1,806,457. PIPE WRENCH. CHARLES HARTMAN, Waddington Channel, British Columbia, Canada. Filed Nov. 13, 1928. Serial No. 319,036. 3 Claims. (Cl. 81—170.)



1. In a pipe wrench comprising a lever member having at its extremity a right angular upturned inwardly serrated jaw, a transverse aperture for the reception of a worm, and a longitudinal tubular aperture and slideway for the reception of a slidable rack adapted to engage said worm, the combination of a slidably movable serrated jaw member angularly disposed to and opposing the corresponding serrated portion of the upturned extremity of said lever member, a grooved slideway on the transverse end surface of said slidable rack adapted to engage said movable jaw member, spring means on said slidable rack tending to slide said movable jaw outwardly along said end grooved-slideway and against a removable stop on said movable jaw, all substantially as described herein.

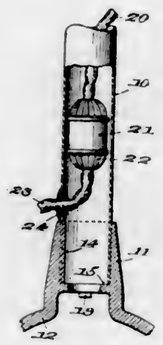
1,806,458. MECHANISM FOR SLITTING FABRIC. ROBERT P. HAYDEN, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Apr. 18, 1929. Serial No. 356,081. 6 Claims. (Cl. 164—60.)

1. Mechanism for slitting bandage fabric, comprising, in combination, a platen roll having annular grooves each providing continuous cutting dies, and a circular cutter-carrying roll the periphery of each cutter being equipped with interrupted cutter elements each presenting twin cutting surfaces mounted to track the grooves for co-operation with the continuous cutting dies.



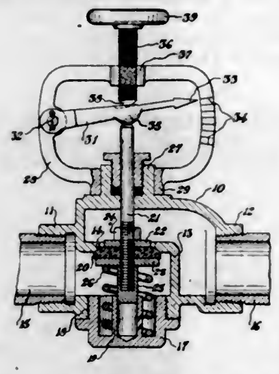
1,806,459. TOWER CONSTRUCTION. HAROLD O. HILL, Aspinwall, Pa., assignor to Riter-Conley Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1929. Serial No. 343,075. 5 Claims. (Cl. 189—21.)

5. The combination with a tower proper comprising a plurality of legs, diagonal brace members for the legs terminating in substantially the plane of the base of the tower, an adjustable anchoring extension at the lower end of one of said legs, and a ground brace extending from the tower, substantially at said base line and in reverse direction to the adjacent diagonal brace member.



1,806,460. MOBILE BLOWER UNIT. ROBERT C. HOPKINS, Alliance, Ohio. Filed Jan. 28, 1929. Serial No. 333,637. 4 Claims. (Cl. 280—44.)

1. In a motor-blower unit, a support, a rocker shaft journaled upon the support, a pair of spaced rocker arms fixed to the end portions of the shaft, and a pair of rear wheels carried by said arms, a central rocker arm upon the rocker shaft, a lever fulcrumed upon the support, a front wheel carried by one end of the lever, a link

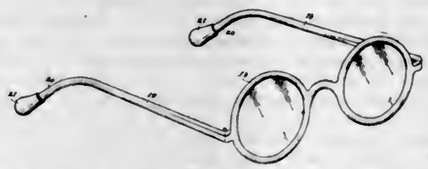


connecting the other end of the lever to the central rocker arm, and a screw operatively connected to said lever between its fulcrum and the link for raising the wheels to permit the support to rest upon the floor.

1,806,461. EQUIPMENT FOR ELECTRIC VACUUM CLEANERS AND THE LIKE. HARRY W. HOLMES, Rahway, N. J., assignor to The Regina Corporation, Rahway, N. J., a Corporation of New Jersey. Filed June 16, 1928. Serial No. 286,043. 3 Claims. (Cl. 247—13.)

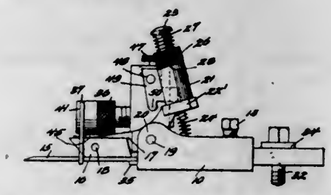
1. An attachment for electrical apparatus, comprising a hollow operating handle, a receiving socket therefor, a key secured within the socket, a slot in the handle for cooperation with said key, and a cable concealed within the hollow handle and extending outwardly through said slot above the socket and key.

1,806,462. GAS VALVE. ROBERT C. HOPKINS, Alliance, Ohio. Filed May 31, 1929. Serial No. 367,252. 1 Claim. (Cl. 251—27.)



In combination with a valve casing having a seat thereon, a valve stem within the casing, and a valve for sealing against high pressures including a cork disk impregnated with paraffin upon the stem for engagement with the valve seat, and a metal disk fixed upon the stem on each side of the cork disk.

1,806,463. OIL AND GAS FURNACE. ROBERT C. HOPKINS, Alliance, Ohio. Filed Oct. 9, 1930. Serial No. 487,478. 4 Claims. (Cl. 263—43.)



1. In furnace wall and heating chamber construction a plurality of partition walls spaced from the furnace walls to form hot-gas chambers, there being a burner port in the furnace walls communicating with each hot-gas chamber, the axes of the burner ports being offset from one another, there being a flame port in each partition wall communicating between the respective hot-gas chamber and the furnace heating chamber and located in alignment with the adjacent burner port, and there being a hot-gas port in each partition wall communicating between the respective hot-gas chamber and furnace heating chamber and located in alignment with the flame port of another hot-gas chamber.

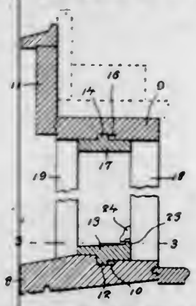
1,806,464. SPECTACLE PROTECTOR. JOHN HOUSLEY, Elizabeth, N. J. Filed Oct. 2, 1928. Serial No. 309,717. 1 Claim. (Cl. 88—51.)

In a device of the character described the combination with the temple bars of ophthalmic mounting, of enlarged resilient head clamping members removably mounted on the free ends of said bars, each of said members comprising a substantially flat elongated body, one end of said body being rounded, the other end of said body terminating perpendicular to the axis of said body, said body having a bore extending from said perpendicular end and terminating short of said rounded end to slidingly and removably receive therein and surround the extremity of a temple bar, said body having one side formed with frictional projections positioned to engage the head of the person wearing the device.

1,806,465. SIDE REGISTER DEVICE. WILLIAM M. KELLY, Westfield, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 5, 1929. Serial No. 352,822. 14 Claims. (Cl. 271—59.)

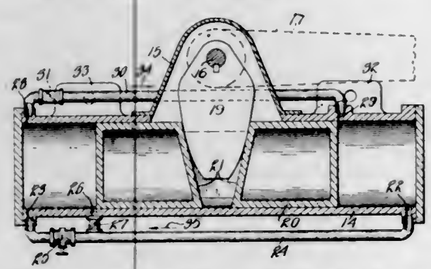
1. Sheet registering mechanism comprising, in combination, a bracket mounted to reciprocate in a path transverse to the direction of travel of the sheets, an arm pivoted to the bracket on an axis transverse to said path and having means to press the margins of the sheets against a surface on said bracket, said arm extending from the opposite side of its pivot from said means and having formed therewith an upwardly projecting barrel, a pin screwed in said barrel and projecting from the top thereof, a coiled compression spring acting upwardly against said pin, an adjusting collar on the projecting end of said pin slidable but non-rotatable with respect thereto, and a compression spring between the head of said pin and said collar.

1,806,466. BOOKBINDER. JOHN J. KERNAN, Baltimore, Md., assignor to American Bank Stationery Company, Baltimore, Md., a Corporation of Maryland. Filed Feb. 1, 1930. Serial No. 425,269. 14 Claims. (Cl. 281—25.)



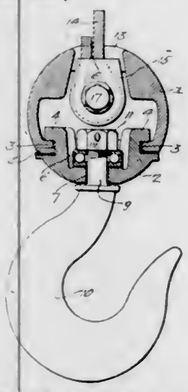
5. A permanent binding including a binding post provided with a head having a locking shoulder, a binding cover, a socket member disposed on the inner face of the cover and provided with means for attaching the socket to the cover, and means in the socket to engage the shoulder and lock permanently with the head upon insertion thereof into the socket.

1,806,467. REVERSIBLE CASEMENT FRAME. GEORGE M. KLEINKNECHT, Fort Lee, N. J. Filed Sept. 13, 1929. Serial No. 392,335. 1 Claim. (Cl. 20—11.)



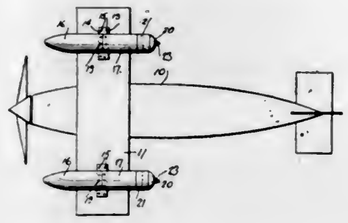
A reversible casement frame comprising a main sill having a groove, top and side jambs associated with the sill and having grooves therein of equal width with the width of the first named groove, an auxiliary sill located on the main sill, a tongue on the auxiliary sill and extending into the first mentioned groove and of a width less than the width of the first mentioned groove, stop strips associated with the top and side jambs, tongues on said strips and of corresponding width with the width of

the first mentioned tongues and extending into the second mentioned grooves, and sashes of different thicknesses



abutting the strips and auxiliary sill and by shifting the strips and auxiliary sill laterally the sashes may be reversed relative to each other.

1,806,468. SHOCK ABSORBER. ASHLEY G. KNIGHT, Jr., Kansas City, Mo. Filed July 2, 1929. Serial No. 375,546. 5 Claims. (Cl. 188—88.)



1. The combination with a vehicle of a shock absorbing device connected with the body of the vehicle and the axle thereof, the shock absorbing device having one way fluid passages connecting the ends thereof permitting fluid to flow in opposite directions to permit free movement of the body of the car relative to the axle in either direction, one of said fluid passages being further provided with means to check its return to intermediate position whereby shocks may be absorbed in both directions, substantially as set forth.

1,806,469. SWIVEL HOOK. CHARLES VERNON KOONS, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 16, 1930. Serial No. 444,855. 4 Claims. (Cl. 294—82.)

1. In a swivel hook, a housing comprising separable sections, and means for detachably securing said sections together, said housing having an aperture at the top for reception of a cable and another aperture at the bottom, a hook swiveled in the bottom aperture, and means located entirely within the housing for preventing retraction from the latter both of the cable and the hook, said means being detachable to permit said retraction and being accessible for detachment by separation of the housing sections.

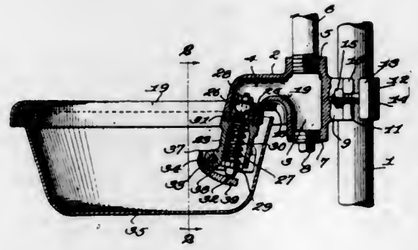
1,806,470. GAS CONTAINER FOR AIRCRAFT. VICTOR KOPIKOWSKI, Philadelphia, Pa. Filed July 25, 1930. Serial No. 470,754. 2 Claims. (Cl. 244—5.)

2. The combination with an aeroplane having a pair of wings, of cradles each fixed to the upper surface of a respective wing adjacent its outer end, and thin metal gas containing shells mounted in said cradles and having smooth and unbroken exterior surfaces, each shell including a forward seamless portion formed from thin metal and closed at its forward end by an ogival point, a central cylindrical portion having its forward edge abutting the rear edge of the forward portion, a seam strap in the interior of the shell covering the said abutting edges, means flush with the exterior of said shell portions for securing the same together, a rear hemi-spherical closure having its forward edge abutting the rear edge of the cylindrical portion, a weld strap surrounding the abutting edges of the central and rear portions and rabbeted into said portions to lie flush with the exterior, and a filling valve at the rear end of the rear portion.

1,806,471. METHOD OF FILTERING AND APPARATUS THEREFOR. SIMON P. KRAMER, Cincinnati, Ohio. Filed Feb. 24, 1928. Serial No. 256,823. 2 Claims. (Cl. 210—205.)

1. The method of preparing a filtering diaphragm which comprises calcining magnesium oxide at 1300° C., mixing the calcined mass with a silicious material, and kiln firing the mixture at substantially 900° C., whereby to prepare a solid body but without effecting a chemical combination of the magnesium oxide and silicious material.

1,806,472. HAIR CURLING APPARATUS. PAUL KUNIN and ISAAC E. MCELROY, Minneapolis, Minn.; said McElroy assignor to said Kunin. Filed Aug. 23, 1928. Serial No. 301,546. 7 Claims. (Cl. 132—33.)

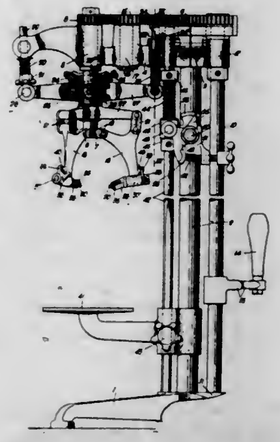


1. In apparatus for curling hair, a clamping shield comprising a pair of clamping sections having ends pivoted together, one of said sections having a slotted portion adapted to accommodate said other section when said sections are swung together, said slotted section having a pawl and said other section having a plurality of locking elements engageable by said pawl to secure said sections together about a lock of hair in a variety of different positions, one of said sections being adapted to carry a curling rod, both of said sections having inner edges extending substantially concentric with said rod for accommodation of a lock of hair and one of said sections having an upstanding flange disposed concentrically of said rod and

spaced therefrom when said sections are secured together to prevent strands of hair from falling flat against the shield and a winding device comprising a spiral tongue

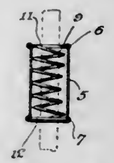
rotatably mounted on said rod and adapted to cooperate with said upstanding flange to engage and wrap the hair about said rod when rotated.

1,806,473. WATERING BOWL. RUDOLPH J. LANGER, Monticello, Iowa, assignor to Franklin Equipment Company, Monticello, Iowa, a Corporation. Filed May 25, 1929. Serial No. 365,972. 5 Claims. (Cl. 119—75.)



1. A watering device of the character described including a support, a casting connected to the support, a valve housing connected to the casting, a valve operable in the housing, a bowl pivotally connected to the valve housing and adapted to operate the valve, and an inverted U-shaped ring secured to the casting and extending around the upper edge of the bowl with the edge of the bowl within the ring.

1,806,474. PROCESS FOR SIZING PAPER. ERNEST LECOCQ, Brussels, Belgium. Filed May 13, 1929. Serial No. 362,853, and in Belgium June 8, 1928. 9 Claims. (Cl. 92—21.)

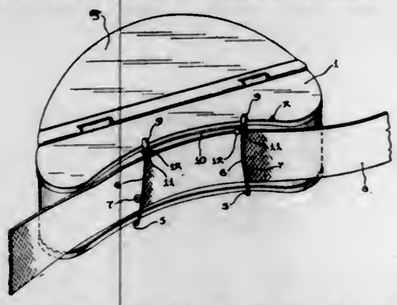


1. In a process for sizing paper by means of an agglutinant constituting a resin soap, treating said resin soap and the paper pulp with bisulfate of an alkaline metal.

1,806,475. MACHINE FOR TRIMMING THE CAPSULES OR SEALING COVERS OF BOTTLES, JARS, AND LIKE CONTAINERS. JOHN EDWARD LEE, Leicester, England, assignor of two-thirds to Alfred Foster Cholerton, and Horace Charles Sydney Tyler, Leicester, England. Filed Nov. 10, 1928, Serial No. 318,349, and in Great Britain Mar. 24, 1928. 16 Claims. (Cl. 164—60.)

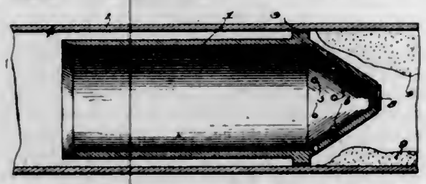
1. A machine for trimming a capsule on a bottle, jar or like receptacle, which includes a cutting device adapted to make a circumferential cut through the capsule about the neck of the receptacle, a support for the receptacle, means for effecting relative rotation between the cutting device and the receptacle, and means for effecting relative movement between the cutting device and the receptacle in an axial direction for cutting transversely through the surplus material which is to be removed preliminary to the circumferential cutting.

1,806,476. PENCIL HOLDER. ZILPHA LINDERMAN, Sebastopol, Calif. Filed Feb. 3, 1930. Serial No. 425,598. 2 Claims. (Cl. 24—12.)



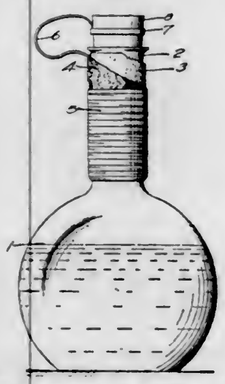
2. In a pencil holder, a tubular member, a spring positioned within said tubular member, said spring having its top and bottom convolutions secured to the opposite ends of said tubular member and having its center portion offset with respect to the axis of the tubular member, and fastening means carried by said tubular member.

1,806,477. ATTACHING DEVICE FOR BAIT BOXES. THOMAS LLOYD and THOMAS W. LLOYD, Ashley, Pa., assignors of one-third to Willard W. Lloyd, Ashley, Pa. Filed July 8, 1929. Serial No. 376,619. 4 Claims. (Cl. 224—5.)



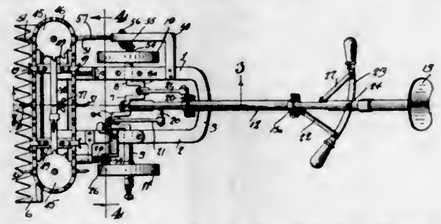
1. An article attaching device, comprising a body portion formed with relatively spaced spring fingers adapted to be disposed substantially transversely of a portion of the article and having loops formed in their intermediate

portions, and an arcuate keeper body secured to a portion of said article in proximity to the free extremities of said spring fingers having keeper members formed upon the opposite extremities thereof and adapted to receive the ex-



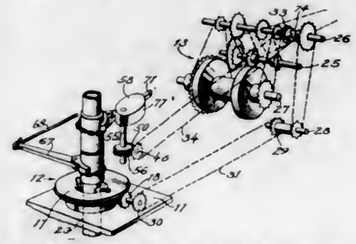
tremities of said spring fingers therein, the length of said keeper body being slightly less than the distance between said spring fingers prior to their engagement in the keeper members.

1,806,478. PIPE CLEANER. FRANK G. LONG, Rockcastle, Ala. Filed Jan. 7, 1929. Serial No. 330,891. 2 Claims. (Cl. 15—104.06.)



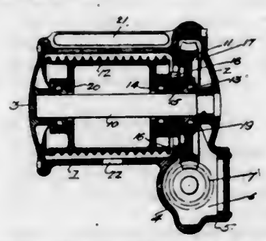
1. A pipe cleaning tool of tubular form and adapted to be propelled through the pipe by the pressure of the fluid in the pipe, said tool being of less external diameter than the interior of the pipe line to be cleaned, said tool comprising a tubular member open at its rear end and spaced at its outer sides from the wall of the pipe line and having a nose at its front end of substantially reduced diameter and conical form having a plurality of series of spray jet bores extending therethrough at different degrees of angularity to the axis of the tool, said bores being arranged in staggered relation.

1,806,479. HEAT INSULATING HAND GRIP. GEORGE O. LORY, Los Angeles, Calif., assignor to O. J. Lafayette Manufacturing Company, a Corporation of California. Filed June 25, 1930. Serial No. 463,690. 2 Claims. (Cl. 215—1.)



1. An article of manufacture comprising a hot liquid dispensing ceramic container, a hand grip surrounding the same and consisting of a layer of cork in close contact with the ceramic surface, asbestos arranged on the layer of cork, and a layer of binding material around said cork and asbestos.

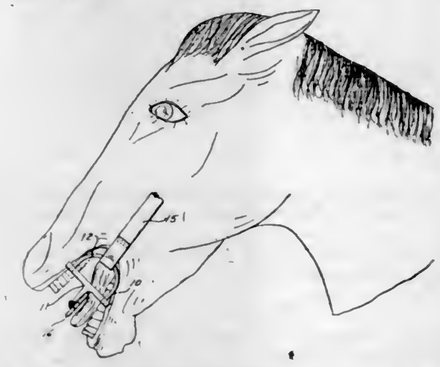
1,806,480. MOWING MACHINE. JOZSEF MANKÓ, Ozd, Hungary, assignor of one-half to Gabor Kovacs, Warrensville, Ohio. Filed Aug. 22, 1930. Serial No. 477,109. 8 Claims. (Cl. 56—186.)



1. In a mowing machine of the character described, a frame, ground wheels, a forwardly positioned horizontal cutter operatively connected with a ground wheel, a horizontally moving endless conveyor above the cutter and operatively connected with the other ground wheel, the operative connections including a crank shaft journalled on the frame and on which the wheels are mounted, and manually operated means for rotating the crank shaft.

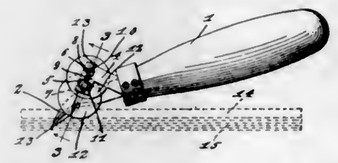
1,806,481. TONG OPERATING MECHANISM. ARTHUR E. MARTOIS, Compton, Calif. Filed Nov. 12, 1928. Serial No. 318,716. 2 Claims. (Cl. 255—35.)

1. In combination: a pipe having a joint; means for holding one part of said pipe from rotation; a rotary machine through which said pipe extends; a wrench attached to the other part of said pipe, said wrench having a handle; a frame located adjacent to said pipe and supported by said rotary machine; a shaft carried by said frame; a cam on said shaft, said cam being arranged to directly engage said handle of said wrench and to turn same; and worm gear means for turning said shaft and said cam.



1,806,482. DAVIT WINCH. JAMES AUGUSTINE MELLON, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 5, 1928. Serial No. 304,015. 2 Claims. (Cl. 254—186.)

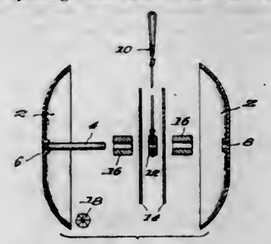
1. In a winch, the combination with a housing, of a relatively fixed shaft extending longitudinally through



said housing, a drum journaled on said shaft, a worm wheel also journaled on the shaft and operatively connected with the drum, a flange in the interior of the housing intermediate the drum and said wheel, a stuffing box affording a seal between the worm wheel and the shaft, a packing member sealing the space between the worm wheel and said flange, a rotary shaft journaled in the housing and projecting therethrough, and a worm on said shaft meshing with said worm wheel.

1,806,483. HORSE BIT. VICTOR MEYER, Brooklyn, N. Y. Filed Nov. 23, 1929. Serial No. 409,313. 2 Claims. (Cl. 54—8.)

1. In combination with an animal bit having a mouthpiece embodying two loosely jointed sections, a tongue plate, and means for loosely connecting said tongue plate to said mouthpiece at the joint between said bit sections, said means including an arched bracket secured to said plate for the passage of said mouthpiece between said bracket and said plate.



1,806,484. KNIFE FOR CUTTING SHOES. OSCAR MICHAUD, Salem, Mass. Filed May 2, 1930. Serial No. 449,288. 2 Claims. (Cl. 164—83.)

1. A knife for cutting the uppers and linings of shoes, in which a pattern of a determined size is arranged over the strips to be cut, of a frame secured to the ferrule of a knife handle and comprising upwardly inclined sides that merge into rightangular downwardly extended ends, upper and lower removable studs passed through the outer ends of the frame, slotted gage discs supported by the studs, said discs being adapted to be selectively arranged on the lower stud or receiving both studs therethrough, and the discs when on the lower stud being contacted by the upper stud.

1,806,485. MUSICAL TOY. ALFONSO FLORES MIRAFUENTES, Guadalupe, Mexico. Filed May 17, 1930. Serial No. 453,333. 4 Claims. (Cl. 46—14.)

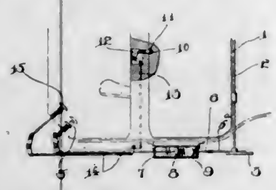
4. In a musical toy, a pair of dished members of resonant material, a pin rigidly secured at one end to one of said dished members and threadedly and removably secured at the other end to the other dished member, the concave faces of said dished members facing and spaced from each other, a pair of parallel discs mounted on said pin between the dished members, a pair of drums mounted on said pin spacing the discs from the dished members,

a drum mounted on said pin between the parallel discs, a string secured to said drum between the parallel discs and passing between said dished members to the outside and a bead entrapped between said dished members.

1,806,486. HAIR CUTTING SCISSORS. ALFONSO FLORES MIRAFUENTES, Guadalupe, Mexico. Filed June 5, 1930. Serial No. 459,269. 3 Claims. (Cl. 30—13.)

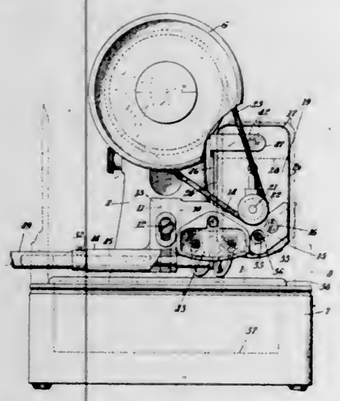
1. A scissors comprising crossed blades pivotally connected, handles at one end of the blades for grasping the scissors, a removable comb secured to the outer surface of one of the blades, the teeth of said comb extending beyond the cutting edge of the blade, and a removable knob handle projecting from the inner face of said blade and near the end thereof, said handle projecting substantially at right angles to said inner face of the blade.

1,806,487. CORD ADJUSTER FOR ELECTRIC IRONS. ADOLF MORAWSKI, Springfield, Mass. Filed Oct. 31, 1929. Serial No. 403,855. 1 Claim. (Cl. 24—129.)



An attachment for the conducting cord of an electric iron comprising a spiral spring, a leather strap slotted at one end to receive the other end to provide a slide loop for the cord and the end of the strap threaded through the loop being engaged with one end of the spring.

1,806,488. DOOR OPENING AND SHUTTING DEVICE FOR AUTOMOBILES. KIKUBO NAGAO, Kamisonocho, Nishiku, Nagoya, Japan. Filed Dec. 14, 1928, Serial No. 326,104, and in Japan Jan. 26, 1928. 3 Claims. (Cl. 268—3.)

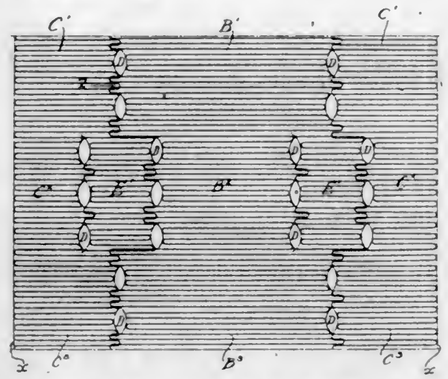


1. An automobile having front and rear seats and a rear hinged door, a bolt for locking the door, said bolt

being mounted in the automobile body so as not to be accessible to an occupant of the rear seat, means for operating the bolt by the operator on the front seat, a toothed sector on the pivot of the door, a second toothed sector adjacent the first sector and meshing therewith, a pedal adjacent the front seat, a hinged rod connected with the said

pedal and eccentrically connected with the second sector, a spring on the rod, and means whereby the spring is put under compression in closing the door and held compressed while the door is closed, thereby permitting the door to be opened by the spring when the locking bolt is retracted.

1,806,489. ELECTRIC SEWING MACHINE. JAMES M. NAUL, Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed July 12, 1928. Serial No. 292,166. 9 Claims. (Cl. 172—179.)



1. A bracket, motor and motor-controller elements mounted on said bracket, a rock-shaft carried by said bracket independently of said motor and motor-controller elements and connected to operate said motor-controller element, and manually controlled means for operating said rock-shaft.

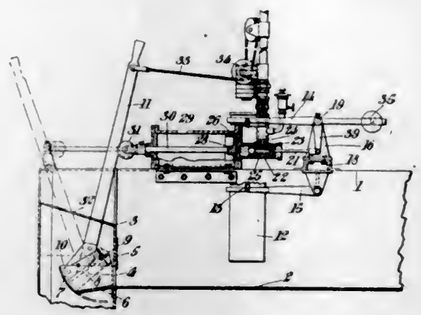
1,806,490. ROTARY COOLING DRUM. HERMANN GUSTAV ROBERT NAUMANN, Nijmegen, Netherlands. Filed Feb. 21, 1929, Serial No. 341,816, and in the Netherlands Nov. 6, 1928. 5 Claims. (Cl. 257—95.)

1. Method for cooling fatty substances in liquid condition comprising the steps that the liquid fats are spread in a thin layer in a substantially liquefied state over a cooling surface, that a normally gaseous but liquefied cooling means is passed along the inner side of the cooling-surface.

1,806,491. METHOD OF FORMING OPEN-WORK DESIGNS IN STOCKINGS. ERNST OSCAR NEBEL, Philadelphia, Pa. Filed June 30, 1928. Serial No. 289,465. 7 Claims. (Cl. 66—180.)

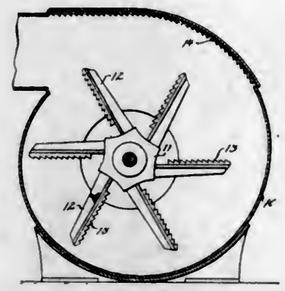
1. A method of producing open-work designs in knitted fabric, comprising the knitting of a fabric in a plurality of separate independent sections each section having selvage edges, and interknitting the selvage edges of adjacent sections at predetermined intervals.

1,806,492. PROCESS OF KNITTING GARTER EXTENSIONS FOR HOSIERY. PAUL R. NESTLER, Green Lane, Pa., assignor of one-half to Earl L. Kotzen, Reading, Pa. Filed May 8, 1930. Serial No. 450,854. 1 Claim. (Cl. 66—173.)



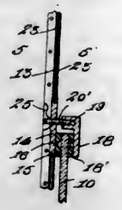
A method of forming garter tabs on the top of a stocking as integral parts of the stocking which consists of producing a plurality of independent strips of fabric on relatively spaced sets of needles of a knitting machine, transferring the first knit course of stitches of each independent strip back onto the said needles, moving the folded tabs thus produced into non-knitting positions on the needles, subsequently knitting a portion of the welt of the stocking on a full complement of needles including said spaced sets thereof, then moving the folded tabs back into knitting position on the needles, and completing the knitting of the stocking welt on said full complement of needles to effect interknitting of the tabs therewith.

1,806,493. COAL WASHER BOX. BERTRAM NORTON, Claverley, England, assignor to Nortons (Tividale) Limited, Tipton, England, a British Company. Filed Mar. 29, 1928, Serial No. 265,734, and in Great Britain Apr. 26, 1927. 7 Claims. (Cl. 209—496.)



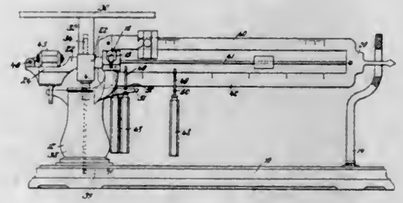
1. A coal washer box having an end discharge aperture, a shelf projecting from the lower edge of the aperture and

away from the box, a gate supported on and swingable about an axis outside the box and spaced from the outer edge of the shelf, mechanism responsive to variations in the



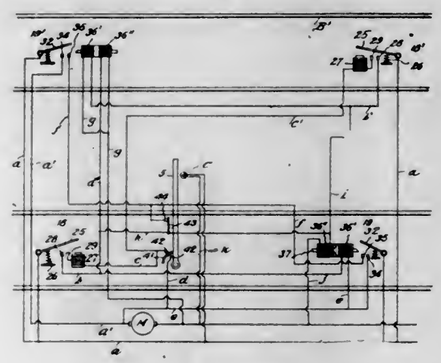
shale level in the box to swing the gate to a position below the upper surface level of the shelf and to a position above said shelf, the gate being shaped to maintain substantial contact with the outer edge of the shelf in all positions.

1,806,494. PROTECTIVE LINING. JAMES D. O'BRIEN, Brooklyn, N. Y. Filed Feb. 23, 1928. Serial No. 256,306. 3 Claims. (Cl. 302—37.)



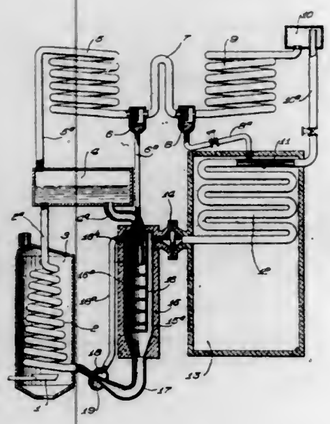
1. An apparatus including a member having a surface subject to wear by the abrasive action of comminuted material impinged thereagainst, said member having contiguous substantially V-shaped parallel grooves in said surface for producing a protective covering consisting of aggregations of said material collected in said grooves.

1,806,495. ROLLING WINDOW SCREEN FOR AUTOMOBILES. WILBUR E. PARKER, Everett, Mass. Filed June 28, 1929. Serial No. 374,454. 2 Claims. (Cl. 292—256.)



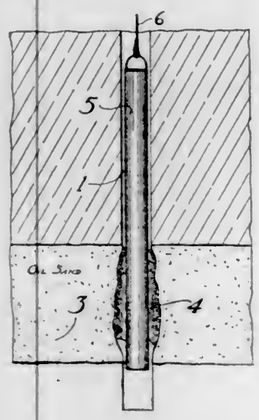
1. In a device of the class described, means for connecting a screen with a window, these means including a pair of clamping elements, one of which is offset laterally toward the other and is provided with a socket portion, an adjustable device entering the socket and passing thru said other clamping element, the latter being slotted for an edge portion of the screen, a cam mounted on the adjustable device and positioned to bear on the clamping element opposite that having the socket, and a plurality of devices on the approaching face portions of the clamping elements and formed with cups from which air is forced under pressure of the cam.

1,806,496. WEIGHING SCALE. ALVARO PEREIRA, New York, N. Y. Filed July 26, 1929. Serial No. 381,255. 5 Claims. (Cl. 265—49.)



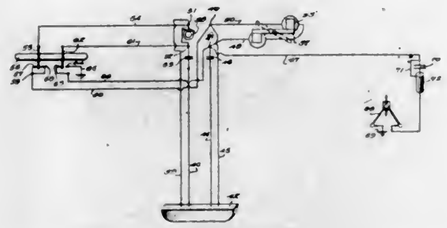
1. A weighing scale having a beam and fulcrum, a weight adapted to be moved along said beam, said weight being non-removable from said beam, and means to support said weight off the beam while it is not in use.

1,806,497. AUTOMATIC CROSSING GATE. GABRIEL POLAK, Forest City, Pa.; Helen Polak, administratrix of said Gabriel Polak, deceased, assignor of thirty-five one-hundredths to John Farkas. Filed Sept. 17, 1930. Serial No. 482,620. 2 Claims. (Cl. 246—127.)



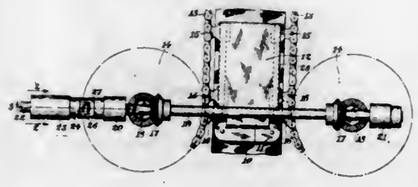
1. The combination with a double track and its crossing, gates for controlling the crossing, a shaft for operating both gates, a motor, means for connecting the motor with the shaft to cause the shaft to lower the gates at one operation of the motor and to raise the gates in another operation of the motor, a circuit for the motor, means operated by a train approaching the crossing on either track for closing the circuit of the motor, means for breaking the circuit when the gates are lowered, train operated means on each track beyond the crossing for closing the circuit to the motor to raise the gates, means for breaking the circuit when the gates are raised and means for preventing the gates being raised by a train on one track when a train on the other track is approaching the crossing.

1,806,498. REFRIGERATING MEANS AND METHOD. BO FOLKE RANDEL, San Diego, Calif., assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed May 11, 1927. Serial No. 190,604. 15 Claims. (Cl. 62—119.5.)



5. The herein described method of refrigeration, consisting in producing a final high pressure in gas by progressive steps of removing gases from a mixture by condensing, thus accumulating all the partial pressures in the remaining gas.

1,806,499. METHOD OF FACILITATING FLOW FROM WELLS. LEO RANNEY, New York, N. Y., and CHARLES O. FAIRBANK, Petrolia, Ontario, Canada, assignors of one-half to Standard Oil Development Company, a Corporation of Delaware. Filed July 21, 1928. Serial No. 294,569. 13 Claims. (Cl. 166—21.)

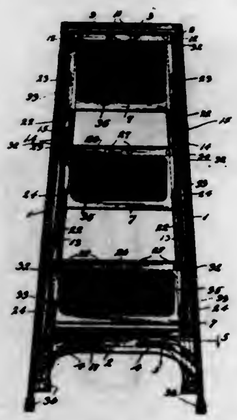


1. In the chemical treatment of wells for facilitating flow therefrom, the improvement which comprises charging into the well an acid and a substance evolving heat and liberating a hydrocarbon gas upon reaction with the acid.

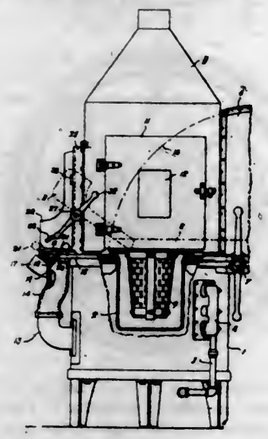
1,806,500. TRAIN CONTROL SYSTEM. PHILIP X. RICE, Danville, Ill., assignor to The Miller Train Control Corporation, Staunton, Va., a Corporation of Virginia. Filed May 3, 1926. Serial No. 106,478. 62 Claims. (Cl. 246—6.3.)

1. In a train control system, a car-carried receiver having a plurality of magnetic paths normally of unequal reluctance, a normally energized primary winding on the receiver urging flux through said paths, a secondary winding included in both of said magnetic paths, a control device in circuit with said secondary winding, and trackway means tending to change the relation of the reluctances of said paths to at least momentarily reduce said flux to substantially zero through said secondary winding.

1,806,501. CONVEYER FOR PACKAGING MACHINES. ALFRED GERMAN ROSE, Gainsborough, England, assignor of one-half to Rose Brothers (Gainsborough) Limited, Gainsborough, England, a British Company. Filed Nov. 11, 1929, Serial No. 406,464, and in Great Britain Nov. 21, 1928. 6 Claims. (Cl. 198—110.)



1. The combination of a conveyer of the endless track type having one lap in a horizontal plane, means on said conveyer to engage the articles to be transported, and transfer mechanism comprising two endless bands provided with stripping fingers and located on opposite sides respectively of the conveyer with one lap of each band parallel to the aforesaid lap of the conveyer, and driving means for the stripping fingers, comprising a device for converting rotational movement at constant angular velocity into rotational movement at fluctuating angular velocity, operable about the period when an article approaches the end of the conveyer lap to move the stripping fingers into engagement with the rear end of the article at a linear speed which is substantially the same as that of the conveyer and subsequently ahead of the conveyer at an increased linear speed.

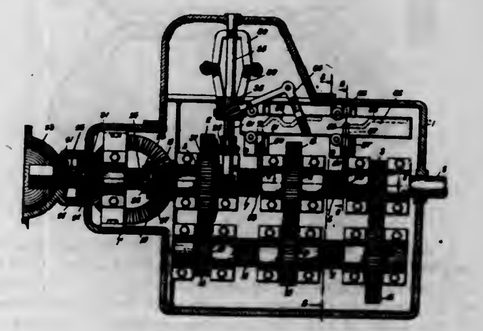


1,806,502. LADDER. HEYMAN ROSENBERG, New York, N. Y. Filed Dec. 31, 1928. Serial No. 329,479. 11 Claims. (Cl. 228—29.)

1. A ladder comprising side bars each consisting of a shape formed up from sheet metal, ladder treads pivoted

to said bars, a brace bar pivoted to one of the side bars to swing free of the treads to and from a position to support one of the treads against pivotal movement, and means for suspending the other treads from the tread supported by the brace.

1,806,503. APPARATUS FOR TREATING METAL WORK. HEYMAN ROSENBERG, New York, N. Y. Filed July 23, 1929. Serial No. 380,350. 7 Claims. (Cl. 263—14.)

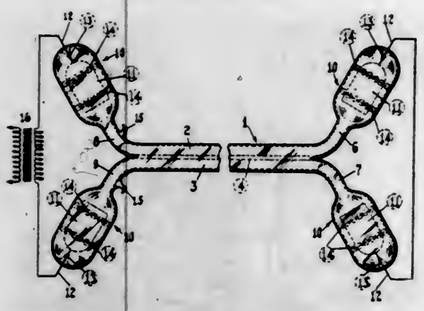


1. In apparatus for molten salts hardening of metal work, the combination, with a furnace and a container for salt located to be heated thereby, of a movably mounted container for work located in the path of discharge of heated products from the same furnace, the container being adapted to be moved from the heating position to a discharging position for directing the work from the container into the salt.

1,806,504. CURTAIN BRACKET. KAROL P. RYBAK, Taylor, Pa. Filed May 1, 1930. Serial No. 448,953. 1 Claim. (Cl. 156—23.)

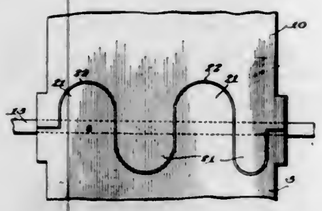
In a device of the kind described, a body, clamping means carried by the body for securing the body to a fixed object, a channel member carried by the body, a curtain rod bracket carrying plate slidably engaged in said channel member and a spring pressed latch lever pivoted to the body member and provided with a latch lug entering the channel of the channel member, said plate having a lug receiving notch in which said lug engages to hold the plate immovable with respect to said channel member.

1,806,505. TRANSMISSION. AUGUST M. SAARI, Watton, Mich. Filed Aug. 8, 1930. Serial No. 473,978. 4 Claims. (Cl. 74—97.)



1. Transmission means comprising a driven shaft, a second shaft in alignment therewith, a spiral spring on the adjacent ends of the shaft, a second pair of aligned shafts parallel to the first shafts, a pair of gears connecting each shaft of one pair with a shaft of the other pair, a spiral spring connecting the second pair of shafts together, each spring acting to transmit the movement of a shaft of one pair to the other shaft of the pair and means for holding one of the springs stationary when desired, so as to prevent said spring from transmitting the movement of one shaft to the opposing shaft.

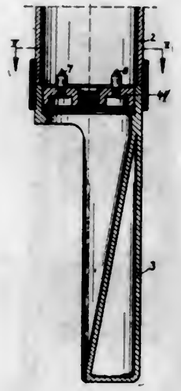
1,806,506. NUT LOCK. WILLIAM G. SAVIDGE, Sunbury, Pa. Filed Nov. 17, 1927. Serial No. 233,795. 1 Claim. (Cl. 151—19.)



A nut lock comprising a base-nut having at one end an internally threaded frustoconical projection of smaller diameter at its base than the body of the nut and of substantial length, said projection divided radially into a circular series of fingers tapering from the body of the nut to their outer ends, a lock ring having a tapering bore large enough in diameter at one end to afford clearance between said ring and said projection in any locking position of the ring and smaller in diameter at and near the other end than the diameter of the outer end of said projection, whereby when said ring is forced on to said fingers its inner surface will bear upon the outer ends only of the fingers in all locking positions, and a jamb nut adapted to engage the outer face of the ring to force the ring on to the fingers.

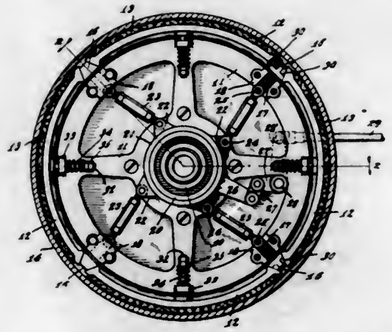
1,806,507. DUPLEX VACUUM TUBE LIGHT. ROBERT C. SMALLEY, Arlington, N. J., assignor to Claude Neon Lights, Inc., New York, N. Y., a Corporation of New York. Filed May 1, 1926. Serial No. 105,892. 6 Claims. (Cl. 176—122.)

1. A duplex vacuum tube comprising two elongated paths enclosed by common internal and external walls, each of said paths terminating in electrode chambers, the walls of the electrode chambers of each path being independent of the walls of the corresponding electrode chambers of the other path.



1,806,508. SHIP CONSTRUCTION. RICHARD F. SMITH, Charleston, S. C., assignor, by direct and mesne assignments, of one-fourth to Raymond D. Sullivan, Savannah, Ga., and one-half to Charleston Dry Dock and Machine Company, Charleston, S. C., a Corporation of Delaware. Filed July 20, 1929. Serial No. 379,819. 2 Claims. (Cl. 114—79.)

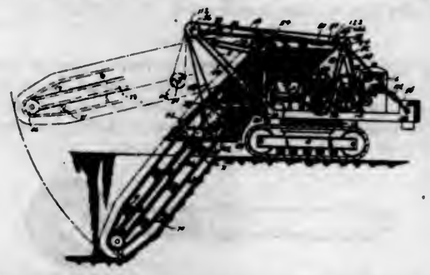
1. In a ship construction, a supporting beam, plates abutted at a joint line approximately centered along one edge of the beam, said plates having interfitting portions extending in alternating directions and beyond the sides of the beam, and a weld along said interfitting portions and the joint line.



1,806,509. METHOD OF ADJUSTING WELL HOLES. ALPHONS GERARD HUBERT STRAATMAN, The Hague, Netherlands, assignor to Naamlooze Venootschap De Bataafsche Petroleum Maatschappij, The Hague, Netherlands. Filed Aug. 9, 1930, Serial No. 474,260, and in the Netherlands June 10, 1929. 3 Claims. (Cl. 255—1.)

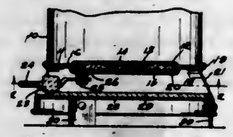
1. Process for orientating a whipstock in a slanting bore hole to be deflected into a vertical direction, which comprises inserting in the bore hole a series of tubes provided at its lower end with a whipstock, recording the position of the plane of symmetry of the whipstock with regard to the deviation plane of the bore hole by

means of a clinometer device and shifting the position of the whipstock by displacing its tubes by the desired angle in accordance with the record obtained.



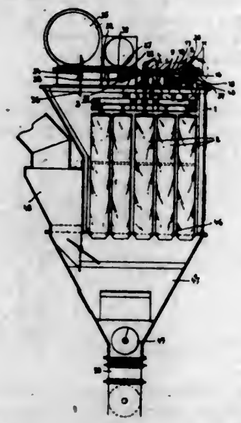
1,806,510. BRAKE. JOHN M. VAWTER, Indianapolis, Ind., assignor to Shadberg Company, Indianapolis, Ind., a Corporation of Indiana. Filed May 5, 1928. Serial No. 275,286. 16 Claims. (Cl. 188—78.)

1. A brake, comprising in combination with a brake drum, a stationary member, a plurality of segmental brake shoes located inside of said brake drum and having inclined end faces, brake-actuating members, guiding means carried by said stationary member for supporting said brake-actuating members for radial sliding movement, each of said brake-actuating members having oppositely inclined working faces arranged to engage respectively the inclined end faces of two adjacent brake shoes, each of said brake shoes being provided at each end with lugs, said brake-actuating members being provided with recesses for the reception of said lugs, a collar rotatably supported on said stationary member within said brake drum, inclined links respectively connecting said brake-actuating members with said collar, and means for rotating said collar to produce inward or outward movement of said brake-actuating members.



1,806,511. CONVERTIBLE EXCAVATING ATTACHMENT. GEORGE A. VAUGHN, Newton, Iowa, assignor to The Parsons Company, Newton, Iowa, a Corporation of Iowa. Filed Oct. 19, 1929. Serial No. 400,825. 5 Claims. (Cl. 37—90.)

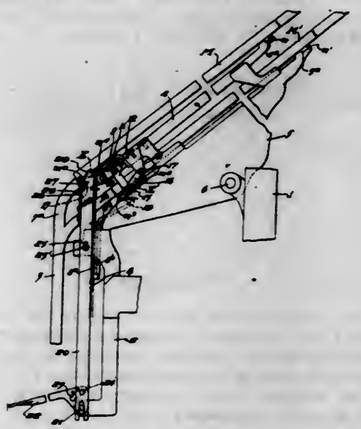
1. In a structure of the class described, the combination of a traction element having a frame and a power plant on the frame, with an excavating attachment having side frame elements detachably pivoted to said first frame at its rear part, longitudinally adjustable rigid



braces connecting the upper parts of the side frame elements with the first frame and an excavating mechanism pivotally carried on said attachment.

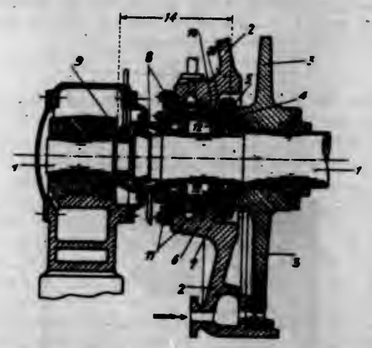
1,806,512. ELECTRIC HEATING APPARATUS. EDWIN L. WIEGAND, Pittsburgh, Pa., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1929. Serial No. 354,283. 2 Claims. (Cl. 219—44.)

1. Electrically heated apparatus comprising an element to be heated, an electric resistance heating unit comprising an electric resistance wire submerged in a mass of compacted electrically insulating material, said mass having one face naked and the other face covered by a metallic reinforcement, a second element adjacent to said first element, said first element and second element defining between them a substantially closed recess and said resistance unit located in said recess with its naked face presented to said first element and said metallic reinforcement presented to said second element.



1,806,513. FILTER FOR SEPARATING DUST FROM AIR OR GAS. EDUARD WILHELM VON WALDENBURG STRAUS-SCHARINA, Lubeck, Germany. Filed July 22, 1930, Serial No. 469,801, and in Germany May 28, 1929. 3 Claims. (Cl. 183—54.)

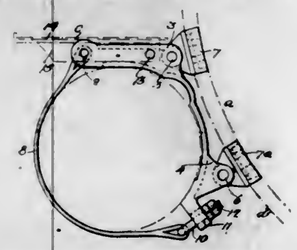
1. A filtering apparatus for air or the like comprising a chamber having an inlet for supplying dust-laden air,



filtering members in the chamber, an outlet passage, an inlet passage for cleansing air, valves for said passages, automatic means for actuating said valves to open either passage and simultaneously to close the other approximately at the same time, and automatic means independent of the valve-actuating means for vibrating the filter members continually while the apparatus is in operation.

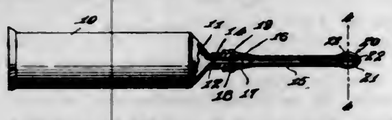
1,806,514. TYPOGRAPHICAL MACHINE. LE ROY W. WILLIS, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 3, 1929, Serial No. 411,325, and in Germany Jan. 9, 1929. 7 Claims. (Cl. 199—19.)

1. In a typographical machine having means for individually supporting a plurality of escapement-carrying matrix magazines in substantially fixed positions therein, the escapement-carrying ends of the magazines being movable relatively to one another, and keyboard operated members for actuating the escapements of the plurality of magazines, means for moving the escapement carrying end of one magazine in a direction to remove its escapements from the range of operation of the actuating members while the escapement-carrying end of another of the magazines is moved in an opposite direction to position its escapement in cooperative relation with said actuating members.



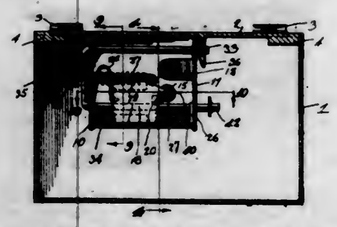
1,806,515. STUFFING BOX FOR ROTATING SHAFTS. HEINRICH ZOELLY, Zurich, Switzerland. Filed Apr. 2, 1928, Serial No. 266,620, and in Switzerland Apr. 9, 1927. 4 Claims. (Cl. 286—10.)

1. A stuffing box for rotatable shafts, comprising in combination, a stuffing box casing, a packing member rotatable with the shaft and partaking in any axial displacement thereof and provided with at least one packing



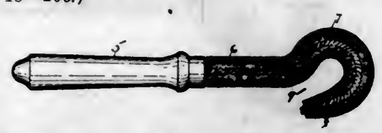
surface, and a non-rotatable packing member in operative connection with the shaft to follow the axial movements of the latter and provided with at least one packing surface cooperating with the packing surface of the rotatable packing member to form at least one throttling gap disposed substantially at right angles to the shaft, said non-rotatable packing member comprising a box-like portion which seats in a bore of said stuffing box casing, the diameter of which bore is less than the outermost diameter and greater than the innermost diameter of the cooperating packing surfaces of the two packing members.

1,806,516. DRUM SUPPORT FOR LOCOMOTIVES. WILLIAM ANDREW BARDSLEY, Oaklyn, N. J. Filed June 1, 1928. Serial No. 282,233. 2 Claims. (Cl. 248—20.)



1. The combination in a drum support for locomotives and the like, of a support having two bearing points for a drum; means for attaching the drum to the support, said support having two lugs spaced apart; and blocks pivotally mounted on the support, said blocks being arranged so as to be attached to the boiler.

1,806,517. FOUNTAIN APPLICATOR. EMMA L. BELLOWS, New York, N. Y. Filed Nov. 29, 1929. Serial No. 410,595. 1 Claim. (Cl. 128—232.)

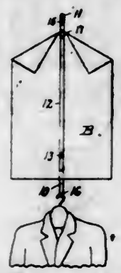


A catheter of tubular formation having an outwardly flared extremity, a coupling for the catheter being shaped for accommodation within the flared extremity of the catheter, the flared extremity being annularly grooved upon the inner surface thereof, a bead extending circumferentially of the coupling about the inclined wall thereof for rotary connection within said groove, the opposed end of the catheter being successively enlarged and reduced closing the longitudinal bore thereof, and the large and reduced portions being longitudinally slotted adjacent the points of connection therefor to facilitate ejection of a medicament therethrough.

1,806,518. BOX LOCK. JOSEPH S. BRYLKA, Du Bois, Pa. Filed Mar. 20, 1930. Serial No. 437,453. 16 Claims. (Cl. 70—14.)

1. In a lock box having a box body and hinged cover, lock mechanism for the cover comprising a key operated sliding bolt on the body and a keeper on the cover, a hasp on the cover and a restraining keeper shackle on the body, and said keeper shackle for said hasp being shiftable to expose a key opening for access to the sliding bolt.

1,806,519. DENTAL PLATE BRUSH. HENRY CAVE, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 4, 1927. Serial No. 210,500. 2 Claims. (Cl. 15—206.)

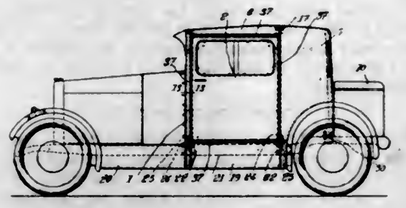


1. A dental plate brush comprising a handle with a brush element projecting therefrom, said element including a core covered with cleaning material of cylindrical shape axially projecting from the handle with the outer end of the brush element reversely bent to form a loop and with the terminal end of the loop directed toward the handle, said terminal end being spaced from the outwardly extending portion of the brush element and defining a restricted space communicating with a larger area within the loop.

1,806,520. BRUSH. HENRY CAVE, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 17, 1929. Serial No. 355,885. 3 Claims. (Cl. 15—206.)

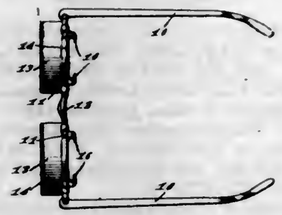
1. A brush comprising a twisted wire core, bristles of wire secured to and radially projecting from said core, and a tip having the bristles permanently set to surround, project forwardly and envelop the tip.

1,806,521. GARMENT BAG SUPPORT. FRANK A. CINADR, Moulton, Tex. Filed Feb. 21, 1930. Serial No. 430,346. 1 Claim. (Cl. 226—18.)



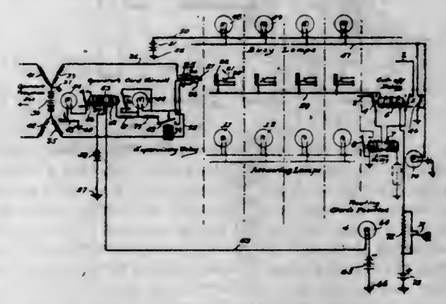
An article of manufacture comprising a laundry bag support, a retaining element relatively long throughout the major portion of its length upon the support for sustaining the bag in an elevated position, and a garment supporting hook carried by the support beneath the bag opening and retaining element to facilitate telescopic association of the garment and bag.

1,806,522. METAL DOWEL FOR WOODEN BEAMS. PAUL JOHAN DE GRUYTER, The Hague, Netherlands. Filed June 17, 1929, Serial No. 371,661, and in the Netherlands June 20, 1928. 1 Claim. (Cl. 85—11.)



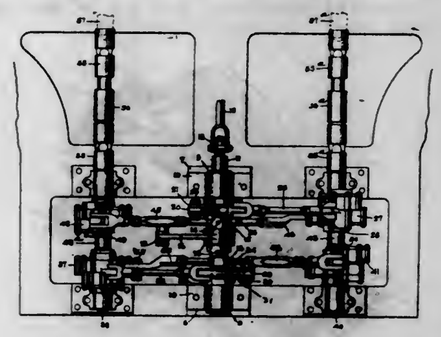
A metal dowel for wooden beams comprising a plate having a plurality of groups of triangular fangs projecting from the plane of the plate, each group being formed by means of radial incisions in the plate in such a way that the triangles of each group have a common apex whereas the base lines form an uninterrupted line, the fangs of each group alternately projecting from each side of the plate.

1,806,523. VEHICLE BODY. JEAN ANTOINE AUGUSTIN DE VIZCAYA, Paris, France. Filed Oct. 31, 1927. Serial No. 229,914, and in France Nov. 6, 1926. 4 Claims. (Cl. 296—28.)



1. A vehicle assembly comprising a chassis, a pair of symmetrical front sections, an intermediate section extending between said front sections, a pair of symmetrical latero-posterior sections forming part of the lateral and part of the rear walls of the body, a pair of rear sections forming part of a rear window frame and extending between the symmetrical latero-posterior sections, a pair of upper and a pair of lower lateral sections extending between the symmetrical front and latero-posterior sections and forming part of a door frame, a roof section, means for rigidly fastening contiguous sections together, a pair of doors hingedly supported by the sectional assembly, and means for detachably supporting all of the foregoing elements on the chassis in the aforementioned relation.

1,806,524. GOGGLES. CHARLES A. DONNELLY, Chicago, Ill. Filed July 6, 1929. Serial No. 376,313. 1 Claim. (Cl. 88—41.)

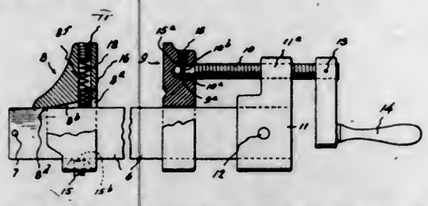


Goggles of the character described comprising semi-circular rims, bows therefor, a nose piece connecting said rims, semi-circular shields for each rim, each shield having one edge rolled upon itself to receive the adjacent rim and thereby support the shield in advance of the latter, a lens of corresponding shape supported by the outer end of each shield, the rolled portion of each shield being slit along spaced parallel lines to provide separated portions bent upon themselves to form hooks, said hooks being arranged in pairs on each rim and projecting rearwardly therefrom to support the goggles on rims of an ordinary pair of spectacles.

1,806,525. CALL DISTRIBUTING SYSTEM. HERBERT W. DRAKE, East Orange, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1930. Serial No. 492,849. 10 Claims. (Cl. 178—2.)

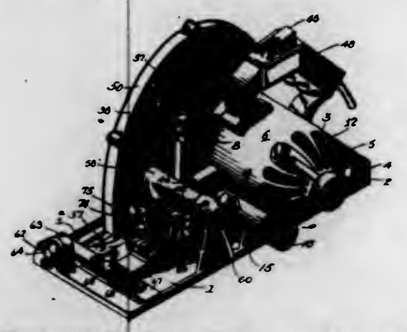
1. In a switchboard having a plurality of operators' positions, a routing clerk's position and a plurality of subscribers' lines, a plurality of devices at said routing clerk's position for indicating which of said lines are busy and means at said routing clerk's position for indicating which operator is working on any line indicated as busy.

1,806,526. SET WORKS FOR WOOD CUTTING MACHINES. JAMES E. ECKERSLEY, Aberdeen, Wash., assignor of one-half to Alexander Polson, Hoquiam, Wash. Filed Aug. 19, 1927. Serial No. 214,185. 8 Claims. (Cl. 74—53.)



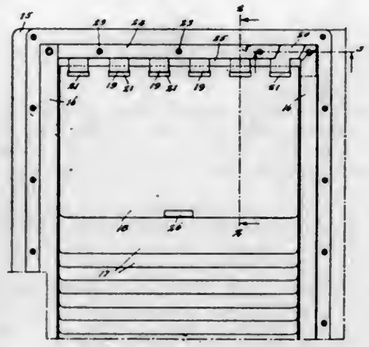
1. In a machine of the character described, a power shaft, a clutch member keyed to said shaft, clutch members revolvably mounted on said shaft and adapted to engage with the said keyed clutch member, bell crank levers connected with said revolvable clutch members, a subshaft on each side of the power shaft, a series of one way clutches mounted on each of said subshafts, and rods connecting the said clutches of the subshafts with the said bell crank levers.

2. In a wood cutting machine of the character described, the combination with feed shafts for operating feed rolls for advancing the wood to a cutter, of a power shaft, a clutch member keyed to said power shaft, clutches revolubly mounted on said power shaft, means to shift the power shaft relatively to the revolubly mounted clutches,



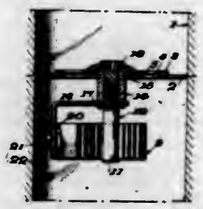
a pair of one-way reversely acting clutches on each of said feed shafts, means connecting each of the said revolubly mounted clutches respectively to one of the clutches of one of the feed shafts and means connecting another of the clutches of one feed shaft with a clutch on the other of said feed shafts.

1,806,527. CLAMPING VISE. PETER EISEMANN, Richmond Hill, N. Y. Filed Nov. 24, 1930. Serial No. 497,881. 4 Claims. (Cl. 144—303.)



1. In a vise, the combination of a bar, a jaw, screw means for moving said jaw along said bar, and a special jaw for coacting with the first-mentioned jaw; said special jaw having a throat sleeving said bar which includes a roof and a floor, said special jaw above said throat having a rearward projection presenting an undersurface for engaging the top of the bar thereby to hold the clamping face of the special jaw at a predetermined angle to the top of the bar, said roof extending toward the other jaw and upwardly at an angle to the top of the bar, said floor having adjustable therein an upwardly inserted set screw the upper end of which is shaped to provide an upstanding teat circular in cross-section, the top of said teat for jamming against the lower part of the bar at a point forward of the rear end of said roof, said special jaw having above the bar a spring-pressed device tending always to urge said roof toward contact with the top of the bar thereby to throw the special jaw to a loose sliding fit on the bar.

1,806,528. PORTABLE POWER-DRIVEN SAW. THOMAS J. FEGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bro's. M'f'g. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1930. Serial No. 424,370. 6 Claims. (Cl. 143—43.)

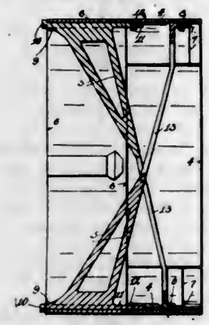


1. The combination in a portable power driven saw, of a base; a frame pivoted to one end of the base; an electric motor mounted on the frame, said motor having a shaft; a saw spindle having its bearings on the frame; gearing between the spindle and the shaft of the motor; a bar pivoted to the base; a projection on the frame encircling the bar; a stop on the bar located below the projection; means for clamping the stop in the position to which it is adjusted, said bar having a notch at its upper end, arranged to engage the encircling projection on the frame when the frame is raised to its full extent; yielding means on the frame tending to force the bar outwardly, so that the notched portion of the bar will engage the encircling member; a handle; a lever at the handle; and means connecting the lever to the bar, so that on the movement of the lever the bar will be moved away from the projection on the frame, which will free the pivoted frame from control of the bar.

1,806,529. VISIBLE LOOSE LEAF DEVICE. CHARLES A. FINLEY, Rutherford, N. J., assignor to Boorum & Pease Company, Brooklyn, N. Y., a Corporation of New York. Filed July 28, 1928. Serial No. 296,017. 5 Claims. (Cl. 129—16.)

4. A visible loose leaf device for superposed sheets, comprising a panel, a covering shield for the sheets and double acting spring hinge means for securing said shield to said panel and adapted to hold the shield in either an open or a closed position.

1,806,530. TEMPERATURE REGULATOR. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Dec. 6, 1928. Serial No. 324,140. 21 Claims. (Cl. 263—93.)

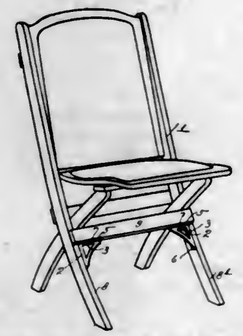


1. A thermostatically controlled valve unit comprising relatively rotatable apertured valve members, a thermostat, means operatively connecting said thermostat to said members to relatively rotate the same, and means causing relative axial displacement of said members on relative rotation thereof.

1,806,531. PRODUCTION OF DEGRADATION PRODUCTS FROM CELLULOSE, CELLULOSE-LIKE SUBSTANCES, AND CELLULOSE CONTAINING MATERIALS. RUDOLF GOGARTEN, Aachen, Germany, and JOHN STANLEY ARTHUR, London, England, assignors to The Commercial Alcohol Company Ltd., London, England, a Corporation of Great Britain. Filed May 23, 1930, Serial No. 455,138, and in Germany Mar. 9, 1929. 2 Claims. (Cl. 127—37.)

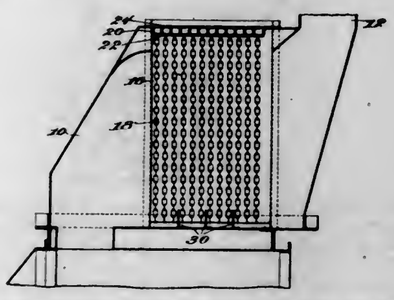
1. The method of producing sugar from cellulose containing substances of moisture content from 20% to 50%, comprising the steps of treating the initial material with a volatile acid suitable for the hydrolysis of cellulose, in amounts sufficient to effect the decomposition, the step being carried out at such low temperature that the formation of sugar is prevented, then as a second step, hydrolyzing the decomposed material to form sugar by direct treatment with dry steam at a suitable pressure, to avoid harmful excess of water, and a third step, deacidifying the mixture to purify the product, the expelled volatile acid being used over again in the process.

1,806,532. SECTIONAL AUXILIARY RIM AND BRACKET FOR VEHICLE WHEELS. OSWALD GORDON GREGSON, West Perth, Western Australia, Australia. Filed July 29, 1929, Serial No. 381,875, and in Australia June 4, 1929. 2 Claims. (Cl. 301—38.)



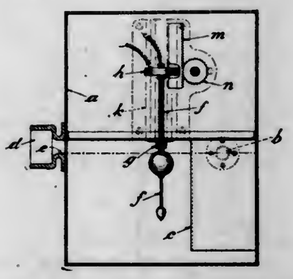
1. In combination, a vehicle wheel having a rim, an auxiliary rim formed in sections secured thereto, segmental brackets, said brackets each having at one of its ends an arc-shaped flange secured to a section of the auxiliary rim, the arms of said brackets being passed through openings formed therefor in the oppositely positioned and companion brackets, each of said arms having at its other end a flange extending transversely of the inner periphery of said vehicle wheel rim and secured to one of said auxiliary rim sections and each of the last named flanges having a snug projecting therefrom and bearing against the free edge of said vehicle wheel rim to prevent outward lateral movement of the auxiliary rim.

1,806,533. CARROTING COMPOSITION. JOHN B. HAKIM, Danbury, Conn. Filed Feb. 14, 1929. Serial No. 340,020. 4 Claims. (Cl. 8—21.)



1. An improved carroting composition consisting of the reaction product of a solution of caustic alkali, an alkali silicate and aluminum.

1,806,534. BRACKET. GEORGE H. HAMILTON, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Apr. 29, 1929. Serial No. 358,866. 1 Claim. (Cl. 155—196.)

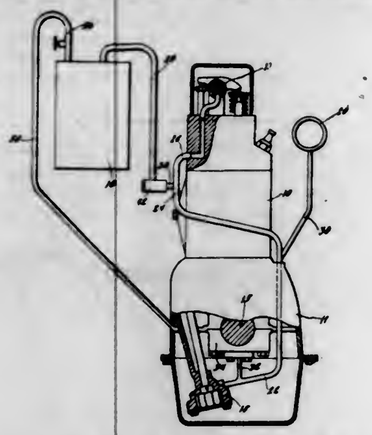


In furniture construction: a pair of furniture members disposed at an angle to each other, the rear surface of one of said members contacting the front surface of the other member; a bracket connecting said members comprising a body portion in the plane of said surfaces, and mounting flanges disposed relatively to each other at the said angle, one of said flanges extending from one side only of the body portion and being secured to one of said members, and the other flange extending from the opposite side only of the body portion and being secured to the other one of said members.

1,806,535. ELIMINATOR. HARRY N. MIDDLETON, Westville, N. J., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1926. Serial No. 86,474. 7 Claims. (Cl. 183—62.)

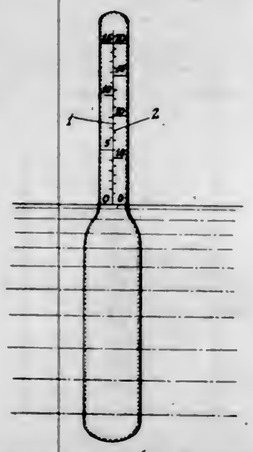
1. An eliminator comprising an air passage, a plurality of rows of closely spaced depending chains in the passage, and means for supporting the chains to permit separate removal horizontally of any of the rows of chains as a unit and independently of the remainder.

1,806,536. APPARATUS FOR REGULATING THE CONCENTRATION OF SOLUTIONS. JOHN ADAMS BOLTON, Timperley, England. Filed June 6, 1930, Serial No. 459,484, and in Great Britain Apr. 20, 1929. 1 Claim. (Cl. 23—253.)



An apparatus for regulating a solution comprising hydrometer means, a tank to receive the solution to be regulated, a hydrometer disposed to be acted upon by the said solution, means for suppplying material to the solution, electrical control means therefor comrising an adjustable member having a guide opening through which the hydrometer passes and guiding and limiting the movement of the hydrometer, a slide carrying the adjustable member, guiding means for the slide, and operating means for manually raising and lowering the slide.

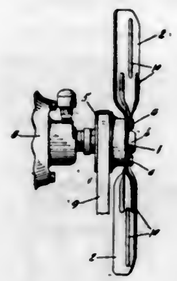
1,806,537. OIL FILTER INSTALLATION. FERDINAND A. BOWER, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 22, 1927. Serial No. 214,716. 3 Claims. (Cl. 184—6.)



1. In a lubricating system as applied to internal combustion engines, an oil pump and oil filter in said system,

a pipe line leading from the pump to the engine rocker arm shaft, a restriction in said line, a second pipe line leading to the filter and connected to said rocker arm

line, a restriction in said filter line, a spring pressed check valve at said filter line restriction, and means for returning the filtered oil to the pump.

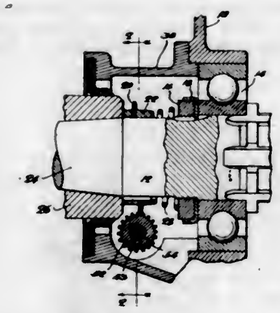


1,806,538. METHOD FOR MEASURING THE AMOUNT OF WATER CONTAINED IN MOIST SAND OR GRAVEL. TAPPAN COLLINS, Dormont, Pa. Filed Jan. 25, 1927. Serial No. 163,344. 1 Claim. (Cl. 23—230.)

The herein described method of determining the quantity of water contained in moist sand or gravel or other insoluble material, which consists in placing a measured representative sample of the moist sand or gravel in a measured similarly equal quantity of an aqueous solution of known concentration and known specific gravity, into which solution the water contained in the sample of insoluble material passes; then by a hydrometer test of the solution determining a factor representative of the amount of water so taken up by the solution from the sample.

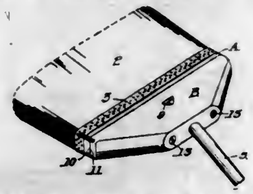
1,806,539. FAN. LEROY V. CRAM, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 4, 1926. Serial No. 146,205. 5 Claims. (Cl. 170—159.)

1. In a cooling system for internal combustion engines of motor vehicles and the like, a fan for inducing an air draft through a cooling radiator, including a laminated blade in which the laminations consist of relatively thin gauge sheet metal plates of identical shape and outline



thruout superposed on one another and integrally united in alined relation with one face of one plate in continuous contact from tip to tip with the adjacent face of the other.

1,806,540. COUPLING DEVICE. BENJAMIN L. CUMMINGS and ARTHUR W. HARRIS, Toledo, Ohio, assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 22, 1925. Serial No. 25,139. 7 Claims. (Cl. 279—75.)

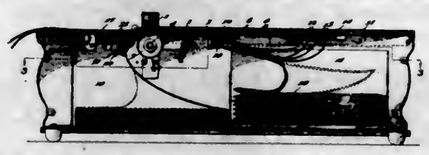


3. The combination of a tool receiving member, a tool, keying means associated with said member and said tool and adapted to positively lock said parts together, a shiftable sleeve surrounding said tool receiving member and adapted to hold said keying means in operative position, and relatively stationary trip means associated with said sleeve for shifting the latter for automatically rendering said keying means inoperative.

1,806,541. SPEEDOMETER DRIVE. EDWIN A. GUSTAFSON, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed May 7, 1927. Serial No. 189,557. 5 Claims. (Cl. 74—7.)

1. An instrument drive comprising, in combination, a flexible shaft, a flexible tube encasing said shaft, a sleeve secured to the end of said tube, said shaft passing through said sleeve, and a gear journalled on the end of said sleeve in concentric relation to said shaft, said gear and said shaft being connected in driving engagement.

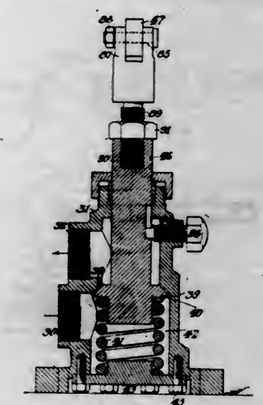
1,806,542. BRUSH. FRANKLIN D. JACOBS, Bellevue, Pa., assignor to Pittsburgh Brush Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1928. Serial No. 250,794. 3 Claims. (Cl. 306—1.)



1. In combination, a brush head provided with a pair of holding bolts countersunk inwardly from the bristle side and projecting beyond the other side equally distant each side of its middle, a handle head having registering holes therefor, and securing screws for the outer end of the bolts countersunk in the handle head and tapped into the ends of the bolts.

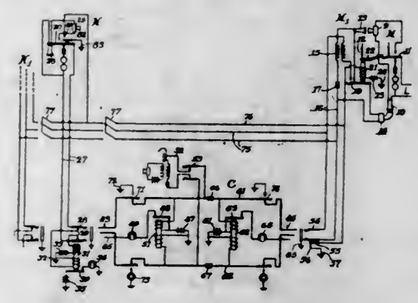
1,806,543. CRANKCASE VENTILATION. HERBERT G. KAMRATH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 7, 1927. Serial No. 159,602. 1 Claim. (Cl. 123—119.)

An internal combustion engine having a valve compartment, a cover for said compartment and an air cleaner through which air is conducted from said compartment, said cleaner having air directing parts formed integrally with said cover, said air directing parts comprising a series of annularly arranged air directing blades pressed out of the material of the cover.



1,806,544. AUTOGRAPHIC REGISTER. MARIE WILLIAM KRAUTH, Hamilton, Ohio, assignor to Krauth & Benninghofen, Hamilton, Ohio. Filed Oct. 20, 1928. Serial No. 313,918. 4 Claims. (Cl. 282—16.)

1. In a machine of the character disclosed, a casing including a writing table for supporting a plurality of record strips in superposed relation, with manifolding paper disposed between the strips, the manifolding paper held stationary and the record strips for dispensing drawn longitudinally over the table across the manifolding paper, a shield marginally covering an edge of the manifolding paper at the approaching side with respect to the direction of strip motion and crosswise thereof, the shield comprising a sheet of pliable material looped to provide a pair of leaves for marginally engaging about an edge of manifolding paper, and a stationary cross rod mounted in said casing engaged between the leaves of said shield hingedly supporting the shield.

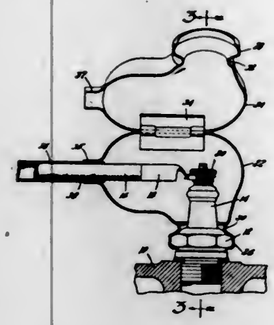


1,806,545. LUBRICATOR. HARLAN M. LUDWICK, Parkesburg, Pa., assignor to Keystone Lubricating Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 26, 1928. Serial No. 288,318. 2 Claims. (Cl. 184—6.)

1. In lubricating apparatus, means adapted to determine the volume and manifest the flow of lubricant dispensed thru a port, including a casing having a lubricant inlet and a lubricant outlet, and a port of fixed area between them, and a tell-tale vent upon one side of said port; axially adjustable screw means adapted to vary

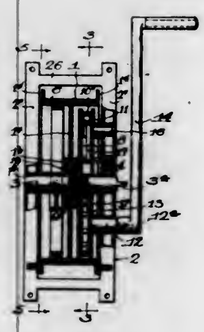
the effective area of said port, and thereby determine the volume of lubricant dispensed; and screw means normally closing said vent, but axially adjustable to open said vent to manifest the flow of lubricant therethru.

1,806,546. TELEPHONE SYSTEM. RUSSELL L. MAURER, Chicago, Ill., assignor of one-fourth to George E. Mueller, Chicago, Ill. Filed May 29, 1929. Serial No. 366,932. 21 Claims. (Cl. 179—42.)



1. An apparatus for mechanically interconnecting separate telephone systems comprising a master telephone having a transmitter and receiver, a connecting telephone having a transmitter and receiver in sound transmitting relation to the receiver and transmitter respectively of the master telephone, an extension telephone electrically connected to the connecting telephone, and means responsive to the movement of the receiver hook of the extension telephone for moving the receiver hook of the master telephone whereby communication is established between the extension and master telephones.

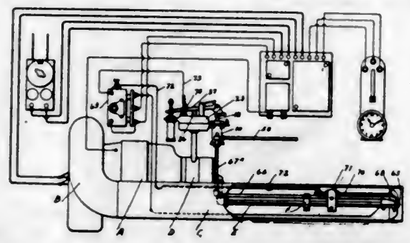
1,806,547. MANUFACTURE OF RUBBER. THOMAS MIDGLEY, JR., CHARLES ALLEN THOMAS, and CARROLL A. HOCHWALT, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 22, 1927. Serial No. 242,009. 9 Claims. (Cl. 18—53.)



2. The process of producing a rubber product which comprises extracting from a natural rubber the rubber hydrocarbon contained therein, compounding said hydrocarbon with an amino carboxylic acid and vulcanizing agents and vulcanizing the mixture.

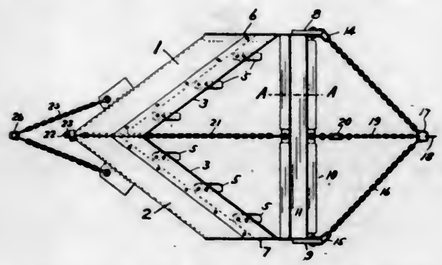
1,806,548. SHIELDING MEANS FOR IGNITION APPARATUS. HECTOR RABEZZANA, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Dec. 16, 1929. Serial No. 414,445. 6 Claims. (Cl. 123—169.)

1. A device for shielding a spark plug to prevent the radiation of electrical energy therefrom comprising a casing formed of complementary sections, and means for pivotally connecting said sections to each other.



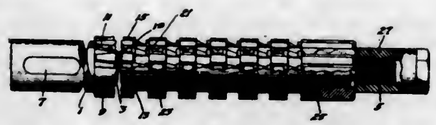
1,806,549. RETRIEVING DEVICE FOR AEROPLANES. JACOB H. WALLACE, San Diego, Calif.; Julia M. Wallace administratrix of said Jacob H. Wallace, deceased. Filed Oct. 1, 1928. Serial No. 309,659. 7 Claims. (Cl. 242—99.)

6. In an apparatus of the character described, the combination of a rotative cable drum, a driven shaft, brake mechanism fixed to said shaft and normally acting to frictionally connect said drum to said shaft when there is less than a predetermined load exerted on said cable, but permitting said drum to revolve during the exertion of more than said predetermined load thereon, and means for holding said shaft against rotation under said load.



1,806,550. LIQUID FUEL BURNING MECHANISM. WALTER W. WILLIAMS, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a Corporation of Illinois. Original application filed July 31, 1922, Serial No. 578,618. Divided and this application filed Mar. 12, 1928. Serial No. 277,183. 1 Claim. (Cl. 158—28.)

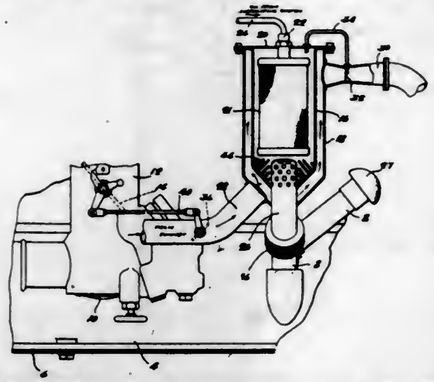
In a liquid fuel burning mechanism, an air pipe, a burner pipe in said air pipe, a jet on the extremity of said pipe, sparking elements, one of said elements being mounted upon the burner pipe and insulated therefrom, the other of said elements comprising a metal tube leading from an independent gas supply mounted in said air pipe



and supported upon the burner pipe, said sparking elements being curved downwardly at their ends, which are adjacent the said jet.

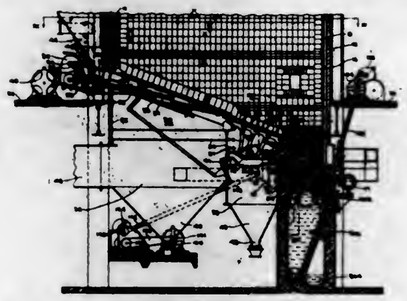
1,806,551. REVERSIBLE DOUBLE DIGGING EDGE SCRAPER. EDWARD C. ADDISON, Camden, N. J., and WARREN H. HILL, Philadelphia, Pa., assignors to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1930. Serial No. 441,229. 4 Claims. (Cl. 37—147.)

1. A scraper having divergent arms, a bail connecting said divergent arms at the vertical center of their forward ends, means for towing said scraper means for attaching the towing means for said scraper to the horizontal center of said bail, and a flexible connection between the horizontal center of said bail and the rear of said scraper.



1,806,552. BROACH. JAMES C. ATWOOD, Syracuse, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 10, 1926. Serial No. 153,901. 1 Claim. (Cl. 90—33.)

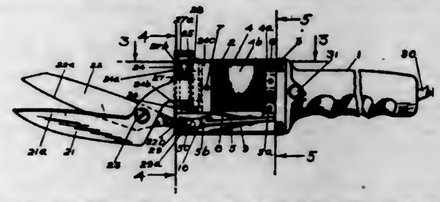
A broach consisting of a shank circular in cross section alternating guides and cutters both having bores circular in cross section and mounted on said shank, the guides having recesses in their end faces and radial splines, the cutters having external teeth, said cutters positioned within adjacent guide recesses and with their teeth engaged between the spline guides.



1,806,553. OIL PURIFIER AND DILUTION REMOVER. ABRAHAM M. BABITCH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich. Filed Mar. 28, 1927. Serial No. 179,018. 4 Claims. (Cl. 184—6.)

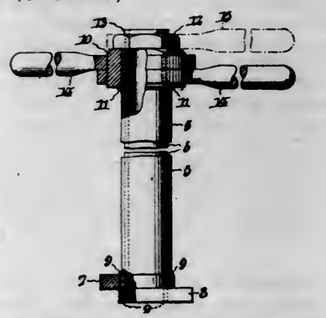
1. In an engine having a lubricating system including a crank case, the combination of a distillation chamber, means for supplying oil from said system to said chamber, a conduit for returning purified oil from the chamber to the crank case, an oil filter in said chamber and in the path

of flow of the oil, and a suction connection for withdrawing vapors from said still, said conduit being of sufficient size to permit the passage of vapors from the crank case into the chamber.



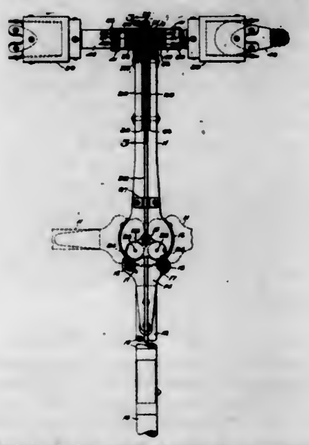
1,806,554. STOKER. ROBERT A. FORESMAN, Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1929. Serial No. 337,445. 18 Claims. (Cl. 110—44.)

1. In a stoker whereon the fuel bed moves in a single general direction from the front to the rear, the combination of an underfeed section comprising alternately-disposed retorts and tuyère rows which discharge a fuel bed in a more advanced state of combustion from the rear ends of the tuyère rows and a less advanced state of combustion from the rear ends of the retorts; a movable overfeed section having its forward end continuously disposed to receive the fuel bed discharging from the underfeed section and both sections presenting under all conditions of operation an unbroken fuel-supporting surface; said overfeed section comprising a series of grate members connected in end-to-end relation so as to provide relative angular movement and extending in the general direction of fuel feed; and means providing for movement of some of said grate members both angularly with respect to the fuel-supporting surface and bodily in the general direction of the fuel feed, whereby the burning material received from the overfeed section is fed positively along the overfeed section and agitated during its progress to facilitate combustion.



1,806,555. MOTOR OPERATED SHEARS. ROBERT R. GONSETT, Los Angeles, Calif. Filed Dec. 31, 1928. Serial No. 329,142. 13 Claims. (Cl. 30—13.)

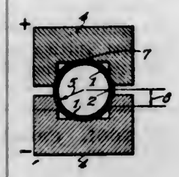
1. In a device of the class described, a supporting means, a cutting member mounted thereon, an electromagnet supported by said supporting means, an armature in connection with said electromagnet adapted to be operated thereby, a second cutting member positioned in operative cutting relation with said first cutting member and operatively



connected with said armature, and adjusting means in connection with said first cutting member for varying the length of the effective cutting stroke between the cutting members.

1,806,556. HYDRANT TOOL. CHARLES B. GREEN, Florence, N. J., assignor to Florence Pipe Foundry & Machine Company, Florence, N. J., a Corporation of New Jersey. Filed Mar. 22, 1930. Serial No. 438,017. 2 Claims. (Cl. 81—72.)

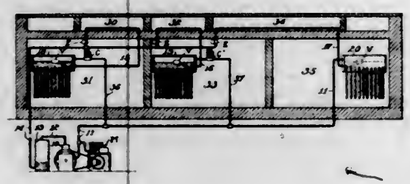
1. A tool for turning hydrant barrels comprising a pair of tubes fitting one within the other and adapted to be eccentrically accommodated within the barrel to be turned, jaws mounted at the lower end of each tube, and means at the upper end of each tube whereby the tubes may be gripped for relative turning to expand the jaws into biting engagement with the barrel.



1,806,557. LAMP BULB REMOVING MECHANISM. HAROLD D. GRINNELL, Pittsfield, Mass., assignor to The G. C. A. Manufacturing Company, Pittsfield, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1931. Serial No. 513,154. 7 Claims. (Cl. 294—21.)

1. In a device of the class described, in combination, a rod, a shaft transversely arranged on one end of the rod,

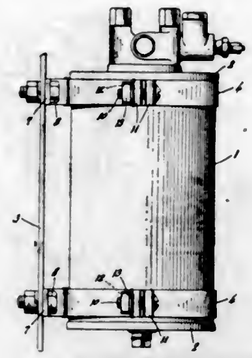
separate lamp bulb clutch mechanisms carried by the shaft and arranged on opposite sides of the rod, and means for rotating the shaft in either of opposite directions.



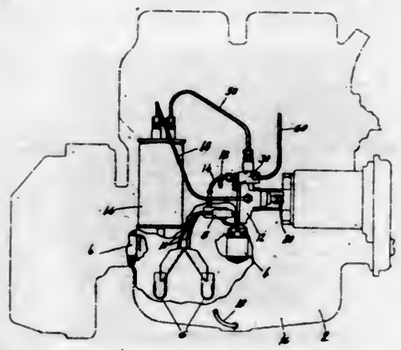
1,806,558. REAR AXLE HOUSING AND THE LIKE AND METHOD OF PRODUCING IT. HENRY S. HOLMES, Brooklyn, N. Y., assignor, by mesne assignments, to Metropolitan Engineering Company, a Corporation of New York. Filed Nov. 10, 1928. Serial No. 318,337. 7 Claims. (Cl. 219—10.)

1. The method of forming articles by the flash welding process which consists in providing segments with lateral indentations, locking them in welding electrodes by means of said indentations, moving the opposed electrodes with the segments so as to establish and maintain an arc between the welding edges, pressing the edges together to make the weld and, after welding, reshaping the product to remove the locking configurations.

7. A segment for the production of hollow articles, the sides of the segment having indentations forming transversely extending external faces whereby they may be locked in engagement with a welding electrode.



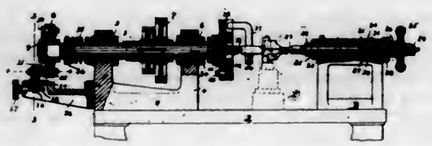
1,806,559. REFRIGERATING SYSTEM. FRANKLIN B. HUNT, Chicago, Ill., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 15, 1930. Serial No. 475,416. 3 Claims. (Cl. 62—115.)



1. A refrigerating system comprising two boilers of the constant liquid-level type, a compressor, connections between the vapor spaces of said boilers and the suction side of the compressor, one of said connections comprising a control valve limiting the suction effect of the compressor on the associated boiler, a refrigerant supply pipe between said boiler and the condenser, means controlled by liquid-level in each boiler for controlling refrigerant flow into said boiler, an expansion valve in each supply pipe, four relatively isolated refrigerating chambers in two of which the boilers are mounted and two of which are respectively traversed by portions of the two supply pipes between their respective expansion valves and boilers, and means dependent upon pressure in boiler vapor space for starting and stopping the compressor.

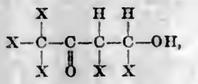
1,806,560. BRACKET. CHARLES W. MCKINLEY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Oct. 20, 1926. Serial No. 142,975. 2 Claims. (Cl. 248—20.)

1. A supporting bracket including a contractive band adapted to encircle and removably clamp a circular receptacle, a supporting member therefor having a concave arcuate portion in which the band is seated, and an attachment sleeve surrounding the band and arcuate portion against which the receptacle is seated upon contraction of the band.



1,806,561. OIL PRESSURE BOOSTER. CHARLES W. MCKINLEY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 7, 1927. Serial No. 159,604. 10 Claims. (Cl. 184—6.)

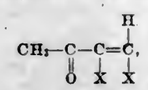
2. The combination of a low pressure lubricating system, an invariable restriction for stepping up the pressure in a portion of said system, an oil filter, and means for passing oil from said portion through said filter.



1,806,562. AUTOMATIC TOOL CUTTING MACHINE. JOHN PICHLER, Cleveland, Ohio. Filed Nov. 1, 1928. Serial No. 316,399. 6 Claims. (Cl. 82—19.)

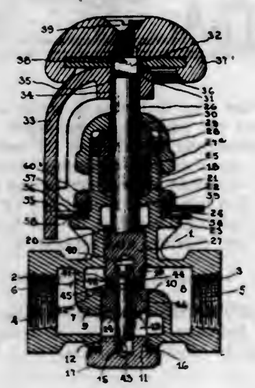
1. An automatic tool cutting machine, comprising a headstock spindle rotatably and axially slidably supported within said headstock, a tailstock, a spindle slidably supported within said tailstock, means on said headstock to axially shift said spindles in one direction when a work piece is inserted between said spindles, and means within said tailstock and actuating upon said tail spindle to yieldingly shift said spindles in the opposite direction.

1,806,563. PROCESS OF PRODUCING 4-SUBSTITUTION PRODUCTS OF THE QUINOLINE SERIES. ALPHONS PRILL, Wiesdorf, and ROBERT WALTER, Dessau, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Mar. 29, 1929, Serial No. 351,109, and in Germany Mar. 22, 1928. 7 Claims. (Cl. 260—38.)



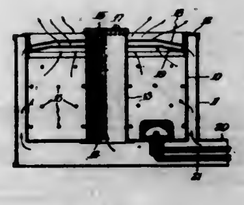
1. Process of producing 4-substitution products of the quinoline series which comprises condensing a primary arylamine with a compound of the general formula

X meaning hydrogen or an alkyl group, in the present of an agent which eliminates water, and of an oxidizing agent.



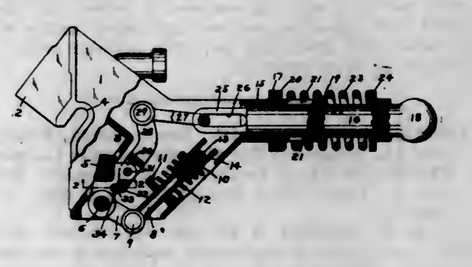
1,806,564. PROCESS OF PRODUCING 4-SUBSTITUTION PRODUCTS OF THE QUINOLINE SERIES. ALPHONS PRILL, Wiesdorf, and ROBERT WALTER, Dessau, Anhalt, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Mar. 29, 1929, Serial No. 351,110, and in Germany Mar. 22, 1928. 5 Claims. (Cl. 260—38.)

1. Process of producing 4-substitution products of the quinoline series which comprises condensing a primary arylamine with a compound of the general formula



X meaning hydrogen or an alkali group, in the presence of an agent which eliminates water and of an oxidizing agent and isolating the reaction product in the form of its acid salt of hydroferrocyanic acid.

1,806,565. VALVE. PHILIP SHERMAN RUSSEL, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 1, 1928. Serial No. 250,972. 11 Claims. (Cl. 251—34.)

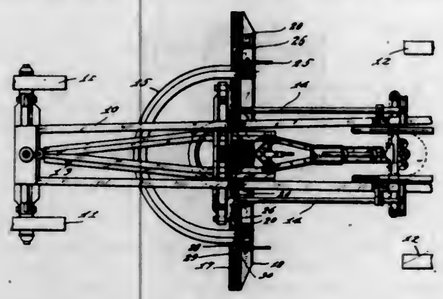


1. A valve comprising a hollow valve body having an inlet and an outlet, a partition in said body between said inlet and said outlet and having an aperture therethrough, a valve member in said aperture having a metering slot with an inclined base for metering the flow through said aperture, and said member having a pilot slot opening into said metering slot.

1,806,566. OIL BURNER. WILLIAM B. STURGIS, Chicago, Ill. Filed Nov. 1, 1928. Serial No. 316,480. 8 Claims. (Cl. 158—92.)

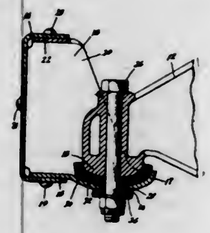
1. In a burner of the character described, the combination of a pot consisting of a continuous side wall and a bottom, means for delivering fuel in fluid form into the pot, a vertically extending tube positioned centrally in the pot to form with the side wall a mixing chamber for the fuel and having the lower end thereof opening through the pot to receive air, means for delivering air into the chamber in such quantity as to effect only aeration of the fuel during normal operation of the burner, a wall extending inwardly from the upper marginal part of the side wall and having its inner edge spaced from the tube to form therearound a restricted outlet for the aerated fuel, and means adjacent the inwardly extending wall for delivering jets of air inwardly against the tube in order to force the aerated fuel to flow inwardly and impinge against the tube as it rises from the chamber and passes upwardly through the outlet, the tube having openings therein above the inwardly extending wall for directing jets of air across the outlet in such quantity as to support combustion of the aerated fuel over said inwardly extending wall and cause the resulting flames to spread outwardly from the top of the pot.

1,806,567. COUPLER UNLATCHING DEVICE. UNCAS A. WHITAKER, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1928. Serial No. 306,445. 7 Claims. (Cl. 285—58.)



1. A coupling device comprising a coupling head, a latch for locking said head in engagement with a counterpart coupling head, and a lever engaging one fulcrum for initially moving said latch from its locking position and then engaging another fulcrum for further movement of said latch.

1,806,568. ROAD GRADER. ROY E. ADAMS, Indianapolis, Ind., assignor, by mesne assignments, to J. D. Adams Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 31, 1926. Serial No. 158,307. 8 Claims. (Cl. 37—159.)

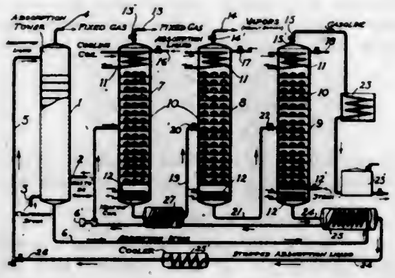


1. In a road grader, the combination of a mold board, a supporting member therefor, means for pivotally at-

taching said mold board to said supporting member on a single axis fixed relatively to said supporting member, said means including mating parts having spherical engaging surfaces, an adjusting link pivotally connected

to said mold board through a universal connection, and means for holding said link in various positions of adjustment relative to said supporting member to vary the inclination of said mold board.

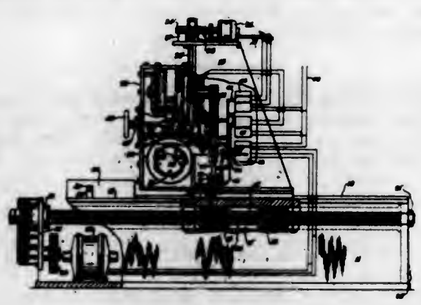
1,806,569. RUBBER MOTOR MOUNTING. BENJAMIN H. ANIBAL, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 27, 1927. Serial No. 208,886. 15 Claims. (Cl. 248—142.)



15. In combination with a supporting member and the member to be supported, of a concave part on one of the members, a concavo-convex pad of cushioning material nested in said concave part, a convex part associated with the other member and nested within said concavo-convex cushioning pad, and yieldable means to hold the parts in assembly.

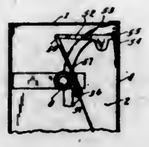
1,806,570. DEWAXING OIL. LEO D. JONES, Philadelphia, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed May 25, 1928. Serial No. 280,658. 5 Claims. (Cl. 196—19.)

1. In the dewaxing of oil that contains wax which when precipitated by temperature reduction is too amorphous for removal from the oil by common filter pressing with duck filters, the steps comprising diluting the oil with a solvent, reducing the temperature of the resulting mixture and thereby precipitating wax therein, and then filtering the diluted oil through a body of interlaced and unwoven wool fibers and thereby removing precipitated wax therefrom.



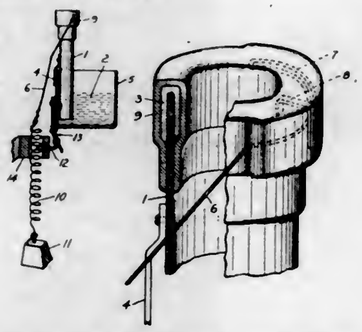
1,806,571. PROCESS FOR RECOVERING GASOLINE FROM GAS. FRANK A. HOWARD, Elizabeth, and NATHANIEL E. LOOMIS, Westfield, N. J., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Feb. 20, 1926. Serial No. 89,644. 2 Claims. (Cl. 196—8.)

1. Process of rectifying condensible constituents derived from a hydrocarbon gas, comprising passing relatively non-volatile absorption liquid charged with such constituents downward through a vapor and liquid contact zone, maintaining in such zone a pressure substantially above atmospheric, heating the lower portion of the zone, and cooling the upper portion thereof to prevent desired components from escaping, whereby the con-



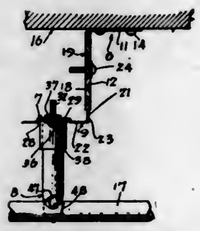
densible constituents are rectified in the presence of the absorption liquid, introducing fresh, cool absorption oil into the upper portion of the contact zone, withdrawing the gases and vapors from the rectification to a point without the system, withdrawing the absorption liquid and subsequently separating the desired constituents therefrom.

1,806,572. CHIPPING MACHINE. GEORGE W. LENTZ, Canton, Ohio, assignor to The Bonnot Company, Canton, Ohio, a Corporation of Ohio. Filed Nov. 26, 1928. Serial No. 321,881. 15 Claims. (Cl. 90—38.)



1. A machine tool including a stationary bed, a carriage mounted for translatory movement on the bed, a tooth tool operatively mounted on the carriage for selective rotation about an axis extending transversely of the direction of movement of the carriage, and means whereby the tooth tool is adapted for cutting by selective movement of the carriage, rotation of the tool, or combined movement of the carriage and rotation of the tool.

1,806,573. DISPENSING MACHINE FOR TOILET SEAT COVERS. CHARLES O. YOUNG, Clackamas, Oreg. Filed Nov. 5, 1928. Serial No. 317,437. 1 Claim. (Cl. 194—1.)

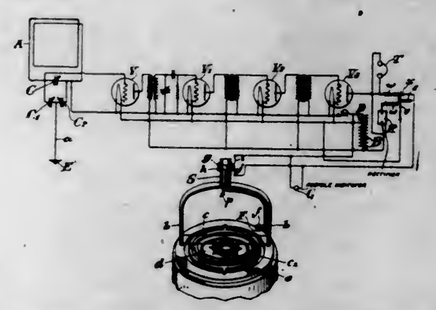


A coin chute having a slot control mechanism comprising a locking link disposed therein and secured to the free end of a counterweighted lever hingedly connected to the coin chute, a supporting spring disposed upon the side of a cabinet, its free end intimately disposed upon the free end of the counterweighted lever, and a link hingedly secured to the oppositely disposed end of the counterweighted lever, said link having disposed at its opposite end an engaging hook adapted for the purposes described.

1,806,574. IGNITION DEVICE. ANTONIO CIRAOLO, Oakland, Calif. Filed July 23, 1927. Serial No. 208,030. 8 Claims. (Cl. 44—36.)

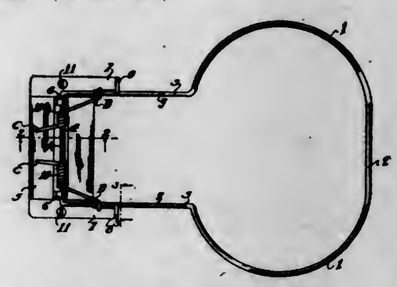
1. Igniting means for a match, comprising an igniter member removably secured to and against the ignition head of the match and arranged to effect the ignition of said head by and upon its removal, and fracturable means operative to releasably and directly secure said match and member together whereby one supports the other prior to the removal of said member.

1,806,575. ADJUSTABLE INSULATOR SUPPORT. FERDINAND A. CIRAOLO and JOHN S. BASHER, Oakland, Calif. Filed Nov. 7, 1927. Serial No. 231,516. 2 Claims. (Cl. 248—30.)



2. In a wall bracket for supporting a luminescent tube, an insulator, an inner one-piece base member of sheet material arranged for mounting on the wall to have an outer portion thereof extending transversely therefrom, an outer one-piece member of sheet material arranged for supportedly engaging the insulator and having an inner extending portion, an intermediate one-piece member of sheet material having angularly related portions for entirely rectilinear adjusted engagement with the respective outer and inner portions of said inner and outer members and entirely in their planes, and clamp bolts extending through contacting portions of the members for releasably securing said members together in mutually adjusted relation.

1,806,576. FOOD PRODUCT. JULIAN S. COHEN, New York, N. Y. Filed Apr. 25, 1928. Serial No. 272,864. 2 Claims. (Cl. 99—11.)



2. A food composition for use in making meringues, comprising egg albumen and a preparation of finely divided seed or kernel of St. John's bread and sugar, said ingredients being in the proportions necessary to form, with the addition of water, a whip of suitable consistency.

1,806,577. DIRECTIONAL RADIO SYSTEM. FREDERICK A. KOLSTER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed May 22, 1925. Serial No. 32,029. 7 Claims. (Cl. 250—11.)

1. A radio compass comprising an electrical system having a non-uniform directional characteristic, a member comprised in said electrical system movable to positions related to the direction of propagation of the received energy, indicating means, a circuit controlling said indicating means, and means controlled by said electrical system effecting continued closure of said circuit when said movable member is in direction indicating position normal to the direction of propagation of the received energy and effecting rupture of said circuit when said movable member is in a different position.

1,806,578. HATRACK. MARION M. STUDEBAKER, Topeka, Kans. Filed Jan. 25, 1929. Serial No. 334,979. 2 Claims. (Cl. 211—31.)

2. In a hat holder, a plate member and a wire loop element pivoted thereon, said plate member having arm members integrally connected therewith and extending laterally therefrom, the outer portion of the arm members bent at right angles, the bent portions having notches on their inside edges as positioning means for the said wire loop element.

Adjudicated Patents

(D. C. R. I.) Roberts and Gibson patent, No. 1,108,098, for basket for centrifugal machines, *Held* valid and infringed. *Western States Mach. Co.* v. *Ferguson*, 47 F.(2d) 775.

(C. C. A. Conn.) Sachs patent, No. 1,292,081, for electric switch, claims 14, 20, and 21 *Held* valid and infringed. *Sachs* v. *Hartford Electric Supply Co.*, 47 F.(2d) 743.

(C. C. A. Conn.) Sachs patent, No. 1,294,176, for electric switch, claims 2, 7, and 11 *Held* not infringed. *Id.*

(C. C. A. Conn.) Sachs patent, No. 1,301,175, for electric service and meter testing system, claims 4, 7, and 10 *Held* valid and infringed. *Id.*

(C. C. A. Mich.) Fowler patent, No. 1,332,550, for padding-bandage, *Held* not infringed. *Fowler* v. *Detroit Bedding Co.*, 47 F.(2d) 752.

(C. C. A. Mo.) Buchanan patent, No. 1,670,235, for variable spray device, *Held* invalid, but, if valid, not infringed. *Buchanan* v. *Wyeth Hardware & Mfg. Co.*, 47 F.(2d) 704.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,362,940, G. B. Harrison and A. L. Rawlings, Gyroscopic compass, decided April 6, 1931, claims 2, 9, 10, 11, 12, 13, 16, 17, 18, 19 and 20.

Pat. 1,671,864, E. B. Higgins, Process involving exchange reactions, decided January 20, 1930, claims 1 and 4.

Pat. 1,680,675, A. S. Gale, Magnetic system to control the stop and levelling of an elevator, decided March 27, 1931, claims 36 and 38.

Pat. 1,787,553. Schaffner, Schaffner and Field, Composition of matter for use in welding copper and steel, decided May 7, 1931, claim 1.

Notices of Cancellation

U. S. Patent Office, *Washington, May 5, 1931.*

Salomon Bros., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Charles J. Wouters, of 3120 Harrison Street, Oakland, Calif., to effect the cancellation of the trade-mark registration of Salomon Bros., of 15 Burling Slip, New York, N. Y., No. 103,363, dated March 30, 1915, and the notice of such proceeding sent by registered mail to the said Salomon Bros. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Salomon Bros., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, May 11, 1931.*

Quaker Hat Co., Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Hodshon-Berg, Incorporated, Fifth Avenue and 57th Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Quaker Hat Co., Inc., of 64–70 West 36th Street, New York, N. Y., No. 244,585, dated July 24, 1928, and the notice of such proceeding sent by registered mail to the said Quaker Hat Co., Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Quaker Hat Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

CLUETT, PEABODY & CO., INC., *v.* WRIGHT

No. 2,578. Decided February 11, 1931

1. TRADE-MARKS—GOODS OF THE SAME DESCRIPTIVE PROPERTY—BELTS, COLLARS, CUFFS, AND SHIRTS.

Belts for men's and women's wear *Held* to constitute goods of the same descriptive properties as collars and cuffs and shirts.

2. SAME—MARKS—SIMILARITY—"AIR-O," "ARROW."

The term "Air-O" as applied to men's and women's belts *Held* confusingly similar to the word "Arrow" as applied to goods of the same descriptive properties, since these words are identical in sound, one being the misspelling of the other.

3. SAME—CANCELLATION—LACHES.

A petition for cancellation may be brought at any time and "the mere passage of time would not be a bar to a prior use of a trade-mark being successful in a cancellation proceeding."

APPEAL from the Patent Office. Reversed.

Messrs. Roberts, Cushman & Woodberry, Mr. Charles D. Woodberry, Mr. Richard F. Walker, and *Mr. John J. Darby* for Cluett, Peabody & Co., Inc.

No appearance for appellee.

BLAND, *J.*:

From a decision of the Commissioner of Patents, dismissing a petition for cancellation of the registration of the trade-mark "Air-O," No. 162,625, dated December 19, 1922, issued to Denver M. Wright for belts for men's and women's wear, appellant has appealed to this court.

Petitioner's petition is grounded upon the contention that appellee was not entitled to the use of his mark on the date of his application for registration for the reason that at the time of the making of said application, the petitioner, appellant herein, was the owner and user of the trade-mark "Arrow" which was sometimes used in the printed form with the pictorial representation of an arrow, and sometimes used in the printed form alone, upon various articles of wearing apparel, sold chiefly in men's furnishing stores.

The record shows that said petitioner is a New York corporation engaged in the manufacture and sale of collars and cuffs, outer shirts, including dress, negligee and work shirts, pajamas, nightshirts, undershirts, underdrawers, union suits, handkerchiefs, neckties, fabric bathing belts and other articles of dress and apparel; that its business was established in 1851; that is factories are located at Troy, Waterford, Schenectady, Rochester, Corinth, Nassau, Greenwich, all in New York, and at South Norwalk, Conn., Leominster, Mass., and Kitchener, Canada; that it maintains salesrooms and offices in 23 principal cities in this country; that its trade extends throughout this country and the principal foreign markets of the world, and that it is the largest collar and shirt manufacturer in the world; that the petitioner's said goods are sold and retailed in men's furnishings stores or haberdashery shops, in department stores, and in general clothing stores; that all of petitioner's said products are marketed under a trade-mark consisting of the word "Arrow" or of the pictorial representation of an arrow, or of said word "Arrow" associated with said pictorial representation of an arrow; that said mark has been continuously used by the petitioner and its predecessors in business since 1885 on shirts, collars and cuffs; that its use was extended to handkerchiefs about April, 1909, and to nightshirts, pajamas, undershirts, underdrawers and union suits about July, 1913, and to bathing belts in November, 1926, since which dates said uses have been continuous; that at the time of its expansion of business to fabric bathing belts and continuously since that time, the petitioner's said belts have been made of the regular stock of material from which certain of its collars have long been made and upon its regular machines used for cutting, folding, binding and stitching collars; that the petitioner is the owner of 12 different registered trade-marks which registrations date from 1900 to 1925. The record further shows large expenditures of money for advertising and many other details of petitioner's business which we will not set out here. The petitioner also introduced into the record a long list of trade-mark registrations of various firms showing the line of goods or different articles of men's wearing apparel which were handled by such firms and covered by such registrations.

The earliest date of use claimed by appellee is in the year 1915.

The Commissioner affirmed the decision of the Acting Examiner of Interferences whose decision dismissed the petition for cancellation. The decision of the Commissioner is to the effect that appellant did not use the "Arrow" trade-mark for belts until 1926 and that its right to extend its use of the "Arrow" mark to belts was lost due to laches since "petitioner practically acquiesced in the exclusive use of the mark 'Air-O' on belts from 1915 to 1926", and holds that it would be "inequitable" to now give appellant the exclusive use of the trade-mark "Arrow" on belts, citing *Victor Stove Co.* v. *Hall-Neal Furnace Co.*, 374 O. G. 252, 18 T. M. R. 178; and *France Milling Co.* v. *Washburn-Crosby Co.*, 7 F. (2d) 304.

Appellant contends that the registration of appellee's trade-mark was not warranted in law for the reason that the marks were identical (that is, identical in sound) and the goods of appellee and the goods of appellant at the time of appellee's registration were of the same descriptive properties; that since belts were in the same class, and closely related in their sale and use, with the articles sold by appellant, appellant had the right to extend its business at any time to the sale of belts and use its "Arrow" trade-mark thereon; and that the Com-

missioner erred in holding that appellant had lost such right by laches, inasmuch as the record was barren of any evidence whatever to the effect that appellant had any notice or knowledge of any facts which might be regarded as the basis for laches.

Counsel for appellant stated in argument that appellant first sought to register its "Arrow" trade-mark for cloth belts, which registration was refused on the theory that at that time the appellee owned a registered trade-mark for "Air-O" on men's and women's belts. He further stated that appellant did not appeal from the action of the Patent Office for the reason that appellant's counsel was of the opinion that the issue on such an appeal would involve only the similarity of the trade-marks and the descriptive properties of the goods of the respective parties; but that after registration had been refused, he then proceeded under section 13 of the trade-mark law of 1905 for cancellation in order that appellee's registered mark, when cancelled, would not be a bar to an application for registration of the trade-mark "Arrow" for cloth belts.

We think the Commissioner erred in his finding:

> That the registrant's belt does not have the same descriptive properties as any of the articles to which the petitioner appropriated its mark up to the time the registrant entered the field is evident. One wishing to purchase collars, cuffs, shirts, etc., would never be deceived into purchasing the registrant's belt; nor would one wishing to purchase registrant's belts be deceived into purchasing any one of the petitioner's articles to which it appropriated its mark prior to 1926.

[1, 2] Men's and women's belts are of the same descriptive properties as most, if not all, of the articles of wearing apparel upon which appellant used its "Arrow" trade-mark prior to the earliest use by appellee of its registered mark. *California Packing Corp.* v. *Tillman & Bendel, Inc.*, 17 C. C. P. A. (Patents) 1048, 40 F.(2d) 108, 394 O. G. 789; *B. F. Goodrich Co.* v. *Hockmeyer*, 17 C. C. P. A. (Patents) 1068, 40 F.(2d) 99, 394 O. G. 795; *Cheek-Neal Coffee Co.* v. *Hal Dick Mfg. Co.*, 17 C. C. P. A. (Patents) 1103, 40 F.(2d) 106, 395 O. G. 10. The application for registration of appellee should have been refused since the word "Air-O" and the word "Arrow" are identical in sound, one word being a misspelling of the other. Appellee, at the time of making his application was not the owner of the trade-mark for which registration was sought, since the same had already been appropriated, used and registered for use for goods of the same descriptive properties. In our view it should have been clear to the Commissioner that confusion would result from the concurrent use of the two marks and that the appellee's mark should not have been registered.

Upon this record, we think the Commissioner erred in his holding that on account of laches appellant lost its right to extend the use of its "Arrow" trade-mark to belts. There is no such statement of facts shown herein as was involved in the two cited cases. For instance, in the France Milling Co. case, supra, a circuit court of appeals decision, the reference to laches on the part of Washburn is predicated upon Washburn's "acquiescence of so many years, while France was building up a noncompetitive business", being such conduct as to bar Washburn from the right to an injunction in equity against The France Milling Co. The "acquiescence" referred to in the France Milling Co. case, supra, no doubt contained the element of notice which is absent in the case at bar. See cases cited in *Cluett, Peabody & Co.* v. *Hartogensis*, 17 C. C. P. A. (Patents) 1166, 41 F.(2d) 94, 396 O. G. 707.

[3] In *Cluett, Peabody & Co.* v. *Hartogensis, supra*, this court had substantially the same question under consideration and it was there held that under the provisions of section 13 of the Trade-Mark Act of 1905, the aggrieved party, having the right to bring his action "at any time", the mere passage of time would not be a bar to a prior use of a trade-mark being successful in a cancellation proceeding. We there held:

> We hold that the section provides that the proceeding may be brought at any time for the determination of these questions by one who deems himself injured by the registration of the mark, and that laches upon the part of the applicant is not a bar to the bringing of the proceeding provided for by the section.

However, further along in the decision we find the following:

> We think it appropriate to say in this connection that this opinion should not be construed as implying that affirmative acts of a prior owner and user of a trade-mark, relied upon by a registrant to his injury, would not be a bar to the right of cancellation in a proceeding under said section 13. We go no further than to hold that in view of the express language of the section mere laches is not such a bar, and nothing more than laches is claimed in the case at bar.

We conclude, therefore, that applicant herein is within its statutory rights in bringing the action for cancellation and that the trade-mark "Air-O", No. 162,625, dated December 19, 1922, should be cancelled.

The decision of the Commissioner of Patents is reversed.

Reversed.

GARRETT, *J.*, dissenting.

I am unable to agree with the majority that, under the facts of this case, appellee's "Air-O" trade-mark should be cancelled.

Briefly, the facts are these:

Appellee began the use of his mark on leather belts worn upon the person in 1915, and has continuously so used it since, without complaint or question, so far as this record shows, until the cancellation proceeding was instituted sometime in 1927.

In 1922 appellee, having then used the mark for about seven years, secured its registration under the Trade-Mark Act of 1905, "for use on men's and women's belts".

Prior to 1915 appellant had used the trade-mark "Arrow," combined with a representation of an arrow, on collars, cuffs and outer shirts, and held five registrations of same. Whether these registrations were of the word "Arrow" alone, or of the word combined with the picture, the record does not show. Of 11 exhibits of the mark filed, as those used, nine of them have the word and picture combined. Subsequent to 1915 appellant extended its use of the mark to handkerchiefs, union suits, pajamas, nightshirts, and other articles of wearing apparel. In 1926 it extended its line of goods to bathing belts made of the same kind of fabrics that are used in the manufacture of some of its collars and, perhaps, some of its other goods. Its arrow mark was used upon these belts and in 1927 it sought to register same for belt use. This application was denied on the ground that it conflicted with appellee's mark "Air-O" since the goods of both parties were belts. While its application was still pending, following an early preliminary adverse action by an examiner, appellant instituted the cancellation proceedings. It did not carry its application for registration beyond the Examiner's final or third decision rendered after a second reconsideration.

It thus appears that appellant did not enter the belt field until 11 years after appellee had begun the use of the mark on belts and four years after appellant's registration.

It seems obvious that appellee has strong equities. There is no suggestion of the slightest bad faith upon his part; no contention that he was endeavoring to obtain any benefits from appellant's advertising or appropriate to his advantage any part of appellant's good will. He began and continued the use of his mark in good faith, and registered it. He has evidently built up an extensive business in interstate and foreign commerce. The stipulated record shows:

> • • • in most of the States of the Union and in Canada, Cuba, Hawaii, Holland, Egypt, Japan, and Mexico, from which foreign countries registrant has received orders for belts under the trade name of "Air-O".

His location is at St. Louis, Mo.; the locations of appellant are in the eastern States and one in Canada. They were in no sense competitors and appellant has made no effort to show any actual injury to itself growing out of appellee's use of his mark over a period of many years. No confusion as to origin of the respective goods, or as to anything else, has been shown; no attempt has been made to show any.

It seems to me that the goods at issue in this cancellation proceeding, proper to be considered, are only those which were being dealt in by the respective parties in 1915 when appellee's use of his mark began. These were collars, cuffs and outer shirts (of textile material) on the one hand and belts (of leather) on the other.

If we extend the matter up to the date of appellee's registration, December 1922, we should add to appellant's goods, handkerchiefs, nightshirts, pajamas, undershirts, underdrawers, and union suits.

In the common and ordinary meaning of the phrase "of the same descriptive properties", I think it may be fairly said that they do not apply to the goods in which the respective parties to this case were dealing prior to 1926. There were no complaints by appellant of appellee's use of his mark or of his registration of same, of which latter it had at least constructive notice, until appellant had entered the bathing belt field and sought to register for that field.

But, even if it be conceded that the goods are of the same descriptive properties, by reason of the construction given by this court to the word "class", there remains the difference in the marks themselves.

I do not agree that they are so similar as that the statute should be held to justify or require the cancellation of appellee's mark.

Admittedly they do not have the same appearance. No person looking at them would be at all likely to think of any resemblance between them. Appellant's word—"Arrow"—is most frequently used in connection, or in combination, with a representation of an arrow. It was being wholly so used in and prior to 1915. Indeed, this representation is quite as distinctive as the word itself. Appellee's word, "Air-O," is, according to the record, used alone, unaccompanied by any sign or symbol. Whether appellant's registrations have generally had the representation of the arrow as a part of the drawing does not appear. The registrations were not placed in the record. Why I do not know. As stated above, nine of the 11 exhibits purporting to give the mark as used show the picture or representation of an arrow. Appellee's registration is in the record and consists of the single word "Air-O."

It is only when the words are pronounced that any resemblance is noted and I do not believe that an order of cancellation should, in this case, be based upon sound alone.

The equities of appellee are too great here to admit of their being lightly brushed aside. He is not the newcomer in the belt field against whom doubt should be summarily resolved. He is the prior user of the mark for belts, and, as between the parties, is entitled, as I view it, to have any doubt resolved in his favor. So far as any public interest may be thought to be involved, there has been no confusion in the past and I know of no reason to presume that any will result from a continuance of the status quo.

This court has had occasion to say in several cases, in substance, that it would be useless to admit a mark to registration which a court of equity will not protect. In so saying we but followed what other courts have frequently said. The Supreme Court of the United States itself has declared the principle.

The converse of this proposition, within proper limits, is true, of course, and I think the principle is applicable here. That appellee has acquired property rights in the mark "Air-O," which, upon this record, a court of equity would protect, I do not for a moment doubt. He is, in my opinion, entitled to have his registration stand.

U. S. Court of Customs and Patent Appeals

IN RE LAW

No. 2,617. Decided February 11, 1931

PATENTABILITY—RAILING.

Claims for a railing *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Hauff & Warland and *Mr. William E. Warland* for Law.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

BLAND, *J.*:

From a decision of the Board of Appeals affirming that of the Examiner, refusing to allow claim 3,

being the only claim in the case, the applicant has appealed to this court. Claim 3 reads as follows:

3. A railing comprising a vertically arranged lower post adapted to be secured to a support and having a threaded end; a cross-fitting provided with a horizontal run and oppositely disposed vertically arranged threaded nipples, one of which is engaged by the threaded end of the lower post, an upper post having on one end a left-hand thread and on the other end a right-hand thread, one end of said upper post adapted to engage the other threaded nipple of said cross-fitting, a T-fitting having a horizontal run and an interiorly threaded nipple adapted to engage the other end of the upper post, a rail in the run of the cross-fitting and a rail in the run of the T-fitting, the ends of said upper post being adapted to impinge upon the respective rails at the same time and lock them firmly in place when said upper post is turned in one direction.

The railing, which is sufficiently described in the claim for the purposes of this decision, is designed to be used as a fence, or for interior use along stairways or other places where railings are necessary.

The references relied on are as follows: Black et al., 339,368, April 6, 1886; Molloy, 824,501, June 26, 1906; Molloy, 824,502, June 26, 1906.

Appellant claims that none of the references discloses his invention and that his railing is a successful and needed improvement over the prior art.

As we view it, appellant's disclosure consists of the main features taken from the three references, the combination of which requires nothing more than mechanical skill.

We agree with the Board of Appeals that the applicant disclosed no patentable invention not disclosed in the prior art and the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

SAUQUOIT PAPER CO., INC., *v.* WEISTOCK

No. 2,584. Decided February 3, 1931

1. TRADE-MARKS—OPPOSITIONS—MISSTATEMENT IN THE NOTICE.

The statement in the notice of opposition that opposer's trade-mark had been registered in the Patent Office and a similar statement on the labels filed with the notice created a prima facie case of fraud against the public, but opposer should have been permitted to show mistake if it could and that there was no fraud in fact in its use of the trade-mark.

2. SAME—SAME—SAME.

Where it was testified on behalf of the opposer that when it purchased the assets of a bankrupt predecessor it acquired labels containing a copyright notice and having authorized its attorney to apply for registration it was under the impression that it was necessary that that application be accompanied by a label bearing the words "Trade-mark registered U. S. Patent Office" and that a few labels were printed for this purpose, but that subsequent labels did not bear this notice, *Held* that there was no fraudulent intent in printing the registration notice on the first labels and that the opposition should not have been dismissed on the ground of fraud.

APPEAL from the Patent Office. Reversed.

Mr. Edward T. Fenwick, Mr. Edward G. Fenwick, and *Mr. Charles R. Fenwick* of *Mason Fenwick & Lawrence* for Sauquoit Paper Co., Inc.

Mr. Herbert J. Jacobi and *Mr. William J. Jacobi* for Weistock.

LENROOT, *J.*:

This is an appeal in a trade-mark opposition proceeding from the decision of the Commissioner of Patents reversing the decision of the Acting Examiner of Interferences, the latter having sustained the opposition and adjudged that the applicant, appellee here, is not entitled to the registration for which she has made application.

The appellee, on August 5, 1927, made application for the registration of a trade-mark, the dominant part of which consisted of the words "Purple Cross", used upon toilet paper and wax paper. Appellant, on October 13, 1927, gave notice of opposition to the proposed registration, alleging that it was the prior owner and user of the words "Purple Cross" as a trade-mark upon toilet paper and kindred products, and that the use of said trade-mark by appellee would cause confusion with the mark owned and controlled by appellant, and that appellant would be damaged by the registration of such mark by appellee. This notice of opposition was found by the Commissioner of Patents to be insufficient for the reason, among other things, that it was not accompanied by specimens or facsimiles in duplicate of the mark actually used by the opposer, appellant here. On November 5, 1927, appellant filed a new notice of opposition to meet the objections raised by the Commissioner of Patents, and with this notice filed specimens of its mark, the notice of opposition referring to such specimens in the following language:

Specimens of the mark as used by this opposer are attached hereto.

This notice of opposition was verified by one John M. Ross, who, it appears, was the treasurer of appellant company. The specimens set out its trade-mark, of which the words "Purple Cross" were the dominant part, and at the bottom of the same there appeared the following:

All infringements of this label will be prosecuted
Trade Mark Registered U. S. Patent Office

Appellee, in her answer to the notice of opposition, among other things, denied the right of the opposer to claim the assistance of the Patent Office, on the ground that said opposer was guilty of misbranding and making false representations in printing upon its labels, as shown in the specimens attached to the notice of opposition, the registration notice: "Trade mark registered U. S. Patent Office," alleging the fact to be that said opposer did not possess a certificate of registration of the alleged trade-mark appearing on said specimens, and that therefore, being guilty of unclean hands, it had no standing before the Patent Office in this proceeding. It is a fact that said mark had never been registered by appellant.

Testimony was taken by appellant; no testimony was taken by appellee, nor was she represented when the testimony upon behalf of appellant was taken.

Both tribunals of the Patent Office found that appellant had owned and used the mark pleaded as of a date prior to any claimed by the appellee. The Acting Examiner of Interferences further found that although misrepresentation by appellant existed at the time the notice of opposition was filed, the testimony showed that the use of the words "Trade mark registered U. S. Patent Office" by appellant had ceased and that for that reason such misrepresentation could not be utilized as a basis for the equitable judgment adverse to the opposer that was sought by appellee. The Assistant Commissioner reversed the decision of the Acting Examiner of Interferences upon the last ground, and held that appellant could not avail itself of the discontinuance of the misrepresentation after the filing of the notice of opposition; he further found that appellant was guilty of misrepresentation in that the words "Trade mark registered U. S. Patent Office" constituted an untrue statement because the mark had not in fact been registered by appellant. He therefore held that the opposition should be dismissed.

[1] It is no doubt true that the filing of the mark containing the words "Trade mark registered U. S. Patent Office", and the statement in the verified notice of opposition that the marks filed were specimens of the mark as used by the opposer, created a prima facie case of fraud against the public upon the part of appellant which, standing alone, justified dismissing the opposition.

We think, however, that in such case the party should be permitted to show mistake, if it can, and that there was no fraud in fact in its use of the trade-mark. Neither the decision of the Acting Examiner of Interferences nor that of the Commissioner of Patents makes any reference to the testimony in behalf of appellant purporting to explain the purpose and use of the specimens of the trade-mark filed, and we think both tribunals must have overlooked such testimony.

It appears from the record that the "Purple Cross" label was originated in 1918 by the Seneca Paper Company of Geneva, N. Y., and that said company continued to do business until October, 1925, when it was reorganized and a new company was formed having the same corporate name. This new company continued to do business until 1927, when it went into bankruptcy. On October 7, 1927, appellant purchased from the trustee in bankruptcy of said company all of the labels and printing plates, together with all the right, title and interest of the bankrupt Seneca Paper Company to the brand "Purple Cross" and the good will of its business pertaining thereto, and also a copyright registration of the "Purple Cross" label, dated February 27, 1925; that since said October 7, 1927, appellant has continued to manufacture and sell toilet paper under this brand; that on October 13, 1927, or within one week from the date of appellant's acquiring said trade-mark as heretofore stated, it filed its original notice of opposition herein, and on November 5, or less than one month after so acquiring the trade-mark, it filed its verified notice of opposition as hereinbefore set out. It appears that appellant's predecessor used said label as a trade-mark long prior to February 25, 1925, which is the earliest date that appellee alleged her use of the same.

Said John M. Ross, treasurer of appellant company, was asked the following question and made the answer quoted:

Q. What can you say as to the appearance of the notice, "Trade mark registered U. S. Patent Office," on the specimen labels which you filed in connection with this opposition proceeding?

A. We purchased from the Seneca Paper Company, Inc., as may be seen on the bill of sale, a large quantity of Purple Cross labels. These bore the imprint, "Copyright 1925, Seneca Paper Company, Inc." Having authorized our attorney to apply for a trade-mark registration on this brand, and being under the impression that application for same must be accompanied by specimen labels bearing the imprint, "Trade-mark registered U. S. Patent Office by Sauquoit Paper Co., Inc.," we printed a few labels bearing this imprint, which were forwarded to our attorney. Subsequent printings of this label have borne the imprint, "Copyright 1925, Sauquoit Paper Co., Inc.," and the trade-mark registration notice has not appeared thereon.

It appears from this testimony that sometime between October 7, 1927, and November 5, 1927, the specimens of the trade-mark filed were sent by appellant to its patent attorney; that is to say, within less than one month after it had acquired the right to use the trade-mark. The question is, shall the explanation given by the witness Ross be accepted as satisfactory evidence that there was no fraud upon the part of appellant in the use of its trade-mark, and that the printing and filing of the specimens here in question were under a misapprehension upon the part of appellant company's officers as to the specimens required to be filed. If this explanation is not accepted, the decision of the Commissioner of Patents should be affirmed.

[2] We think the statement must be accepted that appellant secured from the Seneca Paper Company labels bearing the imprint "Copyright 1925, Seneca Paper Co., Inc.," and that such labels were in its possession at the time that it sent the specimens here in question to its attorney. It is fair to conclude that appellant did not use the trade-mark "Purple Cross" upon goods for a greater period of time than one month previous to the filing of the second notice of opposition. If there had been any use of the trade-mark containing the words "Trade mark registered U. S. Patent Office," it could have been for only a short time, and it is to be noted that within one week from the time it secured the rights of its predecessors to the trade-mark, it began this opposition proceeding, namely on October 13, 1927. That is to say, within six days after it acquired the rights of its predecessors to the trade-mark, it began or attempted to begin this proceeding. We think this is a circumstance that is proper to be considered in weighing the testimony of said Ross hereinbefore quoted. It must be assumed that at least some days elapsed between the time that appellant's officers determined to begin this opposition and the date of filing of the first notice of opposition, October 13, 1927. It would seem that, with an opposition proceeding in mind, appellant's officers would not have had printed a trade-mark containing the false statement for use upon its merchandise, thereby jeopardizing the rights that they were seeking to establish. Furthermore, if there was any intention upon the part of appellant's officers to defraud the public, one would hardly have expected them to furnish to the Patent Office evidence of the fraud when they might have filed the copyright label in their possession,

containing the representation of the trade-mark but not containing the words "Trade mark registered U. S. Patent Office".

In view of all of these circumstances, we think that the witness Ross stated the truth when he said that:

• • • Having authorized our attorney to apply for a trade-mark registration on this brand, and being under the impression that application for same must be accompanied by specimen labels bearing the imprint, "Trade mark registered U. S. Patent Office by Sauquoit Paper Co., Inc.," we printed a few labels bearing this imprint, which were forwarded to our attorney. • • •

We think the fair inference from this testimony is that all of such labels were forwarded to appellant's attorney for the purpose stated by the witness, that none of such labels were actually used upon goods of the appellant, and that appellant had no fraudulent intent in printing the words "Trade mark registered U. S. Patent Office" upon the labels, or in sending them to its attorney to be filed in the Patent Office.

The decision of the Commissioner of Patents is reversed, with directions to sustain the opposition of appellant and deny the application of appellee.

Reversed.

1,695,414. (See 1,466,701.)

1,749,734, T. J. Kelly, Netted cord fabric bag, filed Mar. 11, 1931, D. C., N. D. Ga. (Rome), Doc. E 109, *Sothern Brighton Mills* v. *Aragon Mills.*

1,750,271, L. Kasan, Awning, filed Feb. 17, 1931, D. C., E. D. N. Y., Doc. 5401, *L. Kasan* v. *Sunproof Awning Co., Inc., et al.*

1,779,195, A. P. Steckel, Method and apparatus for rolling thin sheetlike material, filed Mar. 7, 1931, D. C., W. D. Pa. (Pittsburgh), Doc. E 2506, *The Cold Metal Process Co.* v. *United Engineering & Foundry Co.*

1,784,674. (See 1,141,402.)

1,794,124, L. Sugerman, Twin section egg carton, filed Mar. 10, 1931, D. C., S. D. Ohio, W. Div., Doc. E 724, *L. Benoit* v. *The F. H. Blome Co.*

Re. 15,129, 1,432,259, J. J. Richards, Reserve provider for fuel tanks, D. C., S. D. N. Y., Doc. E 46/393, *T. A. Kelly* v. *Pierce-Arrow Sales Corp.* Dismissed Mar. 3, 1931.

Des. 70,508, Des. 73,578, E. Pappert, Eyeglass frame, filed Mar. 10, 1931, D. C., S. D. N. Y., Doc. E 58/303, *E. Pappert* v. *Shell-Craft Mfg. Corp.*

Des. 73,578. (See Des. 70,508.)

Des. 74,384, E. E. Nahon, Chair, D. C., S. D. N. Y., Doc. E 47/33, *E. E. Nahon et al.* v. *The Imperial Upholstering Corp.* Consent decree for plaintiff Mar. 7, 1931.

Des. 76,612, A. Von Frankenberg, Lamp, D. C., S. D. N. Y., Doc. E 49/166, *Frankart, Inc.*, v. *L. Glauber.* Consent decree for plaintiff Mar. 6, 1931. Doc. E 49/208, *Frankart, Inc.*, v. *J. Epter.* Decree as above.

Disclaimers

Reissue No. 15,360.—*William F. Cremean*, Toledo, Ohio. RAILWAY CAR. Patent dated May 23, 1922. Disclaimer filed May 6, 1931, by the patentee, assignee, *The Wine Railway Appliance Company*, consenting.

Therefore, enters this disclaimer to claims 4, 5, 6, and 7 in said specification, which are in the following words, to wit:

"4. In combination with a freight car having a drop door, a member secured to the bottom of the door and extending beyond a free edge thereof, a pivotal hook secured to the car body and above the member secured to the car door, an auxiliary ledge formed on said hook to engage the member on said door to support the door in a temporary partly closed position and a main supporting ledge for engaging the member formed on said door when said door is lifted and thereby hold said door in its final closed position.

"5. In combination with a freight car having a drop door, a member secured to the bottom of the door and extending beyond a free edge thereof, a pivotal hook secured to the car body and above the member secured to the car door, an auxiliary ledge formed on said hook to engage the member on said door to support the door in a temporary partly closed position, a main supporting ledge for finally engaging the member formed on said door to tightly hold said door in its closed position, and means for locking the hook in engagement with said member secured to the car door.

"6. In combination with a freight car having a swinging door, a member secured to the bottom of the door and extending beyond a free edge thereof, a pivotal hook secured to the car body and above the member secured to the car door, an auxiliary ledge formed on said hook to engage the member on said door to support the door in a temporary partly closed position, a main supporting ledge for engaging the member formed on said door to support the door in its final closed position, and the contour of the face of the main supporting ledge corresponding with the contour of the face of the member secured to the car door.

"7. In combination with a freight car having a drop bottom door, a member secured to the door and extending beyond a free edge thereof to form a ledge, a bracket secured to the car body, a pivotal hook secured in said bracket and located above the member secured to the car door, an auxiliary ledge formed on said hook to engage the ledge on the car door to support the door in a temporary partly closed position, a main supporting ledge on said hook for finally engaging the ledge on said door to thereby hold the door in its closed position, and means for locking the hook in engagement with the ledge formed on said door."

1,374,352.—*Andrew J. Borst, jr.*, Buffalo, N. Y. VEHICLE. Patent dated April 12, 1921. Disclaimer filed May 8, 1931, by the assignee, *Fruehauf Trailer Company.*

Hereby disclaims:

All tractor-trailer combinations, as claimed in claim 2, except one in which one engaging member has a projecting part which, as the tractor backs into the trailer, enters between spaced portions of the engaging surfaces on the other engaging member to guide and allow fore and aft movement of the engaging members to and from final coupling relation by relative fore and aft tractor-trailer movement only, and in which the engaging members cooperate in an automatic elevation of the front end of the trailer as the tractor backs into it in coupling, and an automatic lowering of the front end of the trailer as the tractor pulls away from it in uncoupling.

1,383,381.—*Andrew J. Borst, jr.*, Buffalo, N. Y. SEMI-TRAILER. Patent dated July 5, 1921. Disclaimer filed May 8, 1931, by the assignee, *Fruehauf Trailer Company*.

Hereby enters this disclaimer:

Petitioner disclaims any and all supporting mechanism specified in claim 2 except such wherein the horizontally slidable means is actuated by a portion of the tractor when backing the rear end of the tractor underneath the front end of the trailer, to move the slidable means rearwardly, thereby causing the movable supporting element to move upwardly into inoperative position.

Disclaims all supporting mechanism specified in claim 3 except such wherein the slidable elements are actuated by the tractor when backing under the front end of the trailer to thereby elevate the supporting element.

Disclaims all trailer structures specified in claim 6 except where the movable elements are automatically actuated by the tractor in backing under the front end of the trailer to automatically move the supporting element from operative to inoperative position.

Disclaims all trailer structures specified in claim 8 except where the actuator slides are automatically moved rearwardly when the tractor is backed underneath the trailer to automatically raise the supporting member to its inoperative position.

Disclaims all supporting mechanism claimed in claims 18, 19, and 22, except that in which the slide members are adapted to be actuated by a portion of the tractor when the same is backed under the forward end of the trailer to thereby move the slide members rearwardly and cause the supporting member to be moved upwardly into inoperative position.

1,466,656.—*Clarence E. Barr* and *Thomas E. Jackson*, Detroit, Mich. ELECTRIC TOASTER. Patent dated September 4, 1923. Disclaimer filed May 11, 1931, by the assignee, *Harry C. Le Vine*.

Hereby enter this disclaimer to that part of the claims in said specification which are in the following words, to wit:

"1. A toaster comprising a base, a top, a series of parallel heating elements extending substantially the length of the toaster, between the base and the top, and casings for the outer heating elements."

"6. A toaster comprising a base, a top, a series of heating elements extending substantially the full length of the toaster between the base and the top, casings for the outer heating elements, means to support the inner heating element, and guard wires extending longitudinally of the toaster across said heating elements."

1,638,131.—*Warren R. Walker*, Great Kills, N. Y. ELECTRIC SWITCH. Patent dated August 9, 1927. Disclaimer filed May 12, 1931, by the assignee, *General Electric Vapor Lamp Company*.

Hereby enters this disclaimer to claims 1, 2, 3, 4, 5, 6, 10, and 11 of said patent which are in the following words:

"1. A mercury switch comprising an envelope of glass, mercury therein, and electrodes, one of which comprises a lead-in sealed into said envelope and a terminal portion of metal of the iron group welded to said lead-in and extending into said mercury.

"2. A mercury switch comprising an envelope of glass, mercury therein, and electrodes, one of which comprises a lead-in of a metal of the tungsten group sealed into said envelope and a terminal portion of metal of the iron group welded to said lead-in and extending into said mercury.

"3. A mercury switch comprising an envelope of glass, a mercury therein, and electrodes, one of which comprises a lead-in of a metal of the tungsten group sealed into said envelope above the level of the mercury and a terminal portion of metal of the iron group welded to said lead-in and extending into said mercury.

"4. A mercury switch comprising a longitudinal envelope of glass having mercury therein, an electrode sealed through the envelope wall and extending into said mercury, an electrode lead-in of tungsten sealed through the envelope wall at one end thereof and a terminal portion of nickel welded to said lead-in and extending into said mercury.

"5. A mercury switch comprising a longitudinal envelope of glass having a wall formed therein, mercury in said envelope, an electrode sealed through the wall of said envelope and extending into said mercury, an electrode lead-in of tungsten sealed through said wall above normal mercury levels and a terminal portion of nickel welded to said lead-in and extending into said cup.

"6. A mercury switch comprising a sealed envelope of glass, mercury therein, and electrodes, one of which comprises a lead-in sealed into said envelope and a terminal portion of metal of the iron group welded to said lead-in and extending into said mercury, and a filling of hydrogen in said envelope."

"10. A mercury switch comprising a sealed envelope of glass, mercury therein, and electrodes one of which comprises a lead of tungsten sealed into the envelope and a terminal thereon of oxygen free nickel.

"11. The method of making an electrode for a mercury device into which it is sealed which comprises welding a nickel terminal portion to a tungsten lead-in portion."

1,676,609.—*Roger D. Hunneman*, Chicago, Ill. ART OF DISTILLING HYDROCARBON OILS. Patent dated July 10, 1928. Disclaimer filed May 8, 1931, by the assignee, *Standard Oil Company*.

Hereby enters this disclaimer to claims 5, 6, and 7 of said patent, which claims are in the following words, to-wit:

"5. The method of distilling hydrocarbon oils comprising passing the oil in a confined stream through a heating zone, discharging the oil into a separating chamber, passing the unvaporized oil in countercurrent to a current of steam, subsequently subjecting said steam with the vapors from the separating chamber to refluxing action, and maintaining sub-atmospheric pressure on the system.

"6. The method of distilling hydrocarbon oils which comprises passing the oil in an externally heated confined stream through a heating zone, discharging the oil into an unheated separating chamber, supplying steam in said chamber so as to pass through the liquid therein, removing separated vapors and steam from said chamber, and subjecting the removed vapors and steam to a controlled refluxing action.

"7. The method of distilling hydrocarbon oils which comprises passing the oil in an externally heated confined stream through a heating zone, discharging the oil into an unheated separating chamber, supplying steam in said chamber so as to pass through the liquid therein, removing separated vapors and steam from said chamber, subjecting the removed vapors and steam to a controlled refluxing action and returning reflux to the separating chamber."

Changes in Classification

Order No. 3,192, May 12, 1931, directs:

In *class 266, Metallurgical Apparatus* (Division 3), abolish the following subclasses, with their definitions:

1.5 **Electric furnaces.**
Electrodes
1.6 Carbon.

The patents formerly contained in these subclasses have been placed for the most part in class 13, Electric Furnaces, established in this order.

Establish, in Division 3, class 13, Electric Furnaces, with the subclasses indicated in the new loose leaf now being published for insertion in the Manual of Classification, and definitions to be printed in Classification Bulletin No. 63, the patents contained in this class having been taken for the most part from class 266, Metallurgical Apparatus, subclasses 1.5, Electric furnaces, and 1.6, Electrodes, Carbon, abolished in this order.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 26, 1931

[VOL. 406. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 308,738. LEHIGH PACKING CO. INC., Allentown, Pa. Filed Dec. 8, 1930.

Cloverhill White

The word "White" is disclaimed apart from the other features of the mark shown on the drawing.

For Rabbits for Breeding Purposes.

Claims use since Aug. 15, 1930.

Ser. No. 312,396. VICTOR OOLITIC STONE COMPANY, Bloomington, Ind. Filed Mar. 21, 1931.

VICTOR TAPESTRY

For Building Stone as It Comes from the Quarry.

Claims use since November, 1930.

Ser. No. 312,716. THE MOORES LIME COMPANY, Durbin, Ohio. Filed Mar. 30, 1931.

MAG-LI-KOTE

Applicant disclaims the word "Kote" apart from the mark as shown on the drawing.

For Material Made Principally from Dolomite or Lime for Coating Molds for Casting Pig Iron.

Claims use since Feb. 6, 1931.

Ser. No. 313,387. GEORGE F. PETTINOS, INCORPORATED, Philadelphia Pa. Filed Apr. 15, 1931.

"SONITTEP"

For Sands.

Claims use since Apr. 2, 1931.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 313,285. S. DRESNER & SON, INC., Chicago, Ill. Filed Apr. 13, 1931.

DRESNER ORIGINAL

For Luggage—viz, Gladstone Bags, Club Bags, Coat Cases, and Overnight Cases.

Claims use since January, 1923.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 297,450. MOORE AND BRADFORD, Washington, D. C. Filed Mar. 17, 1930.

CREST

C

For Glass and Metal Cleaning Paste.

Claims use since January, 1930.

Ser. No. 300,323. GUY E. BRIGNALL, doing business as Lite Soap Company, Aurora, Ill. Filed May 12, 1930.

Lite

For Mineral Soap Containing Tri-Sodium Phosphate as an Ingredient.
Claims use since Jan. 1, 1920.

Ser. No. 300,324. GUY E. BRIGNALL, doing business as Crysto Soap Company, Aurora, Ill. Filed May 12, 1930.

CRYSTO

For Mineral Soap Containing Tri-Sodium Phosphate as an Ingredient.
Claims use since Jan. 1, 1917.

Ser. No. 309,809. CHARLES M. DEERING, doing business as Salta Products, Worcester, Mass. Filed Jan. 10, 1931.

SALTA

For Powdered Cleanser for General Household Purposes and for Cleaning Surgical Instruments, Jewelry, Refrigerators, Enameled Gas and Electric Stoves, and Dairy Equipment.
Claim use since February, 1930.

Ser. No. 309,815. GRISWOLDVILLE MANUFACTURING COMPANY, Griswoldville, Mass. Filed Jan. 10, 1931.

Filtex

For Sand-Paper.
Claims use since Dec. 27, 1930.

Ser. No. 311,437. GABILLA, INCORPORATED, New York N. Y. Filed Feb. 25, 1931.

LA VIERGE FOLLE

For Toilet Soap.
Claims use since Oct. 29, 1910.

Ser. No. 312,250. ABRASIVE PRODUCTS, INC., Boston, Mass. Filed Mar. 18, 1931.

JEWEL

For Natural Abrasive of Flint, Emery, and Garnet; Artificial Abrasive of Silicon, Carbide and Aluminum Oxide; and Abrasive Papers and Cloths.
Claims use since May, 1929.

Ser. No. 312,252. ABRASIVE PRODUCTS, INC., ,Boston, Mass. Filed Mar. 18, 1931.

PILGRIM

For Natural Abrasives of Flint, Abrasive Papers and Cloths.
Claims use since May, 1929.

Ser. No. 312,470. BROADUS BAILEY, doing business as Broadus Bailey and Company, Greenville, S. C. Filed Mar. 24, 1931.

BAYSOL

For Cleaning Composition for Bath Tubs, Sinks, Floors, Linoleum, Painted Woodwork, and the Like.
Claims use since June 10, 1927.

Ser. No. 313,136. LOUIS M. KERR, Buffalo, N. Y. Filed Apr. 9, 1931.

PIONEER

For Waterproofing Dressing for Shoes and Like Articles of Leathers.
Claims use since Feb. 13, 1931.

Ser. No. 313,365. FIDELITY MANUFACTURING CO., INC., doing business as Alrite Mfg. Co., Zionsville, Pa. Filed Apr. 15, 1931.

For Auto Top Dressing.
Claims use since Jan. 17, 1931.

CLASS 5

Adhesives

Ser. No. 312,850. LIQUID CEMENT CO., San Diego, Calif. Filed Apr. 2, 1931.

S AND F

For Adhesive Liquid Cement.
Claims use since Feb. 15, 1931.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 293,339. P. J. OESTERLING & SON, INC., Butler, Pa. Filed Dec. 6, 1929.

AT Sun Side LAST

"CHIKLOH"

For Tonic for the Treatment of Coccidiosis and White Diarrhoea in Poultry.
Claims use since October, 1924.

Ser. No. 304,292. NEWPORT CHEMICAL WORKS, INCORPORATED, Carrollville, Wis. Filed Aug. 6, 1930.

ROSE BOSPHORE

The word "Rose" is disclaimed apart from the mark as shown in the drawings.
For Synthetic Perfume.
Claims use since July 19, 1930.

Ser. No. 305,801. A/S. APOTHEKERNES LABORATORIUM FOR SPECIALPRÆPARATER, Skoyen near Oslo, Norway. Filed Sept. 18, 1930.

Kollopin

For Bath Perfumery.
Claims use since March, 1927.

Ser. No. 306,287. RADIATOR SPECIALTY COMPANY, Charlotte, N. C. Filed Oct. 1, 1930.

Applicant is the owner of registered Trade-Mark No. 220,740.
For Composition for Cleaning the Interior of Hot Water Circulating Systems.
Claims use since July 28, 1930.

Ser. No. 306,418. JOE. F. SANTEE, doing business as Santarub Chemical Company, Okmulgee, Okla. Filed Oct. 4, 1930.

SANTARUB

For Penetrating Vaporizing Ointment for the Treatment of Flu, Croup, Coughs, Head Colds, Chest Colds, Neuralgia, Sprains, Sore Feet, Boils, Piles, and Inflammation.
Claims use since Jan. 15, 1927.

Ser. No. 306,437. LENA FLAHERTY, doing business as Rhealinzo Co., Portland, Oreg. Filed Oct. 6, 1930.

RHEALINZO

For Medicine for Pyorrhea.
Claims use since June 1, 1929.

Ser. No. 309,032. LOUIS H. MYERS, Atlantic City, N. J. Filed Dec. 16, 1930.

"LACTOPHILUS"

For Acidophilus Culture.
Claims use since Feb. 10, 1925.

Ser. No. 309,033. O. H. D. Co., INC., Wilmington, Del. Filed Dec. 16, 1930.

The words "Cough Syrup" are disclaimed apart from the mark as shown on the drawing.

For Cough Syrup.

Claims use since January, 1927.

Ser. No. 309,086. KISSANA CHEM.-PHARM. LABORATORIUM G. M. B. H., Bad Kissingen, Germany. Filed Dec. 17, 1930.

Kissana

For Adhesive Plasters—Namely, Plasters of a Merely Antiseptic Character, Plasters for Keeping Surgical Dressings in Place, Court Plaster, and Medicated Plasters; Surgical Dressings, Dressings of Iodoform Gauze; Animal and Plant Destroyers—Namely, Insect Powder, Rat Poison, and Preparations for Destroying the Phylloxera; Spring and Bath Salts, Perfumery; Cosmetics—Namely, Preparations for Treating the Skin, Hair, Mouth, Teeth, Nails, Beard, Lip Sticks, Powder, Rouge, and Hair Dyes; and Medicinal Preparations Used in the Treatment of Rheumatism, Nervous Diseases, Gout, Diseases Resulting from Colds, Constipation, Hemorrhoids, Rash, and Medicinal Baths—Namely, Extracts, Either Liquid or in the Nature of Powder or Tablets Which Are Put in the Water, as, for Instance, Sulphur, Salts, Iodine, and Pine Needles.

Claims use since January, 1920.

Ser. No. 309,665. THE ANTE-FERMEN CO., Columbia, S. C. Filed Jan. 7, 1931.

Ante-Fermen

For a Medicinal Preparation for the Treatment of Sour Stomach Due to Hyperacidity, Flatulence Due to Hyperacidity, Wind Colic, and for Use as a Carminative Antacid Intestinal Astringent Stomachic, and for Treating Teething Children.

Claims use since Nov. 7, 1930.

Ser. No. 310,059. LENTHERIC, INCORPORATED, New York, N. Y. Filed Jan. 17, 1931.

Applicant is the owner of registered Trade-Marks Nos. 180,528, 254,198, 275,324, and 276,648.

For Perfumes, Toilet Waters, Eau de Cologne, Face and Scalp Lotions, Face Powders, Dusting Powders, Powder Compacts, Rouges and Refills, Lipsticks and Refills, Cleansing, Vanishing, and Tissue Creams, Hair Tonics, and Bath Salts.

Claims use since October, 1924.

Ser. No. 310,211. CHESEBROUGH MANUFACTURING COMPANY, CONSOLIDATED, New York, N. Y. Filed Jan. 21, 1931.

The lining on the drawing represents a blue colored background upon which in actual use the lettering appears in white. With the exception of the duly registered trade-mark "Vaseline" and the name of the company no claim is made to the exclusive use of the wording appearing on the drawing apart from the mark as shown.

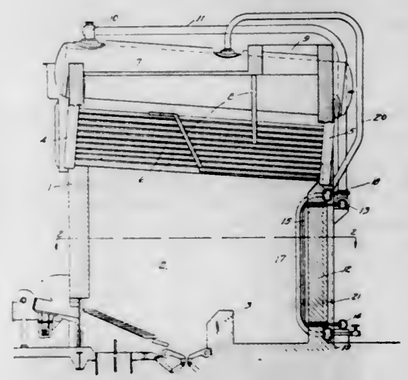
REISSUES

MAY 26, 1931

18,080. NEEDLE BEARING. RICHARD GÖTZ, Berlin-Gross-Lichterfelde, Germany. Original No. 1,717,204, dated June 11, 1929, Serial No. 18,179, filed Mar. 25, 1925. Application for reissue filed June 21, 1930. Serial No. 462,918. 9 Claims. (Cl. 308—179.)

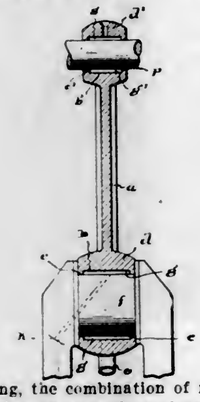


1. In a bearing, the combination of relatively rotatable cylindrical bearing races and a plurality of cylindrical needles interposed therebetween, such needles forming a closed ring or sleeve, which is compelled to revolve as an entirety in the same direction as the driving bearing member, without each single cylindrical needle being constrained to turn around itself.

18,081. HEADGEAR AND METHOD OF MAKING THE SAME. HARRY M. LIPPER, Atlantic City, N. J., assignor to Lipper Manufacturing Company, a Corporation of Pennsylvania. Original No. 1,720,560, dated July 9, 1929, Serial No. 354,191, filed Apr. 11, 1929. Application for reissue filed Feb. 3, 1931. Serial No. 513,238. 5 Claims. (Cl. 2—198.)

1. A head gear formed of generally limp and elastic knitted fabric, including a head-pocket portion adapted to fit snugly over the head of the wearer to form the crown of the assembled head dress and a generally elongated streamer portion at least approximately twice as long as the head-pocket portion and extending from an end thereof, adapted to surround the lower periphery of the head-pocekt portion to form the rim of the assembled head dress; the shape of the head dress, when mounted upon the head of the wearer, being maintained by the contour of the head of the wearer.

18,082. RADIANT SUPERHEATER. BENJAMIN BROIDO, deceased, New York, N. Y., by The Superheater Company, New York, N. Y., assignee. Original No. 1,590,180, dated June 29, 1926, Serial No. 625,418, filed Mar. 15, 1923. Application for reissue filed Mar. 26, 1931. Serial No. 525,628. 5 Claims. (Cl. 122—471.)



1. In an apparatus of the class described, the combination of a furnace, a radiant type superheater comprising parallel vertical alined superheater tubes adjacent to a wall of said furnace and water tubes parallel to the superheater tubes and in a plane parallel to and in advance of the plane of the superheater tubes, said superheater tubes being so located relatively to the water tubes and to the furnace that they are exposed to direct radiant heat from said furnace.

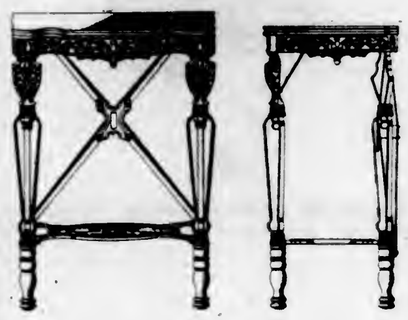
DESIGNS

MAY 26, 1931

84,225. TRAFFIC SIGNAL. ROCCO BLESSO, Hartford, Conn. Filed Sept. 8, 1930. Serial No. 36,904. Term of patent 14 years.

The ornamental design for a traffic signal as shown.

84,226. THERMOMETER. H. BRAINARD BROWN, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Aug. 1, 1929. Serial No. 32,263. Term of patent 14 years.

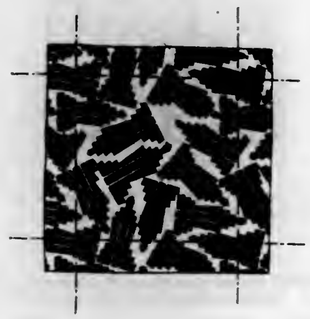


The ornamental design for a thermometer, as shown.

84,227. COMBINATION TRAY AND TABLE. LESLIE H. BURLIN, Oak Park, Ill., assignor to Advance Pattern & Foundry Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1931. Serial No. 39,042. Term of patent 7 years.

The ornamental design for a combination tray and table as shown and described.

84,228. TABLE. LESLIE H. BURLIN, Oak Park, Ill., assignor to Advance Pattern & Foundry Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1931. Serial No. 39,044. Term of patent 7 years.

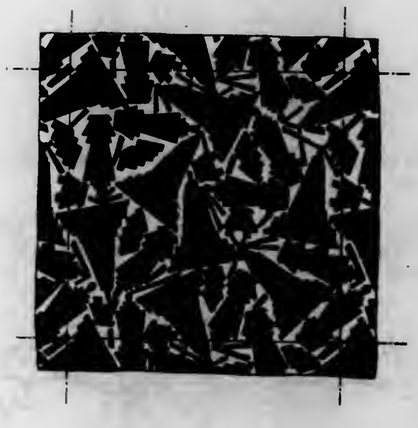


The ornamental design for a table as shown.

84,229. TEXTILE FABRIC. CARL H. DAVIS, New York, N. Y., assignor to Tubize Chatillon Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1931. Serial No. 38,421. Term of patent 3½ years.

The ornamental design for a textile fabric substantially as shown and described.

84,230. TEXTILE FABRIC. CARL H. DAVIS, New York, N. Y., assignor to Tubize Chatillon Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1931. Serial No. 38,422. Term of patent 3½ years.



The ornamental design for a textile fabric substantially as shown and described.

84,231. TEXTILE FABRIC. CARL H. DAVIS, New York, N. Y., assignor to Tubize Chatillon Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1931. Serial No. 38,423. Term of patent 3½ years.

The ornamental design for a textile fabric substantially as shown and described.

84,232. TEXTILE FABRIC. CARL H. DAVIS, New York, N. Y., assignor to Tubize Chatillon Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1931. Serial No. 38,424. Term of patent 3½ years.

The ornamental design for a textile fabric substantially as shown and described.

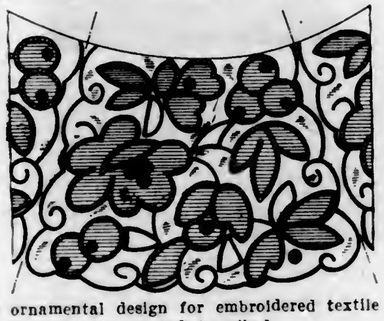
84,233. TOY FIGURE. WALTER E. DISNEY, Hollywood, Calif. Filed Mar. 30, 1931. Serial No. 39,302. Term of patent 14 years.

The ornamental design for a toy figure, as shown.

84,234. BOTTLE OR SIMILAR ARTICLE. WILLIAM A. DOLAN, New York, N. Y., assignor to The Wilbert Products Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 4, 1931. Serial No. 38,543. Term of patent 7 years.

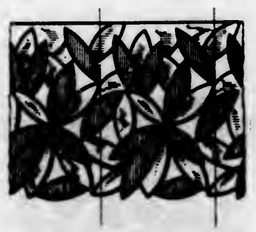
The ornamental design for a bottle or similar article, as shown.

84,235. EMBROIDERED TEXTILE FABRIC. ERNEST W. FREUDENBERG, Larchmont, N. Y. Filed Mar. 5, 1931. Serial No. 38,952. Term of patent 3½ years.



The ornamental design for embroidered textile fabric substantially as shown and described.

84,236. EMBROIDERED LACE. ERNEST W. FREUDENBERG, Larchmont, N. Y. Filed Mar. 5, 1931. Serial No. 38,953. Term of patent 3½ years.

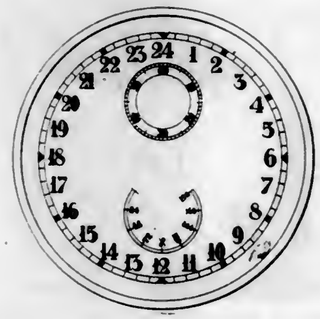


The ornamental design for embroidered lace substantially as shown and described.

84,237. EMBROIDERED TEXTILE FABRIC. ERNEST W. FREUDENBERG, Larchmont, N. Y. Filed Mar. 5, 1931. Serial No. 38,954. Term of patent 3½ years.

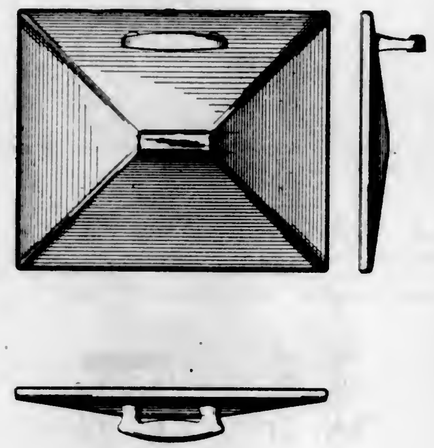
The ornamental design for embroidered textile fabric substantially as shown and described.

84,238. EMBROIDERED TEXTILE FABRIC. ERNEST W. FREUDENBERG, Larchmont, N. Y. Filed Mar. 5, 1931. Serial No. 38,955. Term of patent 3½ years.



The ornamental design for embroidered textile fabric substantially as shown and described.

84,239. BOTTLE CAP. EDWIN W. FUERST, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 1, 1931. Serial No. 39,318. Term of patent 14 years.

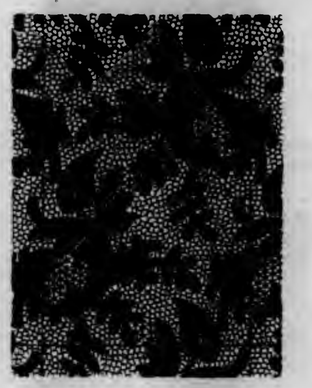


The ornamental design for a bottle cap substantially as shown and described.

84,240. WATCH DIAL OR SIMILAR ARTICLE. JOHN P. V. HEINMULLER, New York, N. Y., assignor to A. Wittnauer Co., New York, N. Y., a Corporation of New York. Filed Sept. 27, 1930. Serial No. 37,082. Term of patent 3½ years.

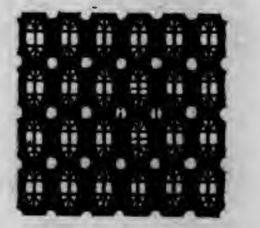
The ornamental design for a watch dial or similar article, substantially as shown.

84,241. DOOR. CARL H. HOFFSTETTER, Erie, Pa., assignor to Odin Stove Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed May 21, 1930. Serial No. 35,706. Term of patent 14 years.



The ornamental design for a door as shown.

84,242. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Mar. 21, 1931. Serial No. 39,182. Term of patent 3½ years.

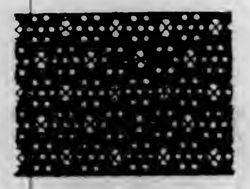


The ornamental design for lace, substantially as shown and described.

84,243. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Mar. 23, 1931. Serial No. 39,200. Term of patent 3½ years.

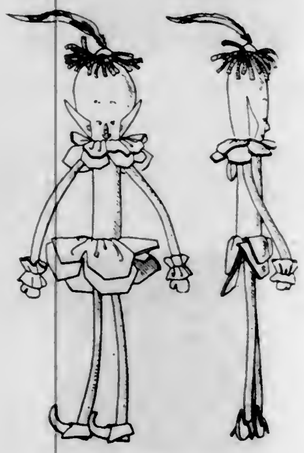
The ornamental design for lace, substantially as shown and described.

84,244. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Mar. 25, 1931. Serial No. 39,233. Term of patent 3½ years.



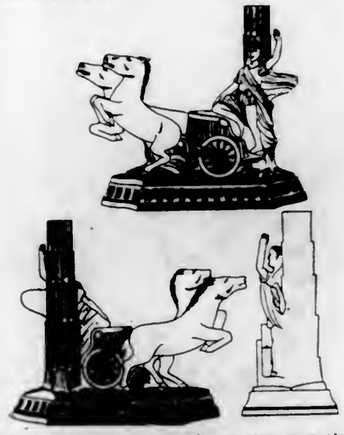
The ornamental design for lace, substantially as shown and described.

84,245. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Mar. 27, 1931. Serial No. 39,268. Term of patent 3½ years.



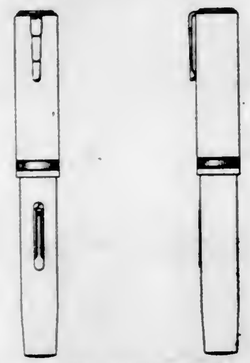
The ornamental design for lace, substantially as shown and described.

84,246. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Mar. 30, 1931. Serial No. 39,297. Term of patent 3½ years.



The ornamental design for lace, substantially as shown and described.

84,247. DOLL. BERTA L. KELLEY and LOUISE WINNIFORD, Santa Barbara, Calif. Filed Feb. 21, 1931. Serial No. 38,789. Term of patent 3½ years.

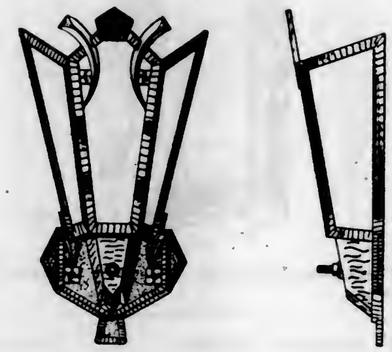


The ornamental design for a doll as shown.

84,248. LAMP BASE OR ARTICLE OF ANALOGOUS NATURE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co., Inc., a Corporation of New York. Filed Apr. 14, 1931. Serial No. 39,474. Term of patent 3½ years.

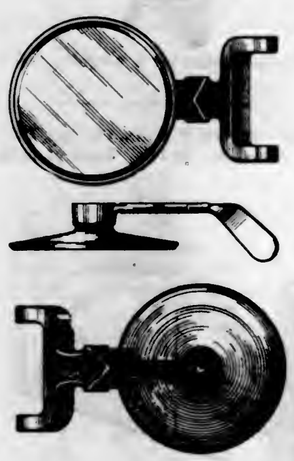
The ornamental design for a lamp base or article of analogous nature substantially as shown.

84,249. FOUNTAIN PEN OR SIMILAR ARTICLE. GABRIEL LARSEN, Springfield, N. J., assignor to L. E. Waterman Company, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1931. Serial No. 38,537. Term of patent 14 years.



The ornamental design for a fountain pen or similar article substantially as shown.

84,250. COAT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1931. Serial No. 38,626. Term of patent 3½ years.



The ornamental design for a coat substantially as shown.

84,251. LIGHTING FIXTURE. JULIUS C. LOWRY, Detroit, Mich. Filed Apr. 2, 1931. Serial No. 39,332. Term of patent 7 years.

The ornamental design for a lighting fixture as shown.

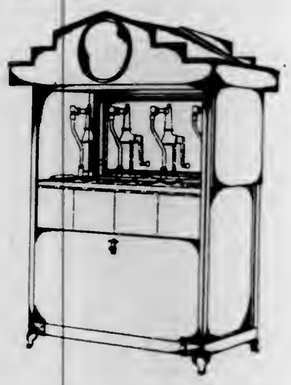
84,252. HINGED MIRROR FOR AUTOMOBILE DOORS. FRANK MABIANI, New York, N. Y., assignor to Best Die Casting and Stamping Company, Incorporated, New York, N. Y. Filed Aug. 13, 1930. Serial No. 36,652. Term of patent 7 years.

The ornamental design for a hinged mirror for automobile doors, as shown.

84,253. LAMP CHIMNEY. GLENN E. MCFADDEN, Buffalo, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Mar. 17, 1931. Serial No. 39,123. Term of patent 3½ years.

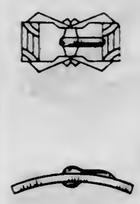
The ornamental design for a lamp chimney substantially as shown.

84,254. SHOE. CHARLES MILLER, Long Island, N. Y. Filed Mar. 26, 1931. Serial No. 39,244. Term of patent 3½ years.



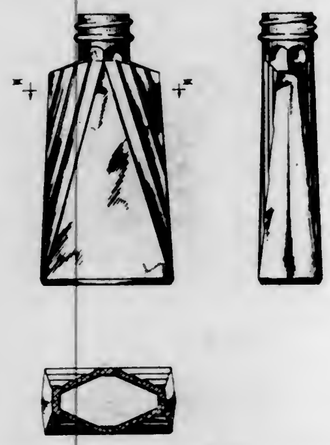
The ornamental design for a shoe, as shown.

84,255. TOY. HERBERT H. MOOR, Rock Island, Ill. Filed Mar. 25, 1931. Serial No. 39,235. Term of patent 7 years.



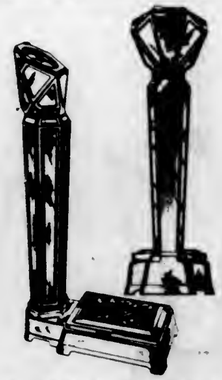
The ornamental design for a toy, substantially as shown and described.

84,256. OIL DISPENSER. HYMAN PHILLIPS, Cincinnati, Ohio. Filed Mar. 21, 1931. Serial No. 39,193. Term of patent 14 years.



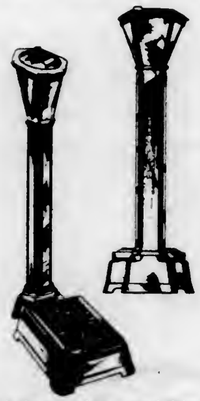
The ornamental design for an oil dispenser as shown.

84,257. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Mar. 19, 1931. Serial No. 39,155. Term of patent 3½ years.



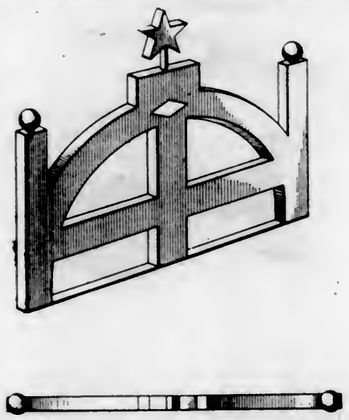
The ornamental design for a shoe buckle as shown.

84,258. BOTTLE. ROBERT P. RICHARDSON, Reidsville, N. C., assignor to The Nu-Shine Company, Reidsville, N. C., a Corporation of North Carolina. Filed Apr. 1, 1931. Serial No. 39,316. Term of patent 14 years.



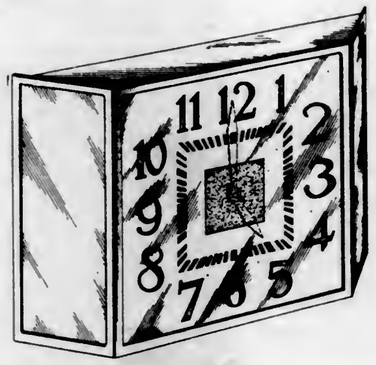
The ornamental design for a bottle substantially as shown.

84,259. WEIGHING MACHINE CASING. BARNETT B. ROCHESTIE, Trenton, N. J. Filed Mar. 24, 1931. Serial No. 39,230. Term of patent 3½ years.



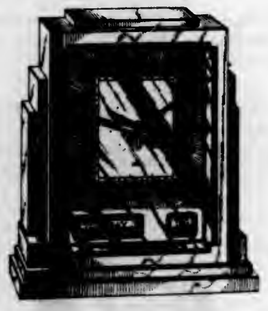
The ornamental design for a weighing machine casing, as shown.

84,260. WEIGHING MACHINE CASING. BARNETT B. ROCHESTIE, Trenton, N. J. Filed Mar. 24, 1931. Serial No. 39,231. Term of patent 3½ years.



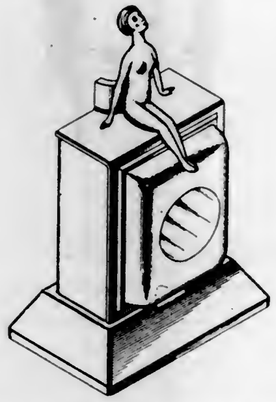
The ornamental design for a weighing machine casing, as shown.

84,261. SIGN. JOSEPH P. RYAN, Chicago, Ill. Filed Mar. 19, 1931. Serial No. 39,148. Term of patent 7 years.



The ornamental design for a sign, as shown.

84,262. CLOCK. ABRAM J. SCHULER, Chicago, Ill. Filed Mar. 11, 1931. Serial No. 39,033. Term of patent 14 years.

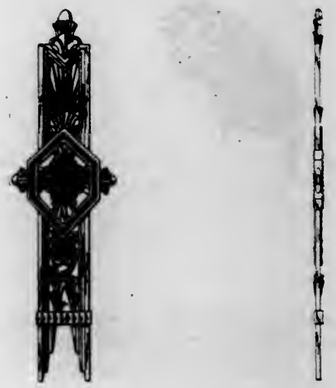


The ornamental design for a clock substantially as shown.

84,263. CLOCK CASE. GEORGE H. STEPHENS, Northbrook, Ill., assignor to The Hammond Clock Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1931. Serial No. 39,091. Term of patent 14 years.

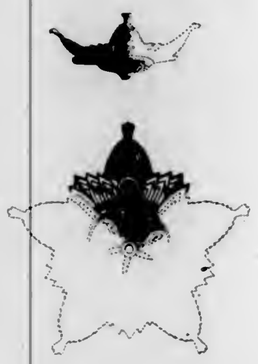
The ornamental design for a clock case, as shown.

84,264. CIGARETTE BOX OR THE LIKE. HENRY C. STOLL, Bronx, N. Y. Filed Mar. 31, 1930. Serial No. 35,073. Term of patent 3½ years.



The ornamental design for a cigarette box or the like substantially as shown and described.

84,265. SPOON OR SIMILAR ARTICLE. FRANK S. TRUMBULL, Providence, R. I. Filed Jan. 22, 1931. Serial No. 38,415. Term of patent 3½ years.



The ornamental design for a spoon or similar article, substantially as shown.

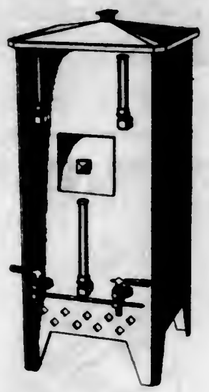
84,266. LIGHTING FIXTURE STRAP OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Apr. 1, 1931. Serial No. 39,321. Term of patent 3½ years.

The ornamental design for a lighting fixture strap or article of similar nature, as shown.

84,267. LIGHTING FIXTURE MEMBER OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Apr. 1, 1931. Serial No. 39,323. Term of patent 3½ years.

The ornamental design for a lighting fixture member or article of similar nature, as shown and described.

84,268. LIGHTING FIXTURE MEMBER OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Apr. 1, 1931. Serial No. 39,324. Term of patent 3½ years.

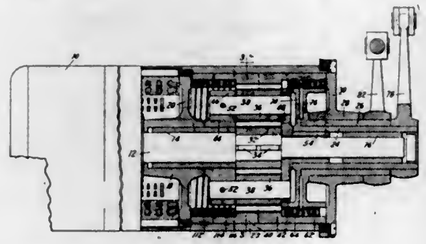


The ornamental design for a lighting fixture member or article of similar nature, as shown and described.

84,269. ASH RECEIVER OR SIMILAR ARTICLE. WILLIAM R. WESTFALL, Kew Gardens, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 1, 1931. Serial No. 39,320. Term of patent 3½ years.

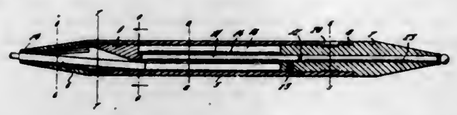
The ornamental design for an ash receiver or similar article, as described and shown.

84,270. COFFEE URN. HARRY HARPER, Minneapolis, Minn. Filed Apr. 16, 1931. Serial No. 39,506. Term of patent 14 years.



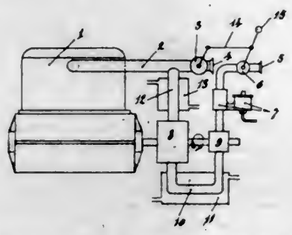
The ornamental design for a coffee urn, as shown.

PATENTS



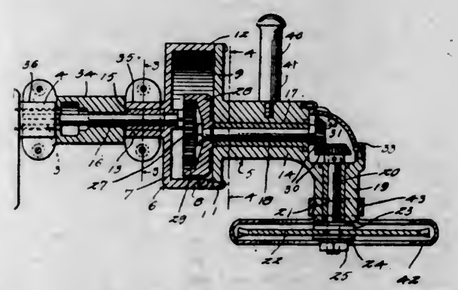
GRANTED MAY 26, 1931

1,806,579. BRAKE MECHANISM. VINCENT G. APPLE, Dayton, Ohio, assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Jan. 11, 1929. Serial No. 331,789. 30 Claims. (Cl. 188—162.)



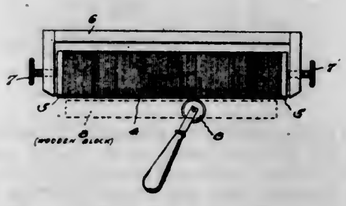
1. Brake mechanism comprising, brakes, a brake operating member, a motor, a clutch driven thereby, connections between the operating member and clutch, clutch-to-brake connections, and means including said connections whereby pedal effort is transmitted to the brakes.

1,806,580. MAGAZINE PENCIL. OSCAR R. BARTH, Detroit, Mich. Filed Jan. 13, 1930. Serial No. 420,467. 5 Claims. (Cl. 120—14.)



1. A pencil comprising a barrel, a rotatable plug at one end, a rotatable clutch lead guide at its opposite end having an offset feed channel leading from said opposite end to one edge of the inward end, a rod connecting the plug and the guide for rotation as a unit, and a magazine positioned between the plug and the guide clutch and around the rod in the barrel adapted to position a plurality of lead holding tubes, each adapted to be released into the channel of said guide member when any one of said tubes comes into registry with the channel opening at the inner end thereof.

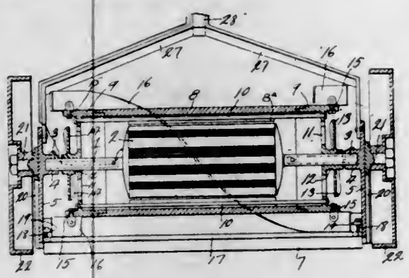
1,806,581. FUEL SUPPLY SYSTEM FOR INTERNAL COMBUSTION ENGINES OF VARIABLE LOAD FOR USING HEAVY FUELS. JOSEPH BETHENOD, Paris, France, assignor to Societe des Moteurs Dugelay, Paris, France, a Limited Company of France. Filed Aug. 29, 1928, Serial No. 302,803, and in Belgium Sept. 27, 1927. 13 Claims. (Cl. 123—119.)



1. In a system for supplying fuel and air for internal combustion engines using heavy fuels, in combination, a carburetor to which liquid fuel is delivered, a main intake manifold, an auxiliary intake, a first auxiliary volumetric pump driven synchronously by the engine, a reservoir, a second auxiliary pump, said auxiliary intake, carburetor, first auxiliary pump, reservoir, and second auxiliary pump, being arranged in the order stated with reference to the direction of flow of the gases, to constitute a means for delivering explosive mixtures to a suitable point in said intake manifold.

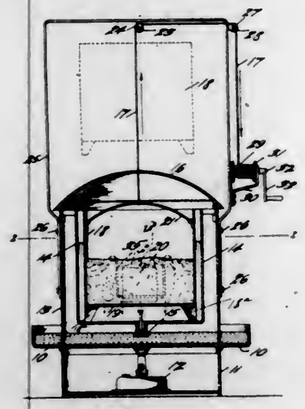
1,806,582. PORTABLE ELECTRIC SAW. FRED G. BEUTNER, White Lake, S. Dak. Filed Nov. 7, 1929. Serial No. 405,397. 3 Claims. (Cl. 143—431.)

1. A portable saw, comprising a casing having parallel front and rear walls, means connecting the walls for relative angular adjustment, a front bearing sleeve arranged eccentrically on the front wall and extending forwardly therefrom, a rear bearing sleeve arranged eccentrically on the rear wall and extending rearwardly therefrom, the bearing sleeves being arranged with their axes in radially offset relation and the bearing sleeves being adjustable with the front and rear walls, so that the distance between said axes may be varied, a main shaft journaled in the rear bearing sleeve, a counter-shaft journaled in the front bearing sleeve, a pinion arranged within the casing and secured to the main shaft, a gear arranged within the casing and removably secured to the counter-shaft and meshing with the pinion, an arbor, means rotatably supporting the arbor from the front bearing sleeve, gears connecting the counter-shaft and arbor, and a blade secured to the arbor.



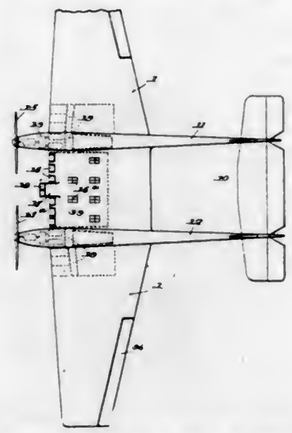
1,806,583. PROCESS OF FINISHING PLAYING CARDS. EDWARD T. BOORMAN, Milltown, N. J., assignor to King Press, Inc., Borough of Carlstadt, N. J., a Corporation of New Jersey. Filed Jan. 14, 1929. Serial No. 332,573. 1 Claim. (Cl. 41—26.)

The process of finishing playing cards which consists in first placing a plurality of decks together to form a



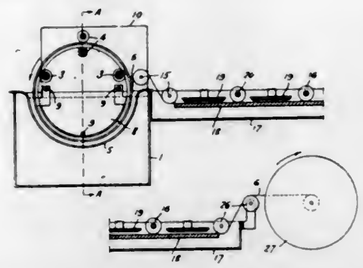
column, straightening and clamping said column into a solid block, sanding the sides and edges of said block from end to end to render the same perfectly smooth, applying thereto a mixture of colored printer's ink and clear varnish, drying the same at room temperature and finally burnishing the sides and edges of the block and when finished releasing and separating the decks therein.

1,806,584. LAWN MOWING MACHINE. WILLIAM JOHN BORER, Genoa, Nebr. Filed Jan. 29, 1926. Serial No. 84,637. 4 Claims. (Cl. 56—26.)



1. A lawn mower comprising a non-rotatable shaft, an electric armature carried by said shaft, a field casing rotatably mounted on said shaft, blades carried by said field casing, vertically disposed plates at opposite ends of the field casing and having arcuate slots therein, rearwardly extending members carried by said plates, a roller connecting said rearwardly extending members together, said stationary shaft being connected to said plates, bars pivoted to the rearwardly extending members adjacent the rollers, bolts carried by said bars and extending through the arcuate slots in the plates and forming means whereby said bars may be adjusted in relation to the ground, wheels rotatably mounted on said bars and a cutter bar adjustably mounted on the plates and disposed below the armature field casing.

1,806,585. GRAIN SOAKING ATTACHMENT FOR WATERING TROUGHS. VIRGIL S. BROWN, Cromwell, Iowa. Filed Apr. 18, 1929. Serial No. 356,124. 4 Claims. (Cl. 119—73.)



1. In a grain soaking attachment for a watering trough, a tank for supplying water to the trough, a grain receptacle having a perforated bottom, a door in the side of the receptacle, said door having flanges at its edges, means on the receptacle for holding the door approximately horizontally, and means for suspending the receptacle above the water tank.

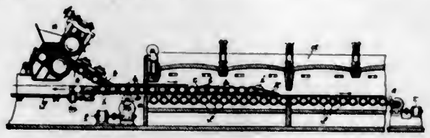
1,806,586. AEROPLANE. WILLIAM WHITNEY CHRISTMAS, New York, N. Y., assignor, by mesne assignments, to The General Development Company, Hartford, Conn., a Corporation of Connecticut. Filed Nov. 8, 1929. Serial No. 405,805. 35 Claims. (Cl. 244—14.)

1. An aerofoil comprising a pair of oppositely lifting structures and an intermediate combined lifting and housing structure united in an integral homogeneous symmetrical unit, the portions of such structure adapted solely for lift consisting of cantilever trusses with straight braces and an intermediate portion of said structure being adapted for both lift and housing, consisting of a rectangular frame having as elements cantilever trusses containing passageways through each individual element affording headroom sufficient for the passage of persons, said truss structures including spar trusses extending from end to end and rib trusses spaced apart thereon and intersecting the spar trusses at intervals, with tubular posts at the intersections, common to said spars and said ribs and having pivotal connection with said spars and said ribs at each intersection thereof, adapted to permit free motion of the elements of spars and ribs and to compensate for strains and stresses throughout the wing structure and for distortion due thereto.

1,806,587. MANUFACTURE OF METALLIC SHEET, STRIP, OR WIRE. SHERARD OSBORN COWPER-COLES, Sunbury-on-Thames, England. Filed Jan. 3, 1931, Serial No. 506,469, and in Great Britain May 16, 1929. 5 Claims. (Cl. 204—11.)

3. Apparatus for the production of metallic sheet strip or wire comprising in combination an electrolytic bath, a cathode therein, an anode therein, means for slowly rotating the cathode, a baffle in proximity to the cathode, and means for moving the baffle continuously in a direction parallel to the axis of the cathode.

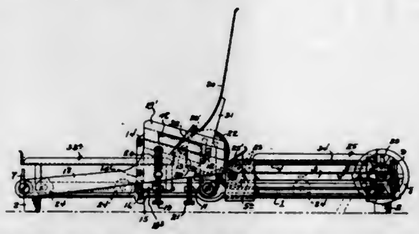
5. Apparatus for the production of metallic sheet, strip or wire comprising in combination, an electrolytic bath, a cathode therein, an anode therein, means for slowly rotating the cathode, means for stripping the deposited metal from the cathode in the form of a sheet, a second electrolytic bath in proximity to the first bath into which the sheet is passed, an anode therein, electrically non-conducting means for supporting the sheet in said second bath, a series of spindles and a roller freely mounted on each spindle and bearing on the sheet, each roller having an aperture of substantially larger diameter than that of the spindle on which it is mounted, and means for reciprocating said rollers across the sheet.



1,806,588. SURFACE TREATMENT OF SYNTHETIC PRECIOUS STONES. HERMANN ESPIG and WOLFGANG TEUBNER, Bitterfeld, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Feb. 7, 1930, Serial No. 426,765, and in Germany Feb. 11, 1929. 2 Claims. (Cl. 125—1.)

1. The process which comprises treating the surface of synthetic precious stones, belonging to the class of corunds and spinels and being mainly composed of alumina, with fused anhydrous sodium tetraborate.

1,806,589. SURFACE TREATMENT OF ARTICLES MADE OF SYNTHETIC CORUNDUM. HERMANN ESPIG and WOLFGANG TEUBNER, Bitterfeld, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed June 12, 1930, Serial No. 460,788, and in Germany Feb. 11, 1929. 4 Claims. (Cl. 125—1.)

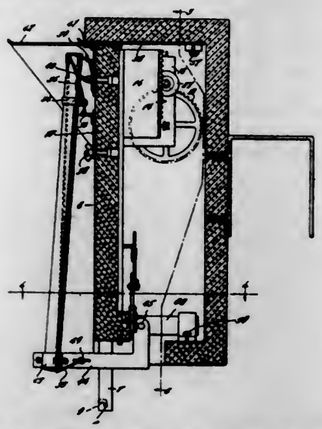


1. A process which comprises treating the surface of an article consisting of synthetic corundum with a fused substance containing a substantial amount of boracic acid.

1,806,590. FEEDING SHEET GLASS TO LEER CONVEYERS. MICHAEL FINCKE, Aix-La-Chapelle, Germany, assignor, by mesne assignments, to The American Bicheroux Company, a Corporation of Delaware. Filed June 3, 1929, Serial No. 368,067, and in Germany Oct. 12, 1928. 13 Claims. (Cl. 49—3.)

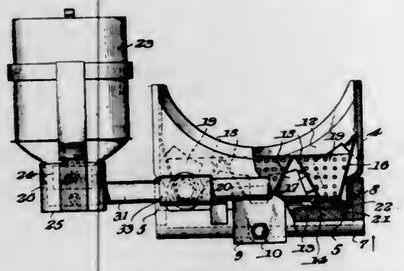
12. The combination with an intermittent sheet glass forming machine, of a lehr conveyer, having a feeding speed less than the speed of sheet formation, a take-off table reciprocable in the line of feed of the lehr conveyer and moving over the latter, and receiving glass from the former, the table having means for feeding the glass from off the forward end thereof onto the conveyer.

1,806,591. PRINTING PRESS. PAUL WILLIAM ALLEN, Knoxville, Tenn. Filed Mar. 30, 1928, Serial No. 265,977. Renewed Apr. 15, 1931. 7 Claims. (Cl. 101—250.)



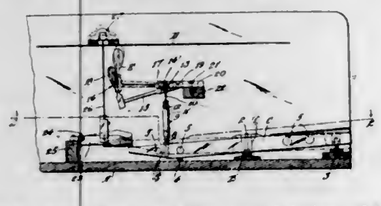
1. A printing press comprising a reciprocable bed, a slotted paper feed platform over its rearward position, an impression roller forward of the platform, foldable fingers carried by the bed to engage the paper through the slotted platform, means on the printing frame for automatically raising the fingers upon rearward movement to lift and feed the paper on the forward movement of the bed, a traverse bar above the bed to lower the fingers on forward movement of the bed, and means for shifting the impression roller into and out of printing position on the forward and back movement of the bed respectively.

1,806,592. DENTAL ELEVATOR. ANTHONY BARONE, Boston, Mass. Filed July 12, 1929. Serial No. 377,792. 9 Claims. (Cl. 32—84.)



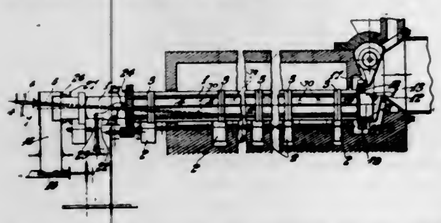
8. In combination with a dental elevator blade for use in loosening roots of teeth from the root socket, said blade being provided with a spindle, a holder which forms a bearing for the said spindle, and means operatively connected with the said spindle for vibrating the elevator blade on its axis.

1,806,593. AUTOMATIC FUSE SETTING APPARATUS. EDWARD H. BOICOURT and ALLAN H. BOICOURT, Rockwell City, Iowa. Filed Jan. 6, 1930. Serial No. 418,859. 2 Claims. (Cl. 200—126.)



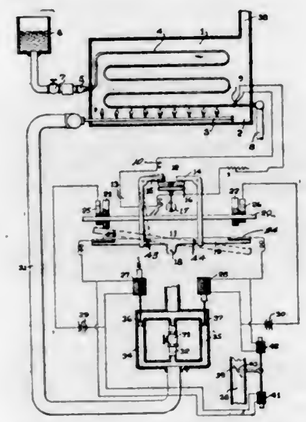
1. In an apparatus of the class described, a casing, a panel hingedly mounted in the casing, a plurality of fuses, supporting means on the panel for the fuses, means for automatically placing the fuses in a circuit one after the other as they burn out, and an escapment mechanism mounted on said panel for controlling said means to provide a predetermined time interval between the burning out of one fuse and the setting of the next fuse in the circuit.

1,806,594. OIL CELLAR FOR DRIVING BOXES. HARRY W. CODDINGTON, Roanoke, Va. Filed Aug. 20, 1923. Serial No. 658,272. 10 Claims. (Cl. 308—83.)



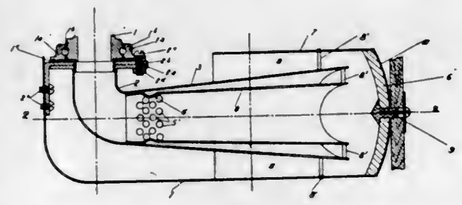
1. In a lubricating device for locomotive driving boxes, the combination with an oil receptacle, of a sponging retaining member removably contained within said receptacle, means for yieldingly supporting said receptacle, means for yieldingly supporting said sponging retaining member, and an oil reservoir supported by said oil receptacle and having means for maintaining the oil at a constant lever therein.

1,806,595. PIANO ACTION. CHARLES EWEN CAMERON, Jr., East Orange, N. J., assignor to Lauterbumana Co., a Corporation of New Jersey. Filed Dec. 23, 1929. Serial No. 415,915. 9 Claims. (Cl. 84—237.)



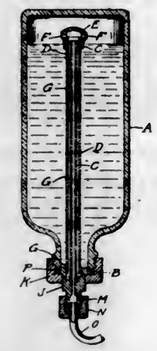
1. In a piano, the combination with a string, of a hammer, a key, a single hammer lifter between said key and said hammer connected for relative movement with one thereof, the distance between the points of engagement of said lifter with said hammer and said key being less than that required to cause the hammer to contact with said string at the end of the string-striking movement of said key without said relative movement, so that upon the string-striking movement of said key movement of said lifter will allow said hammer to be thrown against said string by the energy imparted thereto by actuation of said key and permit said hammer to recoil idly independent of said key, and shock-absorbing means both to limit recoil of the hammer and to restrain rebound of the hammer to the string.

1,806,596. MANUFACTURE OF ZINC. HENRY EDWIN COLEY, London, England. Original appplication filed Aug. 8, 1927, Serial No. 211,293, and in Great Britain Feb. 2, 1927. Divided and this application filed June 10, 1929. Serial No. 369,692. 5 Claims. (Cl. 263—34.)



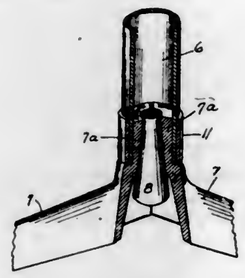
1. Apparatus for use in the reduction of zinc from its ores comprising a tubular reducing chamber, means for introducing ore continuously into one end of said reducing chamber, means at the opposite end of said reducing chamber for continuously removing the gangue therefrom, means for heating the interior of said reducing chamber, artificially cooled conveying means for carrying a hydrocarbon into the reducing chamber, said conveying means extending downwards to a position near the inside wall of the chamber so as to maintain the hydrocarbon in a non-decomposed condition until it reaches the ore, and a vapour outlet situated at the ore inlet end of the reducing chamber for removing from the reducing chamber the vapourous products of the reduction.

1,806,597. METHOD OF TREATMENT OF HYDROCARBONS. LUIS DE FLOREZ, Boston, Mass., assignor, by mesne assignments, to The TEXAS Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 4, 1922. Serial No. 579,603. 8 Claims. (Cl. 196—132.)



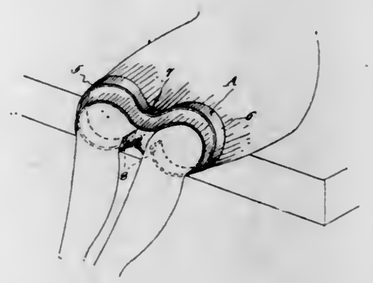
5. The method of treating hydrocarbon oils which comprises passing such oils through a pipe still at a substantially uniform rate of flow, supplying fuel to heat the still, and automatically applying, at predetermined recurrent intervals, corrections to the quantity of fuel supplied to the still to maintain a predetermined temperature at a selected point therein, each of which corrections is proportionate to the extent of the departure of the temperature at the selected point from the predetermined temperature at the time of making that correction.

1,806,598. ACOUSTIC RECEIVER. RENÉ DENOUX, Paris, France. Filed Dec. 19, 1929, Serial No. 415,321, and in France July 6, 1929. 2 Claims. (Cl. 181—27.)



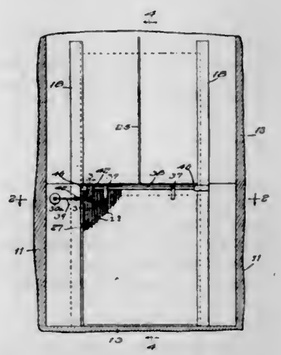
1. An acoustic device of the type described comprising an open housing, a tapered tube having its large end opening into said housing, means at the small end of said tube for connecting a sound producing device thereto, spacing pins for securing the large end of said tube within said housing, a second tapered tube having its small end fitted within the small end of said first tube, and also having a series of perforations adjacent the small end thereof, a plurality of spacing pins for securing the large end of said second tube within the large end of said first tube in spaced relation thereto, and a sound reflector of polished glass disposed in said housing directly in front of said tubes.

1,806,599. DISPENSING MEANS. PAUL N. ELDERKIN, Los Angeles, Calif. Filed Feb. 4, 1929. Serial No. 337,459. 7 Claims. (Cl. 123—196.)



1. A device of the character described comprising a container, means forming within said container a separate chamber, means providing communication between said container and said chamber at vertically spaced points, and a conduit communicating with an upper end portion of said chamber, said container being adapted to contain a fluent substance and said conduit being adapted for connection with a source of variable pressure.

1,806,600. SUPPORT. PAUL N. ELDERKIN, Los Angeles, Calif. Filed Mar. 5, 1929. Serial No. 344,538. 1 Claim. (Cl. 248—41.)

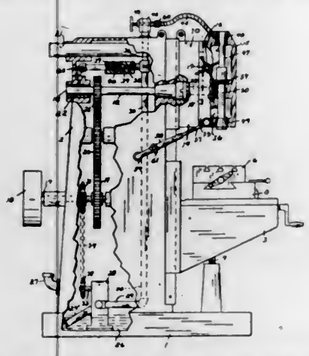


A device of the character described comprising a standard, the lower end portion at least of which is hollow, a plurality of base members each inclusive of an upwardly directed shank portion of segmental cross-section for insertion into the lower end portion of said standard, the inner face of each shank portion being recessed and the recesses of the collective shank portions cooperating to provide an upwardly tapering opening through the collective shank portions when the latter are inserted within said standard, the wall of said upwardly tapering opening being circular and continuous circumferentially and also continuous throughout the length of said shank portions, and a tapered wedge element for insertion into said tapered opening to spread said shank portions against the inner face of said standard.

1,806,601. SKIRT HOLDER. ROBERT E. ALEXANDER, Springfield, Pa. Filed Sept. 20, 1929. Serial No. 394,004. 2 Claims. (Cl. 24—81.)

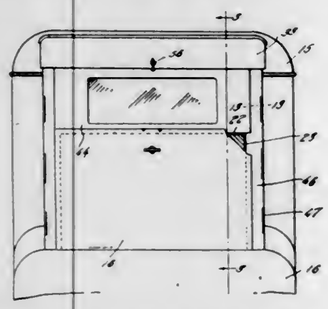
1. As a new article of manufacture a skirt holder comprising a pair of resilient leg encircling clamps, the terminals of said clamps extending inwardly and upwardly with respect to each other for extending well under the leg of the user when applied.

1,806,602. FLAME BAFFLE PARTITION. RUDOLPH J. ANSCHICKS, Chicago, Ill., assignor to Protectoseal Company of America, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1929. Serial No. 381,979. 10 Claims. (Cl. 262—34.)



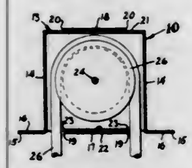
1. In mine equipment a flame and explosive proof partition comprising a plurality of strips of non-combustible material mounted in close spaced apart relation in a frame of non-combustible material, said partition having an opening therethrough, a door for said opening and mechanism operable to hold said door in open position, said mechanism being actuated by the concussive force of air pressure waves, to cause said door to close the opening.

1,806,603. MACHINE TOOL LUBRICATION. JOSEPH B. ARMITAGE, Milwaukee, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis. Filed Apr. 9, 1924. Serial No. 705,230. 26 Claims. (Cl. 184—6.)



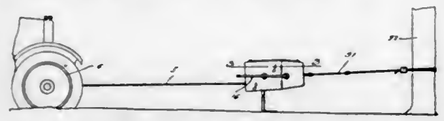
1. In a machine tool, the combination with two relatively movable lubricating systems adjustable to varying relative levels whereby their relative resistance to flow of lubricant is variable, and means for adjusting their relative position, of a resiliently yieldable valve device asso-

ciated with one of said systems and set to yield at pressure in excess of those required for delivery of lubricant to



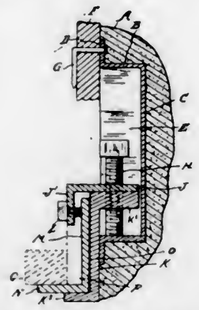
the other of said systems in any relative position thereof and means for regulating lubricant flow through said other system.

1,806,604. COLLAPSIBLE RUMBLE SEAT INCLOSURE. JAMES M. BAKER, Parkersburg, W. Va. Filed Apr. 11, 1930. Serial No. 443,484. 3 Claims. (Cl. 296—45.)



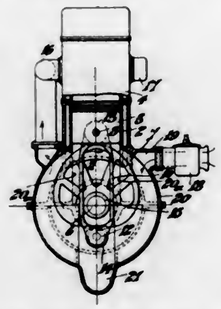
1. A rumble seat inclosure comprising a roof, a rear panel hinged at its upper end to the rear part of the roof, side panels hingedly connected to the roof, a flap hingedly connected to the rear edge of each side panel and said flaps engaging parts of the rear panel and rumble seat back when the inclosure is in operative position.

1,806,605. WINDOW PULLEY. BERT E. BARTHOLOMEW, Santa Ana, Calif., assignor to Consolidated Factories Limited, Santa Ana, Calif., a Corporation of California. Filed Nov. 6, 1929. Serial No. 405,110. 4 Claims. (Cl. 16—211.)



1. In a device of the class described, a case, said case including a back, side members and end members, an aperture in said end members adjacent each side thereof, a cover for said case, said cover including means adapted to allow free passageway through the apertures at one end of said case and means adapted to obstruct the passageway through the end apertures at the opposite end of said case, means to secure said cover to said case, and a pulley rotatably supported in said case.

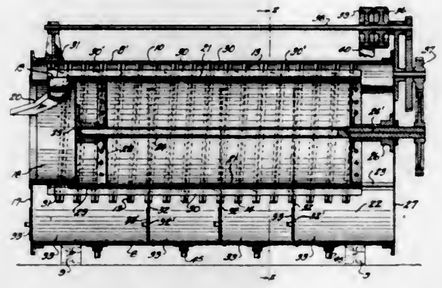
1,806,606. AUTO TOWING DEVICE. GARRY MOORE BOOTH, Dearborn, Mich. Filed Sept. 25, 1929. Serial No. 395,072. 2 Claims. (Cl. 254—186.)



1. An automobile tow of the class described comprising a housing having attaching hooks at one end, a cable winding drum arranged therein having gears carried thereby, a crank shaft journalled in the housing having gears connected with the gears of said drum, a crank arm for said shaft, a support for said housing and a foot rest for the support whereby to enable the operator to hold the housing against movement during the operation thereof.

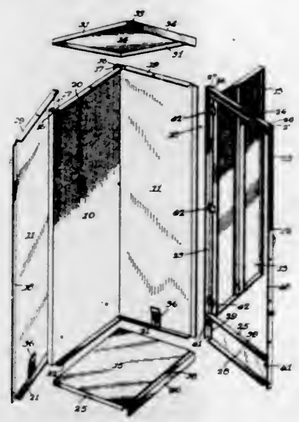
1,806,607. ADJUSTABLE SUPPORT FOR ANGLE BARS. BASIL E. BROWN, Pontiac, Mich. Filed Feb. 19, 1930. Serial No. 429,535. 7 Claims. (Cl. 72—101.)

1. Means for affording an adjustable structural support for an angle iron upon which finishing courses of brick are designed to be rested along the face of a previously erected structure, comprising a shell adapted to be fixed in position relatively to said previously erected structure during its construction, an adjusting screw rotatably positioned within said shell, and a plurality of angled members operatively connected with said adjusting screw and adapted to cooperatively engage the vertical web portion of an angle bar, the horizontally extending web of which is supported from beneath by a laterally projecting portion of one of said angled members.



1,806,608. INTERNAL COMBUSTION ENGINE. JOHN BRYANT, Cardiff, Wales. Filed Mar. 5, 1928, Serial No. 259,025, and in Great Britain Apr. 5, 1927. 2 Claims. (Cl. 123—78.)

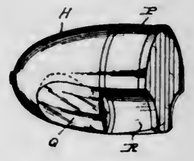
1. In an internal combustion engine, the combination with a cylinder and crank case, the latter having spaced



inlet and outlet ports for fuel mixture, of a crank shaft and a cam thereon, a piston adapted to intermittently obstruct passage of fuel mixture between said ports, a cam on the shaft adapted to sweep a fuel charge into the outlet port, and a link connection between said cam and piston.

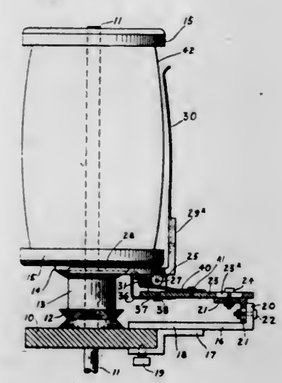
1,806,609. CONTINUOUS COOKER. FRANK D. CHAPMAN, Berlin, Wis., assignor to Berlin Chapman Company, Berlin, Wis., a Corporation of Wisconsin. Filed Dec. 13, 1926. Serial No. 154,521. 15 Claims. (Cl. 126—272.)

1. A continuous cooker, comprising a horizontally extending tank having inlet and outlet openings and heat zones of various degrees of temperature, a spirally trending member extending through said tank and the heat zones, and a closed drum extending through the spirally trending member for preserving the heat zones, and having means coacting with the spirally trending member for moving cans through the heat zones.



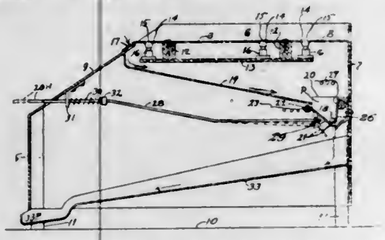
1,806,610. FURNITURE. CARL T. CHRISTENSEN, Aurora, Ill., assignor to All-Steel-Equip Company, a Corporation of Illinois. Filed July 26, 1928. Serial No. 295,457. 5 Claims. (Cl. 312—143.)

3. In metallic furniture, a back and sides, each composed of a single sheet, a top and bottom each composed of a single sheet secured to the sides and the back, the front edges of the top and bottom being offset downwardly and provided with depending flanges, a front frame comprising upper and lower channels receiving the flanges and cooperating with the offset portions, the depending flange of the top resting on the bottom flange of the upper channel.



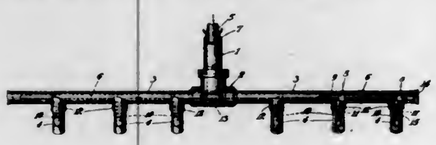
5. A metallic cabinet comprising a back and sides, said back having its vertical edges bent to form flanges extending inwardly in opposite directions and spaced from the plane of said back, side members having their side edges bent to extend laterally inwardly and then forwardly and outwardly for engaging said first-named flanges by a lateral and then a turning movement to form, when at right angles to said back member, a rigid joint between said back and sides.

1,806,611. HEADLIGHT FOR MOTOR VEHICLES. SILAS CORDES, Boise, Idaho. Filed May 2, 1928. Serial No. 274,556. 2 Claims. (Cl. 240—41.35.)



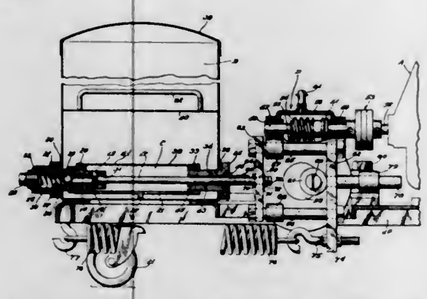
1. A lamp including a body having an inwardly projecting annular shoulder provided with a source of light, lateral ports formed in the body and extending forwardly to said annular shoulder, a lens for each of said ports having curved outer faces flush with and forming a continuation of the outer face of said body, a partition chamber fixed to the front of said body, said partition chamber being curved inwardly at points forward of said lateral ports, and a closure for the front of said partition chamber.

1,806,612. STOPPING MECHANISM FOR SPOOLERS AND THE LIKE. JOHN H. COX, Lowell, N. C., assignor of one-half to Charles Burkley, Gastonia, N. C. Filed Oct. 5, 1929. Serial No. 397,570. 4 Claims. (Cl. 242—39.)



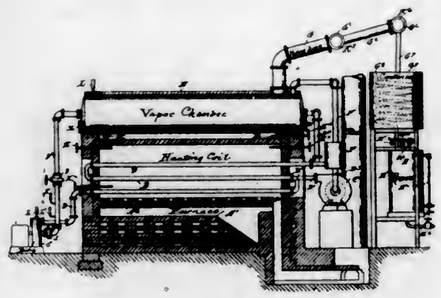
1. In a stopping mechanism for spoolers or like machines, a combination with a winding spindle having a flange adapted to support a spool to rotate the said spool by frictional contact therewith, of a pivoted bell crank lever adapted to be moved through contact with the yarn wound on the spool, a trigger mechanism associated with said bell crank lever, resilient means adapted to normally press the bell crank lever upwardly, said trigger mechanism being adapted to be released when undue pressure is applied on the upper portion of the bell crank lever by the yarn wound on the spool.

1,806,613. BALL GAME. WALTER B. CRAIGHEAD, St. Paul, Minn. Filed Jan. 2, 1930. Serial No. 417,883. 5 Claims. (Cl. 273—88.)



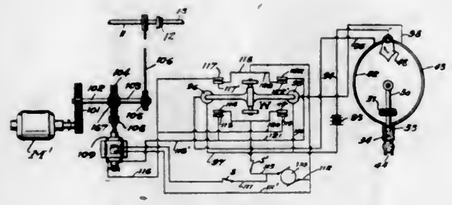
3. The structure specified in claim 1 in which said ball retrieving means comprises an inclined plane in the device directed downwardly from a plane below said circuit closing pockets and terminating in a pocket accessible at the lower front part of the device.

1,806,614. WATER-COOLED AGITATOR. ALBERT L. CULBERTSON, Mount Vernon, Ohio, assignor, by mesne assignments, to The Chapman-Stein Company, Mount Vernon, Ohio, a Corporation of Ohio. Filed July 27, 1926. Serial No. 125,282. 3 Claims. (Cl. 48—85.2.)



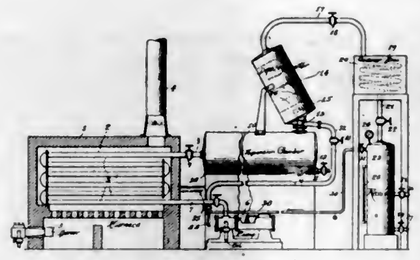
2. A water cooled firebed agitator member comprising an upwardly extending stem, laterally directed arms extending therefrom, said stem having a cooling water pipe passing therethrough and said arms having water conducting tubes therewithin which are connected to said pipe, said arms also having hollow fingers projecting therefrom at points spaced along their lengths, and means for directing serially through the fingers carried by each of said arms, the water which flows through the corresponding tube.

1,806,615. LUBRICANT COMPRESSOR. ERNEST W. DAVIS, Oak Park, Ill., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 29, 1927. Serial No. 216,129. 20 Claims. (Cl. 221—47.1.)



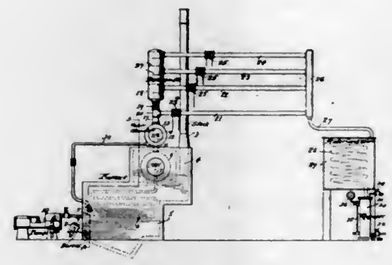
13. In lubricating apparatus of the class described, a source of lubricant supply, a cylinder fed therefrom and adapted to discharge lubricant at high pressure, a piston reciprocable in said cylinder, a yoke connected to said piston, means for reciprocating said yoke, said yoke comprising spaced parallel straps, spaced parallel guiding means connecting said straps, and a third guiding means connected to one of said straps and having a common axis with said piston.

1,806,616. PROCESS FOR PRODUCING LOW BOILING POINT HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed Nov. 4, 1918, Serial No. 260,955. Divided and this application filed Sept. 6, 1921, Serial No. 498,886. Renewed July 16, 1928. 1 Claim. (Cl. 196—59.)



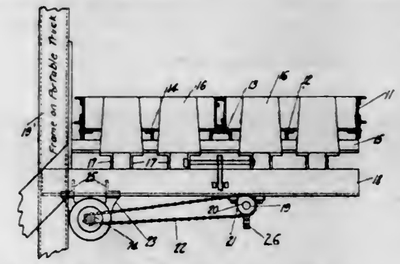
A process of converting heavy into lighter hydrocarbons, consisting in pumping oil first through a heating coil and to a separating chamber, then taking off the vapors from said chamber and passing them to a vapor chamber, passing the unvaporized oil through a second heating coil to the said vapor chamber, taking off vapors from the vapor chamber and condensing them and returning the unvaporized oil from the said vapor chamber to the first coil, the oil being maintained under pressure of the generated vapors during treatment.

1,806,617. SYNCHRONIZED PHOTOGRAPHIC AND SOUND RECORDING AND REPRODUCING MECHANISM. CHARLES W. EBELING, New York, N. Y., assignor to Harrison W. Rogers, Incorporated, a Corporation of Delaware. Filed Dec. 13, 1927. Serial No. 239,676. 7 Claims. (Cl. 172—293.)



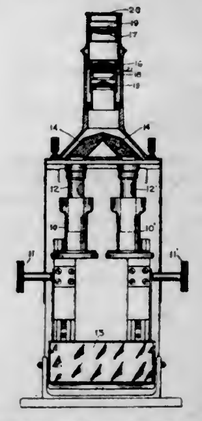
1. In a device of the character described, the combination with two machines, an independent electric motor for each machine, means controlled by one machine for setting in motion the motor of the second machine, and a differential gearing interposed between both motors to be driven simultaneously thereby, of a pole changing switch, a reversible motor controlled by said switch, a second differential gearing interposed between the motor of one machine and the machine operated thereby and under the control of the reversible motor, two pendant switches operated by the first differential gearing and in circuit with the reversible motor, and means for returning said pendant switches to normal position should either one be carried beyond its normal zone.

1,806,618. PROCESS OF CRACKING PETROLEUM OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 10, 1920, Serial No. 429,609. Renewed June 9, 1926. 1 Claim. (Cl. 260—162.)



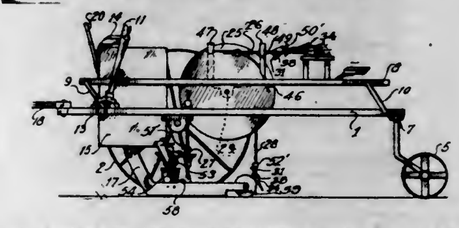
A process of cracking petroleum oil wherein hydrocarbon chlorides are formed consisting in continuously passing a stream of oil through a cracking coil disposed within a furnace, in subjecting said oil while in the furnace to a cracking temperature while maintained under a superatmospheric pressure, in introducing said oil to an expansion chamber where vaporization occurs, in condensing the vapors and collecting the condensate and gases in a receiver, and in continuously admitting to the stream of oil passing to said cracking coil incondensable gases from said receiver mixed with hydrogen chloride for passage through said cracking coil.

1,806,619. APPARATUS FOR TREATING HYDROCARBON OIL. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Sept. 1, 1920, Serial No. 407,401. Renewed July 2, 1928. 1 Claim. (Cl. 196—99.)



An apparatus for cracking hydrocarbon oil, comprising a furnace, a plurality of parallel tubes disposed within said furnace, a common header connected to the inlet ends of said tubes, an enlarged chamber connected to the outlet of said tubes, a second enlarged chamber disposed outside of said furnace, to which vapors from said first enlarged chamber pass a dephlegmator, means for delivering vapors from said second enlarged chamber to said dephlegmator, said means serving also for returning reflux condensate from said dephlegmator to said second enlarged chamber, means for passing reflux condensate from said second enlarged chamber to said header, and means for taking off vapors from said dephlegmator for condensation and collection.

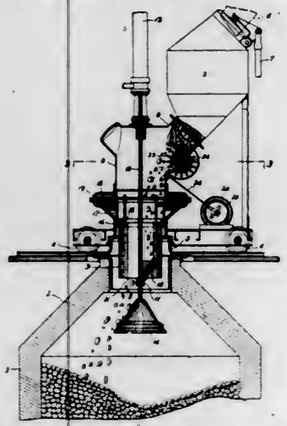
1,806,620. VIBRATOR MECHANISM. STEPHEN FLAM, Walnut Park, Calif., assignor to Supertile Machinery Corporation, Los Angeles, Calif., a Corporation of California. Filed June 24, 1926. Serial No. 118,268. 6 Claims. (Cl. 259—72.)



4. In a vibrator mechanism, a supporting structure, a horizontal load sustaining member supported at one end on the structure and having a free end, said means including a source of motion carried by the member.

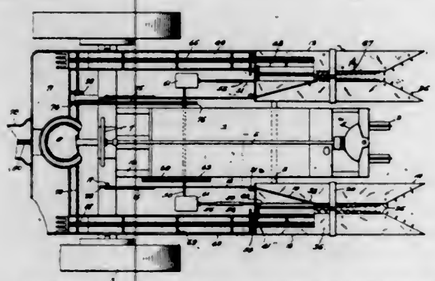
1,806,621. OPTICAL SYSTEM FOR COLORIMETERS AND THE LIKE. JOHN W. FORREST, Brighton, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 2, 1927. Serial No. 217,253. 4 Claims. (Cl. 88—14.)

1. In a colorimeter, an optical system comprising an ocular, two similar prisms and a biprism disposed between said ocular and said similar prisms, each of said similar prisms having a surface disposed to receive light rays normally thereto, two surfaces for successively reflecting said rays and a surface for refracting said rays.



1,806,622. PLANT SETTING MACHINE. GABRIEL J. GIBBENS, Hutchinson, Kans. Filed Sept. 6, 1927. Serial No. 217,576. 5 Claims. (Cl. 111—3.)

1. A plant setting machine comprising a wheeled frame, a furrow opener carried by the frame, a wheel rotatably supported on the frame, a plurality of plant setting devices connected to the wheel in spaced relation, a cam

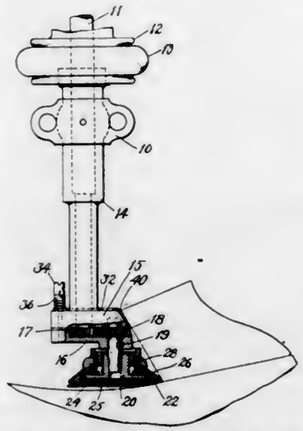


adjacent to the wheel over which the plant setting devices ride to temporarily hold them in horizontal plant receiving positions, each plant setting device consisting of an elongated bar having at one end a rigid clamping jaw and a movable clamping jaw, the rigid clamping jaw having two hopper forming side flanges to which the movable jaw is pivoted, a spring normally urging the movable jaw into clamping position, and means for releasing the movable clamping jaw.

1,806,623. FUEL-CHARGING MECHANISM. JAMES H. GLEASON, Willoughby, Ohio, assignor to The Gas Machinery Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 11, 1927. Serial No. 232,571. 4 Claims. (Cl. 214—37.)

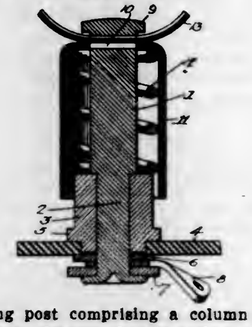
1. Fuel-charging mechanism comprising a fuel-feeding device; means for supplying said device with fuel; a vertically-movable shell member with which said device communicates; means for periodically actuating said device to feed into said shell member; a vertically-reciprocable bell distributer below said shell member; means for periodically raising and lowering said bell, said shell member being supported upon said bell in the upper position of the latter, the bell forming a cone valve for the shell member in such upper position; means for intercepting and supporting the shell member intermediate the upper and lower positions of the bell as the latter is lowered; a discharge chute formed as an integral part of the shell member and interiorly thereof; and means for rotating said shell member from the periodic actuating means of said fuel-feeding device.

1,806,624. TWO ROW CORN PICKER. EARL GLOVER, LOYD GLOVER, and REX GLOVER, Comstock, Nebr. Filed July 26, 1928. Serial No. 295,486. 18 Claims. (Cl. 56—18.)



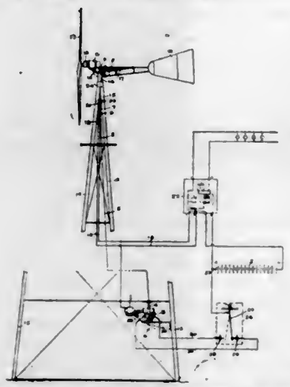
1. A two row corn picker including a tractor, corn pickers pivotally mounted on the tractor at opposite sides thereof and provided with gathering mechanism and having snapping rolls, side conveyors fixed to the tractor at opposite sides of the same and arranged to receive the ears of corn from the corn pickers and extending rearwardly therefrom, the corn pickers being movable upwardly and downwardly independently of the side conveyors, a central longitudinally disposed rear conveyor arranged to discharge at the rear of the machine and means for transferring the ears of corn from the side conveyors to the rear conveyor.

1,806,625. HOLDDOWN SLEEVE FOR EXPANSIVE REAMERS. JOHN GRANT, Los Angeles, Calif. Filed Mar. 7, 1930. Serial No. 434,020. 7 Claims. (Cl. 255—75.)



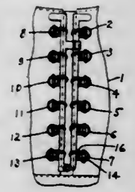
1. In combination with an expansive reamer which embodies an internal cutter expanding mandrel, cutters surrounding the mandrel and movable longitudinally thereon, and a body confining the cutters about the mandrel, the mandrel and cutters being so formed that relative longitudinal movement between them in one direction causes outward expansive movement of the cutters; a removable sleeve fitting around the mandrel and bearing against the cutters longitudinally to prevent longitudinal expansive movement.

1,806,626. MACHINE FOR FINISHING THE SHANKS OF SHOES. EDWARD F. HODGKINS, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 21, 1923. Serial No. 640,490. 5 Claims. (Cl. 51—197.)



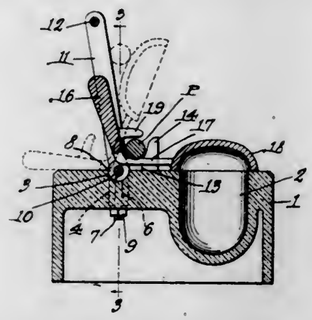
1. A machine for buffing the shanks of shoes having high heels with overhanging breasts, comprising a rotary buffing tool having a radial working face, supporting means for said tool, and driving means for said tool including a shaft extending in a line normal to the plane of rotation of said tool, the shaft of said driving means being offset from the axis of the tool to avoid interference with the overhang of the heel breast when the tool is in operation upon the shank and in proximity to the heel breast, and said tool extending radially beyond said supporting means.

1,806,627. BINDING POST. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 3, 1929. Serial No. 375,849. 2 Claims. (Cl. 173—259.)



1. A binding post comprising a column of conducting material having a lower reduced portion and at its upper end a passage adapted for reception of a wire conductor, at least one end of said passage terminating in the side of the column, means for mounting the column in a supporting structure including a collar closing embracing the reduced lower portion of the column and adapted at its lower end to engage the said supporting structure, the lower end of said column projecting below the collar and the supporting structure and being adapted to be expanded to thereby secure the column in the structure, a spring surrounding the upper end of the column and seated upon the top of said collar, and a sleeve also surrounding the column and having a part at the top closely embracing the column and forming an abutment for the upper end of the spring whereby the spring is adapted to resiliently retain the sleeve against a wire conductor inserted in said passage to clamp the conductor in the column.

1,806,628. AIR MOTOR ELECTRIC GENERATING AND STORAGE SYSTEM. FRED L. HUNT, Mishawaka, Ind., assignor to Perkins Corporation, South Bend, Ind., a Corporation of Indiana. Filed May 24, 1926. Serial No. 111,226. 1 Claim. (Cl. 200—164.)

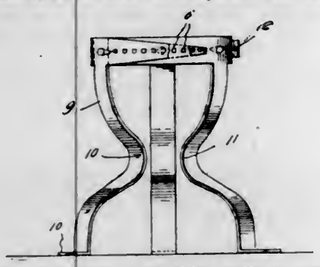


An automatic regulator system in which a small capacity high speed motor has its speed reduced approximately four thousand times for operating the vane of an air motor generating set, which system comprises an inner notched disk rotatable at a slow speed, an open ended casing surrounding the disk, electric contacts for the disk supported by the casing, a cover having a central opening, and an outer disk of substantially the same diameter rotatable with the inner disk the periphery of the outer disk closing the opening in the cover and serving to control the stopping and starting of the air motor generating set.

1,806,629. SHOE CLASP. FRED M. KEIRNAN, Edgewater, N. J. Filed Mar. 12, 1930. Serial No. 435,168. 3 Claims. (Cl. 24—73.)

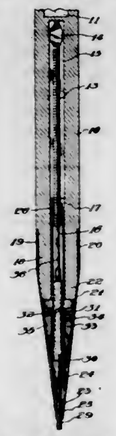
1. The combination with a shoe provided with two rows of oppositely arranged eyelets and two bars, one end of each being pivoted to the other, of a multiple of looped resilient means formed to engage with and be held in said eyelets, said loops extending through the said eyelets and engaging with the said pivoted bars.

1,806,630. COMBINED INKSTAND AND PENRACK. STEPHEN KELTONIK, Conemaugh, Pa. Filed May 21, 1930. Serial No. 454,325. 4 Claims. (Cl. 120—5.)



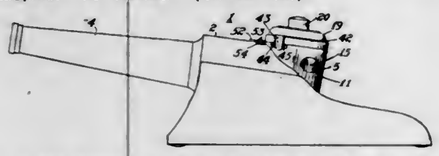
1. An ink stand including a block having a recess, a transverse channel, and grooves communicating with the channel, a structure seated at its lower ends in the grooves and having a portion forming a pen rack, a pivot member seated in the channel and connecting the sides of the structure for holding the lower ends of said structure in the grooves, a lid pivotally connected to said pivot member, a counterbalance carried thereby, and a lifting element extending from the counterbalance for overhanging a pen holder on the rack when the lid is closed.

1,806,631. FRUIT HOLDER. MARTHA LASHER, Miami, Fla. Filed June 23, 1930. Serial No. 463,329. 1 Claim. (Cl. 65—22.)



In a fruit holder of the character described, a split band, one end of the said band being tapered to a point, the opposite end portion of the band being formed with a plurality of longitudinally spaced openings into one of which the pointed end portion of the tapered end of the band may be bent for clamping the band to the fruit, prongs pro-

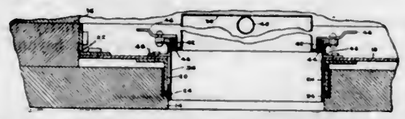
jecting inwardly from the inner face of the band, and leg members constructed of spring material and adapted to support the band at their upper ends, the intermediate



portions of each leg being curved inwardly to provide knees, the lower end portions of each leg being bent outwardly to provide a supporting foot.

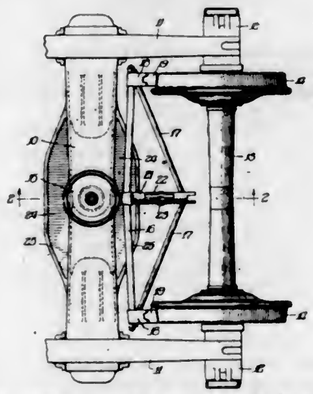
1,806,632. PENCIL. JOHN P. LYNN, Chicago, Ill., assignor to Dur-O-Lite Pencil Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1929. Serial No. 379,658. 17 Claims. (Cl. 120—18.)

1. A pencil comprising a body portion and a relatively rotatable tip portion, a lead carrier threadedly mounted on said tip portion and having a limited movement thereon, and lead propelling means co-operating with said body portion and said lead carrier and adapted to be actuated by relative movement between said body and tip portions and to effect said limited movement.



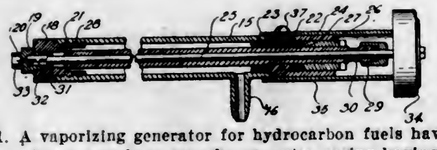
1,806,633. TOY GAS CANNON. JOHN W. MACDONALD, Wilkinsburg, Pa. Filed Jan. 28, 1930. Serial No. 423,939. 14 Claims. (Cl. 42—55.)

1. A gas cannon comprising a chamber in which gas may be exploded, a turnable hollow breech block having a water basin integral therewith, a source of gas liberating material mounted on the turnable breech block, a measuring device for admitting measured quantities of gas liberating material to the water basin, and means for operating the measuring device in response to a turning movement of the turnable chamber.



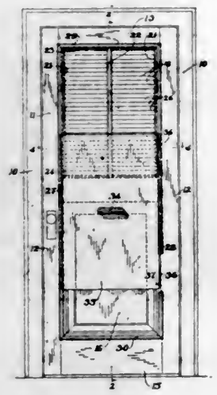
11. As an article of manufacture, a hollow tapered turnable breech block forming a combined water chamber or reservoir and a gas generating chamber.

1,806,634. DISPLAY DEVICE FOR BUILDINGS. GOTTLIEB R. MAGNEY, WILBUR H. TUSLER, and LEON E. ARNAL, Minneapolis, Minn., assignors to W. B. Foshay Co., Minneapolis, Minn. Filed Feb. 1, 1929. Serial No. 336,673. 3 Claims. (Cl. 40—130.)



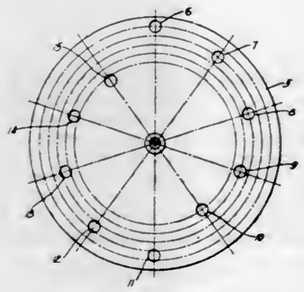
1. A display device for buildings comprising outside walls having openings forming a design, the portion of the wall occupied by said openings being of reduced thickness on the inside to form a surrounding ledge, a plate of sheet metal having openings corresponding to said first openings, outwardly projecting flanges on said plate surrounding said second openings and extending into said first openings, a frame fitting into the space formed by said surrounding ledge and engaging the inside of the margin of said plate, and lights disposed inside the building for illuminating said openings.

1,806,635. BRAKE BEAM SAFETY DEVICE. PAUL J. MCCULLOUGH, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Delaware. Filed May 2, 1929. Serial No. 359,742. 8 Claims. (Cl. 105—230.)



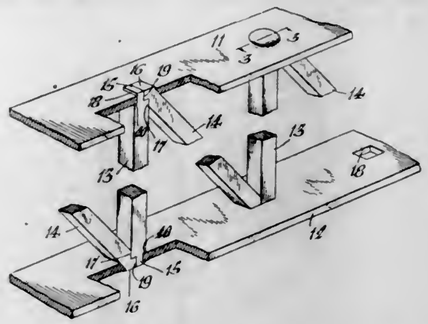
1. A car truck including a bolster and a supported brake beam, and a bracket outwardly extending from the truck bolster and rigid therewith beneath the brake beam and serving as a safety device.

1,806,636. THERMOSTATIC CUT-OFF. JOHN E. MCCUTCHEN, Wichita, Kans., assignor to Coleman Lamp and Stove Co., Wichita, Kans., a Corporation of Kansas. Filed Sept. 6, 1927. Serial No. 217,559. 2 Claims. (Cl. 158—42.4.)



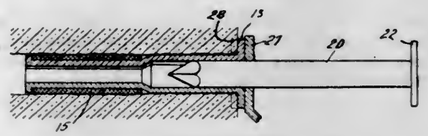
1. A vaporizing generator for hydrocarbon fuels having two primary members, namely, an outer casing having an inlet and an outlet, and a hollow valve stem longitudinally disposed within the outer casing having a valve for closing off the outlet, the primary members differing one from the other in rate of expansion and contraction at varying temperatures so that the valve will close off the outlet at low temperature and open it at high temperature and a manually operable valve stem within the hollow valve stem having a valve at one end to vary the effective port area of a constricted discharge opening in the outer casing.

1,806,637. LOUVER DOOR. ARTHUR MCGAVIC, Kansas City, Mo., assignor to Nathan Paine, Miami Beach, Fla. Filed Apr. 20, 1927. Serial No. 185,233. 4 Claims. (Cl. 20—36.)



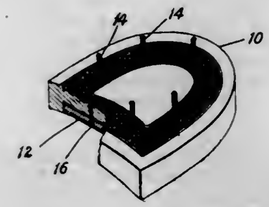
1. A louver door comprising a pair of spaced stiles, top and bottom rails joining said stiles, an intermediate rail joining said stiles and of lesser thickness than the top and bottom rails and having its inner face depressed from the plane of the inner face of the door, the inner marginal edge portions of said stiles and top and bottom rails being rabbeted at the inner face of the door substantially to the plane of the depressed inner face of said intermediate rail, a fixed panel closing the space between said stiles and the intermediate and lower rails, a fixed louver frame occupying the space between said stiles and the upper and intermediate rails, there being upright channels on the inner side of said door adjacent the rabbeted inner edge portions of said stiles, and a panel vertically slidably movable in said channels to close said louver frame when in its upper position and to expose said frame when in a lower position.

1,806,638. TELEVISION. PIERRE MERTZ, Bellerose Manor, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 24, 1928. Serial No. 295,098. 12 Claims. (Cl. 178—6.)



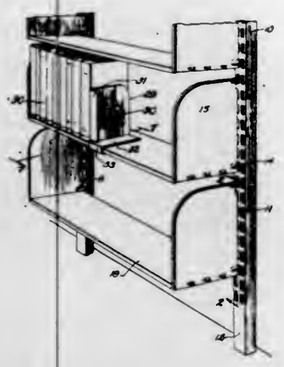
1. The method of scanning to produce image currents which comprises repeatedly scanning the entire area of a field of view and causing each scanning line of the entire path of one complete scanning to partially overlap two scanning lines of a preceding one.

1,806,639. TRUSS. LOUIS B. MOLTZAN, Buffalo, N. Y. Filed Dec. 13, 1929. Serial No. 413,723. 9 Claims. (Cl. 189—37.)



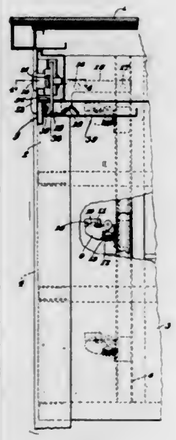
1. A building truss, comprising top and bottom members having openings therein, upright members disposed between said top and bottom members, and diagonal members extending from one upright member to an adjoining one, the ends of said upright members and said diagonal members terminating in attaching shanks jointly engaging the corresponding openings in said top and bottom members and upset at their outer ends against the latter.

1,806,640. EXPANSION SHIELD. RALPH E. OGDEN, Lawrence, N. Y., assignor, by mesne assignments, to J. Edward Ogden Company, New York, N. Y., a Corporation of New Jersey. Substitute for application Serial No. 720,757, filed June 18, 1924. This application filed June 12, 1926. Serial No. 115,494. 24 Claims. (Cl. 85—2.4.)



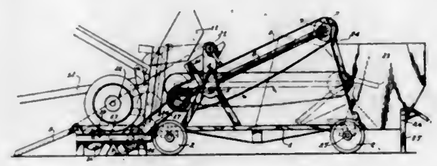
24. In combination, a sheet metal expansion shield, a band of relatively soft metal supported on the expansible portion of said shield by encircling the same, and a hammer driven expander adapted to expand the shield and the metal band.

1,806,641. LOADED RUBBER HEEL. GAYNOR O'GORMAN, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 31, 1924, Serial No. 759,093. Divided and this application filed Jan. 10, 1927. Serial No. 160,206. 4 Claims. (Cl. 36—35.)



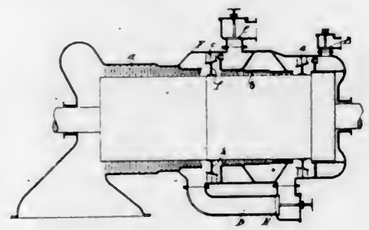
1. A loaded rubber heel having a penetratable nail-anchoring element, the nails with which the heel is loaded penetrating said element and being held thereby rigidly in predetermined relation to each other.

1,806,642. BOOKSTACK. ENOCH OHNSTRAND, Kenmore, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 19, 1927. Serial No. 184,924. 4 Claims. (Cl. 211—136.)



1. In a book stack, a plurality of standards adapted to be secured in substantially vertical position, a plurality of shelf ends secured along one edge to said standards so that said shelf ends lie in a substantially vertical plane, a shelf extending between a pair of adjacent shelf ends, a downwardly extending flange formed at each end of said shelf, said flange being provided with a series of apertures, and a series of offset tongues formed along the bottom edge of each shelf end, said tongues being adapted to enter said apertures and lock said shelf to said shelf ends, said tongues forming the means for securing said shelf to said shelf ends.

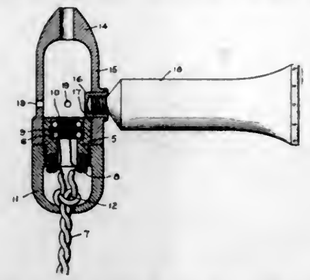
1,806,643. DESK DRAWER LOCK. ENOCH OHNSTRAND, Kenmore, N. Y., assignor to Remington Rand Inc., New York, N. Y. Filed Nov. 15, 1927. Serial No. 233,431. 11 Claims. (Cl. 45—94.)



1. In a desk drawer lock, the combination with a desk having a plurality of drawers arranged in a pedestal, and a center drawer adjacent said pedestal, of a locking bar mounted in said pedestal for vertical sliding movement, cooperating means on said pedestal drawers and said locking bar adapted for locking engagement in one position of said bar to lock said pedestal drawers in closed position, an operating member for said locking bar extending under said center drawer, a locking member movably mounted in the center drawer, manually operable means connected to said locking member, and a lock mechanism for retaining said locking member in drawer locking position, said locking member being formed for engagement with a portion of the desk for locking the center drawer, and having a projection for moving said operating member and locking bar into locking position.

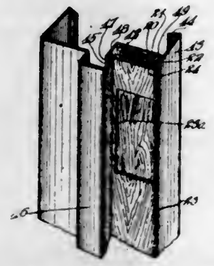
1,806,644. PORTABLE MATERIAL RECEIVING MEANS. HUGH P. PARIS, Oakland, Calif. Filed June 22, 1929. Serial No. 372,970. 6 Claims. (Cl. 214—44.)

1. A device of the class described comprising a main body portion affording a vehicle, an elevating conveyer carried thereby, a power receiving unit pivotally connected at one end of the vehicle to support and receive power from the driven wheels of a material transporting vehicle when in material dumping position, a connection between the power unit and the conveyer, a hopper hingedly connected at the opposite end of the vehicle to receive material from said conveyer, said power receiving unit and hopper capable of folding upon the opposite ends of the vehicle when not in use.



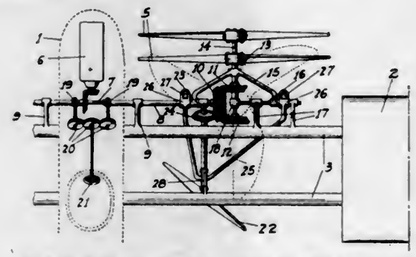
1,806,645. ELASTIC FLUID TURBINE. CHARLES ALGERNON PARSONS, Newcastle-on-Tyne, England, and ERNEST HENRY BUCHANAN ANDERSON, New York, N. Y.; said Anderson assignor to said Parsons. Filed Oct. 12, 1927, Serial No. 225,727, and in Great Britain Nov. 18, 1926. 4 Claims. (Cl. 60—43.)

1. An elastic-fluid turbine unit comprising in combination a rotor; a stator casing surrounding said rotor to provide a continuous annular passage available for flow of motive fluid and disposed in said passage in the sequence set forth, cruising impulse and reaction blading and main impulse and reaction blading; and means for by-passing motive fluid from a point of said passage between said cruising impulse and reaction blading to a point of said passage between said main impulse and reaction blading.



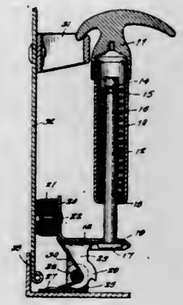
1,806,646. ELECTRICAL VAPORIZER. JOSEPH ROBINSON, New York, N. Y., assignor of one-fourth to Roy M. Wolvin, New York, N. Y. Filed May 25, 1927. Serial No. 194,180. 5 Claims. (Cl. 128—192.)

1. A device for generating vapors for inhalation, comprising in combination, a nozzle through which the vapors pass, said nozzle being provided with a chamber, an electric heating element extending into said chamber, a container having communication with said chamber and containing a compound, and means for delivering from the container to said chamber and into contact with said



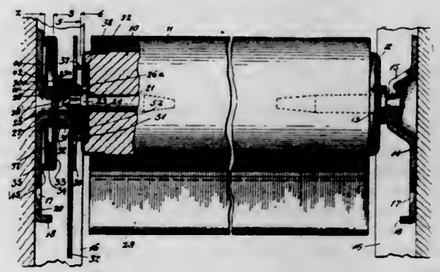
heating element a predetermined amount of said compound, said chamber being provided with vents through which drafts of air enter to carry the vapors of said compound upwardly through said nozzle on inhalation.

1,806,647. METALLIC DOORFRAME. EDWARD E. ROSS, Cicero, Ill. Filed Dec. 4, 1929. Serial No. 411,550. 4 Claims. (Cl. 72—98.)



1. A jamb facing comprising a column having sides and a front, an offset portion of the front constituting a door stop, a recessed section extending away from said door stop an defining a pocket having a key, and a facing member lodged in the pocket and locked by the key.

1,806,648. AIRPLANE. HERVEY M. SALISBURY, Walnut Grove, and ARTHUR E. MILLER, Sacramento, Calif. Filed Sept. 14, 1929. Serial No. 392,558. 6 Claims. (Cl. 244—15.)

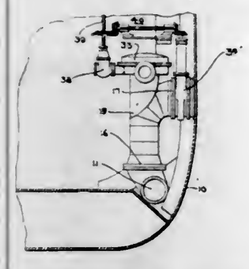


1. An airplane including a fuselage, wings disposed to the sides of the fuselage in transversely spaced relation thereto, tractor propellers mounted in the transverse planes of the spaces between the wings and fuselage, pusher propellers mounted independently of the tractor propellers and disposed in said planes rearwardly of the tractor propellers, means for turning the tractor propeller from horizontal to vertical positions at will, and selectively controlled means for causing the pusher propeller to turn with the tractor propellers or to remain relatively stationary.

1,806,649. HOOD CATCH. FRANK P. SARGENT, Stratford, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 25, 1927 Serial No. 215,291. 1 Claim. (Cl. 292—114.)

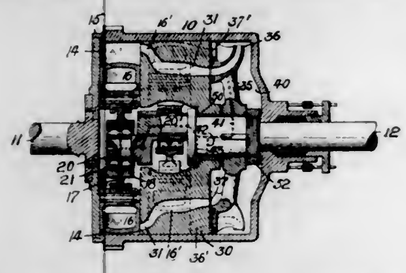
In a hood catch, a hold down clamp, a keeper adapted to be engaged by said clamp, a support for said clamp comprising a base and a transverse hinge pin connecting said base and clamp and permitting relative inward and outward movement of said clamp toward and away from the hood, and a spring coiled about said pin bearing upon said clamp and adapted to yieldingly press the same away from the hood in its disengaged relation.

1,806,650. SHADE ROLLER. CHARLES F. SCHMELZ, Bridgeport, Conn., assignor to Stay-Put Shade Roller Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 4, 1929. Serial No. 397,347. 11 Claims. (Cl. 156—28.)



4. In a device of the character described having a shade roller, a shade-raising unit mounted on a support for detachably supporting and operating said roller and including a spool upon which a cord is wound so that the unwinding of the cord causes the shade to be raised by being wound upon the roller, a clutch between said spool and the roller for causing the spool and roller to rotate in unison in both directions, and means for frictionally holding the cord spool and shade roller against a tendency to rotate in a direction which causes lowering of the shade.

1,806,651. MARINE PUMPING SYSTEM. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 29, 1930. Serial No. 440,970. 3 Claims. (Cl. 114—183.)

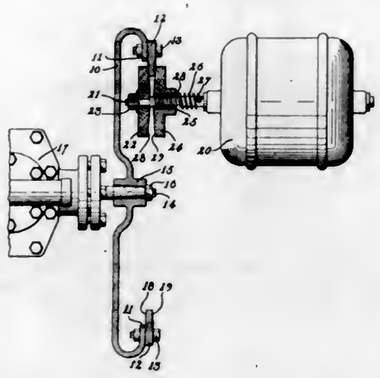


3. The combination with a ship, of emergency apparatus for removing water from the ship to prolong or maintain its buoyancy when in danger of sinking comprising at least one propeller pump including a housing having its

inlet opening into the bottom region of the ship, a shaft arranged coaxially of the housing, and a propeller in the housing and connected to said shaft; a prime mover for

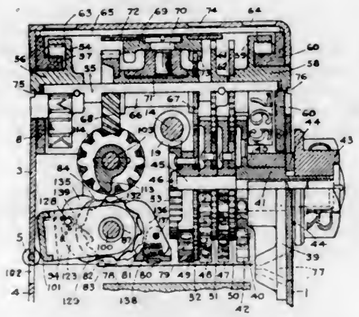
driving the shaft, a support carried by the housing for supporting the prime mover; and a conduit connecting the housing outlet with the exterior of the ship.

1,806,652. AUTOMATIC ACCELERATOR. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover, Del., a Corporation of Delaware. Filed July 25, 1925. Serial No. 45,996. 12 Claims. (Cl. 60—54.)



1. In an accelerator for automotive vehicles, in combination, a driving member, a driven member, means whereby said driving member transmits torques directly to said driven member, means for utilizing the action of said driving member on said driven member to generate hydraulic pressures, valve mechanism for said pressure-producing means, there being rubbing surfaces between said mechanism and said pressure-producing means, and means whereby the torques generated by said rubbing surfaces are transmitted to said driven member in the same direction as, and in addition to, the torques transmitted directly thereto by said driving member.

6. In combination, a vehicle having a driving element, a driven element, a straight-through connection between said elements, a connection including an accelerator between said elements, means for automatically shifting from the accelerator connection to the straight-through connection when the speed of the driven element is measurably equal to the speed of the driving element, and means for rendering said first means ineffective when the vehicle is operated in reverse.

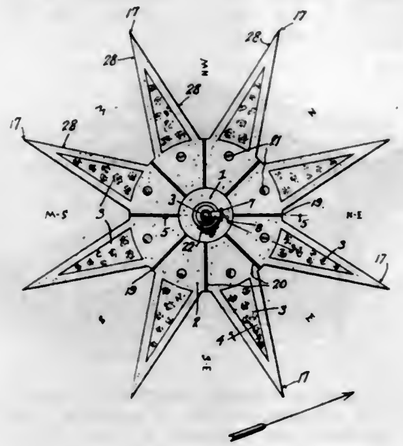


1,806,653. POWER TRANSMITTING DEVICE. OTTO M. SUMMERS, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 27, 1928. Serial No. 257,301. 3 Claims. (Cl. 74—26.)

1. In a frictional power transmitter a driving member and a driven member having their shafts extending in the same longitudinal direction, one of said members comprising a pulley having cheeks bearing opposedly facing frictional surfaces, a shaft for said pulley, one of said cheeks being axially displaceable with respect to the other, the other of said members including a friction annulus encircling said pulley and attached to the driven member in power transmitting relation, external threads on the pulley shaft, an internally threaded sleeve engaging with said threads and carrying said axially displaceable cheek,

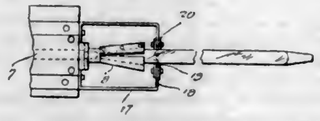
said threads being arranged to advance said cheek into clamping frictional power transmitting engagement with said annulus, and a spring attached to said cheek and said shaft to urge the displacement of said cheek through agency of said threads.

1,806,654. TICKET ISSUING MACHINE. ERNEST CLAYTON TILLY, Montpelier, Bristol, and HENRY MATTINSON, Disley, England. Filed Apr. 5, 1928, Serial No. 267,704, and in Great Britain Apr. 25, 1927. 13 Claims. (Cl. 235—31.)



1. A ticket issuing machine comprising setting means for bringing marking elements into position to correctly mark the ticket to be issued, operating means for effecting the actual marking of the ticket, a plurality of counting units, rocking elements actuated by said operating means, pawls mounted on said rocking elements and arranged to actuate said counting units, and cams adapted to coact with the pawls to prevent certain of them from driving the counting units when the rocking element is moved, the cams being moved from the setting means in order to determine which of the pawls shall be prevented from driving.

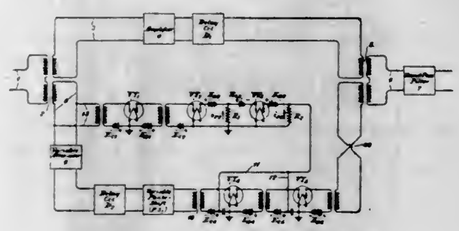
1,806,655. MOORING MAST. PHILIP C. TRAVER, Lynbrook, N. Y., assignor to Jamaica Sea Airport, Jamaica, N. Y. Filed Jan. 27, 1930. Serial No. 423,832. 7 Claims. (Cl. 244—2.)



1. A mooring mast of the character described comprising a circular base upon which the mast is centrally

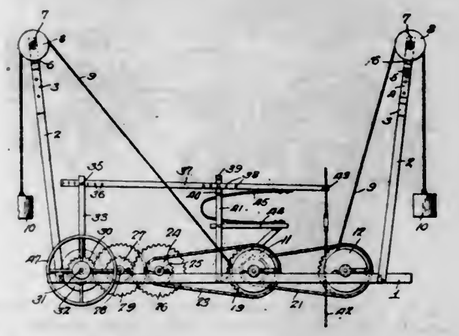
mounted, said base having a series of radiating anchor receiving tunnels opening at its periphery, and radially

extending guide fingers extending from the peripheral wall of the base at opposite sides of the outer ends of the tunnels and adapted to direct an anchor thereinto.



1,806,656. STAKE SHARPENER. NICHOLAS A. WARD, Auburn, Wash. Filed Mar. 10, 1930. Serial No. 434,780. 1 Claim. (Cl. 144—30.)

A rotating stake sharpener of the class described, comprising a hollow conical head having a side opening therein and a cutting blade mounted along one side of said opening and projecting into the hollow, a shank portion at the small end of said head, having a drive shaft receiving recess in its end and an annular bearing flange formed to project at right angles at the end of said shank portion, a driven shaft in said recess, a casing rotatably mounting said drive shaft, a U-shaped bracket forming a work support having inwardly turned flanges bolted to said casing at a point below the shaft, said bracket being so formed as to project outwardly and upwardly to a point where its bight is in alinement with said shaft, a stake receiving notch in the bight portion of said bracket to prevent rotation of the stake, and rectangular stake adjusting plates having longitudinal slots, adjusting bolts passing through said slots and through the bight portion, whereby said slots may be adjusted for various sizes of stakes, said stakes being guided through said notch into said sharpener in axial alinement therewith.

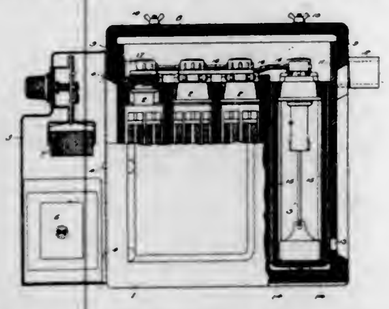


1,806,657. POWER LIMITING APPARATUS. WILLIAM T. WINTRINGHAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 14, 1929. Serial No. 363,072. 8 Claims. (Cl. 179—171.)

7. A voltage limiting apparatus comprising two branch circuits having their outputs connected in opposing relation to an outgoing circuit in which the voltage is to be limited, one of said branch circuits including an amplifier having the same gain for waves of all amplitude applied to the system, an amplifier in the second branch, and means associated with said second amplifier and responsive

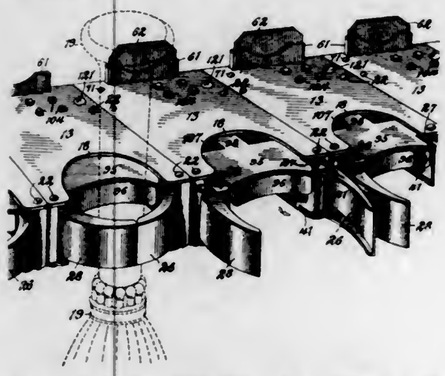
to applied waves to render the gain of said second amplifier high when the voltage applied thereto is high, and low when the voltage applied thereto is low.

1,806,658. PUMP. WILLIAM H. ZORN, Harrisburg, Nebr. Filed June 23, 1930. Serial No. 463,314. 2 Claims. (Cl. 185—27.)



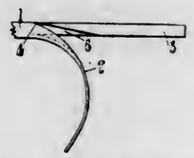
1. In a device of the class described, a frame, first shafts journaled on the frame, a third shaft journaled on the frame, a fourth shaft journaled on the frame between the third shaft and one of the first shafts, a fifth shaft journaled on the frame between the fourth shaft and said one of the first shafts, all of the shafts being arranged in parallel relation, a chain and sprocket connection between the first shafts, a chain and sprocket connection between said one of the first shafts and the fifth shaft, intermeshing gears on the fifth and fourth shafts, intermeshing gears on the fourth and third shafts, drums on the first shafts, flexible elements wound about the drums, weights carried by the flexible elements, means for guiding the flexible elements intermediate their ends, a walking beam, means for fulcruming the walking beam intermediate its ends, a crank on the third shaft, a pitman pivoted to the crank and to one end of the walking beam, and means for connecting the opposite end of the walking beam with machinery to be driven.

1,806,659. POWER UNIT DEVICE. JOHN O. ARCHIBALD, Lancaster, N. Y. Filed Dec. 13, 1926. Serial No. 154,561. 4 Claims. (Cl. 175—315.)



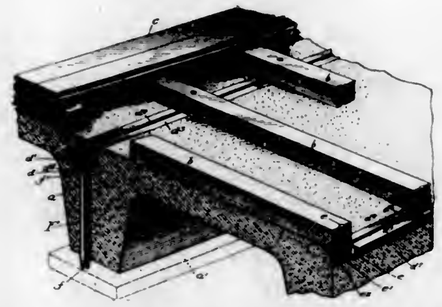
4. In an electrical power assembly including a casing containing apparatus from which gases are evolved

during the operation, the casing being provided with a vent opening in one side near its top and having a



portion of its bottom upwardly offset throughout its length to define a passage, said upwardly offset portion having air inlet openings therein.

1,806,660. UMBRELLA LOCK. JOHN CLAYTON BACKUS, Smethport, Pa. Filed Oct. 28, 1929. Serial No. 402,964. 23 Claims. (Cl. 70—14.)



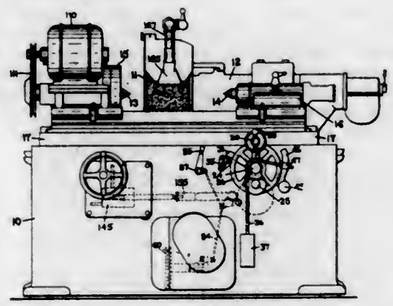
1. In a lock, the combination of a casing, a section movable into and out of the casing, jaws pivoted to the movable section, means for opening the jaws as the movable section is moved out, and means for closing the jaws as the movable section moves in.

1,806,661. METHOD OF AND MEANS FOR PRODUCING SOLES OF OR FOR BOOTS AND SHOES. CHARLES MARTIN BAGSHAW, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Aug. 31, 1927, Serial No. 216,708, and in Great Britain Sept. 16, 1926. Divided and this application filed July 11, 1928. Serial No. 291,880. 24 Claims. (Cl. 21—31.5.)

1. An apparatus for producing an apron on a shoe sole comprising a support for the heel end of the sole, means to deform said heel end, and an apron splitting knife arranged to move in a plane at an angle to the plane of the marginal portions of the sole at and adjacent to the heel breast line.

1,806,662. METALLIC INSERT FOR CONCRETE STRUCTURES. FRANCIS M. BARTON, Chicago, Ill., assignor, by mesne assignments, to Scott-Weiss Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1928, Serial No. 245,084. Renewed Apr. 3, 1931. 7 Claims. (Cl. 72—101.)

1. An insert for concrete structures formed of sheet metal and comprising a pair of oppositely facing side walls complementally corrugated to form sockets for attaching devices, the crown portions of the sides between the sockets being arranged in abutting relation.

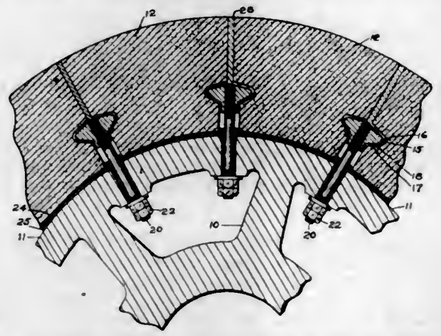


1,806,663. BASE EXCHANGE MATERIAL AND PROCESS OF MAKING SAME. ABRAHAM S. BEHRMAN, Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 21, 1924. Serial No. 700,822. 18 Claims. (Cl. 23—113.)

1. The process of producing a metallo-silicate which comprises mixing a solution of an alkali metal silicate, an acid and a solution of a non-alkaline compound of an amphoteric hydroxide in such volume proportions and concentration as to form a gel embracing substantially the entire volume of the mixture.

13. A process of preparing a high silica base exchange silicate which comprises reacting an alkali metal silicate, an amphoteric metal salt and an acid stronger than silicic acid.

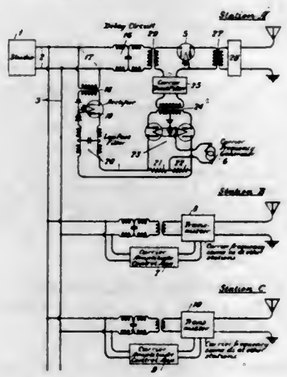
18. The process of improving base exchange materials which comprises reacting the ingredients to form a base exchange material and introducing a sufficient amount of an acid to neutralize substantially all of the free alkali present.



1,806,664. GRINDING MACHINE. ALBERT G. BELDEN and CHARLES G. TREFETHEN, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1926. Serial No. 89,458. 11 Claims. (Cl. 51—95.)

1. A cylindrical grinding machine comprising a base, a rotatable grinding wheel and a work support which are

movable relatively toward and from each other, a cross feed screw and nut connected to cause such movement, a power actuated mechanism including a cam and a follower operatively connected to rotate the feed screw in both directions through a predetermined angular distance and at a varying rate and means operated in timed relation with said power actuated mechanism to stop the same after the grinding wheel has finished its cutting operation.

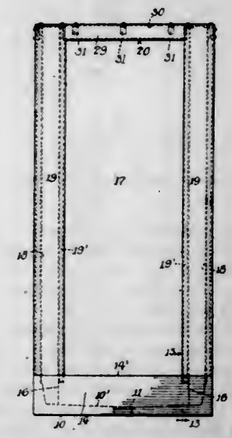


1,806,665. SEGMENTAL GRINDING WHEEL AND METHOD OF MAKING THE SAME. HUGO W. H. BETH, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 21, 1928. Serial No. 327,620. 8 Claims. (Cl. 51—207.)

1. The method of making a grinding wheel having abrasive segments adjustably clamped on a rotatable support comprising the steps of locating the segments in an approximately correct grinding position on the support, providing a layer beneath the segments of a moldable material capable of setting to a hard body, forcing the material into full contact with the adjacent faces of the segment and the support, permitting the moldable material to harden in place and thereafter drawing the segments down firmly onto the support.

5. A grinding wheel comprising a rotatable support, a plurality of abrasive segments thereon, each segment having spaced locating shoes of compressible material thereon and a shoe molded to that portion of the support beneath on which it rests, and means for clamping the segments securely on the support.

1,806,666. RADIO BROADCASTING SYSTEM. RALPH BOWN, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 11, 1928. Serial No. 325,151. 4 Claims. (Cl. 250—17.)

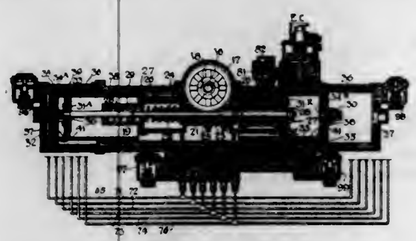


1. In a radio broadcasting system the method of simultaneously transmitting from a plurality of stations each operating on substantially the same carrier frequency a set of signals from a single source, which comprises simultaneously causing the amplitudes of the unmodulated carrier frequency components transmitted from a plurality of said stations to vary with the amplitude of said set of signals, whereby the detected beat note resulting from two slightly different carriers will be the product of two carriers each of abnormally small amplitude when the amplitude of the desired signal is small.

1,806,667. COMBINED ILLUMINATED SIGN AND WREATH SUPPORT. JOHN F. BRESLIN, Jr., Summit Hill, Pa. Filed May 13, 1930. Serial No. 452,014. 2 Claims. (Cl. 40—132.)

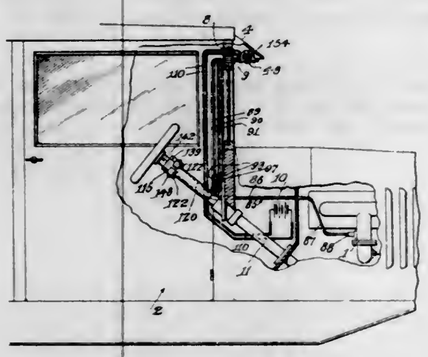
1. A combined illuminated sign and support for wreaths and the like, a casing open at its bottom, and including a rear wall, end walls, a front wall, a top wall and a connecting wall rising upwardly and rearwardly from the front wall and merging into said top wall for supporting an object at an inclined position, said front wall having an opening formed therein, a transparent medium normally closing said opening, and having indicia provided thereon.

1,806,668. SHOWER BATH CABINET. WILLIAM BULTHUIS, Chicago, Ill. Filed May 17, 1929. Serial No. 363,815. 14 Claims. (Cl. 72—16.)



1. In a shower bath cabinet, the combination of a receptor formed with internal corner pilasters, and a sheet metal stall attached at its lower end to said receptor, and formed with internal corner reinforcements resting on said pilasters.

1,806,669. REMOTE CONTROL MECHANISM. CHARLES A. CAMPBELL, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Jan. 29, 1929. Serial No. 335,956. 13 Claims. (Cl. 121—38.)

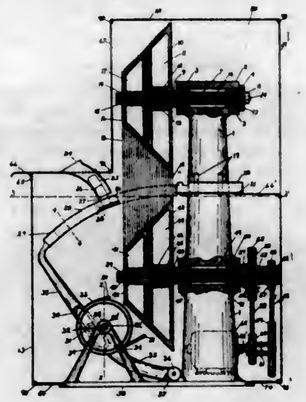


1. Means for actuating a starting gear having a starting position, a running position and a stop position, comprising in combination two expansible chamber motors;

means for connecting said motors with said gear whereby each motor may impart independently an increment of motion thereto; valve means operable selectively to admit pressure fluid to both motors, to admit it to one and exhaust the other and to exhaust both; and an exhaust valve

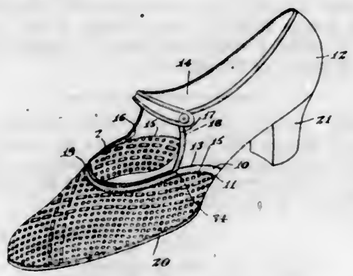
associated with each motor and having actuating means in the path of flow of pressure fluid to and from the motor, and arranged to be shifted in a valve closing direction by flow toward the motor and in a valve opening direction by flow from the motor.

1,806,670. SIGNALING APPARATUS FOR MOTOR VEHICLES. CARL F. CAPELL, Santa Monica, Calif., assignor of one-fourth to Herbert Cutler Brown, Los Angeles, Calif. Filed Mar. 21, 1929. Serial No. 348,852. 2 Claims. (Cl. 177—329.)



1. A signaling apparatus comprising a housing forming a suction chamber, an illuminable signaling element arranged exteriorly of one end of said chamber, a suction operated, reciprocatory rod for projecting and retracting said element with respect to said end of said chamber, a stationary abutment within the chamber and extending inwardly from said end of the latter and providing for arresting the outward movement of said rod, said rod extending through said abutment, a suction line leading to the other end of said chamber, a normally open circuit forming means for said element including circuit connections and a contact bodily carried with said rod, a contact carried by the inner end of the abutment to be engaged by said other contact to close said circuit, a ported member carried by and insulated from the housing, opening into said chamber, electrically connected to the contact on the abutment and in circuit with an electrical source, and a suction line opening into said ported member.

1,806,671. SUBSTITUTED ARYL ANTIOXIDANT. LUDWIG J. CHRISTMANN, Jersey City, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Oct. 20, 1928. Serial No. 313,972. 3 Claims. (Cl. 18—50.)

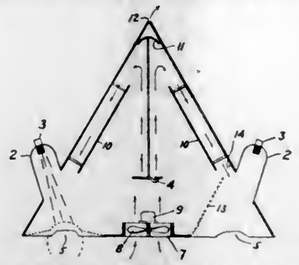


1. A rubber composition containing P-amino-M-cresol.

1,806,672. MULTIPLE-BLADED SLICING MACHINE. HARRY J. CRINER, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa. Filed June 10, 1929. Serial No. 369,680. 7 Claims. (Cl. 146—88.)

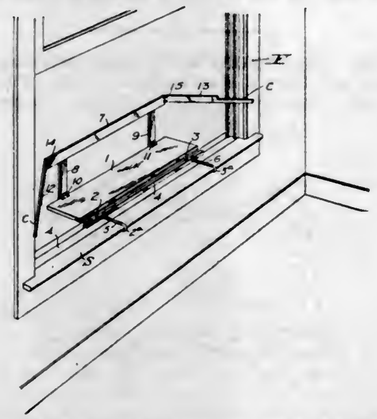
1. A cutting or slicing machine of the type described, comprising a base, a frame united thereto, upper and lower bearings secured in the frame, a plurality of concentric drive shafts mounted in one of the bearings and a plurality of concentric idler shafts mounted in the other bearing, a stepped conical pulley secured upon the front end of each of the drive shafts and a corresponding conical pulley secured upon the front end of each of the idler shafts, a plurality of cutting or slicing bands mounted upon the conical pulleys, and means for driving the drive shafts simultaneously but at different relative speeds.

1,806,673. BOOT OR SHOE AND METHOD OF MAKING SAME. CLAUDE H. DANIELS, Newton Center, Mass. Filed Oct. 10, 1930. Serial No. 487,822. 6 Claims. (Cl. 36—3.)



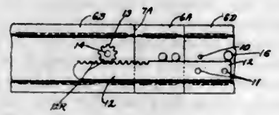
1. The improved process of shoe manufacture, which includes the steps of adhesively uniting a vamp and vamp lining, simultaneously perforating a plurality of apertures completely through both said vamp and said vamp lining, and weaving strips separate from said layers through predetermined apertures of both the vamp and the vamp lining, whereby the latter are positively held together independently of the adhesive.

1,806,674. MEDICAL CABINET FOR LIGHT RAY TREATMENT. JAMES A. DONOHUE, Philadelphia, Pa. Filed May 11, 1929. Serial No. 362,276. 3 Claims. (Cl. 174—177.)



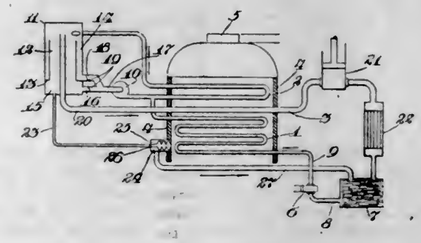
1. Apparatus for the treatment of the scalp including in combination: a cabinet having an opening therein into which a head may be inserted exposing the scalp for treatment and having an air inlet opening therein, a fan

mounted to draw cool air through said opening into said cabinet, means for conducting a steady, uniform stream of air onto the scalp being treated within said cabinet, means for controlling the amount of said air which is conducted to the head being treated, an outlet for air from said cabinet, a separate source of infra-red light located within



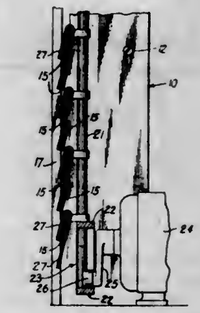
said cabinet so that the infra-red rays are thrown directly on the scalp undergoing treatment, a separate source of ultra-violet light located within said cabinet so that the scalp undergoing treatment is exposed to said ultra-violet rays, and means movable into position for shutting off the scalp undergoing treatment from said ultra-violet rays.

1,806,675. PORTABLE WINDOW SEAT. WILLIAM D. DUNN, Elizabeth, N. J., assignor to August Walter Spilner, Elizabeth, N. J. Filed Feb. 9, 1929. Serial No. 338,850. 4 Claims. (Cl. 304—24.)



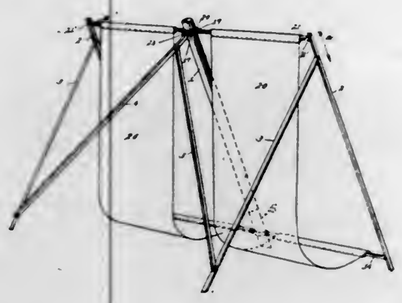
1. A portable window-seat comprising a substantially U-shaped metal frame affording seat-supporting bars each provided with hooked extremities adapted to engage an inner portion of a window frame; a seat member rigidly secured upon said seat-supporting bars; a clamp-bar slidingly fitted upon said supporting bars and adapted to rest upon an outer portion of the window frame to transmit thereto the weight of said seat and seat-supporting bars; and a coil spring surrounding each of said bars and acting upon said clamp-bar to cause it to slide on said supporting bars thereby to grip an outer portion of the window frame.

1,806,676. TIRE RIM. FRANK J. DUSEL, St. Paul, Minn. Filed Feb. 25, 1929. Serial No. 342,508. 2 Claims. (Cl. 301—32.)



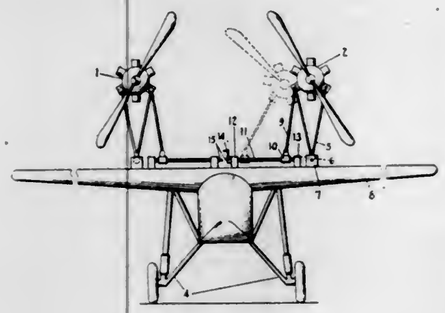
1. A collapsible tire rim comprising a plurality of hingedly connected like metal rim sections and an end section comparatively short, the free end of said short section adapted to abut the free end of the adjacent other end section, a rock bar fixed on said latter section extending past said short section and over the adjacent face of the section hinged to the short section, rotary rack engaging means on said latter section adapted to spread or close the said sections to release the short rim section as described, and means for connecting said abutting parts to each other.

1,806,677. SEMIFLASH BOILER. CHARLES A. FRENCH, Riverside, Ill. Filed Feb. 21, 1930. Serial No. 430,199. 6 Claims. (Cl. 122—235.)



1. In a steam generating system, water storage means, a vaporizing coil communicating with the storage means, means for circulating water from the storage means through the vaporizing coil, and means adapted to automatically remove the major portion of the water from said storage means at a predetermined temperature.

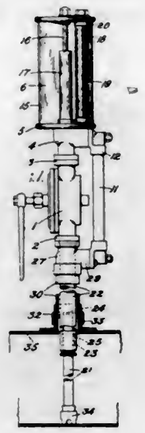
1,806,678. CHANGEABLE EXHIBITOR. EUGENE FARKAS, New York, N. Y. Filed Jan. 30, 1931. Serial No. 512,861. 7 Claims. (Cl. 40—62.)



1. In a changeable exhibitor having stationary and relatively slidable display members, the combination with upright frame members having angular extensions, a plurality of stationary display members detachably mounted on said extensions, said display members being positioned relative to each other in series, in parallel planes, in angular relation with the vertical plane, the adjoining ends of any two display members being in the same horizontal plane and presenting the component parts of the display as an unbroken unit, and a plurality of cooperating display members slidable relative to and alternately covering said stationary display members and forming a changeable exhibit.

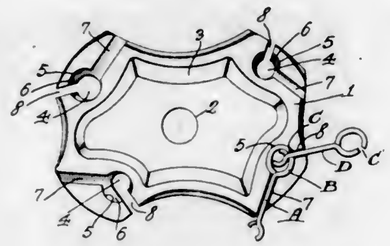
1,806,679. **BEACH CHAIR.** CARL GILMORE, Oakland, Calif. Filed Sept. 18, 1928. Serial No. 306,647. 8 Claims. (Cl. 155—154.)

1. In a beach chair of the character described, a central support and a pair of side supports disposed in lateral spaced relation, rear supports having their upper ends pivotally secured to upper end portions of said side supports, and diagonal braces connecting the lower end portions of said rear supports and said central support together.



1,806,680. **ADJUSTABLE ENGINE FOR AIRCRAFT.** THOMAS F. HAMILTON, Milwaukee, Wis., assignor to The Hamilton Standard Propeller Corporation, West Homestead, Pa., a Corporation of Pennsylvania. Filed Jan. 5, 1929. Serial No. 330,573. 5 Claims. (Cl. 244—14.)

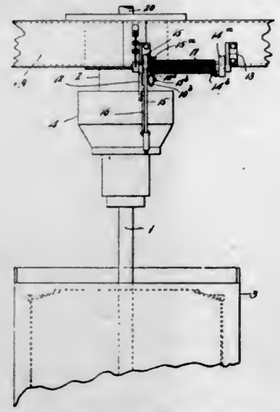
3. In an aircraft, an engine, means for pivotally supporting said engine in operative position on an axis lengthwise of the craft, and constantly-rigid movable means for rocking said engine about said pivotal support whereby the engine may be moved laterally with reference to the craft without interruption of its operation.



1,806,681. **MEANS FOR CLEANING LIQUID STORAGE TANKS AND THE LIKE.** FRANK HAMMOND, Park Royal, England. Filed July 11, 1929, Serial No. 377,586, and in Great Britain Oct. 15, 1928. 4 Claims. (Cl. 210—207.)

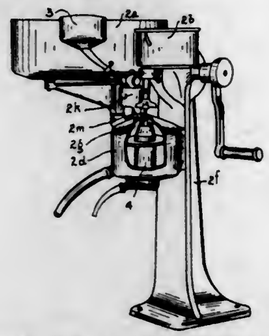
1. For removing impurities from liquid stored in tanks, a self-contained cleaning device comprising pump means, a suction pipe connected to the pump suction and adapted to be inserted into a tank, a separating vessel to separate impurities from the liquid withdrawn from the tank, a connection between the inlet to said vessel and the pump discharge, a return pipe from the outlet from said vessel adapted to be connected to the tank, the suction and return

pipes being arranged one within the other, and sealing means on the outer of said pipes for making a tight connection with the tank to form a completely closed system.



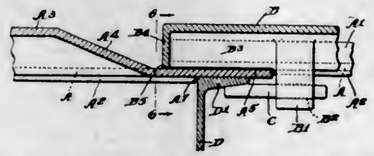
1,806,682. **CHAIN REPAIRING TOOL.** MATTHEW MAYS HEINY and IRVIN R. SMITH, Haxtun, Colo. Filed Aug. 27, 1930. Serial No. 478,238. 4 Claims. (Cl. 59—7.)

1. A tool of the class described including a block having a bore therein provided with a counterbore and a groove in communication with the counterbore, said counterbore and groove being adapted to receive one end portion of a link and support it on edge, there being a slot extending into the block and communicated with the bore and counterbore for receiving a second link when displaced downwardly relative to the first named link.



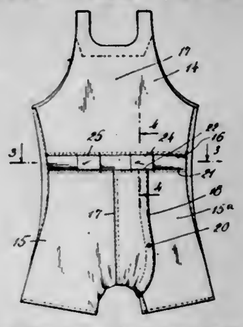
1,806,683. **BRAKE MECHANISM FOR CENTRIFUGAL MACHINES.** EUGENE ROBERTS, New York, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed June 15, 1927. Serial No. 199,101. 10 Claims. (Cl. 188—166.)

1. A brake mechanism for a gyratory suspended centrifugal machine spindle, embracing in combination with a brake pulley fast on the gyratory spindle of interiorly disposed pivotal brake shoe members, brake expanding toggle members, a rotatable expanding member also located inside said brake pulley and having connection with the brake shoe members through said toggles, releasable self-acting means for rotating said toggle-expanding member to extend the toggles to brake-setting position before the toggles reach a position of dead centre, said actuating means be-



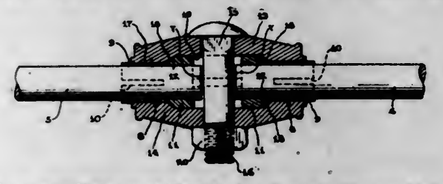
ing provided with adjustment to produce and maintain the desired amount of pressure of the brake shoes against the pulley.

1,806,684. **MIXER.** FERNAND HENRARD, Brussels, Belgium. Filed Oct. 4, 1929. Serial No. 397,281. 5 Claims. (Cl. 259—95.)



1. In a mixer of the kind described, a support; a fatty substance container thereon; a whey container also carried by the support; a distributor communicating with the containers; a casing below the distributor and having an open top; a mixing sleeve within the casing and having a truncated conical upper open end confronting the open top of said casing; blades within the truncated conical upper end; a spout leading from the distributor to said truncated conical upper end; and means passed through the open top of the casing and connected with the sleeve to rotate the same.

1,806,685. **CAP TILE AND TILE ROOF.** EDWARD HERING, Beverly, N. J., assignor to United States Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Mar. 23, 1929. Serial No. 349,804. 2 Claims. (Cl. 108—10.)

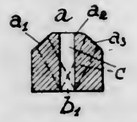


1. A tile roof comprising in combination parallel beams upon which the tiles are supported, tiles having upwardly extending lateral flanges and an upwardly extending centrally located hood arranged in parallel rows with the tiles of each row in staggered relation to those of the other rows with their upper ends resting on the roof beams and their lower ends resting on the upper ends of a lower row of tiles with their hoods extending over the lateral flanges of two adjacent tiles said tiles in each row being spaced from each other, cap tiles extending over the lateral flanges of adjacent tiles of each row and into the hood of tiles in an upper row, said cap tiles having near their lower ends downwardly extending lugs of such length that they extend below the top of the tile supporting beam and means for firmly securing said lugs to the beams.

1,806,686. **GARMENT.** ROBERT E. HEYN, South Orange, N. J., assignor to The B. V. D. Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 8, 1930. Serial No. 479,493. 1 Claim. (Cl. 2—78.)

A garment of the union suit type which comprises a back made up of a top portion and a bottom portion connected by a yieldable insert of knitted elastic fabric in which the wales extend horizontally, said insert extending across the back between the top and bottom portion, said bottom having a crotch opening defined by portions normally overlapping at their edges, said opening terminating at the lower edge of the insert at one side of the median line of the back and substantially in the zone of strain extending from the crotch diagonally to one of the shoulders of the garment, a fabric reinforcement comprising elastic knitted fabric with the wales extending horizontally and having the side edges folded between the reinforcement and the garment, said reinforcement extending in vertical alignment with the end of said crotch opening, stitching connecting the upper edge of the insert and the upper edge of the reinforcement to the top portion of the back and the lower edge of the reinforcement and insert to the bottom portion of the back, affording an additional thickness of material at the place of stitching, and a second fabric reinforcement symmetrically located with respect to said first reinforcement on the other side of said garment and lying substantially in the zone of strain extending diagonally from the crotch to the other shoulder portion of said garment.

1,806,687. **COUPLING.** CHARLES W. HOOVER, Burbank, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla., a Corporation of Delaware. Filed Jan. 6, 1930. Serial No. 418,837. 3 Claims. (Cl. 287—111.)



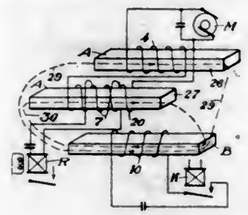
1. A coupling comprising a plurality of one-piece sleeves having substantially cylindrical bores adapted to receive

substantially cylindrical ends of a broken rod, each sleeve being provided with a longitudinal slit of less length than the sleeve to facilitate contraction of the same and also provided with an enlarged portion having a tapered outer surface, clamping half collars adapted to contract the slitted portions of the sleeves to cause them to tightly grip the rod ends, and also provided with complementary tapered inner surfaces engaging the tapered surfaces of the sleeves for contracting the enlarged portions of the sleeves when the rod ends are pulled away from each other, and means for forcing the half collars toward one another.

1,806,688. METHOD OF MAKING ORNAMENTAL RUBBER BALLS. LEONARD R. HOWES, Akron, Ohio, assignor, by mesne assignments, to Miller Rubber Company Inc., Wilmington, Del., a Corporation of Delaware. Filed Oct. 4, 1928. Serial No. 310,439. 2 Claims. (Cl. 154—16.)

1. The hereindescribed method of making rubber balls having ornamental veneered surfaces, which consists in producing a plurality of sheets of thin and thick stock, respectively, thoroughly cooling the sheets separately, thereafter superposing said sheets one on the other to produce laminated sheets, and forming the balls from said laminated sheets, the balls being formed by joining cupped portions of the laminated sheets.

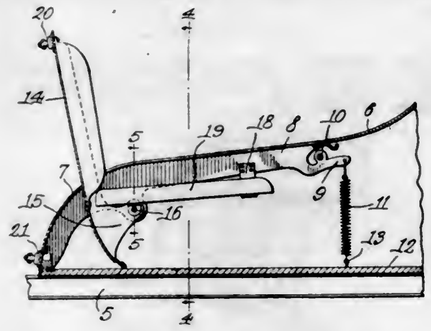
1,806,689. CURVED MOUTHPIECE FOR MOUTH-ORGANS. RUDOLF JONTOF, Hamburg, Germany. Filed Sept. 11, 1929. Serial No. 391,799. 4 Claims. (Cl. 84—377.)



1. A mouthpiece for mouth-organs, in which the blowing channels traverse the mouthpiece from the compartment body of the mouthpiece so that two blowing holes on the surface of the mouthpiece are separated from one another arranged in several rows the lower end of said channels being situated side by side in one row on the lower surface of the mouthpiece so that the tones of the compartment body of the mouthpiece lying close together can be blown separately or in desired chords.

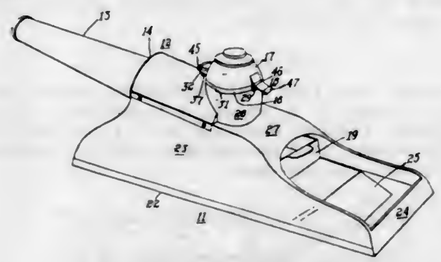
1,806,690. PROCESS FOR THE REGENERATION OF ACTIVE SILICA GEL. GERHARD KRÖNER, Cologne-on-the-Rhine, and FRIEDRICH WILHELM STAUF, Cologne-Deutz, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 6, 1928, Serial No. 290,880, and in Germany July 25, 1927. 3 Claims. (Cl. 23—182.)

2. In the process for the regeneration of active silica gel which is impregnated with decomposed organic substances, the step which comprises treating the silica gel with an oxidizing agent in a liquid phase at a temperature between about 90° and 150° C.



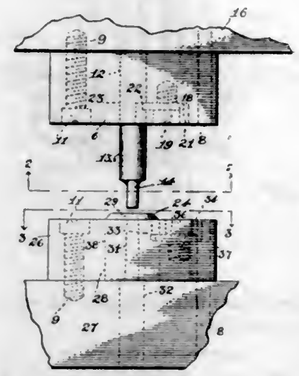
1,806,691. RAILWAY TRAFFIC CONTROLLING APPARATUS. FREDERICK W. LEE, Baltimore, Md., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1926. Serial No. 145,264. 1 Claim. (Cl. 246—63.)

In combination, a train carried receiver comprising two straight parallel horizontal cores, a winding on one core, a relay connected with the winding, a magnetic circuit including the two cores in series, two sources of magnetomotive force one on each core for sending flux through the magnetic circuit in opposite directions, and a member located in the trackway and arranged when the train



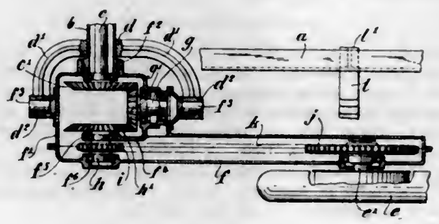
is in a predetermined position to be parallel to and between the two train carried cores, so that flux from each said core is shunted away from the other core by said member.

1,806,692. RUMBLE SEAT CONSTRUCTION. GUY A. LEMON, Chapman, Kans. Filed Aug. 29, 1929. Serial No. 389,230. 1 Claim. (Cl. 296—66.)



A motor vehicle body construction including a pivoted rear deck having a cut out portion and having lateral downwardly extended flanges, a rod having its ends secured in openings of the flanges, brackets, a seat section mounted on the rod and resting on the brackets, a closure pivotally mounted on the rod and adapted to swing to a vertical position, providing a back for the seat, and said closure adapted to close the cut out portion.

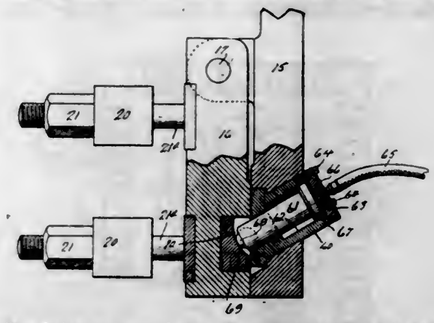
1,806,693. TOY CANNON. JOHN W. MACDONALD, Wilkinsburg, Pa. Filed June 5, 1928. Serial No. 283,009. 43 Claims. (Cl. 42—55.)



1. A cannon having a stationary explosion chamber and a turnable gas mixture generating chamber, the gas generating chamber being adapted to permit access to the explosion chamber when in one position and to prevent access thereto when in another position.

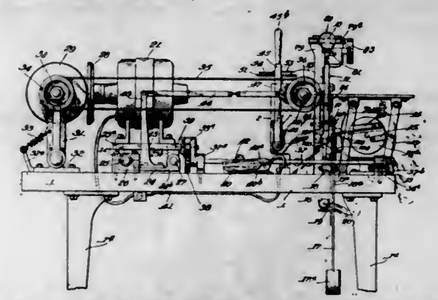
1,806,694. LOCKING MECHANISM. CLEMENS J. MARKSON, Philadelphia, Pa. Filed Dec. 19, 1929. Serial No. 415,177. 2 Claims. (Cl. 279—77.)

2. A punch-press tool-retainer having axially parallel a tool socket and overrunning recess extending in from its face, and a securing member mounted to oscillate in the recess in a plane parallel with the face of the retainer and having a cam surface for making locking and clamping engagement with a tool within the socket.



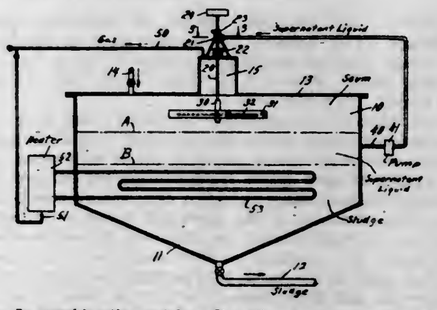
1,806,695. INDIVIDUAL WHEEL MOUNTING. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 19, 1929. Serial No. 372,088. 4 Claims. (Cl. 180—72.)

1. A wheel mounting for a vehicle comprising a frame, a wheel, an axle housing, a housing formed with an offset extension, means to mount the wheel in the last named housing, a web formed in the housing adjacent the extension, means to journal a shaft in the web and an adjacent wall of the housing, trunnions mounted on the extension, bearing arms mounted rotatably on the axle housing, and an elongated aperture in the extension to receive the axle housing.



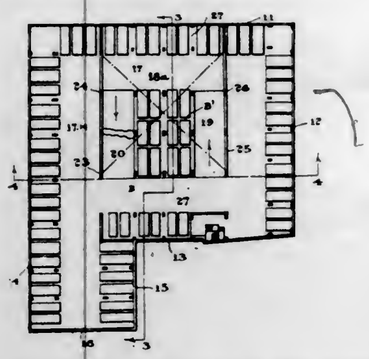
1,806,696. TOOL LIFTER. LOUIS H. MESKER, Shaker Heights, Ohio, assignor to The Cleveland Planer Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 1, 1930. Serial No. 492,717. 12 Claims. (Cl. 90—55.)

1. In a device of the type described, a clapper-box member, a clapper-block member pivoted thereto, a cylinder formed in one of said members, a piston in said cylinder, a rod connected to said cylinder and projecting out of same and engaging said other member, a bearing surface formed on said other member to be contacted by said rod for moving said pivoted member about its pivot point, said



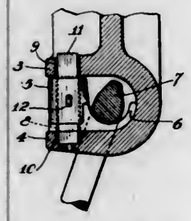
surface being so curved that the axis of said rod is always perpendicular thereto at its point of intersection therewith.

1,806,697. COIL WINDING MACHINE. WILLIAM O. MEISSNER, Chicago, Ill., assignor to The Meissner Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1929. Serial No. 387,602. 15 Claims. (Cl. 242—10.)



1. In a coil winding machine, the combination of a driven spindle, means for supporting a core for rotation by said spindle, means for guiding wire from a spool onto said core including a reciprocating carriage, and means for introducing sheets of insulating material between successive layers of wire in said coil comprising a shiftable table, a prime-mover operatively connected with said table, and means controlled by said carriage for effecting the actuation of said table to and from said core by said prime-mover at predetermined intervals in the winding operation.

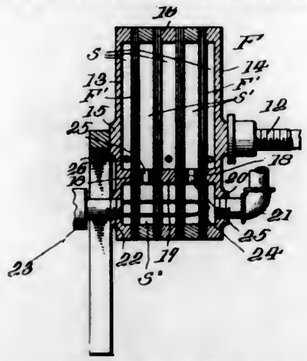
1,806,698. SLUDGE DIGESTION APPARATUS. SAMUEL FISHER MILLER, Bay Head, N. J., assignor to Pacific Flush-Tank Company, New York, N. Y., a Corporation of Illinois. Filed Aug. 2, 1929. Serial No. 382,940. 9 Claims. (Cl. 210—2.)



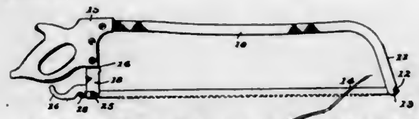
1. In combination with a digestion tank, a rotary member submerged in the upper part of the tank, and means for discharging a liquid across said member into the tank.

1,806,699. STORAGE BUILDING. CHARLES GORDON MITCHELL, Montreal, Quebec, Canada. Filed Apr. 29, 1929. Serial No. 359,069. 9 Claims. (Cl. 20—1.13.)

1. In a storage building, a plurality of main floors positioned at one storey height above another, an intermediate floor between each pair of main floors, parts of the intermediate floor being removed to allow for the storage of trucks on the main floor below and ramps forming a communication between the floors.



1,806,700. BRAKE HANGER SUPPORT. WILLIAM O. MOODY, La Grange, Ill., assignor to Frederic Schaefer, Pittsburgh, Pa. Filed Dec. 5, 1928. Serial No. 323,870. 4 Claims. (Cl. 188—209.)

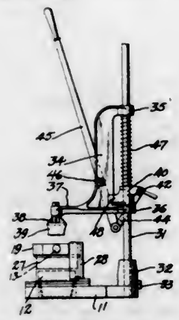


1. The combination with a truck frame for railway cars provided with a bracket having upper and lower walls forming a slot open at its sides and outer end for receiving a brake hanger, of a brake hanger retainer in the outer end of said slot and provided with a wearing shoe for a brake hanger, said retainer and said walls being provided with registering non-circular openings, and a non-circular pin in said openings locking the retainer and its shoe in operative position and against rotary movements on the axis of the pin.

1,806,701. OIL FILTER. HENRY H. MORETON, Santa Monica, Calif., assignor of one-third to O. B. Englisch, Chicago, Ill., and one-third to Charles F. Craig, Los Angeles, Calif. Filed Oct. 8, 1928. Serial No. 311,249. 3 Claims. (Cl. 210—191.)

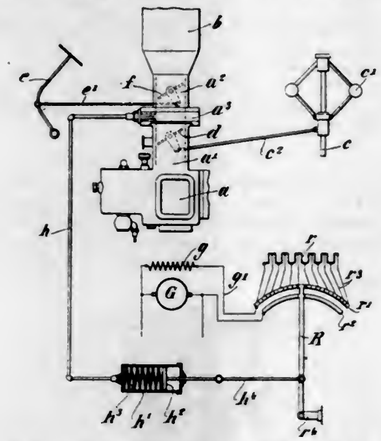
1. A filter of the character described comprising two spaced apart casing members, a plurality of filter elements independent of the casing members and of each other, and a plurality of open spacer frames interposed between the edges of adjacent filter elements, each spacer frame having spacer members at its upper and lower ends, and a partition member located between said spacer members, said spacer and partition members extending transversely the full width of the frame, said partition members cooperating with said filter elements to provide chambers above the partition members on opposite sides of each filter unit, and to also provide a supply compartment below said partition members, alternate partition members having openings therein so as to establish communication between the supply compartment and the chambers between predetermined pairs of said filter elements, the other chambers having outlet openings.

1,806,702. SAW. JOHN E. O'NEILL, Corning, N. Y. Filed Mar. 19, 1929. Serial No. 348,171. 3 Claims. (Cl. 145—34.)



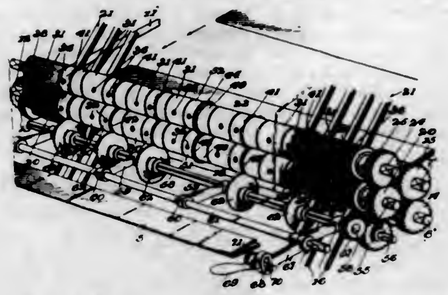
1. A saw frame having a pair of arms, a saw blade having one end removably secured to one of the arms, teeth on the end of the opposite arm, a handle on the toothed arm, a transversely U-shaped socket removably fitted on the toothed arm and adapted for swinging movement toward the handle, teeth on the socket for cooperation with those on the arm for holding the socket in adjusted position on the arm, and means carried by the socket for engagement with the opposite end of the saw blade and holding it in place in the frame.

1,806,703. MANUFACTURE OF CELLULOSE. KARL OTT, Leverkusen-on-the-Rhine, and HERIBERT SCHUESSLER, Cologne-Deutz, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Mar. 5, 1930, Serial No. 433,504, and in Germany Mar. 7, 1929. 9 Claims. (Cl. 92—9.)



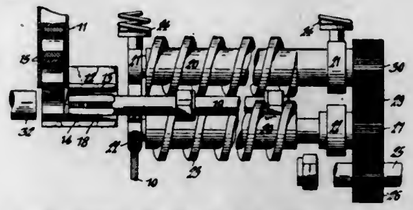
1. Process which comprises reacting with an alcohol upon non-ligneous vegetable matter containing incrusted fibers in the presence of an acid medium.

1,806,704. ICE CREAM CUTTER. CANIO PACE, Coney Island, N. Y. Filed Aug. 5, 1930. Serial No. 473,170. 4 Claims. (Cl. 107—21.)



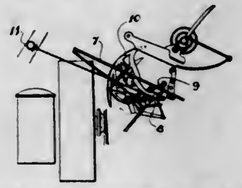
1. An ice cream cutter including a stationary die for receiving a block of ice cream thereon, a removable cutter including a closed frame and blades extending across said frame, a handle whereby the cutter may be placed on the ice cream block, a plurality of stationary guide elements adjacent to the die but spaced therefrom to coact with the frame for guiding the cutter with respect to the die, said die having openings for wholly receiving the blades when the cutter is moved with the blades severing the said block into cakes, said frame being constructed to relatively closely receive the ice cream block when the blades are in said openings, said frame having an opening portion for lateral sliding and removal of the ice cream cakes from the die.

1,806,705. ENGINE SPEED CONTROL BY MANIFOLD DEPRESSION. EDWIN M. POST, Jr., New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 14, 1929. Serial No. 363,044. 1 Claim. (Cl. 290—40.)



A combination comprising an engine having a manifold, a generator driven by said engine, a field winding on said generator, an engine speed responsive device, a manually operated member and a generator field controlling mechanism, a riser section having a throttle valve therein, means to control the valve by the speed responsive device, a second section between the valve and manifold communicating with the field controlling mechanism, a third section having a throttle valve between the second section and the manifold, and means connecting the throttle valve in the third section to the manually operated member.

1,806,706. FOLDING MACHINE. EARL D. RADER, Bedford, N. Y., assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1928. Serial No. 313,363. 23 Claims. (Cl. 270—68.)



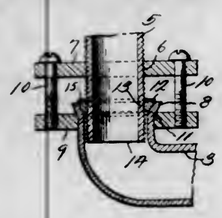
1. In a folding machine, a perforating device, a member having a groove for said perforating device, and a rotary driven element for cleaning said groove.

1,806,707. MACHINE TOOL FOR TAPPING NUT-BLANKS. PAUL C. RAYMOND, Buffalo, N. Y. Filed June 23, 1928. Serial No. 287,763. 2 Claims. (Cl. 10—129.)

1. A nut tapping machine tool, comprising a frame, a tap having a comparatively long stem poriton projecting from one end thereof, a plurality of spirally-fluted feed screws journaled in said frame and in frictional peripheral contact with substantially the overall length of the tap-stem, two of said feed screws being disposed side by side in horizontal alinement and between the upper opposing sides of which the lower side of the tap-stem is supported, the remaining feed screw, being disposed above and centrally between the aforesaid pair of screws and contacting with the upper side of the tap-stem, whereby the latter is supported at three substantially equi-distant points about its axis, and means for yieldingly urging the centrally disposed feed screw into peripheral contact with the tap-stem.

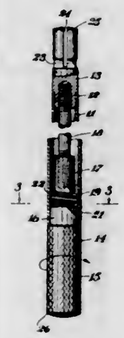
1,806,708. HAND OPERATED BUNDLE TRIP FOR BINDERS. WILLIAM JAMES REX, Holland, Manitoba, Canada. Filed Nov. 5, 1928. Serial No. 317,377. 3 Claims. (Cl. 56—433.)

1. A hand operated mechanism for the weight trip of a binder including a flexible operating member connected thereto and extending beneath the binder deck; said flexible operating member terminating within reach of the binder operator.



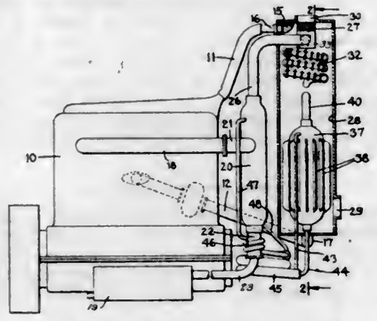
1,806,709. COMBINED WALKING STICK AND CIGAR AND CIGARETTE CARRIER. JOSEPH ROSINSKY, New York, N. Y. Filed Apr. 21, 1930. Serial No. 446,063. 2 Claims. (Cl. 135—47.)

1. The combination, with a hollow walking stick provided with a removable head and shaft, of a spring adapt-



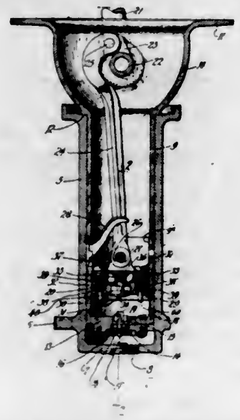
ed to be placed in said walking stick, and a movable plate, one end of said spring being fastened to the tip of said walking stick, the other end of said spring beign fastened to the underside of said plate, a knob connected to the upper side of said plate to said said plate against the tension of said spring.

1,806,710. PIPE JOINT. CHARLES W. ROSS, Jr., New Orleans, La. Filed June 22, 1928. Serial No. 287,421. 4 Claims. (Cl. 285—130.)



1. The combination with a bath waste pipe, a trap lead fitting having a portion axially related to the waste pipe and into which the waste pipe extends, said waste pipe being threaded, said axial portion of the trap lead fitting having a flange axially movable thereon and provided with a bevelled edge, said axial portion of the trap lead fitting being flared and in the path of the bevelled edge of the axially movable flange, a bevelled ring threaded on the waste pipe and disposed within the flared portion of the trap lead fitting, a flange threaded on the waste pipe above the ring and bolts extending through both of said flanges and forming means whereby the bevelled ring is maintained in water tight engagement within the flared portion of the trap lead fitting.

1,806,711. CURLING ROD. MORRIS SALZMAN, Brooklyn, N. Y., assignor to Universal Permanent Wave Machine Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1928. Serial No. 304,374. 3 Claims. (Cl. 132—34.)



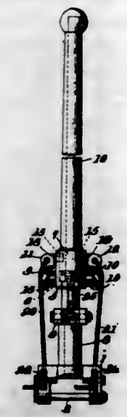
1. A curling rod for use in curling hair in the art of permanent hair waving, comprising an outer tube having an end piece rotatably mounted at one end and a turning head rotatably mounted at the other end, and means within the tube connecting the end piece and head to form a unit mounted for rotary movement relative to the tube, one way clutching means for permitting a rotation of the unit in one direction and restraining such rotation in the opposite direction, said means including a spirally wound spring with its turns having a frictional fit in the tube and having one end secured to the unit.

1,806,712. COOLING SYSTEM FOR ENGINES. JOSEPH SCHULMAN, Brooklyn, N. Y. Filed June 17, 1930. Serial No. 461,684. 9 Claims. (Cl. 123—170.)

1. A cooling system for an internal combustion engine comprising an engine cooling fluid circulating system, a refrigerating system for cooling said fluid of a type adapted to be operated by energy supplied thereto in the form of heat, and means for supplying heat thereto from the waste heat of the engine.

1,806,713. HYDRAULIC RAISING AND LOWERING MECHANISM FOR CHAIR SEATS. ARTHUR R. SCHWARZKOPF, Chicago, Ill., assignor to Theo. A. Kochs Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1928. Serial No. 309,417. 6 Claims. (Cl. 138—9.)

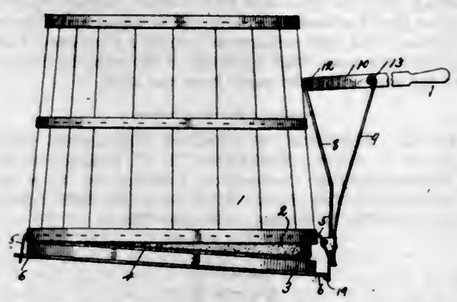
1. In hydraulic raising and lowering mechanism, the combination of a cylinder closed at its lower end, a cylindrical stem therein closed at its lower end and formed with a valve controlled port in said lower end, a reciprocatory valved pump bucket in said cylindrical stem having cushioned limiting means disposed laterally of the valve of the pump bucket and adapted to impinge against the head of the stem during the final portion of the down stroke of the pump bucket to retard movement of said bucket toward said head and valve controlled port, and means for reciprocating the pump bucket.



1,806,714. MANUFACTURE OF 2-AMINONAPHTHALENE-3-CARBOXYLIC ACID. HUGO SCHWEITZER, Wiesdorf-on-the-Rhine, Germany, assignor to General Aniline Works Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 5, 1929, Serial No. 352,890, and in Germany Feb. 14, 1927. 14 Claims. (Cl. 260—109.)

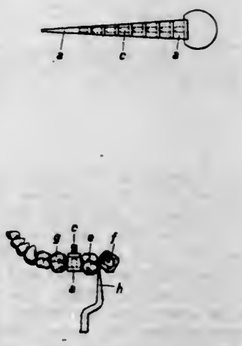
1. A process of preparing 2-amino-naphthalene-3-carboxylic acid, which process comprises heating a compound of the group consisting of 2-hydroxynaphthalene-3-carboxylic acid and the zinc salt thereof with ammonium chloride and a compound of the group consisting of zinc oxide and zinc carbonate at a temperature of from about 150 to 250° C. for several hours.

1,806,715. CRYSTALLINE ORGANIC COMPOUNDS. CHRISTIAN J. SCHWINDT, Pittsburgh, Pa., assignor, by mesne assignments, to The Selden Research & Engineering Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 27, 1930. Serial No. 484,933. 12 Claims. (Cl. 23—245.)



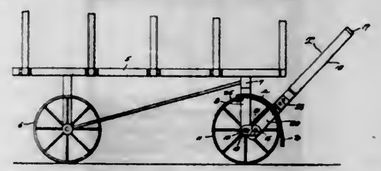
1. As a new chemical product, felted crystalline organic material having consolidated top and bottom surfaces.

1,806,716. DETACHABLE JOY STICK FOR AEROPLANES. CHARLES FRANKLIN SEATON, Elyria, Ohio. Filed Oct. 8, 1928. Serial No. 311,019. 5 Claims. (Cl. 244—29.)



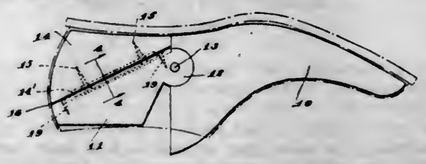
1. A joy stick for aeroplanes formed of two sections, one section having a slidably mounted sleeve to receive the upper section, dogs carried by the sleeve engaging the upper section and cables connected to said dogs for initially moving said dogs out of engagement with the upper section and finally removing said sleeve from over the upper section.

1,806,717. FRUIT BASKET TOP APPLYING TOOL. SAMUEL H. SHELLER, Marion, Pa. Filed Sept. 16, 1929. Serial No. 392,885. 6 Claims. (Cl. 81—3.)



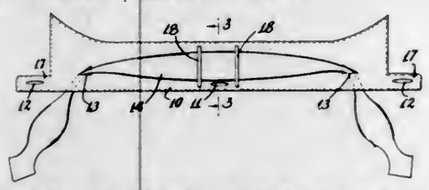
1. A tool for applying the cover to a fruit basket having wire loops or handles on the basket and projections on the cover, comprising a member adapted to exert a closing action on the cover, a second member cooperating therewith adapted to force the wire loops over a projection on the cover, said members being relatively movable and means for relatively shifting said members.

1,806,718. SECTIONAL WEDGE. FRITZ SPANIER, Karlsruhe, Germany. Filed June 28, 1928, Serial No. 288,969, and in Germany Aug. 30, 1927. 2 Claims. (Cl. 82—10.)



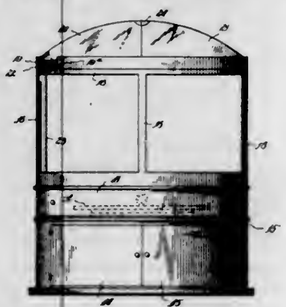
1. A device for drawing teeth by means of an elevator or the like, consisting of a sectional wedge, the thickness of which increases continuously from the narrowest to the greatest width of tooth, the sections of said wedge being adapted to be separated so that after the assembled wedge is inserted with the section of corresponding width into a gap between teeth the sections not needed may be removed.

1,806,719. COMBINATION TONGUE AND BRAKE. EDWARD D. SULLIVAN, Klamath Falls, Oreg. Filed Jan. 4, 1929. Serial No. 330,390. 4 Claims. (Cl. 188—119.)



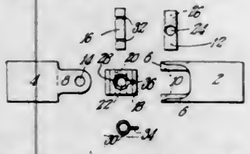
4. In combination with a front wheeled truck including an axle and a pair of wheels, plates arranged on the axle to project forwardly thereof and in two pairs one adjacent each wheel, a pair of arms having extensions formed with slotted extremities, bolts passing through the plates and the extremities, one extremity located between the pair of plates, a tongue on said arm, brackets on said arms, brake segments on said brackets for engaging the wheels when the tongue is in an upwardly and forwardly inclined position with the extremities engaging under the axle and further engage the wheels when the tongue is in the downwardly and forwardly inclined position and the extremities are free from the axle, said segments each including upper relatively large arcuate portions and lower relatively small arcuate portions.

1,806,720. LAST. ROBERT L. STANLEY, Richmond, Me. Filed July 18, 1928. Serial No. 293,666. 4 Claims. (Cl. 12—136.)



1. In combination with a divided last, a combined shank and toe piece, a back heel piece obliquely and transversely slidable on a central member hinged to said shank and toe piece.

1,806,721. INVISIBLE TIE COLLAR. MAXWELL TAUBEN, Brooklyn, N. Y. Filed Apr. 23, 1930. Serial No. 446,506. 3 Claims. (Cl. 2—137.)



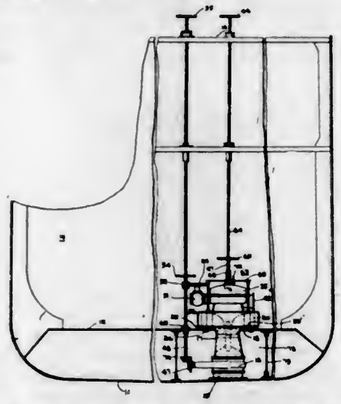
1. A strip of material for being bent around one's neck and formed with a buttonhole at the center for the rear collar button of one's shirt and with buttonholes at the ends for the front collar button of one's shirt and with apertures near the ends for the passage of the ends of a necktie positioned within said collar, and means for holding said necktie within said collar, so as to support the tie below said buttonhole and accommodate ties of various widths and ones relatively wide when compared with the width of said collar, comprising a tubular stiff element attached upon the rear of said collar and extended downwards, a strip extended out from the bottom of said stiff element and detachably secured at its free end near the top edge of said collar.

1,806,722. ADVERTISING DEVICE. ELAINE VON DER LIPPE-LIPSKI, Washington, D. C. Filed Apr. 20, 1929. Serial No. 356,840. 5 Claims. (Cl. 40—76.)

1. An advertising device or changeable sign exhibitor comprising a casing in which the advertisement is displayed, a support at an elevation above the advertisement to leave openings for viewing said advertisement from the sides of the exhibitor, colored glasses rotatably mounted on said support, and means for revolving said glasses.

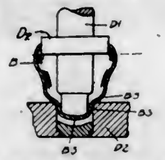
1,806,723. UNIVERSAL JOINT. EUSEBE TETRAULT, Ludlow, Mass. Filed May 3, 1930. Serial No. 449,443. 3 Claims. (Cl. 64—102.)

1. A universal joint structure comprising, a central block member, forked members having pairs of lugs at opposite sides of said block, a pivot pin for connecting one pair of lugs to said block, a pivot locking pin for connecting the other pair of lugs to said block and for holding the pivot pin against movement, a locking member associated with said pivot locking pin and block which is provided with a telltale portion extending outwardly from one of said lugs whereby the presence of the locking member may be determined.



1,806,724. GUN MOUNT FOR AIRCRAFT. WILLIAM WAIT, Jr., Garden City, N. Y., assignor to Chance M. Vought, Great Neck, N. Y. Filed Feb. 25, 1929. Serial No. 342,363. 18 Claims. (Cl. 89—40.)

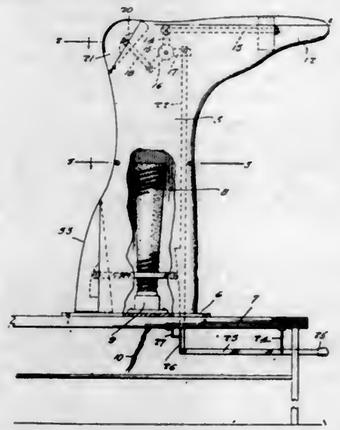
8. A gun mount including a parallelogram support for moving the gun in the plane of the parallelogram and tension means fastened to the parallelogram and disposed along a diagonal thereof to act in opposition to the weight of the gun.



12. A gun mount including a parallelogram support for adjustments in the plane of the support and means for varying the friction of said parallelogram support.

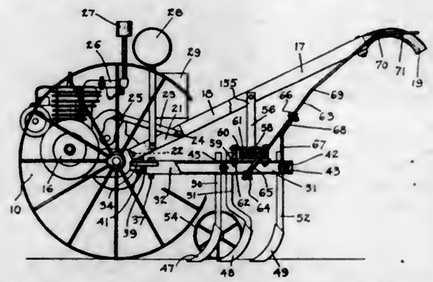
1,806,725. MARINE PUMPING SYSTEM. JOHN Q. WALTON, Washington, D. C., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 28, 1930. Serial No. 439,798. 14 Claims. (Cl. 114—183.)

1. The combination with a ship's structure embodying a shell and an inner plating structure spaced from the shell, of a propeller pump disposed, at least in part, between the inner plating structure and the shell, said pump having its axis of revolution extending transversely of the inner plating structure and the shell and having an inlet connecting with the inner side of the inner plating structure and an outlet extending axially of the pump and disposed adjacent to the shell, and means including a sea chest and a sea valve for connecting the outlet of the pump to the shell and for supporting the pump from the shell.



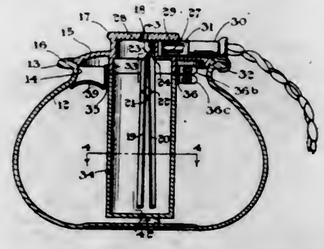
1,806,726. METHOD OF MAKING INSULATOR CAPS. FLOYD D. WENN, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Sept. 26, 1928. Serial No. 308,375. 3 Claims. (Cl. 29—155.5.)

1. The process of stamping from a sheet metal blank, a supportable cap of the undercut socket type adapted to



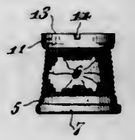
mount on an insulator neck therein, said process including forming said blank into a cup shape comprising a tubular skirt portion of which one end thereof is initially closed by a transverse dome wall portion, and thereupon, further drawing the central region of said dome into a stepped crown plate and during which operation the overall length of said skirt is axially contracted by bending inwardly the dome end thereof to contribute metal for forming up the drawn crown portion.

1,806,727. ELECTRIC DRIER. LILLIE G. WHITE, Boston, Mass, assignor of one-half to Frank W. Ziniti, Boston, Mass. Filed May 10, 1928. Serial No. 276,667. 3 Claims. (Cl. 223—17.)



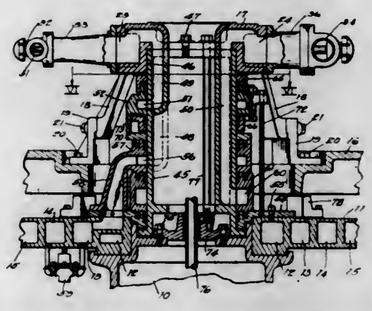
1. In combination, a hollow stocking form, a base for securing the same in inverted position, a heating element arranged within the form, toe, heel and calf sections adjustably carried by the form and means extending through the base operable outwardly thereof and operatively connected to each of said sections for simultaneously adjusting the sections.

1,806,728. DRAWBAR ATTACHMENT. GUY L. WILLITS, Minneapolis, Minn. Filed Nov. 9, 1927. Serial No. 232,045. 18 Claims. (Cl. 97—48.)



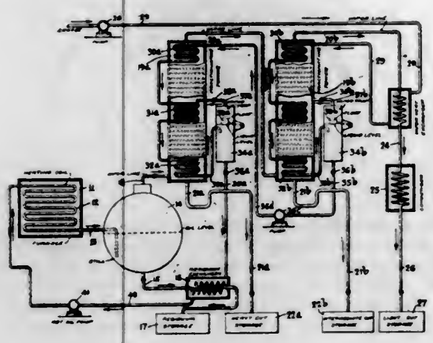
1. In combination with the frame and steering handles of a tractor, a pair of spaced parallel drawbars pivoted to said frame and extending rearwardly thereof, a support secured to said handles and extending downwardly toward said drawbars, a rail formed on said support for cooperation with said drawbars for holding the same in proper elevation relative to said handles, said drawbars being shiftable transversely relative to said rail, a drawbar beam swingably mounted in said drawbars and adapted to be shifted in parallel relation from one side to the other upon the swinging of said drawbars, and means supported from said handles for shifting said drawbar beam from one side to the other.

1,806,729. HUMIDIFIER. ALLAN A. AITKEN, Montreal, Quebec, Canada. Filed Nov. 21, 1929. Serial No. 408,910. 12 Claims. (Cl. 219—40.)



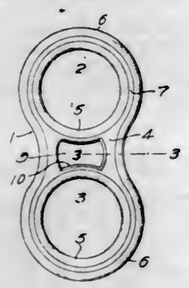
1. A humidifier comprising a water container, a removable cover closing a filling opening formed in said container, electric steam generating means positioned in said container and including suitable terminals carried by the cover, a plug engageable with said terminals for connecting the steam generating means to a suitable source of current, and co-operating elements carried by said cover and plug for engaging the container to prevent removal of the cover when the plug is applied to said terminals.

1,806,730. THIMBLE. MAURICE ALLAND, Atlantic City, N. J. Filed Jan. 20, 1930. Serial No. 421,960. 3 Claims. (Cl. 223—51.)



1. A sewing thimble, in combination with an annular ring of magnetizable metal secured thereto and provided with transversely extending reduced portions to define the limits of its magnetic poles.

1,806,731. DISTRIBUTING HEAD FOR GLASSWARE FORMING MACHINES. RUSSELL G. ALLEN, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed July 30, 1928. Serial No. 296,146. 5 Claims. (Cl. 49—1.)



1. A distributing head comprising, in combination, a stationary drum, a distributing ring surrounding the drum and having an annular passageway, said drum having a port opening into said passageway, means for rotating said ring, packing glands above and below said ring, and means for clamping said packing glands to the ring for rotation therewith.

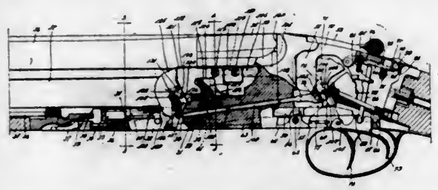
1,806,732. PROCESS OF DISTILLATION. OTTO BEHIMER, Chicago, Ill., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 10, 1928. Serial No. 253,256. 2 Claims. (Cl. 196—134.)

1. The process of distilling hydrocarbon oil which comprises maintaining a body of oil in a still forming a portion of a distillation unit, maintaining the still under conditions of distillation, passing vapors evolved from the still through a fractionating tower, heating the oil charge by exchange of heat from the vapors passing through said fractionating tower but not in direct contact therewith, separating the vapors evolved from the oil charge thus heated and introducing them into the fractionating tower at an intermediate point, and heating the remaining unvaporized portion of the charge to a vaporizing temperature before it is introduced into the still.

1,806,733. LINK. THOMAS W. BELL and THOMAS C. ROGERS, Parkersburg, W. Va., assignors to Acme Fishing Tool Co., Parkersburg, W. Va., a Corporation of West Virginia. Filed June 29, 1928. Serial No. 289,318. 4 Claims. (Cl. 59—84.)

3. A link used in well drilling having an eye at each end thereof, and an elongated bar hand hold between the eyes.

1,806,734. LUBRICATING OIL. HARRY T. BENNETT, LE ROY G. STORY, and HOWARD B. BECKLEY, Tulsa, Okla.; said Story assignor to Josiah Chatfield, Cleveland, Ohio. Filed Mar. 29, 1926. Serial No. 98,380. 4 Claims. (Cl. 87—9.)

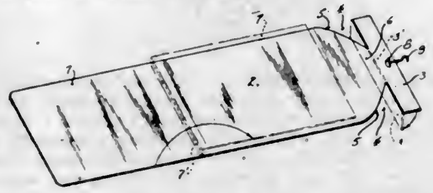


1. A lubricating oil having a pour point less than 20° F. comprising about 95.9 percent 280 Saybolt viscosity at 100° F. mineral lubricating oil; about 4 percent neat's-foot oil, and about .1 percent aluminum stearate.

1,806,735. LUBRICATING OIL AND METHOD OF MAKING THE SAME. HARRY T. BENNETT and LE ROY G. STORY, Tulsa, Okla.; said Story assignor to Josiah Chatfield, Cleveland, Ohio. Filed Oct. 24, 1927. Serial No. 228,487. 16 Claims. (Cl. 87—9.)

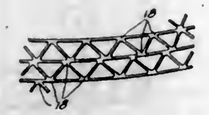
13. A stable low pour point wax-containing lubricating oil comprising a mineral lubricating oil, a minute quantity of soap in proportions not less than 0.05% nor more than 0.3% whereby a pour point is obtained lower than possessed by the same mineral lubricating oil without the addition of said soap, and a stabilizer whereby said low pour point is maintained, the quantity of soap being sufficiently small to produce the low pour point without materially affecting the viscosity of the oil.

14. A lubricating composition comprising a mineral lubricating oil having a relatively high pour point combined with aluminum stearate whereby the pour point of the oil is reduced to less than 20° F., the weight of the aluminum stearate being less than .3 percent of the weight of the mass.



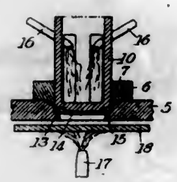
1,806,736. FIREARM. JOHN M. BROWNING, deceased, Ogden, Utah, by John Browning, administrator, Ogden, Utah, assignor to J. M. & M. S. Browning Company, Ogden, Utah, a Corporation of Utah. Filed Feb. 24, 1928. Serial No. 256,754. 26 Claims. (Cl. 42—48.)

1. In a firearm of the over and under type, a receiver, a barrel section pivoted thereto and having over and under barrels, an extractor on said barrel section, firing mechanism on said receiver having a hammer, means for cocking said hammer during the operation of opening the firearm, an actuator for said extractor on said barrel section, a connecting rod on said receiver between said hammer and actuator and frictionally held in all of its positions, and means on said hammer for positively moving said rod into operative relation to said actuator during the operation of cocking the hammer upon breaking the gun.



13. In a firearm of the over and under type, a receiver, a barrel section having over and under barrels, an extractor on said barrel section, a piece on said barrel section separate from said extractor, means for actuating said extractor through said piece to eject a shell, and means acting through said piece for moving said actuating means to operative position.

1,806,737. GARMENT BOX. GENEVIEVE BRUER, San Francisco, Calif. Filed Dec. 10, 1928. Serial No. 324,938. 2 Claims. (Cl. 206—7.)

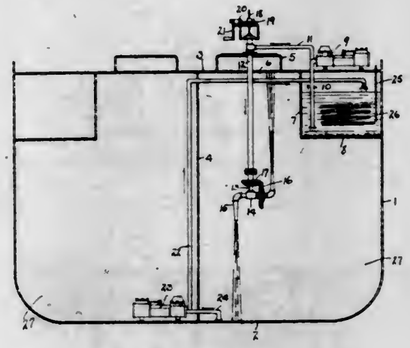


1. A garment holder adapted for free positioning in a box comprising a flat member having notches in its side edges near one end adapted to receive the collar of the garment, the end portion of said member above said notches extending the full width of the box and being turned downwardly to rest upon the bottom thereof.

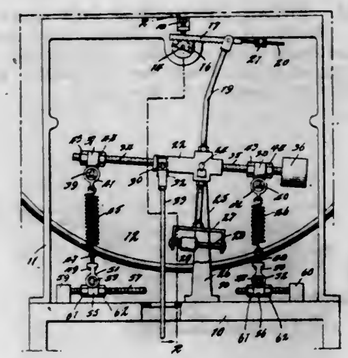
1,806,738. CHEMICO-THERMAL WELDING PROCESS. BRUCE BURNS and HOWARD B. LEWIS, Los Angeles, and RUSSELL M. OTIS, Alhambra, Calif., assignors to Hughes Development Company, Ltd., Los Angeles, Calif., a Corporation of Delaware. Filed Jan. 2, 1929. Serial No. 329,801. 16 Claims. (Cl. 113—112.)

1. A chemico-thermal vapor process of welding together substantially contacting metallic objects, which comprises: heating said objects in an enclosure containing a compound of a welding metal or metalloid, to such temperature that said compound is vaporized and the vaporized compound is decomposed to deposit its metallic radical upon said objects and free its non-metallic radical, said deposited metallic radical going into solid solution to alloy with said objects and form the weld.

1,806,739. BOTTLE CLOSURE AND ITS MANUFACTURE. HERMAN F. BUSCH, Millvale, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 18, 1926. Serial No. 129,944. 9 Claims. (Cl. 113—80.)



1. A bottle closure comprising a metal cap and a resilient compressed artificial cork liner formed in situ and permanently set therein, the central portion of the liner adapted to register with the opening in a bottle mouth, being more highly compressed than the edge portion adapted to engage the bottle.

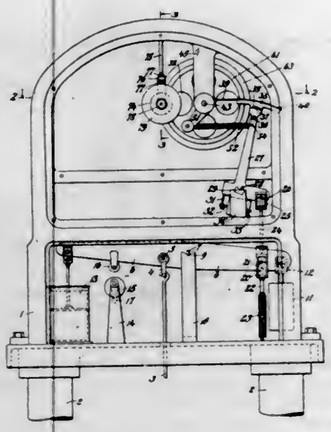


7. The process of lining bottle closures comprising placing in a metal closure cap an artificial cork mix containing cork granules and a glycerine-gelatine formaldehyde-coagulant binder which is capable of rapidly setting under heat, compressing the cork mix in the cap to form a liner therein, and applying heat at a temperature of about 400° Fahrenheit for not over about one minute, whereby a permanently compressed artificial cork liner is quickly formed in situ in the metal cap and cemented thereto by the heat-hardened binder.

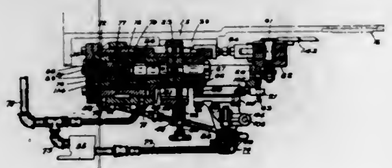
1,806,740. METHOD OF CLEANING, SCALING, AND GAS FREEING BULK CARGO TANKS OF TANK VESSELS. ARTHUR B. BUTTERWORTH, Port Arthur, Tex., assignor, by mesne assignments, to Butterworth System, Inc., Wilmington, Del., a Corporation of Delaware. Filed Oct. 11, 1927. Serial No. 225,592. 5 Claims. (Cl. 141—1.)

1. A process of cleaning the interiors of tanks of cargo-vessels and the like comprising heating a cleaning liquid, directing the said liquid in streams with force against the sides and the bottom walls of said tanks, and simultaneously removing the used liquid at a rate to maintain the bottom walls free of liquid and in condition to be cleaned by the same operation.

1,806,741. SPRING SCALE. HUGH M. CAMERON, Woodhaven, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1928. Serial No. 247,055. 6 Claims. (Cl. 265—68.)



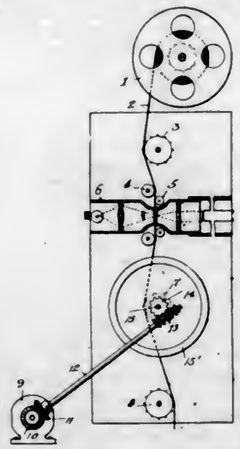
1. A scale mechanism comprising an indicating means, a lever system, means connecting said lever system and indicating means to actuate said indicating means, means for applying a load to the system, a spring attached to said lever system adapted to lengthen upon application of the load, a second spring attached to said lever system adapted to shorten upon application of the load, said second spring being lengthened sufficiently at the no load position by the first spring having been pulled from its normal position against the action of said second spring so that said second spring still has a tendency to shorten at the full load position, and means for shifting said springs toward and from the fulcrum of said lever system.



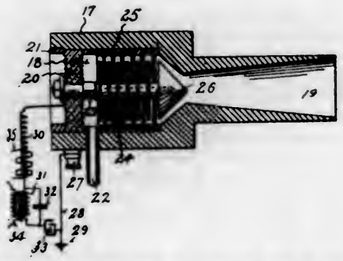
1,806,742. PROJECTING SCALE. HUGH M. CAMERON, Woodhaven, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1929. Serial No. 387,605. 6 Claims. (Cl. 265—68.)

1. In a projecting scale, a member adapted to be moved proportionately to the load applied to the scale, a metal

circular dial having weight indicia perforated therein, means for turning said dial, means fastened to said member and adapted to control the turning of said dial, a screen, and means for projecting the weight indicia on the screen.



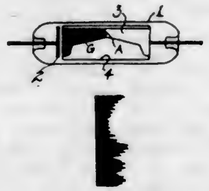
1,806,743. SHEAR MECHANISM FOR GLASS FEEDERS. ALBERT N. CRAMER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 30, 1927. Serial No. 236,653. 10 Claims. (Cl. 49—14.)



2. A shear mechanism including a supporting frame, an air motor thereon having a reciprocating differential piston therein, a sleeve on the piston extending forwardly through one end of the motor cylinder, shears mounted on one end of the frame, adjustable connection between the shears and the sleeve carried by the piston, means to constantly apply air pressure to one side of the piston, means including a reversing valve for periodically applying air pressure to the opposite side of the piston, and automatic means directly controlled by reciprocation of the piston to reverse said air pressure control valve at regular intervals.

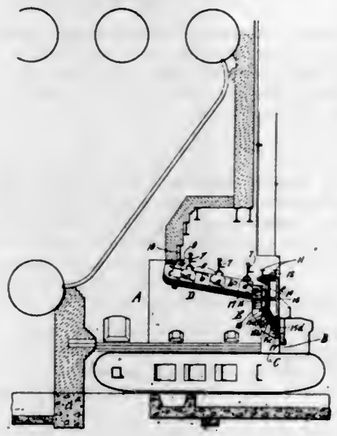
1,806,744. SILENT DRIVE MECHANISM FOR TALKING MOTION PICTURE MACHINES. LEE DE FOREST, New York, N. Y., assignor, by mesne assignments, to General Talking Pictures Corporation, a Corporation of Delaware. Filed May 24, 1924. Serial No. 715,499. 3 Claims. (Cl. 88—16.2.)

1. In a sound and motion picture machine employing a film the combination with a phonofilm attachment of a plurality of film feeding sprockets including a feed sprocket for drawing the film through said phonofilm attachment and means for driving the feed sprocket for drawing the film through said phonofilm attachment independently of the other feed sprockets.



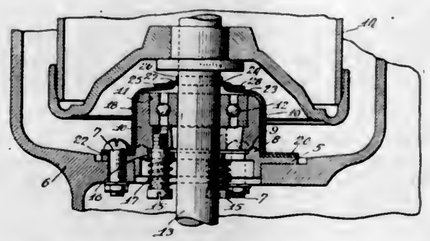
1,806,745. SOUND PRODUCING DEVICE. LEE DE FOREST, New York, N. Y., assignor, by mesne assignments, to General Talking Pictures Corporation, a Corporation of Delaware. Filed Dec. 10, 1927. Serial No. 239,018. 3 Claims. (Cl. 179—113.)

2. In a sound reproducing device employing a gas modulated in accordance with voice currents, the combination with separated porous electrodes and means for providing a flow of gas therethrough of means for subjecting the electrodes to electric forces and means for varying the electric forces by and in accordance with the voice currents.



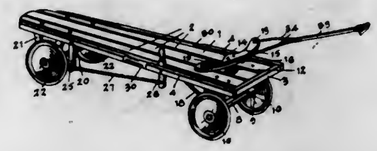
1,806,746. LUMINOUS DISCHARGE DEVICE. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 8, 1928. Serial No. 298,210. 11 Claims. (Cl. 179—100.3.)

10. In the method of making photographic sound records with a luminous gas discharge device connected to the output of an amplifier which itself may produce distortion, the steps of varying the luminous discharge of the device independent of any distortion produced by said elements in a degree either less than or greater than the degree proportional to the varying sound currents causing the variation.



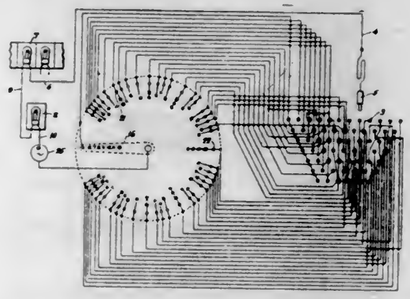
11. A sound recording glow light of the type described comprising an evacuated vessel, an anode and a cathode in said vessel, said cathode varying in width from its center towards both ends.

1,806,747. FURNACE STRUCTURE. BRADLEY DOBIE, Ridgewood, N. J., assignor, by mesne assignments, to American Arch Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 10, 1922. Serial No. 580,856. 8 Claims. (Cl. 110—99.)



1. An ignition arch structure for furnace chambers including in combination with an arch nose, a plurality of supporting members and a plurality of bricks arranged vertically to form a vertical wall extension, each member supporting an approximately upright tier of vertically alined superimposed bricks and having a plurality of seats, each of which extends between adjacent faces of bricks of the same tier and supports a plurality of the bricks of the tier, means for supporting said supporting members and means for securing the bricks to the respective supporting member as against lateral displacement and in position to shield the supporting members from the furnace heat.

1,806,748. BEARING PROTECTOR, JAMES MCCOSH EDWARDS, Waterloo, Iowa, assignor to Iowa Dairy Separator Company, a Corporation of Iowa. Filed Mar. 24, 1927. Serial No. 177,909. 2 Claims. (Cl. 308—134.)



2. A deflector shield formed from an integral piece of sheet metal comprising a vertically disposed annular sleeve portion adapted to be frictionally attached around a vertically rotatable shaft, a radially disposed outwardly extending downwardly inclined central portion surrounding said sleeve portion, and a radially disposed outwardly extending downwardly inclined marginal portion surrounding said central portion, the inclined plane of said marginal portion being offset downwardly and extending substantially parallel with respect to the inclined plane of said central portion.

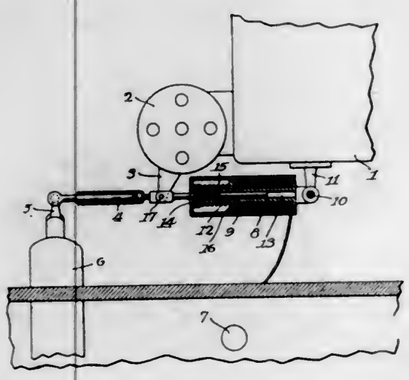
1,806,749. TOY WAGON. LAURENCE D. ELLIS, Toledo, Ohio. Filed Apr. 20, 1929. Serial No. 356,747. 2 Claims. (Cl. 280—87.5.)

1. In a toy wagon, a pair of trucks, a plurality of elastic strips supported on the trucks and forming the wagon top, the rear truck secured to the rear end of the top, means for pivotally connecting the forward truck to the forward end of the top, a cross bar connected to the forward truck for moving the forward truck for guiding the wagon, a tongue having a Y, the inner ends of the arms of the Y turned inwardly, and a pair of removable elastic split pins for receiving the inturned ends and insertible in the cross bar.

1,806,750. INDICATOR. GEORGE C. FAIRBAIRN, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 15, 1927. Serial No. 233,370. 7 Claims. (Cl. 161—3.)

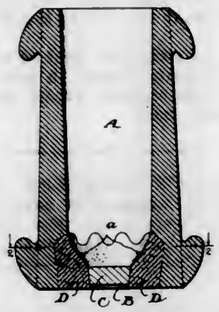
7. In a device of the class described a plurality of electrical indicators, a plurality of contact elements, a constantly and uniformly movable member co-operating with said contacts to successively provide electrical connections therethrough, a plurality of electrical connection-forming devices arranged in groups, each group having a different number of said devices and the devices of each group being connected respectively with a separate corresponding series of equally spaced contact elements, and means constantly in circuit with said indicators adapted to connect a desired number of said indicators to a selected group having a corresponding number of said devices.

1,806,751. DISHWASHING MACHINE. SYLVANUS W. FISK, Los Angeles, Calif. Filed Mar. 22, 1929. Serial No. 349,011. 3 Claims. (Cl. 299—63.)



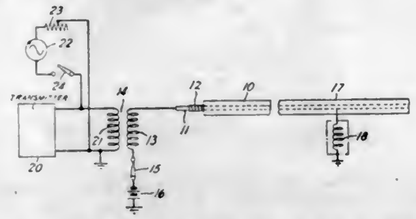
1. A rotator for a dish washing machine including a shaft having its ends journaled in the end walls of the

machine, disks on said shaft, washers on said shaft for spacing the end disks from the end walls, radial arms arranged to space said disks apart, scoops secured to said



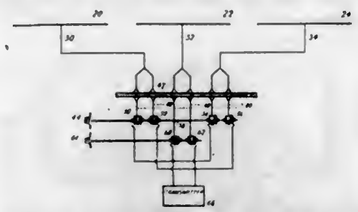
disks so as to pick up charges of liquid from the bottom of said washing machine and move it into position to be thrown by said radial arms when said shaft is rotated, and means for rotating said shaft.

1,806,752. AUTOMATIC SPARK RETARDER. RAY H. FLOYD, Chicago, Ill., assignor of forty-nine per cent to Irvin W. Powell and Irene E. Powell. Filed July 2, 1928. Serial No. 289,674. 2 Claims. (Cl. 123—186.)



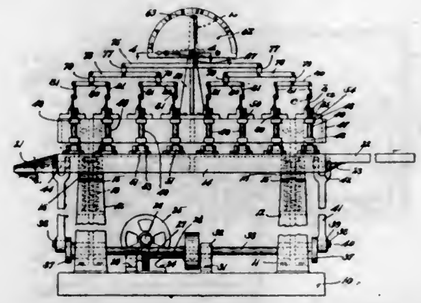
1. In a motor vehicle, the combination of a timer controller member, a timer subject to manual control by said member, a starter member, an electromagnet solenoid having an energizing circuit controlled by said starter member, whereby the electromagnet is automatically energized when the starter is energized, an endwise movable armature core for said magnet, means whereby said electromagnet solenoid and core have pivotal support and controlling connection with said timer, and a helical spring for said armature core, forming with said magnet and core a movably supported unit in which the spring and solenoid and core have a common longitudinal axis, whereby to automatically restore said core to normal position in said magnet, after the engine is started, the energizing of said magnet serving to move the timer to retarding position, and said spring serving automatically to advance the timer after the engine is started.

1,806,753. INGOT MOLD. EMIL GATHMANN, Baltimore, Md. Filed Sept. 15, 1926. Serial No. 135,586. 5 Claims. (Cl. 22—139.)



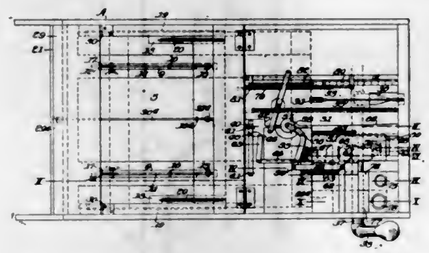
1. An ingot mold having a vertical ingot-forming chamber, the inner chamber side walls of which at the lower portion of the mold are formed of an alloyed metal more heat-resisting than the remaining mold walls to the cutting action of liquid steel.

1,806,754. CABLE SIGNALING SYSTEM. JOHN J. GILBERT, Douglaston, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 25, 1929. Serial No. 365,936. 12 Claims. (Cl. 178—63.)



1. A method of transmitting signals over a long cable loaded with a magnetic material which comprises simultaneously impressing upon a terminal section of said cable a series of signals and a unidirectional current to improve the magnetic characteristics of said magnetic material in said section and confining said unidirectional current to said section to limit the voltage necessary to impress said unidirectional current.

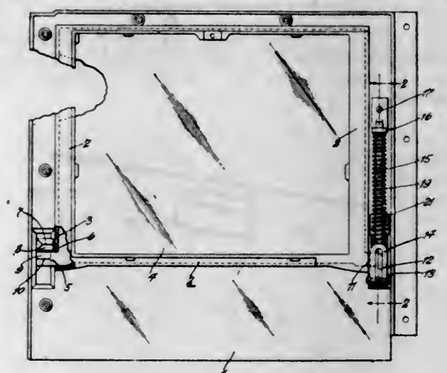
1,806,755. ANTENNA. CLARENCE W. HANSELL, Rocky Point, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 28, 1927, Serial No. 229,294. 10 Claims. (Cl. 250—33.)



2. A directive antenna comprising a plurality of radiating sections located substantially in line and relatively in broadside, a source of transmission energy, means to feed the sections from the source substantially cophasially, and means to slightly relatively vary the phase relations between the sections in order to warp the directivity of the antenna.

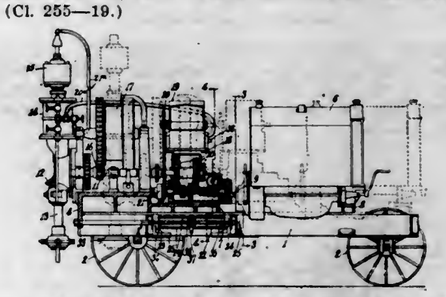
1,806,756. LEATHER GRADING MACHINE. DANA E. HARDING, Arlington, Mass., assignor, by mesne assignments, to Harding-Walcott Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 29, 1924. Serial No. 740,474. 8 Claims. (Cl. 33—147.)

4. An improved grading machine comprising a base, a table yieldingly mounted on said base, a plurality of independently and longitudinally movable shafts mounted above said table, means for moving said table alternately toward and from said shafts, means for causing an appreciable slowing down in the vertical movement of said table at the extreme limits of travel thereof, averaging means associated with said vertically movable shafts for averaging the movement of all of said shafts, and means associated with said averaging means for visually indicating said average movement.



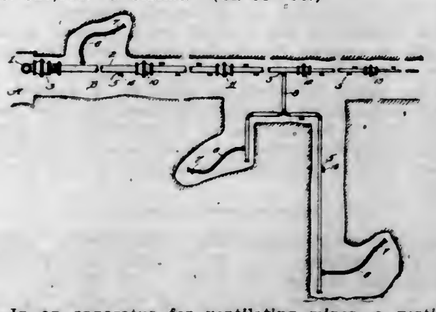
1,806,757. COIN CONTROL MECHANISM FOR VENDING MACHINES OR THE LIKE. JOHN A. HEBB, Hopwood, Pa. Filed Jan. 27, 1930. Serial No. 423,626. 10 Claims. (Cl. 194—69.)

1. In a coin control mechanism of the character described, the combination with commodity shifting means adapted to be actuated by the operator, of an interfering member therefor, a coin control plate movable by the shifting means, a coin slide operatively connected with the interfering member for receiving a predetermined number of coins, one of said coins being adapted to engage the coin control plate to impart a movement to the coin slide for retraction of the interfering member, by a movement of the shifting means, and means for returning the plate and slide to their normal positions by a return movement of the shifting means, whereby the interfering member is returned to interfering position.



1,806,758. OVEN DOOR CONSTRUCTION. HERMAN HERRENBRUCK, Belleville, Ill., assignor to Orbon Stove Co., Belleville, Ill., a Corporation of Delaware. Original application filed Aug. 3, 1928, Serial No. 297,178. Divided and this application filed Apr. 8, 1929. Serial No. 353,455. 4 Claims. (Cl. 126—191.)

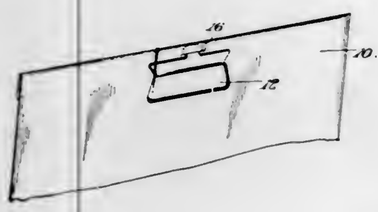
4. In a stove, an oven wall having an opening therethrough, a rigid door frame around said opening and having an opening through one side thereof at one of the lower corners of said frame, a panel for closing said opening and having a thickened portion at its lower end seated against the outer surface of the wall, a fastener extending outwardly through said wall and terminating in and being enclosed



by said thickened portion of said panel and fastening said panel in position, and a projection on the upper end of said panel extending against the inner surface of said wall and cooperating with said fastener to hold said panel rigidly in position.

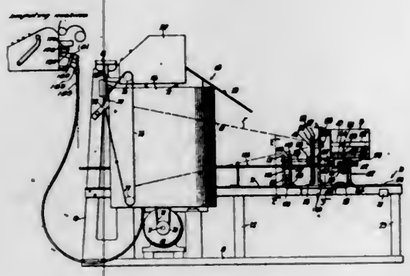
1,806,759. DRILLING APPARATUS. HARRY C. JOHANSEN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 26, 1927. Serial No. 171,345. 16 Claims. (Cl. 255—19.)

1. In a drilling apparatus, a wheeled truck frame, a frame slidably mounted thereon, a driving engine on said sliding frame, a rotary drill on said sliding frame having drill rod feeding mechanism and driven by said engine, and fluid pressure operated means driven by said engine for shifting said sliding frame relatively to said truck frame.



1,806,760. MINE VENTILATING APPARATUS. LOUIS KESSLER, Chicago, Ill. Filed Dec. 21, 1928. Serial No. 327,533. 2 Claims. (Cl. 98—50.)

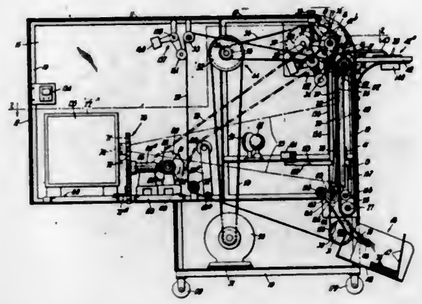
1. In an apparatus for ventilating mines, a vertical discharge flue, a long lateral collecting pipe connected



to the flue, said pipe decreasing in size as the distance from the flue increases, and a plurality of blowers arranged in and distributed along said pipe, said blowers decreasing in size as the distance from the flue increases.

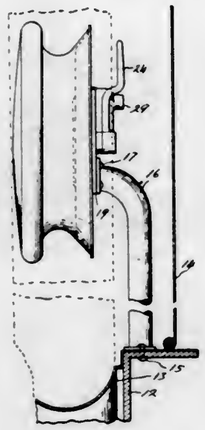
1,806,761. CARRY BAG. CHARLES P. KLEEBAUER, Cohoes, and ROBERT M. LACKEY, Waterford, N. Y. Filed July 8, 1927. Serial No. 204,189. 1 Claim. (Cl. 229—68.)

A bag comprising a back portion and a front portion, at least one of said portions being adapted for folding along a line near the edge thereof, said portions having registered openings therethrough, a member projecting from the edge of the foldable portion and adapted to be passed through the registered openings when said portion is folded, and a lug associated with said member and adapted to enter a slot in one of said portions when the member is inserted through the openings, said member having greater width than said openings.



1,806,762. PHOTOGRAPHING APPARATUS. GEORGE LEWIS MCCARTHY, Rye, and ABRAHAM NOVICK, Flushing, N. Y.; said Novick assignor to said McCarthy. Filed June 28, 1926. Serial No. 118,890. 17 Claims. (Cl. 88—24.)

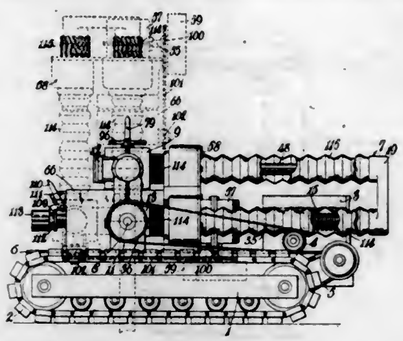
1. The combination of a camera, document feeding means normally at rest, a power drive, a clutch operable at will to connect the feeding means with the power drive to feed the documents into the focal range of the camera, means automatically effective to operate the clutch to disconnect the conveying means from the power drive after a feeding step of substantially the length of one of the documents, and means timed to operate the camera after a predetermined number of such feeding steps.



1,806,763. PHOTOGRAPHING APPARATUS. GEORGE LEWIS MCCARTHY, Rye, N. Y. Filed Apr. 30, 1927. Serial No. 187,982. 16 Claims. (Cl. 88—24.)

1. In a document photographing apparatus, the combination with a camera for making a composite photographic record of distinctive business documents, of a document feeder for carrying the documents into the photographic field of the camera, comprising a driven belt traversing the photographic field, endless document gripping thread-like bands having active stretches located in the photographic field between the belt and the

camera in position to be interposed between the camera and the documents and to press the documents against the belt while being photographed and while being fed to and from photographing position, and means for guiding the return or inactive stretches of the bands outside the focal range of the camera.

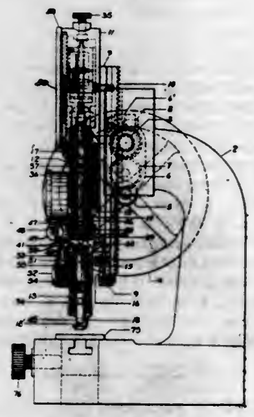


1,806,764. SPARE WHEEL LOCKING DEVICE. BENJAMIN S. MOORE, Detroit, Mich., assignor to Oakes Products Corporation, North Chicago, Ill., a Corporation of Michigan. Filed Feb. 24, 1930. Serial No. 430,494. 11 Claims. (Cl. 70—90.)

1. In a spare wheel lock, the combination of an abutment, latch members slidably mounted on the abutment, means for moving the latch members into engagement with the central portion of a wheel, and a lock for locking said means while in contact with the wheel.

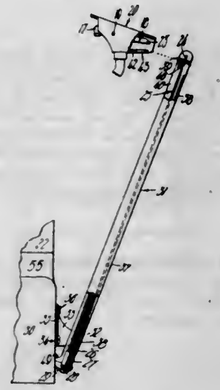
1,806,765. DRILLING MECHANISM. THORE R. E. RUNDQVIST, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 10, 1925. Serial No. 36,261. 31 Claims. (Cl. 225—3.)

1. A drilling mechanism comprising a truck including a power driving element, a guiding frame pivotally mounted thereon, drill bit reciprocating mechanism including a rotatable drive element slidably guided by said guiding frame, means for feeding said drill reciprocating mecha-



nism relative to said guiding frame, and operative driving connections between said power driving element and said mechanism.

1,806,766. CIRCUIT INTERRUPTER. MILTON H. SHOENBERG and LESTER SCHON, San Francisco, Calif.; said Schon assignor to said Shoenberg. Filed Apr. 13, 1926. Serial No. 101,675. 16 Claims. (Cl. 200—122.)

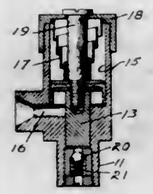


1. A device of the class described comprising a relatively flat button shaped casing, an interrupter element within said casing, and a detachable mounting for said element, said casing forming at least one conductor for said element.

1,806,767. APPARATUS FOR MEASURING THE HARDNESS OF MATERIALS. ALBERT F. SHORE, New York, N. Y. Filed May 23, 1928. Serial No. 279,875. 15 Claims. (Cl. 265—13.)

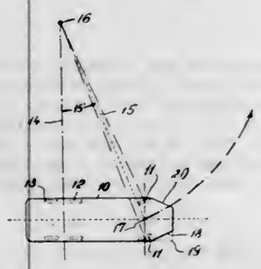
1. In a hardness measuring device, the combination with a press-frame, means carried by the press-frame, said means being adapted to apply pressure to the hardness measuring device, means for measuring the pressure applied, a longitudinally movable pressure-bar, one end being provided with a superhard indentor-point and the other end being adapted to press against the pressure-measuring means, a member surrounding the pressure-bar and moving parallel with and relatively thereto, one end of said member being adapted to contact with the surface of the test specimen, spring means adapted to press said member downwardly for clamping down the said test specimen, depth-measuring means carried by the pressure-bar, and adjustable means on the surrounding member adapted to actuate the depth-measuring means for setting the same to zero.

1,806,768. COMBINED TYPEWRITING AND COMPUTING MACHINE. ERNEST STEVENSON, West Haven, Conn., assignor, by mesne assignments, to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 18, 1925. Serial No. 44,451. 9 Claims. (Cl. 235—60.)



2. In a typewriting and computing machine, a series of denominational jacks, a series of rods connected with the computing mechanism to be operated by the jacks, a bracket fixed to the casing of the computing mechanism near the lower ends of the rods, and a rack mounted parallel with the rods and pivoted to the bracket, effective to locate the upper ends of the rods with reference to the jacks.

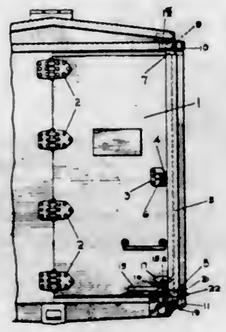
1,806,769. ILLUMINATED DISPLAY GLOBE. EDWARD F. STRAW, Pittsburgh, Pa., assignor to Samuel Heer, Pittsburgh, Pa. Filed May 25, 1928. Serial No. 280,472. 6 Claims. (Cl. 40—131.)



1. In a glass globe structure, an integral glass globe, a continuous shoulder impressed on the wall of said globe, a convex glass face fitted within said continuous shoulder, said face having a greater degree of convexity than the adjoining wall of the globe to provide sufficient space for display matter, a split ring having means resiliently associated therewith to maintain the said glass face in the fitted position on the globe.

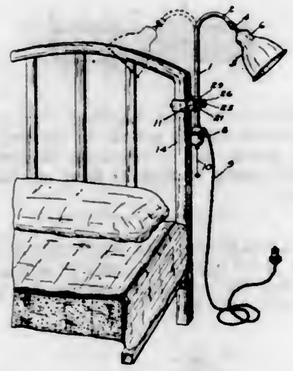
1,806,770. DEVICE FOR INJECTING LIQUID UNDER PRESSURE. FRANCISCUS L. VAN WEENEN, Rotterdam, Netherlands, assignor of one-half to Cornelis Franciscus Maria van Berkel, Wassenaar, Netherlands. Filed Dec. 4, 1926, Serial No. 152,713, and in Belgium Dec. 30, 1925. 11 Claims. (Cl. 184—7.)

1. A device for injecting lubricant under pressure comprising a plunger having two pressure faces of different areas, a spring for moving said plunger in one direction toward the smaller end thereof, means for subjecting the larger of said pressure faces to fluid pressure from the lubricant to move said plunger against the force of said spring, and means for supplying lubricant to be acted on by the smaller of said pressure faces.



1,806,771. ROAD VEHICLE. OLIVER F. WARHUS, Albany, N. Y., assignor to Versare Corporation, a Corporation of New York. Filed Nov. 17, 1927. Serial No. 233,792. 1 Claim. (Cl. 280—87.)

In a road vehicle, a plurality of pairs of wheels the front pair of which are steerable, a body supported by said wheels and having a projecting front portion, said front portion comprising a front wall and beveled rearwardly extending vertical walls which connect said front wall with the main side walls of the body, the angle of bevel of said beveled walls being such that the bevel portion is substantially parallel to the front wheels when they are turned to their maximum steering angle so that when making a turn substantially the entire area of the vehicle is confined within the arc described by the juncture of the front wall with the outside beveled wall, and a driver's seat in the front part of the body within the beveled portion thereof.

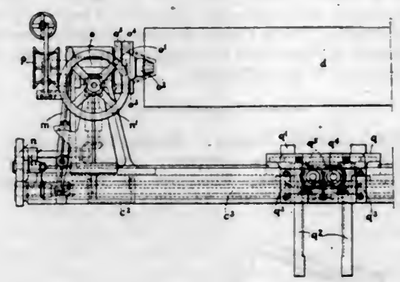


1,806,772. OPENING, CLOSING, AND LATCHING MECHANISM. AXEL WASBERG and KENNETH J. TOBIN, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1928. Serial No. 308,691. 5 Claims. (Cl. 292—259.)

1. In a house car, a hinged door, keepers above and below said door, a latch bar pivoted upon said door and engageable under said keepers, a hook upon the lower end of said bar and a cam lever having a hooked portion for

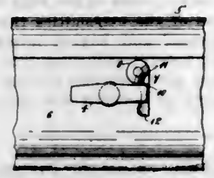
engaging said hook for drawing the lower end of the bar in one direction and a cam portion for forcing said bar in the other direction.

1,806,773. LIGHTING FIXTURE. WILLIAM S. WATERS, Lakewood, Ohio. Filed May 2, 1928. Serial No. 274,460. 11 Claims. (Cl. 240—4.)



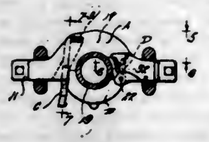
1. In combination with a portable extension cord lamp having a lamp supporting member provided with an elongated straight cylindrical portion and a laterally extending lamp carrying portion at its upper end, and a clamp composed of separable members recessed to receive a bed post between them, releasable fastening means for drawing said members into gripping engagement with the bed post, said clamp having a fixed clamping jaw and a pivoted clamping jaw, said jaws being recessed to receive the straight portion of the lamp suporting member, one of said jaws having a notch at its outer end and the other of said jaws having a bolt pivoted thereto and movable into and out of said notch, said bolt having a nut thereon engageable with the notched jaw to draw the jaws into gripping engagement with the lamp supporting member.

1,806,774. MACHINE FOR REWINDING WEBS OF PAPERS APPLICABLE FOR SIMILAR PURPOSES. CLARENCE HAMMOND WEBSTER, London, England, assignor to R. W. Crabtree & Sons, Limited, Leeds, England, a Joint-Stock Corporation of Great Britain. Filed Aug. 5, 1927, Serial No. 210,957, and in Great Britain Aug. 13, 1926. 12 Claims. (Cl. 242—58.)



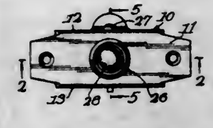
1. Apparatus for re-reeling webs of paper or other materials from remnant reels comprising in combination a pair

or rotatable cones oppositely disposed in line adapted for the support of the remnant reel, pedestals upon which the said cones are respectively mounted, mechanism for



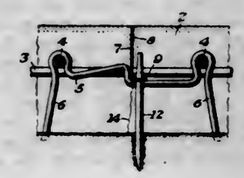
effecting the relative movement of the said pedestals and the bodily movement together of the said pedestals, both movements being effected in the direction of the axis of the said cones, substantially as hereinbefore described.

1,806,775. SAFETY LOCK FOR GAS VALVES. SAMUEL A. WILDE, Taunton, Mass., assignor to Glenwood Range Company, Taunton, Mass., a Corporation of Massachusetts. Filed May 7, 1930. Serial No. 450,421. 3 Claims. (Cl. 126—42.)



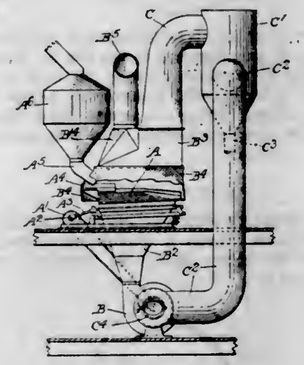
1. The combination with a gas manifold, a valve connecting therewith having a stem, and a handle borne by the stem for turning it and operating the valve, said handle having an open and closed position determinate with the open and closed position of the valve, of a plate through which the valve stem extends and over the face of which plate the handle turns, a gravity actuated manually releasable lock pivotally mounted upon said plate adjacent said handle and normally maintained by gravity in locking position with relation to the handle for preventing the turning thereof when the handle is in a closed position, or be manually released into a disengaging position permitting the turning of the handle for opening said valve, and means whereby the lock may be moved automatically into a disengaging position on the turning of the handle from an open to a closed position.

1,806,776. ELEVATOR. CHARLES E. WILCOX, Long Beach, Calif. Filed May 31, 1930. Serial No. 458,405. 14 Claims. (Cl. 294—90.)



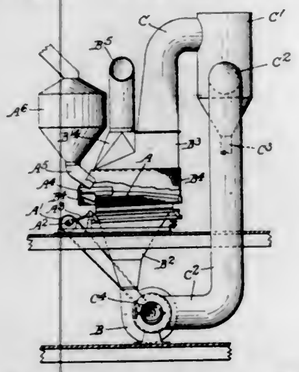
1. An elevator including, two sections adapted to engage around an object, and means operable by a projection on the object to either operate the sections together around the object or to disengage the sections from the object.

1,806,777. ELECTRIC SWITCH. LEE M. WILEY, Marion, Ind., assignor to Delta Electric Company, Marion, Ind., a Corporation of Indiana. Filed Aug. 12, 1929. Serial No. 385,245. 7 Claims. (Cl. 200—16.)



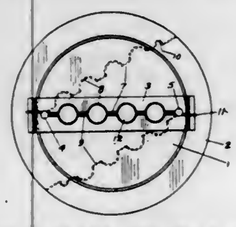
1. In an electric switch in combination, a plurality of contact elements arranged in line, the central element having a rounded face, a bridging plate recessed to receive the rounded face, and a telescopically extensible actuating lever having jointed engagement with the plate, and a spring for extending the lever.

1,806,778. ROAD CONSTRUCTION. FREDERICK R. WILSON, Canonsburg, Pa. Filed Dec. 22, 1927. Serial No. 241,948. 27 Claims. (Cl. 94—18.)



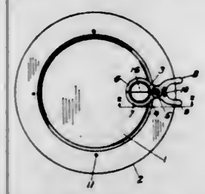
1. In a road construction, a dividing plate adapted to be embedded in the roadbed and comprising an upstanding portion, a continuous base portion extending at an angle thereto, and a supporting chair connected with the base portion.

1,806,779. PROCESS OF CLEANING COAL. RAY W. ARMS, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 23, 1927, Serial No. 193,468. Divided and this application filed Mar. 10, 1928. Serial No. 260,565. 4 Claims. (Cl. 209—502.)



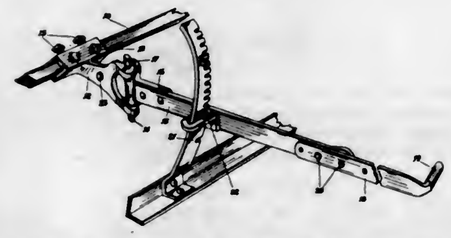
1. The process of cleaning coal by air which consists in forcing a high pressure stream of air through a flowing bed of coal, said stream including a portion of the dust laden air from above the bed together with an additional supply of air, withdrawing the resultant air from above the bed, recirculating part of it through the coal bed and withdrawing the remainder from the system.

1,806,780. DUST COLLECTING SYSTEM FOR COAL CLEANERS. RAY W. ARMS, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1927. Serial No. 193,468. 7 Claims. (Cl. 209—502.)



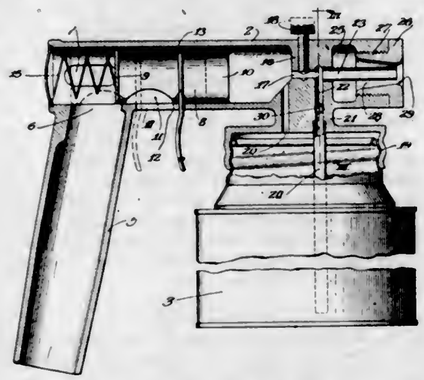
1. In an air cleaning system, a penumatic stratifying table, a blower adapted to discharge air under pressure therethrough, a hood overlying the entire working area of the table, means for withdrawing air from the hood, and discharging it to the intake side of the blower for recirculation through the system, means for withdrawing from the system some of the air from the hood, the system being closed except between the hood and the table whereby air to replace that withdrawn from the system must enter the system inwardly across the sides of the table.

1,806,781. CIGARETTE SNUFFER AND RECEIVER. LEON S. BRACH, East Orange, N. J. Filed Dec. 11, 1929. Serial No. 413,176. 17 Claims. (Cl. 131—51.)



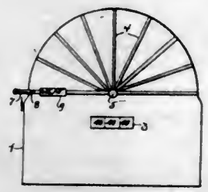
3. In a device of the class described, a receptacle having a rim, a pair of pins fastened to the rim on opposite sides thereof, a pair of members pivoted, one each to said pins and normally lying parallel transversely across the receptacle, said members having complementary socket portions in each to form complete sockets when said members are in socket-closed position.

1,806,782. ARTICLE FOR RECEIVING CIGAR OR CIGARETTE STUBS. LEON S. BRACH, East Orange, N. J. Filed Dec. 11, 1929. Serial No. 413,177. 10 Claims. (Cl. 131—51.)



2. A device of the class described, comprising a receptacle, a plurality of pins carried thereby around its outer periphery, a holder adapted to be removably mounted on one of said pins, said holder being composed of two parts pivoted together intermediate their ends, the portions which extend toward the center of the receptacle being shaped to form a closed end socket to receive a cigar or cigarette stub, while the other portions are spaced apart to form a handle, and a spring member positioned between said handle portions and normally acting to force them apart to hold the socket closed.

1,806,783. LEVER. JAMES C. BRAND, Lincoln, Nebr., assignor to Chase Plow Company, Lincoln, Nebr., a Corporation of Nebraska. Filed Oct. 29, 1929. Serial No. 403,200. 2 Claims. (Cl. 74—39.)

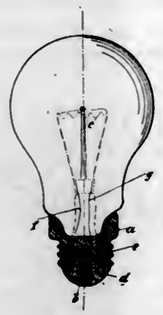


1. A lever for rocking a rock bar of an implement, an eccentric pivotal connection between said lever and the rock bar, the axis of said pivotal connection being perpendicular to the rocking axis of the rock bar, an arcuate rack secured at one of the extremities thereof to a fixed part of the implement and having laterally projecting teeth, and a slotted bracket projecting laterally from said lever and embracing said rack and having means thereon for latching engagement between the teeth of said rack.

1,806,784. SPRAYER. ADAM A. BREUER, Chicago, Ill. Filed Aug. 13, 1928. Serial No. 299,138. 4 Claims. (Cl. 91—45.)

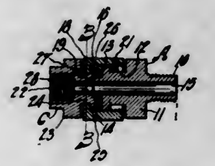
1. A paint sprayer comprising a nozzle, a paint container removably associated therewith, a blower, said nozzle having a partition therein with a restricted passageway therethrough, a valve in said passageway, said nozzle having a passage communicating with said container rearwardly of said valve and another passage communicating with said passageway forwardly of said valve, a valve for regulating flow through said last mentioned passage, and a discharge tube connected to said restricted passageway through which paint is discharged from said second named passage, said valve in said restricted passageway regulating the pressure of air passing through said passageway into the paint stream issuing from said second named passage.

1,806,785. DUPLEX INDICATING DEVICE. SYDNEY ROGER CAVE, New York, N. Y. Filed Jan. 19, 1929. Serial No. 333,627. 3 Claims. (Cl. 40—68.)



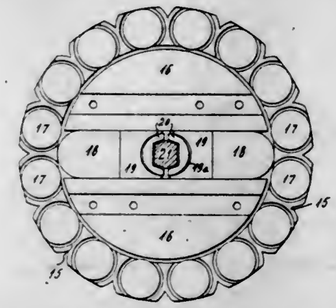
1. A device of the character described comprising a plurality of movable card holders, and a plurality of stationary card holders, a rotatable means for supporting certain of said movable card holders to cause them to correspond with the fixed position of the stationary card holders, said means comprising a sector member and a gear and shaft operated thereby and a drum upon said shaft.

1,806,786. DEVICE FOR LIFTING BODIES SUBMERGED IN WATER. ROLF R. CLAUS, West New York, N. J. Filed Sept. 25, 1930. Serial No. 484,287. 3 Claims. (Cl. 9—19.)



1. A life saving apparatus comprising an inflatable tube adapted to be worn about the neck of a person, a flexible tube connected to said tube, a bi-partite casing to which said flexible tube is connected, a thin rubber body or balloon containing water, in one part of said casing, a carbide supply in the other part of said container, a wire wound about said rubber body, extending out of said casing and a handle at the outer end of said wire to be pulled for tearing said balloon to combine its water with the carbide to develop a gas for inflating said tube, and a valve for controlling the gas supply therefor and preventing the entrance of water into said tube.

1,806,787. INCANDESCENT LAMP. OTTMAR CONRADTY, Nuremberg, Germany. Filed Nov. 3, 1927, Serial No. 230,758, and in Germany June 24, 1927. 2 Claims. (Cl. 176—32.)

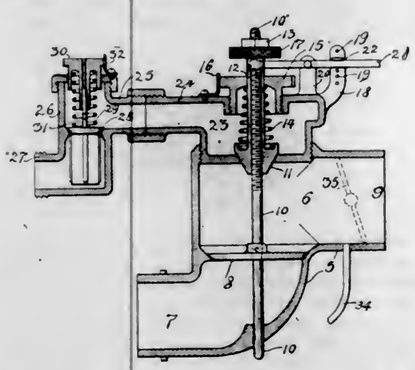


1. An incandescent electric lamp comprising a bulb, and a base having an outer cylindrical current terminal composed of acid proof material and adapted to be inserted in a holder, an inner current terminal composed of acid proof material and mounted concentrically of said outer terminal and an insulating body disposed between said terminals.

1,806,788. COUPLING DEVICE. FRANK H. CROSS, Cleveland, and GEORGE J. RUF, Cleveland Heights, Ohio. Filed Jan. 12, 1928. Serial No. 246,133. 1 Claim. (Cl. 285—143.)

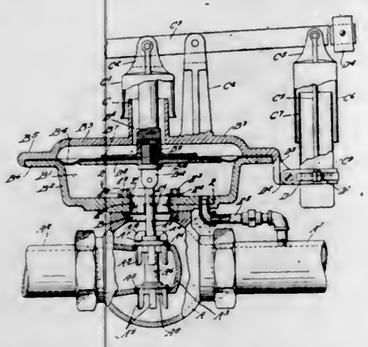
A sidewise coupling and uncoupling device including a base member, a companion member adapted for endwise coupling onto said base member, and a cap threaded onto said base member and engaging said companion member and being partly open sidewise for coupling said members; said base member having a radially open groove therein and said cap having a pin extending into said groove to retain said cap on said base member and being permanently fixed in said cap to prevent removal of said cap; said groove extending all the way around said base member and being of sufficient width to permit the extending part of said pin to be rotated all around on said base member and to move longitudinally of the device according to needs during coupling and uncoupling of said base and companion members.

1,806,789. DIE FOR SWAGING MACHINES. SAMUEL C. CROSS, West Springfield, Mass., assignor to Moore Drop Forging Company, Springfield, Mass., a Corporation of Massachusetts. Original application filed Mar. 28, 1929, Serial No. 350,563. Divided and this application filed Nov. 18, 1929. Serial No. 407,986. 3 Claims. (Cl. 78—21.)



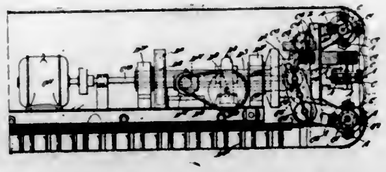
3. The combination with a swaging machine having reciprocating hammer members partaking of a planetary movement around the work to be swaged, of a pair of dies separable from said hammer members, said dies having opposed work engaging faces for shaping a non-round piece of work, said faces being so shaped as to hold the work from rotation relatively to the dies and cylindrical back portions fitted in a bearing of the hammer members, whereby the dies may remain non-rotative relative to the work during the operation of the machine.

1,806,790. GASEOUS FUEL MIXING DEVICE. PERCY J. DASEY, Chicago, Ill. Filed Sept. 22, 1927. Serial No. 221,170. 4 Claims. (Cl. 48—180.)



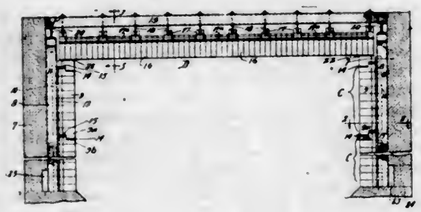
1. In combination, a gaseous fuel mixing device having a casing for connection to the intake manifold of an

internal combustion engine, the casing having a mixing chamber, means forming a gas chamber communicating with the said mixing chamber, an air valve in the casing, a gas valve controlling the communication between the gas chamber and the mixing chamber, means connecting the gas valve and the air valve for conjoint operation, the aforesaid valves being normally closed and being



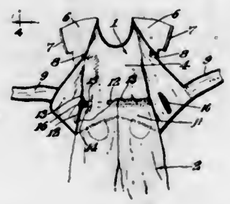
arranged to be opened by a reduction of pressure on one side of the air valve, a gas conduit for the gas chamber adapted to be connected to a gas supply system, and adjustable valve means normally closing the conduit arranged to open only when the first mentioned gas and air valves are open, the said latter valve means being adjusted to be balanced against the pressure of the gas supply system.

1,806,791. VALVE HOUSING. GEORGE C. DAVIS, Chicago, Ill., assignor to G. M. Davis Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1926. Serial No. 97,510. 3 Claims. (Cl. 137—153.)



1. In combination with a valve and diaphragm controlling it, a housing for the diaphragm, a valve housing adjacent thereto, a control stem projecting upwardly from the diaphragm, a sleeve projecting upwardly from the diaphragm about said stem and out of contact therewith, a lever, a connection between said control stem and said lever, a bell, associated with said control stem, depending about said sleeve and out of contact therewith, a stem depending downwardly from said diaphragm, a valve associated with said valve stem, in said valve housing, said valve housing being formed with a valve seat in which said valve is in slidable engagement, and flexible packing means, in slidable engagement with said last mentioned downwardly depending stem adjacent the point where it extends from the diaphragm housing into the valve housing.

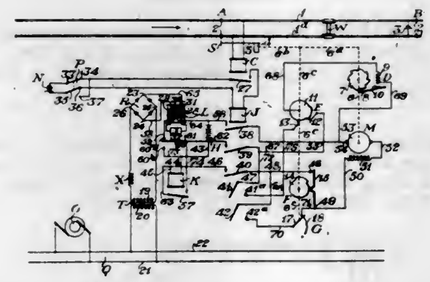
1,806,792. ROCK ABRADING MACHINE. WILLIAM RUSSELL DEGENHARDT, London, and ALLAN FRED DE FRAINE, Wembley, England, assignors to The Francois Cementation Company, Limited, Doncaster, England, a British Company. Original application filed Jan. 7, 1929, Serial No. 330,900, and in Great Britain Jan. 23, 1928. Divided and this application filed June 13, 1930. Serial No. 460,946. 2 Claims. (Cl. 262—7.)



1. A rock abrading machine for use in tunnelling or shaft boring operations, comprising a rotatable frame, a plurality of tool heads rotatably carried by said frame so as to rotate about axes which are tangential to circles having radii of different lengths, the said circles having as their common center the axis of rotation of said frame, and a number of loosely pivoted abrading or chipping tools carried by each of said tool heads, these tools during the rotation of the tool heads moving outwards into their operative positions under the influence of centrifugal force, and the said tools and tool heads being so arranged that the tools cover the whole working face of the tunnel during the rotation of said frame.

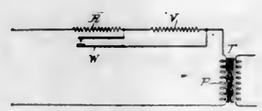
1,806,793. COMBUSTION CHAMBER. BRADLEY DOBIE, Chicago, Ill., assignor to American Arch Company, a Corporation of Delaware. Filed May 16, 1924. Serial No. 713,697. 20 Claims. (Cl. 110—1.)

1. In a refractory furnace, a plurality of upright supporting members, and an upright wall adjacent thereto composed of upright tiers of bricks supported by said members and bricks therebetween supported against lateral movement by the first bricks.



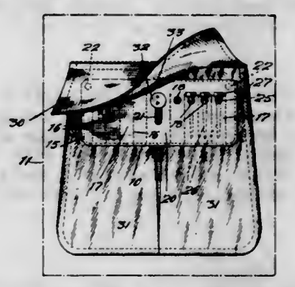
1,806,794. GARMENT. NELL Q. DONNELLY, Kansas City, Mo. Filed Mar. 3, 1930. Serial No. 432,601. 5 Claims. (Cl. 2—83.)

1. A one piece pajama-type garment comprising a blouse portion and a trousers portion permanently connected together, the blouse portion being disconnected from the trousers portion at the rear and being of wrap-around type, said blouse portion being provided with belt members adapted to tie thereabout and said trousers portion being provided with a rear flap portion having resilient means at the waistline thereof, and cooperating fastening means between the flap portion and the blouse portion.



CARNEGIE LIBRARY OF ATLANTA

1,806,795. RAILWAY TRAFFIC CONTROLLING APPARATUS. FREDERICK T. FEREDAY, Anchorage, Ky., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 27, 1930. Serial No. 455,987. 9 Claims. (Cl. 246—21.)

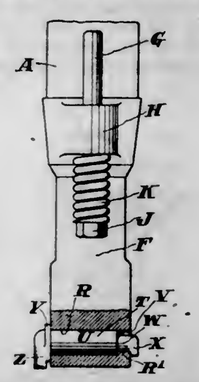


1. In combination, a railway traffic controlling device adapted to be operated by dierct current, a source of direct current, a relay, means for at times supplying said device with current from said source of direct current through the winding of said relay, a source of alternating current, a rectifier, and means controlled by said relay for supplying said device with current from said source of alternating current through said rectifier.

1,806,796. POWER-CIRCUIT CONTROL FOR RADIO RECEIVING SYSTEMS. HOWARD A. GATES, Chicago, Ill., assignor to Zenith Radio Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1928. Serial No. 254,094. 10 Claims. (Cl. 171—229.)

1. Circuit-controlling means for a power-operated radio receiving system comprising power circuit connections, a transformer having input and output circuits, the input circuit of which is connected with said power circuit connections, a resistance element in the connection of said input circuit with said power circuit connections, a circuit-controlling device thermostatically controlled in operation by said resistance element, and a circuit path connected with said device and acting under the control thereof to control the output of said transformer.

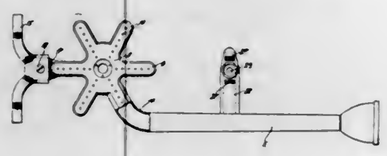
1,806,797. TEE HOLDER. LEO A. GUITERMAN, New York, N. Y. Filed Apr. 19, 1929. Serial No. 356,410. 4 Claims. (Cl. 2—250.)



1. In combination with a garment pocket having a button and lapel having a button hole for said button, a golf tee holder having a button hole adapted to receive said button for mounting said holder on said pocket and beneath said lapel.

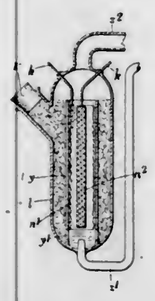
1,806,798. PROCESS FOR MAKING PHENOLIC COMPOUNDS. WILLIAM J. HALE and EDGAR C. BRITTON, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 6, 1928. Serial No. 297,914. 12 Claims. (Cl. 260—154.)

1. In a process for the manufacture of phenolic compounds by the direct hydrolytic action of water in the vapor phase upon a nuclear halogenated aromatic hydrocarbon in the presence of a catalyst, the step which consists in adding the corresponding diaryl oxide to the reacting ingredients.



1,806,799. STEEL RETAINER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 30, 1927. Serial No. 223,040. 2 Claims. (Cl. 121—32.)

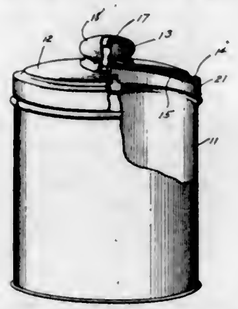
1. In a pneumatic tool, the combination of a front head having a longitudinal bore and a transverse bore communicating at a point intermediate its ends with the longitudinal bore, said transverse bore having a reduced portion at one end, a collared working implement in the longitudinal bore, a pin in the transverse bore forming an abutment for the collar of the working implement to maintain the working implement in the front head, a stem on one end of said pin extending into the reduced portion of the transverse bore, a hook on the stem to engage one side of the front head for holding the pin against endwise movement in one direction, a slot in the wall of the reduced portion of the transverse bore to permit the passage of the hook through said bore, the bottom of the slot form-



ing a continuation of the transverse bore, and angularly disposed weighted means on the other end of the pin normally maintaining the hook in a position remote from the slot, said hook and said angularly disposed means in body contact with the sides of said front head.

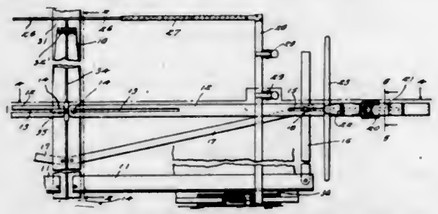
1,806,800. GAS BURNER AND SUPPORT THEREFOR. HERMAN HERASNBUCK, Belleville, Ill., assignor to Orbon Stove Co., Belleville, Ill., a Corporation of Delaware. Original application filed Aug. 8, 1928, Serial No. 297,178. Divided and this application filed Apr. 8, 1929. Serial No. 353,454. 2 Claims. (Cl. 158—99.)

1. In a gas stove, a hollow burner comprising hollow radial arms, in combination with a pipe for conducting gas to said burner, said pipe being of increasing diameter from its outer end to integral connection with one of the arms of said burner at the inner end of said pipe, the inside horizontal diameter of the pipe at its connection with said arm being equal to the inside horizontal diameter of the arm and the vertical diameter of the pipe at its connection with said arm being greater than the vertical diameter of the remaining arms of the burner, the upper wall of the pipe at its connection with said burner arm being slightly below the plane of the upper wall of said burner arm and the lower wall of the pipe inclining downwardly and inwardly throughout nearly the entire length of the burner arm.



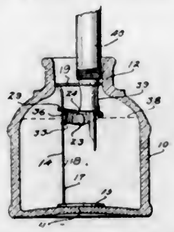
1,806,801. ELECTROLYTIC PRODUCTION OF STERILIZING AGENTS, GERMICIDES, AND THE LIKE. ERIC BERKELEY HIGGINS, London, England, assignor to United Water Softeners Limited, London, England, a British Company. Filed Jan. 16, 1929, Serial No. 332,842, and in Great Britain Feb. 6, 1928. 5 Claims. (Cl. 204—9.)

1. A method of producing chloramine which consists in electrolyzing an alkali chloride in the presence of a soluble ammonium salt.



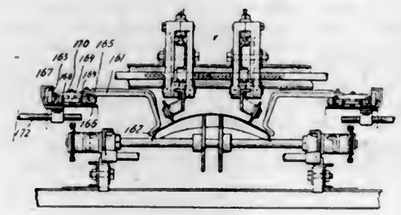
1,806,802. GASKET FOR TALCUM POWDER CANS. EDMUND HOFFMAN, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 11, 1928. Serial No. 276,938. 2 Claims. (Cl. 220—42.)

1. In a container for light fine powders a body member open at the top, a washer of sheet material across the top end of the body member into which the presented top end is indented, and having a hole through which material in the body is discharged from the body, said washer having



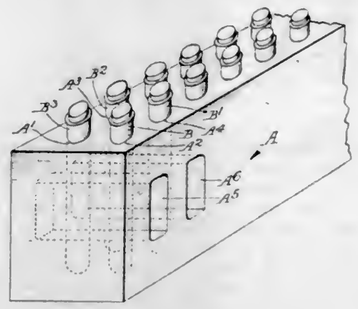
a wide stiff body portion, and a top closure member having an external flange driven and tightly fitting down over the end of the body and permanently pressing the washer thereagainst.

1,806,803. MUSIC LEAF TURNER. THOMAS P. JAKOBSON, Los Angeles, Calif., assignor of one-half to Emelia M. Kling, Los Angeles, Calif. Filed Mar. 25, 1929. Serial No. 349,843. 2 Claims. (Cl. 84—486.)



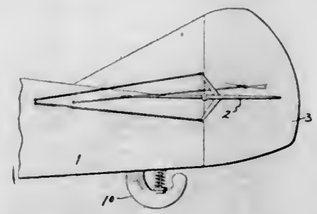
1. A foldable music leaf turning rack including a central member, ledge members pivoted thereto, laterally extending arms slidably and pivotally connected with the central member, brace arms pivotally connected with the central member between the lateral arms and the ledge members, vertical members pivotally mounted on the outer ends of the ledge members and each having a pivot member intermediate its ends engaged in the outer end of a brace arm, each of said lateral arms being slidably engaged with one of said pivots, leaf turning frames supported on said central member, and a gripping jaw slidably adjustable on each of the lateral arms for cooperation with said arm for gripping and holding pages not to be turned.

1,806,804. LIQUID LEVEL INDICATOR AND STOP. HAROLD A. JEWETT, Fredonia, N. Y. Filed Aug. 15, 1928. Serial No. 299,802. 7 Claims. (Cl. 120—71.)



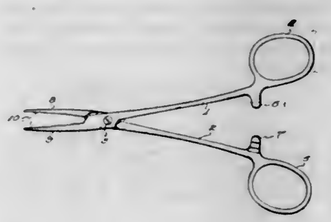
1. A liquid level indicator and stop for filling pens from ink wells comprising a plate seated upon the base of said well, a guide secured to and extending upwardly from said plate, a loop terminating the upper end of said guide adapted to support said indicator within the neck of said well, a floatable member mounted for vertical reciprocation upon said guide, walls defining a pen opening in said floatable member, said opening being remote from said guide and locking means formed upon said floatable member adapted to prevent the downward travel thereof upon said guide when pressure is applied adjacent said pen opening.

1,806,805. APPARATUS FOR TREATING METAL SHEETS. EDWIN R. KNAPP, Summit, N. J., assignor to Copper Plate Sheet & Tube Company, a Corporation of New Jersey. Filed June 16, 1926. Serial No. 116,487. 3 Claims. (Cl. 198—52.)



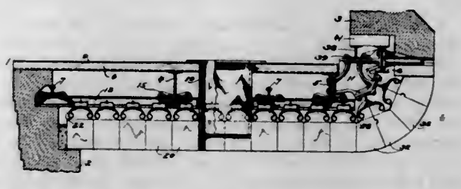
1. A conveyor for carrying metal sheets in arched form, comprising two conveyor sections, each provided with arms extending toward the other section, gripping means at the free end of each arm for engaging an edge of an arched sheet, a track support for each conveyor section, and means for adjusting the positions of the track supports.

1,806,806. APPARATUS AND PROCESS OF DETERMINING THE STRENGTH OF SOLUTIONS. CYRIL KOCOUR, Chicago, Ill. Filed May 1, 1926. Serial No. 106,149. 6 Claims. (Cl. 88—14.)



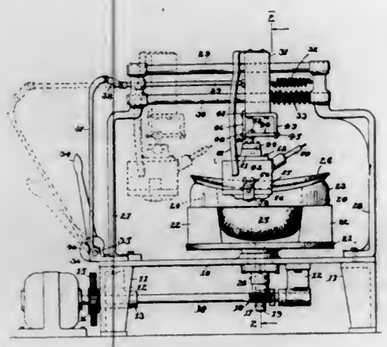
1. The process of determining the strength of solutions the intensity of the color of which bears a direct relation to the strength thereof, which consists in comparing the color of light transmitted thru a body of the unknown and a neutralizing color screen with the color of light transmitted thru a similar color screen and a body of material of the same color as the unknown, the intensity of which in terms of strength of the solution is known.

1,806,807. SHOCK ABSORBING LANDING STRUT FOR AEROPLANES. FRIEDERIKA KUNDERD, Elkhart County, Ind. Filed Sept. 18, 1930. Serial No. 482,753. 6 Claims. (Cl. 244—2.)



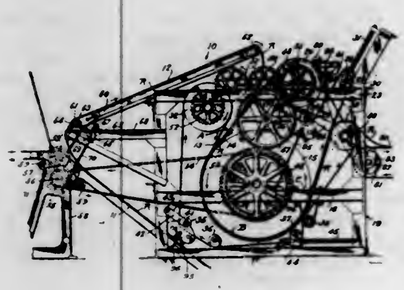
1. In a landing gear for aeroplanes, the combination of a strut, a transverse shaft to which the strut is secured, means for mounting said shaft pivotally in the aeroplane, and springs acting on said shaft for normally urging said strut and shaft in a predetermined direction.

1,806,808. FORCEPS. FRANK H. LAHEY, Boston, Mass., assignor to New England Deaconess Association, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1928. Serial No. 328,877. 6 Claims. (Cl. 128—322.)



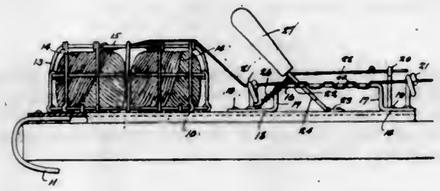
1. A pair of ligaturing forceps the crossed leverage members of which interfit substantially flush with each other at the joint and are formed both in front of and back of the pivoted axis each to overlap the other diagonally of the axis of the instrument and so form acute surface contact angles therewith in the direction of the jaws, whereby the forceps are snag proof in use.

1,806,809. FURNACE CONSTRUCTION. SAMUEL HERBERT LANYON, San Francisco, Calif., assignor to M. H. Detrick Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1925. Serial No. 31,737. 24 Claims. (Cl. 110—99.)



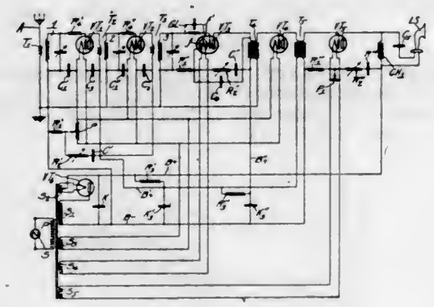
1. In a furnace construction, the combination of a plurality of beams extending transversely across the furnace, a plurality of longitudinally extending tile-supporting bars supported on and beneath the beams, a plurality of spaced nose brackets carried by certain of the beams at the nose end of the furnace, a plurality of transversely extending members carried by the nose brackets and adapted to support the nose tiles, and means carried by the nose brackets for supporting the curtain wall of the furnace.

1,806,810. HAT BRIM FLANGING MACHINE. WILLIAM A. LEONARD, Danbury, Conn., assignor to W. A. Leonard Machine Co. Inc., Danbury, Conn., a Corporation of Connecticut. Filed Dec. 21, 1928. Serial No. 327,652. 3 Claims. (Cl. 223—22.)



1. In a hat brim flanging machine, a lathe, means for supporting a hat upon the lathe, a carrier, a movable plate carried thereby, an iron, a flexible joint having one member secured to the carrier and another member carried by the iron, means for moving the carrier and iron into and out of working position, means tending to move the carrier in one direction and cushion means to limit the movement of the carrier.

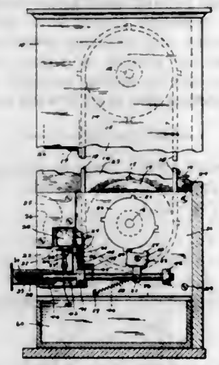
1,806,811. TREAD SHRINKING MACHINE. HECTOR V. LOUGH, Hartford, Conn., assignor to The Hartford Rubber Works Co., Hartford, Conn., a Corporation of Connecticut. Filed Sept. 19, 1928. Serial No. 306,974. 22 Claims. (Cl. 18—2.)



5. A machine for shrinking a continuous stream of unvulcanized rubber stock, comprising a drum, a plurality of endless superposed belts disposed around substantially one half the circumference of said drum, cylinders upon which each of the belts are mounted, idler rollers cooperating with said belts to maintain the same under tension against the surface of said drum, means operated by the belts and coacting with said idler rollers for maintaining said belts in working position, means for rotating the drum, means for rotating the cylinders at surface speeds less than the surface speed of the drum, whereby the belts are stretched for a portion of their length, the rubber stock being entered between and gripped by the stretched portion, said belts being adapted to slip with respect to the drum after the belts have advanced beyond the stretching zone, whereby the rubber stock partakes of shrinkage resulting from contraction of the belts, and means for varying the ratio of speed differences between the drum and the cylinders.

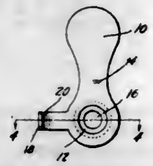
1,806,812. TWINE HOLDING AND DISPENSING DEVICE. GUIDO MALETZ, Baltimore, Md. Filed July 21, 1930. Serial No. 469,338. 2 Claims. (Cl. 242—141.)

1. In a twine holder, a base, a plate supported from the base in spaced relation above the same, a holder for holding a plurality of balls of twine, said plate having slots therein to permit the twine to pass through the plate along a crenellated path, an arm pivoted to said base, a spring normally holding said arm inclined rearwardly towards the holder, and a finger carried by the arm and projecting over the plate, said plate having a groove therein wherewith the finger cooperates to clamp the twine.



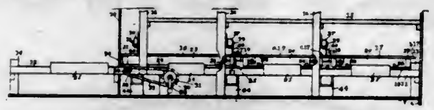
1,806,813. ELECTRON TUBE ENERGIZING METHOD AND APPARATUS. BENJAMIN F. MIESSNER, Short Hills, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Feb. 4, 1928. Serial No. 251,807. 24 Claims. (Cl. 250—27.)

1. In a system including a three electrode vacuum tube having grid, filament and plate electrodes, the combination of a source of current having a fluctuating component, means for energizing the grid electrode of said tube for operation including an energy consuming element through which said current is passed to derive a potential for said electrode, connections for passing said current through said tube by way of said filament and plate electrodes, and reactive-resistive means for diverting a desired portion of the fluctuating component only of said current from the path through said tube.



1,806,814. VENDING MACHINE. GEORGE MORRISON Poughkeepsie, N. Y. Filed Mar. 21, 1930. Serial No. 437,657. 2 Claims. (Cl. 194—69.)

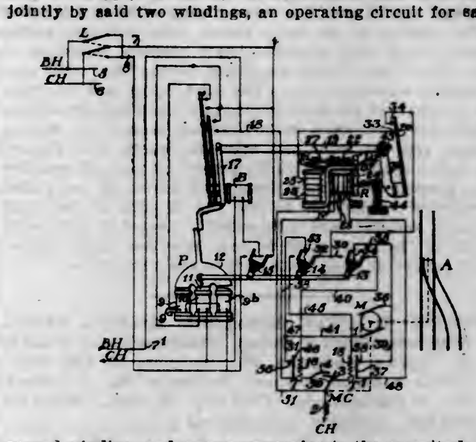
1. In a vending machine, a push rod adapted to be reciprocated, a finger member slidably mounted on said push rod, a locking pin engaging said push rod to lock the same against movement, a coin holder adapted to receive a coin, a flanged plate slidably mounted between said finger member and said coin holder and contacting with the coin to raise the locking pin from engagement with the push rod



when actuated by the finger, and means carried by said push rod for swinging the coin holder to release the coin therefrom.

1,806,815. CONTACT FOR ELECTRIC CIRCUITS. LORENZ F. MUTHER, Newton Center, Mass. Filed Aug. 2, 1928. Serial No. 296,928. 9 Claims. (Cl. 173—328.)

1. An elongated contact plate of conducting material having a hole formed therein at one end and the material surrounding said hole drawn out to form an eyelet barrel perpendicular to said plate for attaching said contact to sheet material and having a guiding member on one side of said plate adapted for engaging a groove in a raceway.

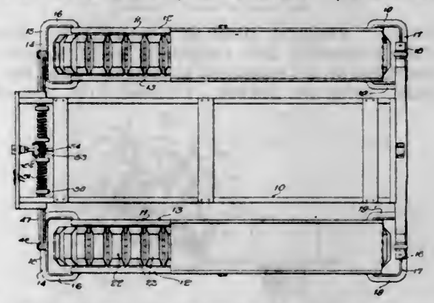


1,806,816. HENHOUSE DROPPING BOARD CLEANER. NIELS P. NIELSEN, Custer, Wash. Filed Mar. 30, 1929. Serial No. 351,167. 6 Claims. (Cl. 119—22.)

1. Hen-house, dropping-board cleaning mechanism consisting of a plurality of connected dropping-board units disposed for abutting end to end and also for spacing apart at definite locations, means to connect said units end to end for said abutting and spacing apart, means to mount said units for reciprocal longitudinal horizontal movements, a scraper mounted for vertical movements only at each of said intervening space locations disposed above and across said dropping board to bear on top of the same as it passes beneath, and means to move all of said dropping board units longitudinally in both directions.

1,806,817. RAILWAY TRAFFIC CONTROLLING APPARATUS. BERNARD E. O'HAGAN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 20, 1930, Serial No. 476,574. Renewed Apr. 9, 1931. 16 Claims. (Cl. 246—242.)

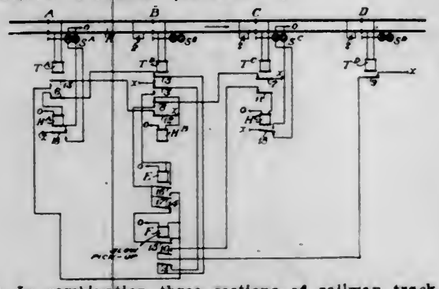
5. In combination with an electric motor, a first winding, a governing circuit for said motor including said first winding, a second winding, a circuit controller for controlling the supply of current to said motor and controlled jointly by said two windings, an operating circuit for said



second winding, and means responsive to the magnitude of the current in said governing circuit for controlling the operating circuit for said second winding.

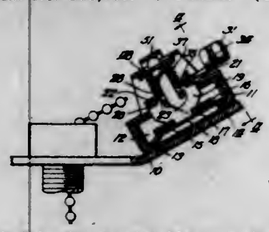
1,806,818. COMBINED MONEY BANK AND ARTICLE HOLDER. VINCENT PAUL PARCHEN, Chicago, Ill., assignor of one-half to Albert H. Kolker, Chicago, Ill. Filed June 10, 1929. Serial No. 369,876. 4 Claims. (Cl. 194—71.)

1. A combined money bank and article holder constructed with a deposit slot, a relatively movable article compartment adapted to support an article, and pivoted locking levers having their ends related in pairs; one pair of ends being presented in the path of money deposited through said slot; the other pair of ends being arranged in dogging relation to said closure, the locking levers having their ends that are presented in the path of the money, deflected each toward the other, and constructed to provide a ratchet to resist return movement of money started through the slot.



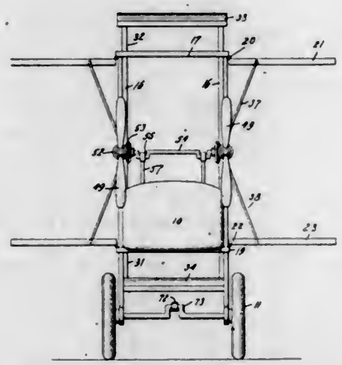
1,806,819. TRACTOR. THOMAS R. PAULSEN, Los Angeles, Calif., assignor to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Filed July 31, 1929. Serial No. 382,401. 9 Claims. (Cl. 305—8.)

3. In a tractor, the combination of a main frame, a truck frame on each side of the main frame, a driving wheel centrally located in each of the truck frames, front



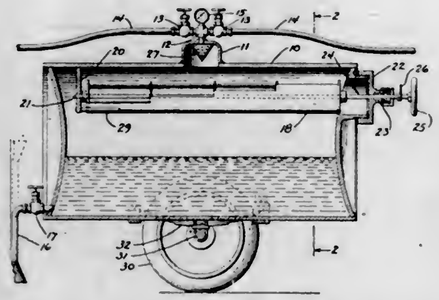
and rear idle wheels journalled in each of said truck frames, one of said idle wheels being slidably journalled with relation to the truck frame, front and rear radius rods having their proximate ends hingedly connected to the axle of the driving wheel, and having their outer ends hingedly connected one to the truck frame and the other to the shaft of the slidably mounted idle wheel, an endless track for each truck frame, carried around the driving wheel and the front and rear idle wheels and adapted to flex in conformity with the ground contour, an equalizer bar pivoted to the main frame and having its outer ends connected respectively to one end of each of the truck frames, and link bars independently pivoted at their outer ends to the other ends of the respective truck frames, and pivoted at their inner ends to the main frame.

1,806,820. RAILWAY SIGNALING. MELVIN A. PENROD, Swissvale, HENRY S. YOUNG, Wilkinsburg, and CHARLES A. BROOKS, Swissvale, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1930. Serial No. 438,996. 3 Claims. (Cl. 246—41.)



1. In combination three sections of railway track, a track circuit including a track relay for each section, a slow-acting device, a first operating circuit for said device including a back contact of the track relay for the first section and a front contact of the track relay for the second section, a normally open stick relay, a pick-up circuit for said stick relay including a back contact of the track relay for the second section and a contact which is closed only when said slow-acting device is in its initial condition, a stick circuit for said stick relay including a back contact of the track relay for the second section, a stick circuit for said slow-acting device including a contact closed only when the device is in its operated condition and a back contact of said stick relay as well as a back contact of the track relay for the second section, a second operating circuit for said slow-acting device including a front contact of said stick relay and a back contact of the track relay for the second section, a signal for said third section, and a controlling circuit for said signal including a front contact of the track relay for the third section and a contact closed only when said slow-acting device is in its operated condition.

1,806,821. SWITCH OPERATING DEVICE. RUDOLF POPP, Valparaiso, Ind., assignor to McGill Manufacturing Company, a Corporation of Indiana. Filed Mar. 18, 1929. Serial No. 348,009. 7 Claims. (Cl. 200—156.)

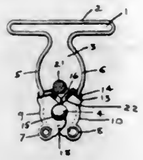


1. In a switch having a rotatable contact carrying member, means for rotating said member comprising a stem having operative connection with said member, a ratchet wheel rotatable with said stem, a pawl pivoted about said stem and slidable toward and away from said ratchet wheel, a spring yieldingly urging said pawl toward said ratchet and toward one limiting position, and a lever arm on said pawl for moving said pawl away from said limiting position, and a spring member extending over said stem and pressing the same toward said contacts.

1,806,822. AEROPLANE. JOSEPH PREATKA, New York, N. Y. Filed Sept. 11, 1930. Serial No. 481,295. 3 Claims. (Cl. 244—13.)

1. An aeroplane comprising a wheeled undercarriage, a tower-like frame rising therefrom, a fuselage mounted on said frame, two pairs of aerofoils hinged to said frame, means for causing the aerofoils of one pair to swing continuously in a direction opposite to those of the other pair, two propellers rotatably mounted on said frame, a motor, a driving connection between said propellers and said motor, a driving connection between said aerofoil actuating means and said motor, and clutches inserted into said connections whereby the said aerofoils and motors may be actuated independently of one another or together, at will.

1,806,823. GAS GENERATOR. JAMES J. REID, San Francisco, Calif. Filed Sept. 21, 1927. Serial No. 220,959. 4 Claims. (Cl. 23—282.)



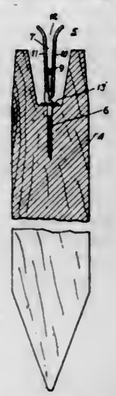
1. In a gas generator of the character described, a sealed tank adapted to contain a liquid, a support within said tank above said liquid, a container journaled to said support adapted to hold segregated quantities of a gas producing agent, and means for tilting said container whereby said segregated quantities of the gas producing agent can be progressively discharged from said container into said liquid to control the generation of gas.

1,806,824. BUTTON LOOP. JESSUP SALISBURY, Hamden, Conn., assignor to The American Buckle Company, West Haven, Conn., a Corporation of Connecticut. Filed Jan. 25, 1930. Serial No. 423,435. 6 Claims. (Cl. 24—224.)

1. A reversible-faced button loop having depending spring arms terminating in relatively free extremities, and toggle-jointed members pivotally mounted upon the extremities, each member being made from sheet metal and folded with parts relatively spaced to enclose the extremities.

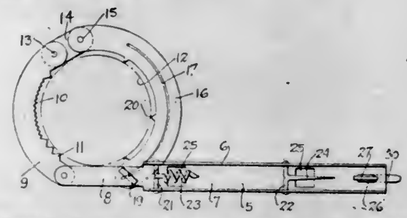
1,806,825. BUTTON LOOP. JESSUP SALISBURY, Hamden, Conn., assignor to The American Buckle Company, West Haven, Conn., a Corporation of Connecticut. Filed Jan. 25, 1930. Serial No. 423,436. 6 Claims. (Cl. 24—224.)

6. A button loop having depending spring arms terminating in relatively spaced extremities; a button-shank retaining loop carried by the extremities, and means provided by the retaining loop to permit the shank of a button to be manually moved into and out of the retaining loop along the plane of the loop by contracting the extremities against the spring tension of the arms.



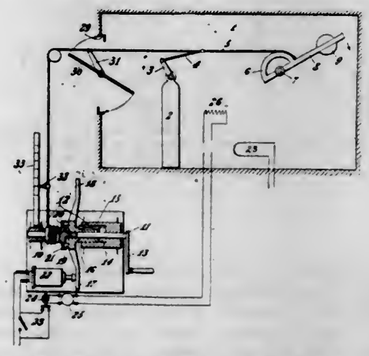
1,806,826. BUTTON LOOP. JESSUP SALISBURY, Hamden, Conn., assignor to The American Buckle Company, West Haven, Conn., a Corporation of Connecticut. Filed Jan. 25, 1930. Serial No. 423,437. 2 Claims. (Cl. 24—224.)

1. An expansible button loop comprising a suspension loop having depending therefrom resilient wire arms bent to provide associated loops in axial alignment and having an intermediate normally closed throat, each arm being looped at the throat and one arm having a looped extremity, and a link inserted between and pivotally connecting the extremity loop of one arm and the loop of the other arm for pivotal movement only in the plane of the loops to complete the button loop.



1,806,827. CLOTHES PROP. CONRAD SAUER, Pittsburgh, Pa., assignor of fifty per cent to John G. Doelfel, Pittsburgh, Pa. Filed Mar. 11, 1930. Serial No. 434,901. 3 Claims. (Cl. 68—12.)

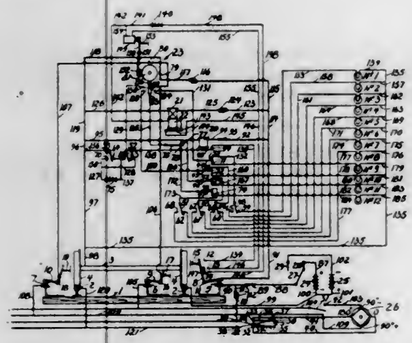
1. A line-holding device for clothes props, comprising a wire bent to double-loop form, with the loops disposed in such relative relation as to constitute gripping jaws, and one end of the wire extending in a straight line and



being screw-threaded to permit of it being screwed into a prop, the other end of the wire being around the said straightened end to serve as a stop member.

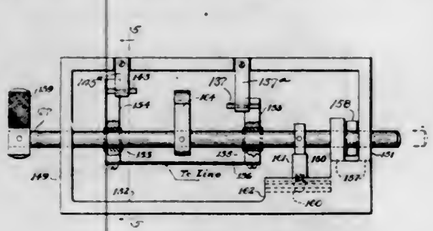
1,806,828. KITCHEN UTENSIL. JAN SERVAAS, Brooklyn, N. Y. Filed June 19, 1929. Serial No. 372,184. 1 Claim. (Cl. 81—3.1.)

A utensil of the character referred to comprising a channeled handle having an extended unchanneled portion, a jaw pivoted to said extended portion, relatively large and small serrations on one edge of said jaw, a slotted adjustable clamp arm having a plurality of spaced apart tongues constituting teeth on one edge thereof, a relatively short link connecting one end of the clamp arm and one end of the jaw, and an adjusting screw in the extension passing through said slot for securing the clamp arm in any adjusted position.



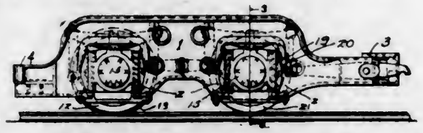
1,806,829. AUTOMATIC FIRE-EXTINGUISHING DEVICE. DANIEL SIEBENMANN, Bern, Switzerland. Filed Oct. 8, 1926, Serial No. 140,258, and in Switzerland Oct. 14, 1925. 4 Claims. (Cl. 254—173.)

1. In a fire-extinguishing device including a container having an extinguishing medium therein and means



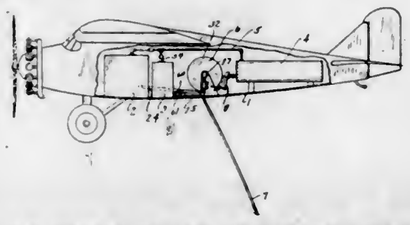
thereon to be operated to release the extinguishing medium, a winch and a rope connecting said winch with said fire-extinguishing device, a release mechanism comprising an axially movable member adapted to normally lock said winch in inoperative position, an electro-magnet, and means operatively associated with said axially movable member and adapted to be actuated by said electro-magnet to move said movable member into unlocking position, permitting said winch to be operated.

1,806,830. AUTOMATIC TRAIN CONTROL. PAUL J. SIMMEN, Eden, N. Y., assignor to Simmen Automatic Railway Signal Company, Eden, N. Y., a Corporation of Arizona. Substitute for application Serial No. 652,691, filed July 20, 1923, and abandoned. This application filed Sept. 5, 1928. Serial No. 304,134. 6 Claims. (Cl. 246—49.)



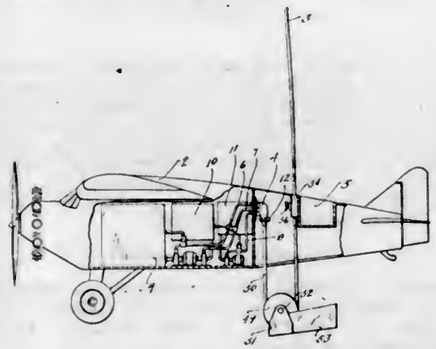
1. In an automatic train control, in combination, a source of direct current, a second source of direct current, a source of alternating current of a plurality of phases, three ramps, connections between one of the ramps and the sources of direct current and between all of the ramps and the source of alternating current, switching means interposed in these connections, a vehicle, train control means on the vehicle, and means on the vehicle connecting at times with the ramps and connected to the vehicle control means whereby more than nine conditions are created in the vehicle control means.

1,806,831. CIRCUIT CONTROL OF TRAIN CONTROL SYSTEMS. PAUL J. SIMMEN, Eden, N. Y. Continuation of application Serial No. 503,235, filed Sept. 26, 1921. This application filed Apr. 23, 1928. Serial No. 272,210. 9 Claims. (Cl. 200—5.)



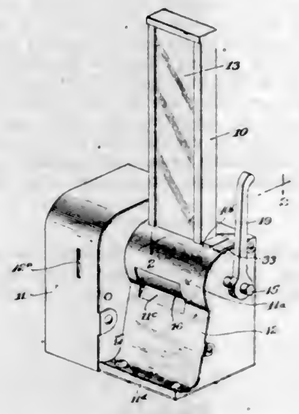
1. In a system of train control a central office switch having three longitudinal positions and including a pair of stationary contacts and arms cooperating therewith and relatively arranged whereby in one longitudinal position both contacts are engaged, in another longitudinal position only one contact is engaged and in a third longitudinal position only the other contact is engaged.

1,806,832. RAILWAY TRUCK. JOHN S. TAWRESEY, East Orange, N. J., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Filed Mar. 25, 1929. Serial No. 349,771. 12 Claims. (Cl. 105—174.)



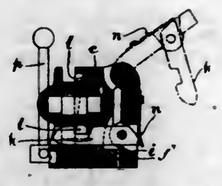
1. In a railway vehicle truck, a plurality of axles, wheels with rail engaging flanges on only one of said axles, wheels with flangeless treads on all of the other of said axles, journal boxes mounted on said axles, a frame carried by said boxes and having a truck pivoting element at one side of said axles, said boxes being interchangeable with each other.

1,806,833. MECHANISM FOR SUPPLYING FLUIDS FROM ONE AIRSHIP TO ANOTHER WHILE IN FLIGHT. JENNIE ULLENDORFF, Portland, Oreg. Filed Jan. 10, 1929. Serial No. 331,680. 10 Claims. (Cl. 244—1.)



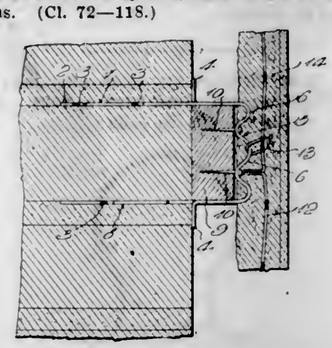
1. In a device of the class described, the combination of a mother ship having fuel and oil reservoirs disposed therein and a receiving ship having fuel and oil reservoirs disposed therein, discharge outlets leading from the reservoirs disposed within the mother ship and inlet pipes leading from a common point to the reservoirs disposed within the receiving ship, a dual passage hose leading from the reservoir outlets from the mother ship, means for detachably attaching the free end of the hose to the common inlet disposed upon the receiving ship and means for maintaining the hose in a relatively taut condition when attached and for automatically reeling the hose when detached from the receiving ship.

1,806,834. MECHANISM FOR SUPPLYING FLUIDS FROM ONE AIRSHIP TO ANOTHER WHILE IN FLIGHT. JENNIE ULLENDORFF, Portland, Oreg. Filed Sept. 25, 1929. Serial No. 395,079. 7 Claims. (Cl. 244—1.)



1. In a device of the class described, the combination of a mother ship and a receiving ship, the receiving ship being superposed the mother ship, a hose detachably attachable from one to the other of the ships, means for pumping elements through the hose and means for maintaining the hose in a relatively taut condition during the transfer.

1,806,835. VENDING MACHINE. WILLARD E. ANDREWS, Sycamore, Ill. Filed Feb. 26, 1929. Serial No. 342,849. 4 Claims. (Cl. 194—63.)

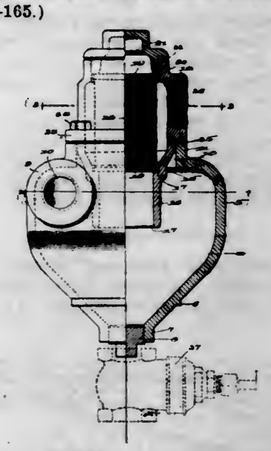


1. A coin control for a vending machine comprising a spindle, a radial arm carried by the latter, a detent recessed to receive and lock said arm against forward and rearward motion, a coin chute movable with said detent, and a radial finger carried by the spindle and adapted to receive the coin between it and the chute, the finger being caused by a movement of the spindle to depress the coin with the effect of moving the chute and separating the detent from the arm, and the recess of the detent having sufficient lateral clearance for the necessary rotary travel of the arm while the finger executes the depressing action aforesaid.

1,806,836. CASE-TIE OR LIKE FASTENING. HERBERT ARMISTEAD, Farnley, Leeds, England, assignor to Armistie Limited, Hunslet, Leeds, England. Filed Dec. 20, 1928, Serial No. 327,384, and in Great Britain Dec. 21, 1927. 5 Claims. (Cl. 81—9.1.)

1. In an apparatus for securing wire ties to packages and the like, the combination of a frame, a fixed clamping member connected to the frame, a slidable clamping member connected to the frame, means for moving said slidable clamping member relative to the fixed clamping member, a stationary die between said clamping members, a movable die hinged to said frame, and coacting with the stationary die for crimping the wire held by said clamping members, an arm pivoted to an intermediate portion of said movable die and having a free end arranged to extend transversely of the frame, and means operatively associated with the said free end on said arm for forcing the movable die toward the stationary die.

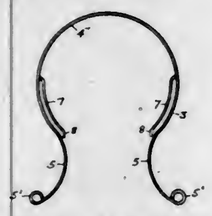
1,806,837. FURRING CLIP. ELDRIDGE ROGER BOYLE, Boston, Mass. Filed Apr. 13, 1929. Serial No. 354,884. 4 Claims. (Cl. 72—118.)



1. A furring clip formed of an integral piece of sheet metal bent to form a central part, spaced parallel ends, shoulders extending transversely from intermediate points of each end, and a filling block between the ends from the shoulders to the central part.

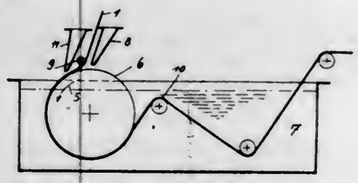
1,806,838. RUBBER TIRE AND ANALOGOUS ARTICLE OF MANUFACTURE. ABRAHAM BRILL, Youngstown, Ohio, assignor to The Republic Rubber Company, Youngstown, Ohio, a Corporation of Ohio. Filed Dec. 28, 1926. Serial No. 157,597. 9 Claims. (Cl. 152—1.)

5. An article of manufacture formed from a plurality of grained rubber sections so disposed that all the grain in one section is disposed in planes nonparallel with the plane of the grain of another section.



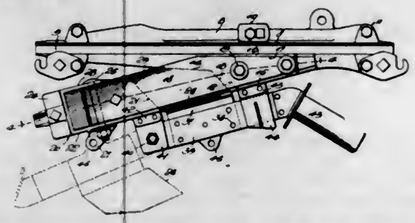
1,806,839. STRAINER. ARTHUR W. BURKS, Decatur, Ill. Filed Mar. 19, 1928. Serial No. 262,932. 2 Claims. (Cl. 210—165.)

2. A strainer comprising a liquid settling chamber having a liquid inlet port, a detachable outlet head mounted on said chamber and having an imperforate tubular portion depending therefrom into said chamber with its lower end arranged in a plane below said inlet port, a strainer element disposed within said head in the path of flow of liquid to said outlet, one end of said strainer being sup-



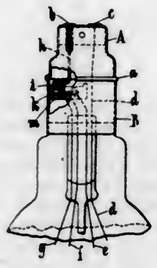
ported upon said tubular portion, and a cap secured to said outlet head and engaging the other end of the strainer to retain it in position.

1,806,840. ANTISKID CHAIN HOLDER. JOHN S. CAMPBELL, Pittsburgh, Pa. Filed May 4, 1929. Serial No. 360,406. 1 Claim. (Cl. 24—259.)



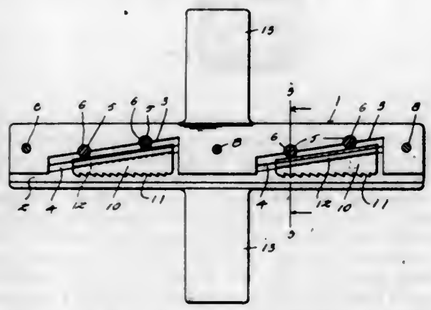
In combination a holder for anti-skid tire chains comprising a substantially U-shaped resilient clamp being adapted for transversely overlapping the tire and tensionally engaging the latter, a pair of fingers being stamped from the clamp side portions and further being disposed on the inner side of and carried by said latter for connecting the tire chain to said clamp, said pair of fingers extending parallel to the respective side portions of said clamp and having their free ends disposed outwardly toward respective side portions.

1,806,841. PROCESS OF MANUFACTURING ARTIFICIAL LEATHER, LEATHER BOARD, WAXED CLOTH AND THE LIKE. EMIL CZAPEK and RICHARD WEINOAND, Bomlitz, Germany. Filed Oct. 2, 1924, Serial No. 741,294, and in Germany June 7, 1923. 3 Claims. (Cl. 91—68.)



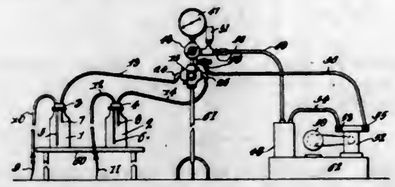
3. The process for manufacturing artificial leather and the like from viscose and similar aqueous cellulose solutions capable of precipitation by acids and salts which consists in wetting a rotating drum with a precipitant, then applying a layer of cellulose solution upon the wetted drum, passing a thin web of fabric in contact with said layer at the same speed as this drum, conducting the web and the layer of cellulose solution together through a precipitating bath by means of the rotating drum and finally washing and drying the coagulated product.

1,806,842. COMBINED TROLLEY FROG AND LINE SECTION SWITCH. KENNETH DAVIS, Pittsburgh, Pa. Filed Apr. 7, 1930. Serial No. 442,362. 3 Claims. (Cl. 191—38.)



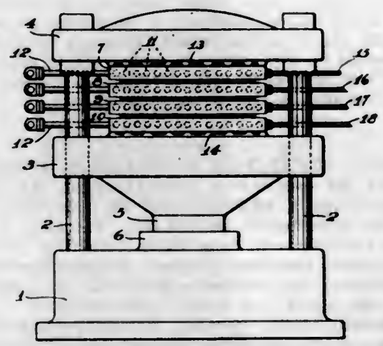
1. A combined trolley frog and line section switch comprising a horizontally elongated main-line plate having wheel ridges along the end portions of its lower side, said plate having a lateral portion at one longitudinal edge and providing a transverse shoulder facing toward one of said ends, a horizontally elongated insulating block having one of its end portions secured upon said lateral portion of said plate, said block projecting beyond said shoulder and diverging from said plate, a fixed horizontal branch-line plate secured against the lower side of said block at the free end of the latter, the inner end of said fixed plate being spaced longitudinally of the block from said shoulder, a movable horizontal branch line plate, received snugly between said shoulder and said inner end of said fixed plate and lying against the lower side of said block, said fixed and movable plates having abutting wheel ridges and abutting wheel guiding flanges, a horizontally swingable switch blade laterally spaced from said block and secured to said movable plate for outwardly moving the latter, and means for mounting said blade and co-acting therewith in conducting current from said main-line plate to said fixed branch-line plate, said main-line plate having wheel guiding flanges co-operable with the above-named flanges.

1,806,843. ELECTRIC LAMP. WILFRED DAWSON, London, England. Filed May 23, 1927, Serial No. 193,586, and in Great Britain May 31, 1926. 3 Claims. (Cl. 173—26.)



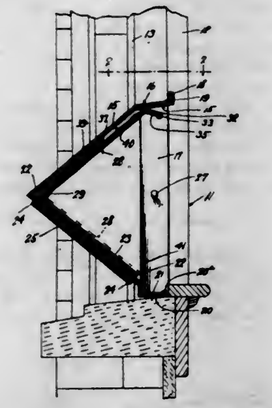
1. An electric lamp of the multiple filament type having a common leading-in wire and other leading-in wires comprising an upper sleeve shaped at its upper end for engagement with a standard socket and formed at its lower end of larger diameter than said standard lamp socket, a lower sleeve of larger diameter than the standard socket rotatably connected to said lower larger diameter end of said upper socket and contact means carried by said lower sleeve for selectively bringing into contact one of said other return wires.

1,806,844. ELECTRICIAN'S TAPE GRIPPER. SAMUEL D. DENNIS, Chillicothe, Mo. Filed June 5, 1930. Serial No. 459,381. 4 Claims. (Cl. 24—136.)



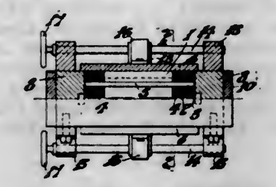
4. A tape puller, comprising an elongated body having a longitudinally extending slot formed therein from one face thereof, a pair of recesses formed in the body from the face through which said slot opens, each of said recesses having a top wall disposed at an angle to the slot and further having the inner wall thereof provided with a longitudinally extending groove parallel with the inclined top wall, a plate adapted to be positioned over the face of the body in which the recesses are formed to cover the same, said plate adjacent each recess having a groove formed therein and disposed parallel with the groove in the wall of the adjacent recess, a gripper block in each recess having a top wall inclined and substantially parallel with the top wall of the recess, a tongue extending longitudinally of each face of each gripper block and slidably positioned in an adjacent groove, and anti-friction elements disposed between the inclined top of each gripper block and the inclined top wall of the recess, said gripper block having the lower face toothed.

1,806,845. INJECTOR AND ASPIRATOR. WILL DWYER, Dallas, Tex. Filed Feb. 18, 1929. Serial No. 340,904. 4 Claims. (Cl. 27—24.)



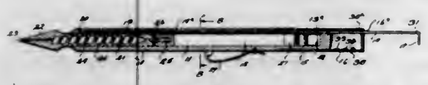
1. An apparatus of the character set forth, comprising a valve casing provided with a pressure port and a suction port, a plug rotatably mounted in the casing and provided with T-shaped passages, the long branches of the passages extending diametrically through the plug and the short passages thereof extending through diametrically opposite sides of the plug, the casing being provided with ports in alinement with the passages in the plug and being provided with passages communicating with said ports, a receptacle communicating with one of the casing passages, a receptacle communicating with the other casing passage, an instrument connected to each receptacle, pressure means connected to the pressure port of the casing, and suction means connected to the suction port of the casing.

1,806,846. PROCESS AND APPARATUS FOR MAKING COMPOSITE GLASS. JOHN H. FOX, Pittsburgh, and HARRY F. HITNER, Oakmont, Pa., assignors to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Oct. 6, 1928. Serial No. 310,808. 7 Claims. (Cl. 18—17.)



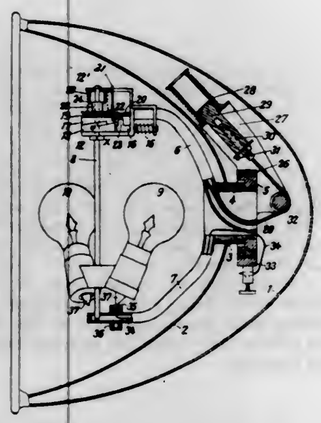
1. A process of applying heat and pressure to a plurality of sheets of glass and reinforcing material which consists in placing the sheets in stacked relation between pressure members, causing such members to approach and apply compressive force to the set of sheets, and supplying high frequency electric current to said members so as to induce molecular vibration in said sheets and heat them to the desired temperature.

1,806,847. WINDOW VENTILATOR. VICTOR W. I. FREDERICK, Brooklyn, N. Y. Filed Aug. 17, 1929. Serial No. 386,709. 2 Claims. (Cl. 98—99.)



1. A ventilator of the class described comprising a longitudinally extensible casing of V-shaped configuration, including a downwardly and outwardly inclined imperforate top, and an upwardly and outwardly inclined screened bottom, a shutter plate hingedly mounted in the apex portion of the casing for covering said screened bottom, said shutter being composed of extensible sections to permit the shutter to be adjusted commensurate with the length of the casing, spring means associated with the shutter and top of the casing for normally maintaining the shutter in an elevated open position, together with hingedly mounted retaining latches mounted within the bottom portion of the casing and on the ends of said casing for cooperation with the end portions of the shutter for holding the shutter down over the screened bottom while in a closing position.

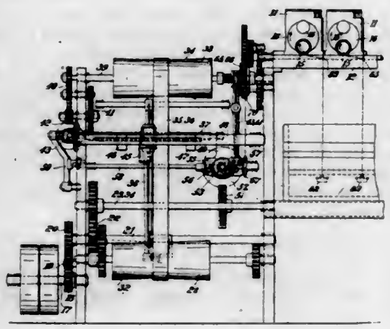
1,806,848. MEANS FOR CASTING LARGE ACCUMULATOR PLATES. JOHN ALFRED FULLILOVE, Market Harborough, England. Filed July 9, 1929, Serial No. 377,005, and in Great Britain July 23, 1928. 6 Claims. (Cl. 22—153.)



1. A mould for casting large accumulator plates, comprising oppositely disposed sides, means for holding the sides in position to form a mould, a plurality of movable sections and means for moving the sections outwardly relatively to the mould, each of the oppositely disposed sides comprising a number of the movable sections, and the movable means of each section being independently of the others.

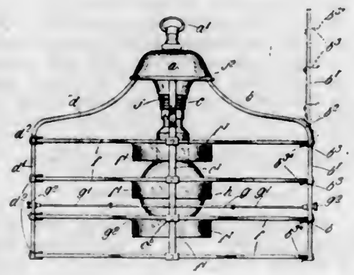
1,806,849. COMBINATION PENCIL, RULE, AND COMPASS. AUGUST J. GELARDI, Bronx, N. Y. Filed Jan. 23, 1930. Serial No. 422,864. 2 Claims. (Cl. 120—1.)

2. In combination, a casing having an elongated round opening therethrough whereby to receive a pencil, said casing having an elongated slot therein spaced inwardly from one face thereof, a slidable rule member loosely carried by said casing in said elongated slot, stop means secured to said slidable member at the inner end portion thereof, said casing having a reduced end portion, a cap member adapted to be removably mounted on said restricted end portion, and compass means for said casing, said compass means when in inoperative position being normally positioned within said cap member.



1,806,850. DIMMING DEVICE FOR SEARCHLIGHTS. PAUL GIESE, Leipzig, Germany. Filed May 24, 1929, Serial No. 365,693, and in Germany Oct. 31, 1928. 9 Claims. (Cl. 240—37.1.)

1. A dimming device for use in connection with search lights, comprising in combination with the reflector of the search light, a lamp carrier arranged in the reflector and including a hollow member arranged in the central portion of the reflector; a plurality of different ray projecting lamps mounted on the carrier; means for actuating the carrier to bring any of the lamps in the focus of the reflector, a contact for supplying current to the lamp disposed in the focus of the reflector, and a conductor for supplying current to said contact, said actuating means and conductor extending through said hollow member.

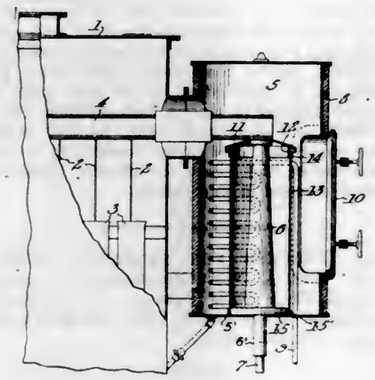


1,806,851. SPINNING MACHINE FOR ARTIFICIAL SILK. HERMANN HAMEL, Dresden-Blasewitz, Germany. Filed Jan. 27, 1928, Serial No. 249,921, and in Germany Feb. 7, 1927. 5 Claims. (Cl. 242—18.)

5. In an artificial silk spinning machine, including alternately rotating spindles, and a reversible spindle carrier to bring the spindles in alternation into rotating position, means to rotate the spindles at a speed gradually decreasing as the yarn is wound thereon, means to reverse the carrier at selected intervals, and means to coordinate the operation of the reversing means and the

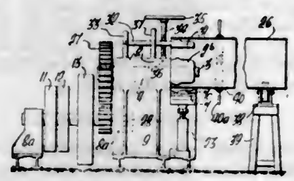
speed slowing means, so that an unwound spindle will be in position to be rotated when the rotating means is at its highest speed.

1,806,852. ELECTRIC LAMP SHADE AND/OR FITTING. SIDNEY WILLIAM HAMLYN, London, England. Filed June 20, 1929, Serial No. 372,389, and in Great Britain June 23, 1928. 7 Claims. (Cl. 240—78.)



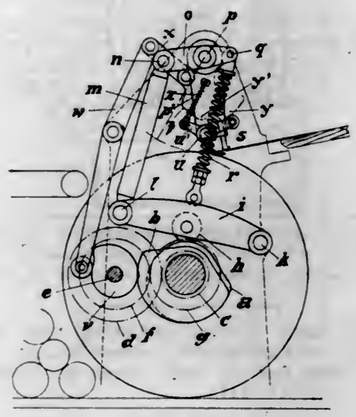
1. An electric lamp fitting comprising a plurality of discs of translucent material, a framework to support the same, one of the legs of said framework being hingedly mounted so that it can be swung out of position to allow easy removal of said discs and a strainer inside said framework to strengthen the same.

1,806,853. UTILIZATION OF PARAFFIN HYDROCARBONS TO CREATE A NONOXIDIZING AND NONSULPHUROUS ATMOSPHERE IN THE TEMPERATURE TREATMENT OF SOLIDS. FREDERICK J. HARLOW and GEORGE R. BENZ, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla., a Corporation of Delaware. Filed May 25, 1928. Serial No. 280,647. 1 Claim. (Cl. 148—17.)



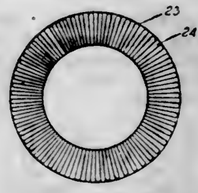
A method of the character described, comprising releasing a super-atmospheric pressure from a liquefied normally gaseous paraffin hydrocarbon fluid having a vapor pressure of not less than 25 pounds per square inch and not greater than 500 pounds per square inch at ordinary temperatures and permitting the same to assume gaseous form, and then utilizing the resulting gas free of any oxidizing agent for maintaining a non-oxidizing and non-sulphurous atmosphere about metal undergoing thermal treatment.

1,806,854. INSULATOR. ROBERT B. HESSON, Middlesex Borough, N. J., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed May 17, 1928. Serial No. 278,478. 8 Claims. (Cl. 183—7.)



1. The combination with an insulator, disks arranged at the ends of said insulator, and a sheet of insulating material cooperating with said disks and spaced from said insulator to form a substantially air-tight housing for said insulator.

1,806,855. METAL WORKING APPARATUS. WALTER REGINALD HUME, Melbourne, Victoria, Australia, assignor to Hume Steel Limited, Melbourne, Australia. Filed Apr. 8, 1926, Serial No. 100,640, and in Australia May 7, 1925. 5 Claims. (Cl. 153—9.)

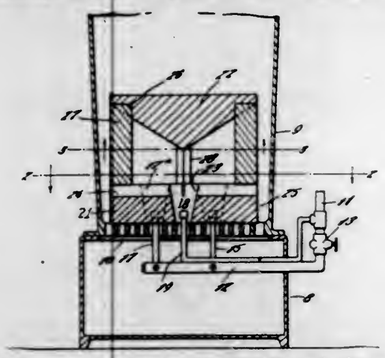


3. An apparatus for forming metal bodies comprising a work support, a forming member mounted for free rotation and bodily movable about a fixed center out of line with its axis of rotation, the bodily movement of the forming member causing it to move into and out of contact with the work on the work support without interference with the free rotation of said member about its axis.

1,806,856. FORE GRIPPER MECHANISM. WILHELM KOLMER and ERHARD WIRSCHINGER, Augsburg, Germany, assignors to Maschinenfabrik Augsburg-Nurnberg A. G., Augsburg, Germany, a Corporation of Germany. Filed Jan. 26, 1929, Serial No. 335,176, and in Germany Feb. 3, 1928. 9 Claims. (Cl. 271—53.)

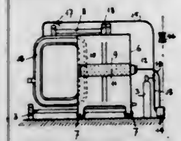
1. In a two-revolution printing press fore-gripper mechanism comprising in combination a two-revolution cam driven by the main shaft of the machine and a one-revolution cam, a lever and a roller journalled in said lever adapted to contact with parts of the circumference of either of said cams.

1,806,857. METHOD OF MAKING SOLID TIRES. RICHARD LIEBAU, Pittsburgh, Pa., assignor to The Republic Rubber Company, Youngstown, Ohio, a Corporation of Ohio. Filed Dec. 1, 1926. Serial No. 151,923. 5 Claims. (Cl. 154—12.)



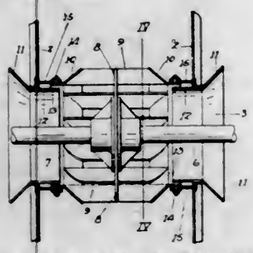
2. The method of producing a tread portion of an elastic vehicle tire which consists in folding a strip of rubber back and forth upon itself to form a compact assembly of contacting folded portions, and then removing the series of turned over edges formed along one edge of the assembly.

1,806,858. GAS BURNER. HARRY W. LIVINGSTON, Lyons, Kans., assignor of one-half to J. M. Blair, Lyons, Kans. Filed Dec. 14, 1929. Serial No. 414,090. 6 Claims. (Cl. 158—7.)



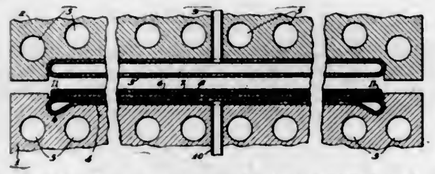
1. In a structure of the class described, in combination, a furnace including a firebox, and a grate in said firebox, a gas burner removably supported on said grate

and comprising a base of disc-like form embodying air and gas mixing means, a spreader plate superposed and



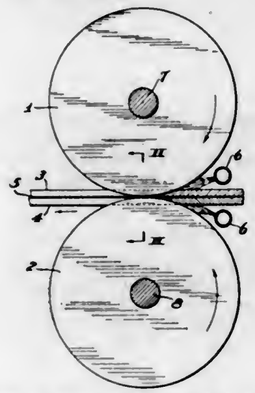
spaced from said base, and a plurality of circumferentially spaced vertically-disposed supports resting on said base and serving to maintain aid spreader in place.

1,806,859. SELF ACTING CLOSURE FOR WATER TIGHT COMPARTMENTS. DIEGO MATTEI, Genoa, Italy. Filed Dec. 26, 1928. Serial No. 328,409. 6 Claims. (Cl. 114—117.)



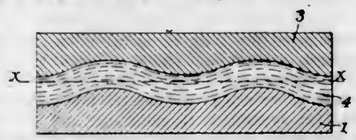
1. A water-tight closure comprising a movable door, a frame for the door, means for closing the door by flooding the compartment in which the door is located, flexible air bags between the frame and door, a source of compressed air, a fluid operated connection between the door and frame, a pipe connecting the fluid connection and source of compressed air, a pipe connecting the bags and said source, a valve controlling the admission of pressure fluid to both pipes, and a valve in the bag connected pipe operable by the door when closing to inflate the bags to effect a water-tight closure between the door and frame when the door is fully closed.

1,806,860. CENTRIFUGAL FAN. WILLIAM J. MONTGOMERY, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed July 11, 1927. Serial No. 204,803. 4 Claims. (Cl. 230—128.)



1. In a device of the class described, a casing element, a rotor element in the casing element having a tubular axial inlet member, said casing having a side wall normal to the rotor axis and provided with an inlet opening coaxial with the rotor, a tubular gasket of anti-friction material surrounding said tubular inlet member and axially adjustable thereon to form a sealing contact with the casing side wall marginally of the latter's inlet opening, and removable means securing the gasket to the tubular inlet member.

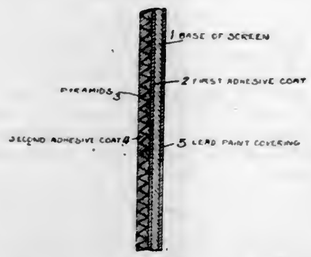
1,806,861. APPARATUS FOR MAKING COMPOSITE GLASS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 1, 1928. Serial No. 282,092. 3 Claims. (Cl. 18—17.)



1. Apparatus for applying heat and pressure to a plurality of sheets to be joined together comprising, a pair of opposing platens each provided with an outwardly opening recess having a substantially flat rear wall and edge walls extending transversely of the rear wall to the faces of the platens, rubber containers seated in the recesses and supported at their edges by the edge walls of the recesses and adapted to receive between them the sheets to be joined, said edge walls being rounded outwardly, means for supplying liquid under pressure to the interior of the containers, and means for affecting predetermined temperature changes in said liquids.

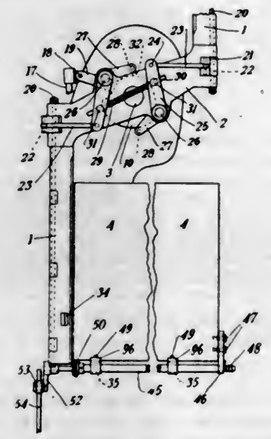
1,806,862. PROCESS FOR SEVERING COMPOSITE GLASS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed July 7, 1928. Serial No. 291,072. 3 Claims. (Cl. 125—13.)

1. A process of severing a composite glass plate comprising a pair of glass sheets with an interposed sheet of tough, transparent material, which consists in simultaneously cutting slots completely through the glass sheets in opposition to each other, leaving a part at least of the interposed sheet unsevered, and then separating the interposed material lying between the slots.



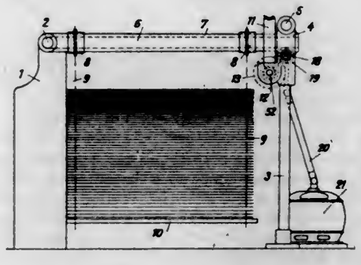
1,806,863. PROCESS FOR PRODUCTION OF SUBSTANCE HAVING A NACREOUS AND CHATOYANT ASPECT. JEAN PAISSEAU, Paris, France. Filed Nov. 19, 1926, Serial No. 149,444, and in France Nov. 21, 1925. 1 Claim. (Cl. 18—47.5.)

Process for the production of sheets of plastic material having a nacreous and chatoyant aspect, the nacreous



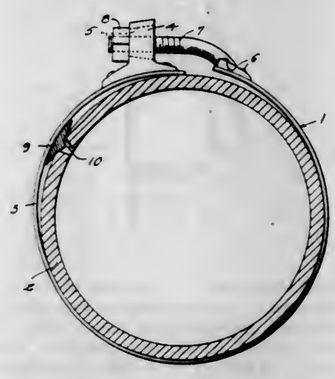
appearance of which presents a predetermined design, which process consists in utilizing elementary sheets of plastic material in which embedded brilliant particles have all been oriented parallel to the surface, in imparting to the brilliant particles of the said sheets a varied orientation by the action of a die applied upon the sheets when they are in a substantially soft condition, the projecting portions of the die corresponding to the design to be obtained and entering the thickness of the sheet, in cutting the sheets thus treated or distorted to make them correspond in size to the cross-sectional area of the chamber of a block-press, in stacking up the pieces or sheets thus cut upon each other in the said press, in uniting them into a compact block in the said press according to standard practice, and in cutting or slicing the block into sheets of the desired thickness.

1,806,864. STEREOSCOPIC CINEMA PROJECTION SCREEN. JULES ERNEST PALLEMAERTS, Stratford, London, England. Filed Oct. 1, 1928, Serial No. 309,382, and in Great Britain Jan. 21, 1928. 3 Claims. (Cl. 88—24.)



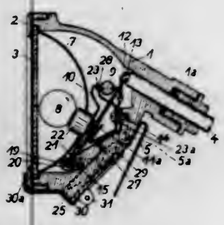
1. A cinematograph and like projection screen comprising a fabric base, a transparent adhesive coating on the front of the fabric base, a plurality of glass pyramids placed on the adhesive coating with their apexes projecting from the base, and a second coating of the transparent adhesive flowed over the front surface of the screen so as completely to embed the pyramids therein.

1,806,865. PLATEN PRINTING PRESS. ARTHUR WILLARD RANGER, London, England. Filed Aug. 2, 1930, Serial No. 472,658, and in Great Britain Jan. 27, 1930. 6 Claims. (Cl. 101—414.)



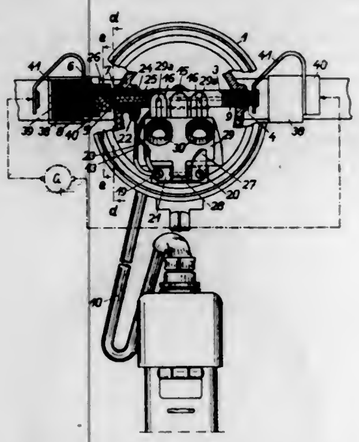
1. In a platen printing press having radial arms provided with grippers and adapted to be partially rotated intermittently in the plane of the swinging platen to bring sheets onto and remove them from the platen, means for releasing each sheet from the grippers momentarily when at the platen and means for registering each sheet when so released including lays adjacent to the side and bottom edges of the platen and means for moving said lays relatively to the platen.

1,806,866. DEVICE FOR ADJUSTMENT OF THE PILE FEED IN SHEET FEEDING MACHINES. GEORG SPIESS, Leipzig, Germany. Filed May 24, 1929, Serial No. 365,606, and in Germany May 21, 1928. 7 Claims. (Cl. 271—62.)



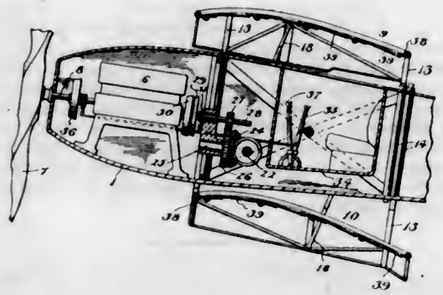
1. In a device for raising the pile table in sheet feeding machines having a motor drive and a hand drive, and wherein raising means arranged at opposite sides of the table are capable of being independently put into and out of action, the combination, with a drive automatically operated by the sheet feeding machine, and a directly operating hand drive, of a cooperating separate hand-controlled motor drive, and coupling means whereby the individual raising means may be separately or conjointly put into or out of operation.

1,806,867. LEAK STOPPING DEVICE FOR PIPES. FRANK WELSH, Granville, Ohio. Filed Apr. 11, 1929. Serial No. 354,359. 1 Claim. (Cl. 24—19.)



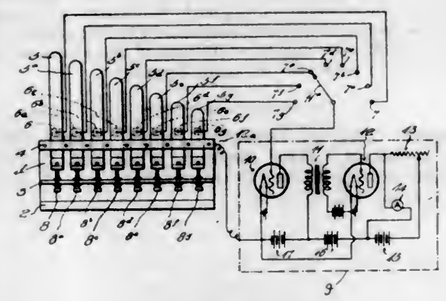
A means for holding a resilient member against an aperture in a pipe whereby to close the aperture comprising a split annular band, an upstanding lug having a base extending outwardly of each side thereof, rivet means for securing the base at one end of said band, said lug having a tapering slotted aperture therethrough, a threaded bolt, rivet means for securing said bolt to the opposite end of said band, said bolt being adapted to extend through said slotted portion of said lug, and a nut threadedly engaging the bolt and bearing against said lug whereby to tighten the band about said pipe upon rotation of the nut in one direction.

1,806,868. MINER'S LAMP. PAUL WOLF, Zwickau, Germany. Filed Apr. 28, 1930. Serial No. 448,061. 12 Claims. (Cl. 240—11.3.)



1. An electric lamp adapted to be energized by an accumulator and to be used as a miner's head lamp or for like purposes, comprising a lamp casing, an electric lamp bulb mounted in the casing, current supply conductors entering the lamp casing and adapted to be connected externally to an accumulator, a switch spindle journaled in the casing, means such as a handle for rotating the switch spindle from outside the casing, and means provided on the switch spindle for establishing and interrupting an electric circuit through the lamp bulb and the current supply conductors.

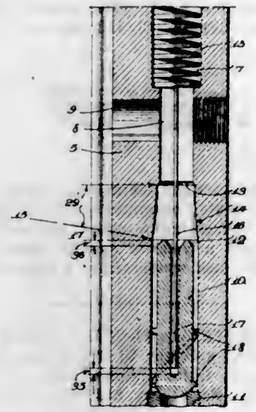
1,806,869. ELECTRIC LAMP CHARGED FROM ACCUMULATORS. PAUL WOLF, Zwickau, Germany. Filed Apr. 28, 1930. Serial No. 448,062. 8 Claims. (Cl. 240—11.3.)



1. An electric lamp, such as a miner's head lamp, adapted to be energised by an accumulator, comprising a lamp casing, a lamp bulb mounted in the lamp casing, conductors for conveying current to the lamp bulb from an accumulator outside the lamp casing, a switch spindle rotatably mounted in the lamp casing, means such as a handle for rotating the switch spindle from outside the lamp casing, means co-operating with the switch spindle for establishing and interrupting an electric circuit through the lamp bulb, the conductors and the accumulator by rotating the switch spindle, and terminals projecting to the outside of the lamp casing and adapted to be coupled to a source of charging current, the conductors, the switch spindle and the means co-operating therewith being adapted to cut off the current from the lamp bulb and to establish a connection in one position of the switch spindle between the outside terminals and the accumulator.

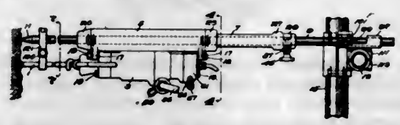
1,806,870. AEROPLANE. WISTER P. BOTT, Homer, La. Filed Nov. 12, 1929. Serial No. 406,653. 1 Claim. (Cl. 244—11.)

In an aeroplane, the combination with a fuselage, of wings mounted thereon, levers fulcrumed between their ends upon the sides of the fuselage and having two alined arms and a third arm extending forwardly from their fulcrums at a right angle to the alined arms, connecting rods pivoted to the opposite ends of the alined arms and to the upper and lower wings respectively, a shaft extending transversely through the fuselage, means for rotating said shaft, cranks on the ends of said shaft, and links connecting said cranks with the forwardly extending arms of the respective levers.



1,806,871. SOUND INTENSITY MEASURING SYSTEM. WARD E. BOWER, Washington, D. C. Filed Jan. 30, 1929. Serial No. 336,221. 11 Claims. (Cl. 181—0.5.)

1. A sound analyzer comprising a mechanical vibration member, a constant frequency electromechanical vibrator carried by said mechanical vibration member, an electrical impulse amplifying system including an electron discharge device, an indicating device associated with the output circuit of said amplifying system, and connections between said constant frequency electromechanical vibrator and said amplifying system for actuating said indicating device according to the operation of said electromechanical vibrator due to sound waves incident upon said mechanical vibration member.

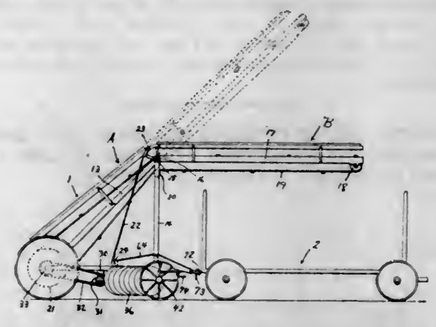


1,806,872. AUTOMATIC WELL FLOWING DEVICE. ALEXANDER BOYNTON, San Antonio, Tex. Filed Nov. 30, 1927. Serial No. 236,765. 16 Claims. (Cl. 137—111.)

15. A valve comprising a body having a plunger chamber with an inlet and an outlet and a seat adjacent to each, a plunger situated in the chamber engaging one of the seats and having a bore, and a spring having an axial

extension fitting in the bore in close proximity with the end of the bore leaving room for a limited unimpeded preliminary movement of the plunger from its seat.

1,806,873. DRILLING MACHINE. GEORGE H. GILMAN, Belmont, Mass., assignor, by mesne assignments, to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 21, 1921, Serial No. 486,378. Renewed July 25, 1930. 19 Claims. (Cl. 121—9.)

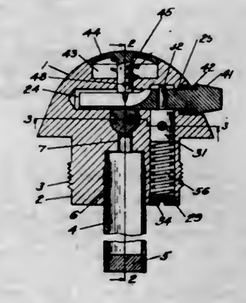


1. In a drilling machine, a longitudinally arranged supporting member, a drill actuator, feeding means for said actuator separate from said member but supported thereby and movable along said member, means for securing said feeding means to said member in different positions of adjustment relative thereto, said actuator supported in lateral offset relation to said feeding means.

1,806,874. DRILLING MACHINE. GEORGE H. GILMAN, Belmont, Mass., assignor, by mesne assignments, to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed June 5, 1920, Serial No. 386,868. Divided and this application filed June 4, 1926. Serial No. 113,672. 18 Claims. (Cl. 121—28.)

6. In a fluid pressure motor, a cylinder, a piston therein, a valve having an internal conduit, admission and exhaust connections for said cylinder, the admission connection comprising said internal conduit, said valve having means to control said connections and being provided with separate surfaces facing in the same direction, means for creating a pressure condition on one of said surfaces to move said valve, and means for creating a pressure condition on the other of said surfaces to lock said valve when so moved.

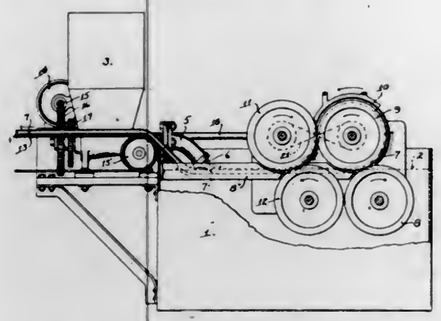
1,806,875. HAY LOADER. JAMES GRAFMILLER, Forest, Ohio. Filed Mar. 15, 1930. Serial No. 436,116. 1 Claim. (Cl. 214—41.)



A hay loader of the character described comprising a wheeled mobile frame having an endless conveyor mounted for operation thereon and adapted to deposit hay in a vehicle disposed forwardly of the loader, and means for detachably connecting the loader to the vehicle comprising a cable having one end attached to the loader, a drum mounted for rotation on the loader upon which the cable is windable, a casting having a hook thereon engageable with the vehicle to be loaded, a pulley journaled in the casting over which the cable is trained, an actuating arm depending from the hook and a projection depending forwardly from the loader for engagement with the arm in a manner to shift the hook.

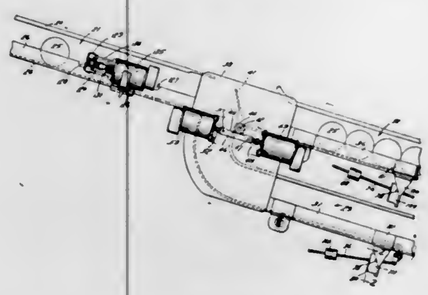
1,806,876. METHOD OF FILTERING AND DECOLORIZING OILS. DENISON W. GRANT, Franklin, Pa. Continuation of application Serial No. 230,691, filed Nov. 2, 1927. This application filed June 23, 1930. Serial No. 463,359. 3 Claims. (Cl. 196—147.)

1. The method of decolorizing oil in a filter which includes the steps of charging a body of fuller's earth into the filter, causing said body of earth to remain stationary, charging such a quantity of oil into said body of earth that, upon subsequently flushing with petroleum spirit all the removed color producing bodies are retained by the earth, causing the oil to seep into the body of fuller's earth and remain therein and in contact therewith for a period of time sufficient to decolorize the oil, then flushing the oil from the earth with petroleum spirit, and then removing the spirit from the oil whereby the oil so produced is of the desired color.



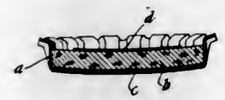
1,806,877. POINT DETONATING FUSE. FRANK B. HALE, Edgewood Arsenal, Md. Filed Oct. 5, 1929. Serial No. 397,682. 9 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757)

1. A fuse for a projectile comprising a body, a fixedly positioned primer charge carried in the body, a detonator



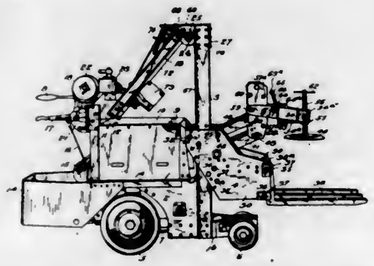
charge carried in a movable bar mounted in the body, means in said body for normally locking said movable bar so that the primer charge is out of line with the detonator charge, set back actuated means for normally maintaining said locking means in locked position, and a firing pin positioned upon the head of said fuse and extending within said body, said firing pin normally resting upon said locking means.

1,806,878. DOUGH COOKING MACHINE. JOHN KAUTTSCHNITT, San Mateo, Calif. Filed May 27, 1930. Serial No. 456,048. 9 Claims. (Cl. 107—4.)



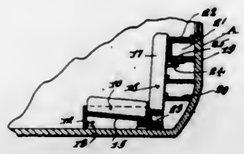
9. A dough cooking machine comprising a tank for containing a cooking liquid; a hopper for containing the dough; a feed screw in the hopper; a spout for reducing the dough to a continuous strip and depositing said strip upon the surface of the cooking liquid at one end of the tank; a system of rotatable rolls at the other end of the tank adapted to impart continuous travel to said strip, turning it half over and reversing its travel direction; switching means associated with said roll system for shifting the strip to lay its reversed course to one side of its outward course; and a traveling conveyer at the feed end of the tank to receive the discharging cooked strip.

1,806,879. RUNWAY SWITCH AND CONTROL THEREFOR. HENRY W. LINDGREN, Waukegan, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 27, 1930. Serial No. 423,712. 8 Claims. (Cl. 193—39.)



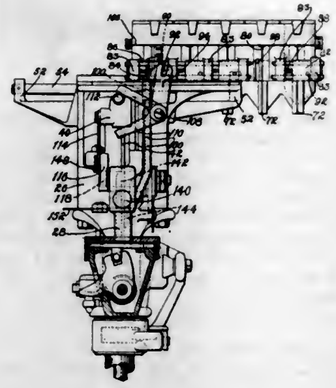
1. In a can runway switch mechanism the combination of an inlet runway section, a plurality of outlet runway sections, a runway switch interposed between said inlet and said outlet sections for selectively directing cans from the former into one of the latter, and means partially located within each of said outlet sections and operable by an accumulation of cans in that section to actuate said switch and thereby divert the cans into the other of said outlet sections.

1,806,880. METHOD OF MAKING BOTTLE CLOSURES. CHARLES E. MCMANUS, New York, N. Y., assignor to Crown Cork & Seal Company, Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1925. Serial No. 40,126. 8 Claims. (Cl. 113—80.)



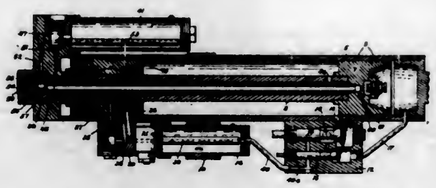
1. The herein described method of making bottle closures including the step of spraying a solution of cementitious material containing a water insoluble, inherently flexible, base, and a volatile solvent upon the exposed face of a cushion disk while within a metal shell.

1,806,881. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 29, 1928. Serial No. 315,790. 12 Claims. (Cl. 214—65.)



1. In apparatus of the class described, the combination of a wheel mounted frame, an elevating member mounted to move upwardly and downwardly relative to said frame, a clamping mechanism mounted on said elevating member and comprising a member pivotally mounted on said elevating member, a support carried by the outer portion of said pivoted member, a bracket mounted on said support, a clamping device carried by said bracket, and means connected to said pivoted member and arranged to operate said clamping mechanism and raise said elevating member when the latter engages a load.

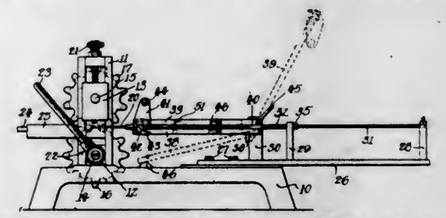
1,806,882. CLOTHING COMPARTMENT. JOSEPH L. RICHARDSON, Nashville, Ark. Filed June 15, 1929. Serial No. 371,192. 2 Claims. (Cl. 246—37.)



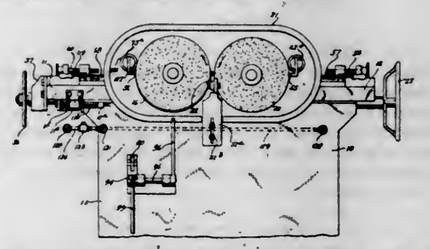
1. The combination with a motor vehicle body including a rear wall, a clothes compartment carried by the rear wall and a plurality of clothes receiving shelves carried by said wall below the compartment, a rear seat frame spaced from the rear wall, a cushion for the frame, a removable back rest for the frame, companion latch members carried respectively by the back rest and clothes compartment, and resilient means carried by the body intermediate the rear wall and seat frame for normally holding the back rest in a raised position and the companion latch members in locked engagement the back rest normally resting against the forward edge of said shelves.

1,806,883. MECHANISM FOR SUPPLYING FASTENINGS. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Nov. 13, 1922, Serial No. 600,497, and in Great Britain Dec. 5, 1921. Divided and this application filed Feb. 17, 1928. Serial No. 255,169. 21 Claims. (Cl. 1—6.)

1. A machine having mechanism for supplying fastenings, comprising a feed raceway, a plurality of parallel delivery raceways, a source of supply of loose fastenings for each delivery raceway, means for supporting the feed raceway and the delivery raceways constructed and arranged to permit any of the delivery raceways to be brought into co-operative relation with the feed raceway, automatically operating means for closing the delivery ends of the delivery raceways during said relative movement, fastening inserting mechanism, and means controlled by said inserting mechanism, for opening the delivery end of the operatively connected delivery raceway.



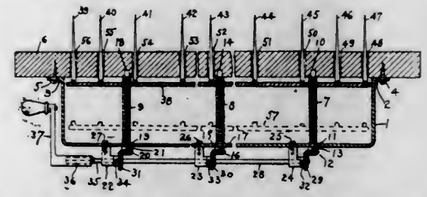
1,806,884. CYLINDER AND PISTON. GLADEON M. BARNES, U. S. Army, Hastings, Mich. Filed Dec. 10, 1930. Serial No. 501,323. 7 Claims. (Cl. 89—43.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



5. A cylinder, means for admitting a gaseous medium to the cylinder, a piston compressing the gaseous medium, a liquid reservoir associated with the cylinder, means for admitting the pressure medium to the reservoir, and means for conducting liquid from the reservoir to bearing surfaces of the cylinder.

1,806,885. FLUTING MACHINE. SERAPHINE F. BAUWENS, Chicago, Ill., assignor to Lewis G. Blessing, Evanston, Ill. Filed Jan. 6, 1927. Serial No. 159,295. 12 Claims. (Cl. 112—175.)

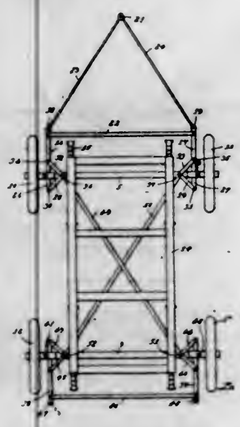
6. A fluting machine having, in combination, a pair of driven toothed rolls, a needle arranged relative thereto for receiving thereon material from said rolls, a support, and a pair of plates pivotally mounted on said support one on each side of said needle, means securing said plates one to the other with said needle therebetween, and a plurality of pointed pins on one plate arranged to straddle said needle at various points along the length thereof, which pins are adapted to engage the material on said needle to hold said needle against bending.



1,806,886. GRINDING MACHINE. CLEMENT BOOTH, Danbury, Conn., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed June 11, 1926. Serial No. 115,220. 44 Claims. (Cl. 51—103.)

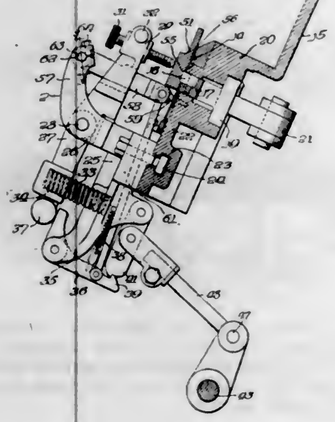
1. In a grinding machine, in combination, a pair of abrasive wheels, means for rotating both of said wheels, means for supporting work therebetween for action thereon by said wheels, and means actuated by fluid pressure for moving one of said wheels toward and into predetermined spaced relation to the other, and then away from the other to respectively grip and release said work.

1,806,887. ADJUSTABLE HOLDING DEVICE. ERNEST BRUNO, New York, N. Y. Filed Sept. 9, 1930. Serial No. 480,799. 3 Claims. (Cl. 164—78.)



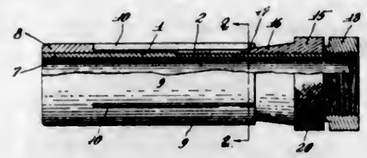
1. In a holding device, a framework attachable to a table, carrying a multiple of screws journalled in said table and framework and rotatably engaging with a plate holding a multiple of pointed pins and means for rotating said screws simultaneously.

1,806,888. METHOD OF SEPARATING ADHERING PARTICLES. GUY H. BUCHANAN, Westfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Feb. 8, 1929. Serial No. 338,634. 8 Claims. (Cl. 209—166.)



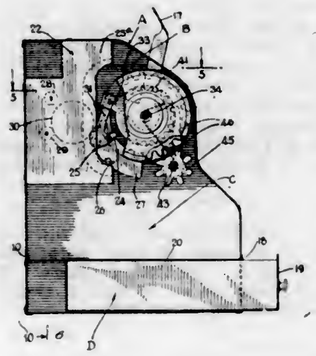
1. A process of recovering elemental carbon from a slurry containing it and other particles adherent thereto, which includes the steps of dissolving the other particles, reprecipitating this material and then separating the carbon by a flotation operation.

1,806,889. TRAILER VEHICLE. CORNELIUS S. BUSINGA, Rockford, Ill. Filed May 16, 1930. Serial No. 452,873. 2 Claims. (Cl. 280—33.5.)



2. The combination in a tractor vehicle having a pair of axles, steering knuckles at each end of the axles and wheels on said steering knuckles, of triangles fixedly attached to each steering knuckle, a pair of reach rods connecting the apex of diagonally opposite steering triangles adapted to steer and draw the trailing wheels, and means for maintaining the wheels attached to each axle in parallelism.

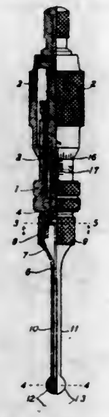
1,806,890. AUTOMATIC STOP MECHANISM. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1928. Serial No. 255,229. 7 Claims. (Cl. 192—126.)



1. In a machine for operating upon blanks the combination of means for feeding blanks edgewise, a detector mounted to swing in an arc about a pivot remote from the path of movement of said blanks, the detector being normally positioned so that a line intersecting said pivot and the point of the detector nearest the path of travel of the blanks will be perpendicular to said path of travel, and means rendered operable by swinging movement of said detector away from normal position under the influence of said advancing blank for stopping said machine.

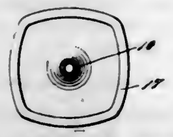
1,806,891. BUSHING. GEORGE B. CHADWICK, Portsmouth, N. H. Filed Feb. 19, 1929. Serial No. 341,113. 2 Claims. (Cl. 77—75.)

1. A device of the class described comprising a sleeve having an externally threaded end portion, a tube surrounding and fixed to the opposite end of said sleeve, and having integral spring fingers extending about said threaded portions and having free ends, and a nut threaded on said threaded end and having a tapered portion engageable with the inner faces of said free ends to force said free ends outward from the axis of said sleeve to an amount dependent on the axial position of said nut.



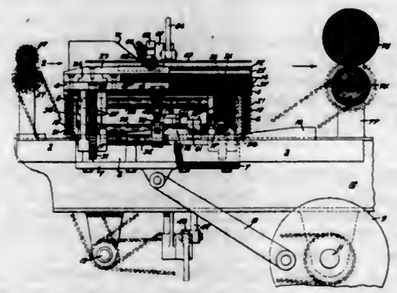
1,806,892. REGISTERING BANK. STANLEY L. CONNELL, Girard, Pa., assignor to The Girard Model Works, Inc., Girard, Pa., a Corporation of Pennsylvania. Filed Mar. 30, 1928. Serial No. 265,889. 15 Claims. (Cl. 235—100.)

1. In a coin registering mechanism, in combination, a registering element, a stationary coin chute adapted to receive a coin and to hold the same in fixed position, an operating element normally disconnected from said registering element, and means movable into engagement with and in riding contact over a coin manually deposited directly in said chute, said means being arranged so as to be actuated by its engagement with said coin for causing said operating element to become operatively connected to said registering element, and said means having a predetermined length of riding contact with said coin for predetermining the degree of movement of said registering element.



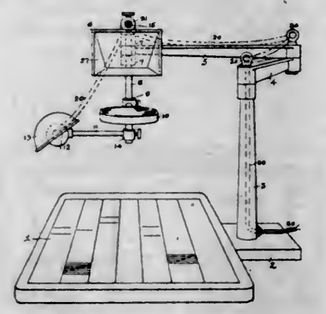
1,806,893. INSIDE MICROMETER CALIPER. HARRY G. CUNNINGHAM, Los Angeles, Calif. Filed Feb. 23, 1929. Serial No. 341,905. 2 Claims. (Cl. 33—164.)

1. In an inside micrometer caliper, in combination, a cylindrical body having an internal screw thread, a rotatable sleeve operative upon said body, a plunger piston within said body and having a screw thread engaging that of the body, the piston being connected at one end with the sleeve and having a circular recess at the other and adapted to receive the flanged head of an expansion element, an expansion element having such head at one end, the other end being wedge shaped, an element having separable measuring legs and adapted to be attached to



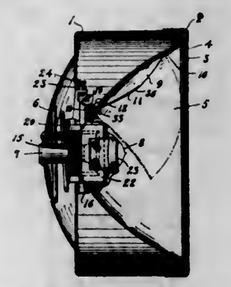
said body, said legs adapted to cooperate with the wedge of said expansion element so as to be separated thereby substantially as described.

1,806,894. COLLAR BUTTON. FRANK P. DAUGHADAY, Providence, R. I. Filed Oct. 27, 1930. Serial No. 491,518. 2 Claims. (Cl. 24—101.)



1. The method of forming a one-piece collar button with a non-circular symmetrical base, including the steps of drawing a sheet metal blank into cup shape with a flange on its edge, hammering the cup to provide a thin shank with a hollow head at the closed end, trimming the flange to provide a non-circular shape similar to but different than the desired finished shape, rolling the marginal edge of the flange throughout its peripheral extent inwardly to provide a finished rolled edge with a periphery of a desired non-circular symmetrical shape and a shape different than the shape of the trimmed flange.

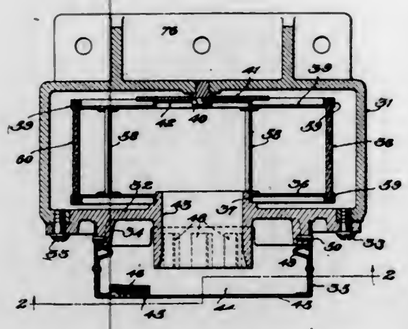
1,806,895. FORMING MECHANISM. GEORGE F. FORD, Los Angeles, and WALTER F. PITTMAN, Huntington Park, Calif., assignors to Fibreboard Products Inc., San Francisco, Calif., a Corporation of Delaware. Filed Apr. 25, 1930. Serial No. 447,180. 17 Claims. (Cl. 93—45.)



1. A forming mechanism for fiber board structures, comprising a platen and a jaw disposed at one side thereof, means for placing the structure upon the platen with its edge overhanging the platen, means for causing relative movement between the platen and jaw to bend the edge of the structure over the edge of the platen, and means for causing further relative movement between the platen and jaw to squeeze the bent over edge therebetween.

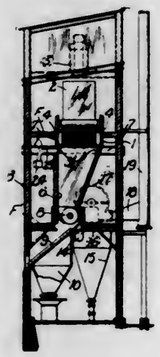
1,806,896. TYPE FORM PROJECTOR. EDMUND J. FREUND, Valparaiso, Ind. Filed Aug. 20, 1928. Serial No. 300,697. 1 Claim. (Cl. 88—1.)

In a device of the character described an optical reverser adaptable for the direct reading from left to right of any portion of a form of type that presents its letters reversed from right to left, which device is always associated with a form of printer's type and it comprises a standard or support positioned adjacent the group of type, a swinging arm comprising a plurality of pivoted members the free end of one member being pivotally connected to the support and the free end of a pivotally connected member being instantly movable above every portion of the type form on a horizontal plane, the reverser supported at the free end of the latter member, and a source of illumination also supported by the free end of said member adapted to illuminate the type.



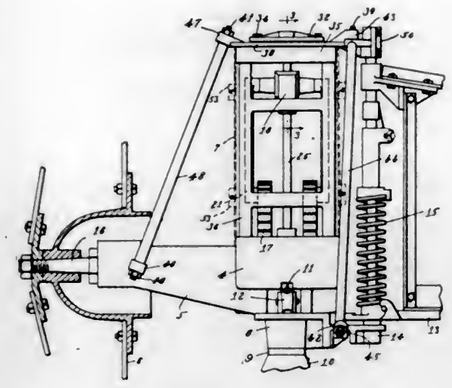
1,806,897. HEADLIGHT FOR AUTOMOBILES. EDITH S. GERRY, Warwick, R. I. Filed May 25, 1929. Serial No. 365,926. 1 Claim. (Cl. 240—45.)

In a headlight, a reflector of substantially parabolic form, a lamp located substantially in the focus of the reflector, a shutter forming part of the reflecting surface of the reflector pivotally mounted above the lamp, and means under the control of the operator for moving said shutter about its pivot comprising an electro-magnet coil, a movable plunger disposed within said coil adapted to be moved upwardly when the coil is energized, means for limiting the stroke of said plunger, a rotatable shaft split at one end thereof mounted on the rear of the reflector for operatively connecting said plunger to said shutter, internal and external threads on the split end of said shaft, a coiled spring on said shaft and connected thereto adjacent the split end thereof, adapted to rotate said shaft to return said plunger to its normal position



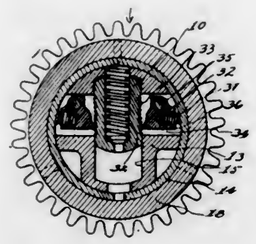
when the coil is de-energized, means on said shaft for adjusting the tension of said coiled spring comprising a collar in screw threaded engagement with said shaft and means for locking said collar on said shaft comprising a tapered screw in screw threaded internal engagement with the split end of said shaft adapted to expand said shaft into locking engagement with said collar.

1,806,898. AUTOMATIC SELF-CLEANING AUTOMOBILE FILTER. ALFRED GOODLOE, Roanoke, Va., assignor, by mesne assignments, to American Air Filter Company, Inc., a Corporation of Delaware. Filed May 7, 1928. Serial No. 275,912. 11 Claims. (Cl. 183—63.)



1. An air filter particularly for a compressor or the air intake of the carbureter of an internal combustion engine or the like comprising a housing; a pin mounted on the housing; a filter drum rotatably mounted on the pin, said housing having a bath of oil in the bottom thereof into which the filter projects; a plurality of teeth associated with said filter drum; and a piston and cylinder device cooperating with said teeth and operated by the suction of the associated engine to intermittently rotate the drum to automatically and periodically clean and recoat the filter with oil.

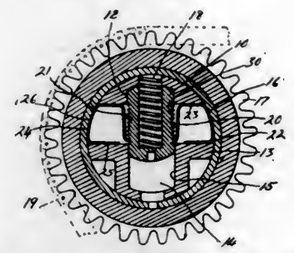
1,806,899. DUST COLLECTOR MECHANISM FOR SINTERING MACHINES. JOHN E. GREENAWALT, New York, N. Y. Filed Apr. 30, 1929. Serial No. 359,373. 2 Claims. (Cl. 266—21.)



1. In combination with a rotatable sintering pan, a sinter receiving hopper thereunder, means for sealing the adjacent edges of the pan and the hopper from the atmospheric air, said sealing means comprising hinged gates at the ends of the hopper adapted to rest on the ends of the pan, and means for causing a blast of air to traverse the hopper.

1,806,900. WINDMILL. FRANK J. HALLER, Freeport, Ill., assignor to Stover Manufacturing & Engine Co., Freeport, Ill., a Corporation of Illinois. Filed Feb. 6, 1929. Serial No. 337,740. 14 Claims. (Cl. 170—77.)

1. In a windmill head, comprising a substantially vertical guide rod, and a cross-head reciprocable on said guide rod constructed to operate a plunger rod, an extension on said head reaching upwardly about the guide rod, and a top plate removably secured on top of the extension and providing support for the upper end of the guide rod, said top plate serving to cover a hand-hole provided in the top of said extension through which the cross-head is arranged to be removed and replaced.

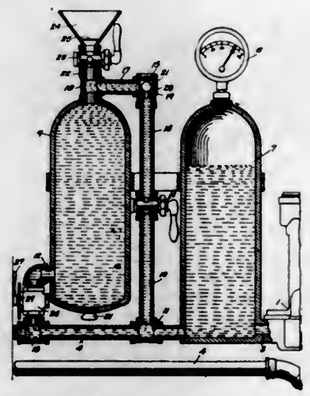


1,806,901. TIGHTENER FOR FLEXIBLE DRIVE CONNECTIONS. FRANK M. HAWLEY, Detroit, Mich., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Dec. 27, 1926. Serial No. 157,401. 12 Claims. (Cl. 64—5.)

1. In an automatic chain tightener, the combination with a support, of a sprocket journalled upon said support, means for automatically effecting a rectilinear movement of said sprocket in one direction relative to said support, and means for automatically holding said sprocket from movement in the opposite direction relative to said support.

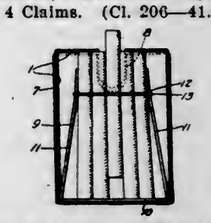
1,806,902. AUTOMATIC CHAIN TIGHTENER DEVICE. FRANK M. HAWLEY, Detroit, Mich., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Apr. 16, 1928. Serial No. 270,523. 7 Claims. (Cl. 64—5.)

1. In a tightener for flexible drive connections, the combination of a support, a bearing slidably mounted on said support, a revoluble member on said bearing, means for resiliently urging said bearing in one direction relative to said support, ratchet teeth on said support and a latch carried by said bearing and engageable with said



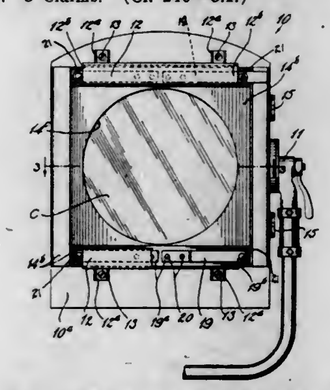
ratchet teeth, said latch comprising a spring metal clip having an arm projecting into engagement with said ratchet teeth.

1,806,903. TRANSMITTER SUSPENSION ARM. HARRY H. IDE, Chicago, Ill., assignor to American Electric Company, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 17, 1930. Serial No. 436,492. 8 Claims. (Cl. 179—152.)



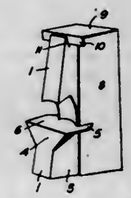
1 In a transmitter suspension arm, a base plate for supporting the same attached to a telephone switchboard, tubular telescoping members supported by said base plate, a square rod inside said tube members, and means cooperating with said square rod for preventing turning movement of said tubular members.

1,806,904. METHOD OF MIXING LIQUIDS. EARL JOHNSON, Kansas City, Mo. Filed Jan. 4, 1929. Serial No. 330,313. 3 Claims. (Cl. 299—84.)



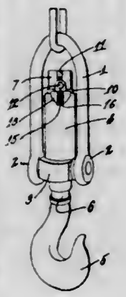
2. The method of adding a secondary spray fluid having lower specific gravity than a primary fluid to a stream of said primary fluid, including confining portions of the primary and secondary fluid to form a body of secondary fluid supported by a body of primary fluid, and by-passing a portion of the stream of primary fluid first through the body of secondary material to pick up secondary fluid and force portions of the same through the body of primary fluid.

1,806,905. CIGARETTE PACKAGE. CHARLES KAMPFMAN, East Hartford, Conn. Filed Sept. 6, 1928. Serial No. 304,324. 4 Claims. (Cl. 206—41.)



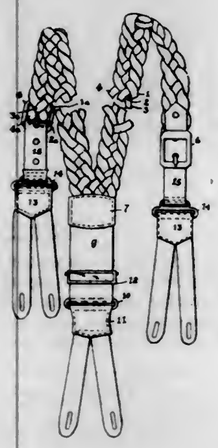
1. A cigarette package comprising a wrapper to enclose a pack of cigarettes; a substantially U-shaped clip within the wrapper comprising a relatively stiff strip bearing against opposite sides of the pack and against one end thereof, said clip being bendable at the corners of the pack; and a rubber band surrounding the pack and the clip adjacent the free ends of the latter and exerting a compression through the clip tending to force the cigarettes laterally toward the center of the package.

1,806,906. SPOT AND FLOOD LIGHT PROJECTOR. JOSEPH LEVY, Brooklyn, N. Y., assignor to Century Lighting Equipment, Inc., New York, N. Y., a Corporation of New York. Filed June 26, 1930. Serial No. 463,852. 3 Claims. (Cl. 240—3.1.)



1. In a light modifying accessory adapted to be removably supported between a pair of grooved slides of a conventional light projecting apparatus, flat spring means secured to the accessory, and spaced projecting members carried on said means for engaging with one of said slides.

1,806,907. COMBINED CARD SUPPORT AND DISPLAY STAND. WALTER LINDSEY, Toronto, Ontario, Canada. Filed Mar. 18, 1930. Serial No. 436,837. 3 Claims. (Cl. 211—156.)

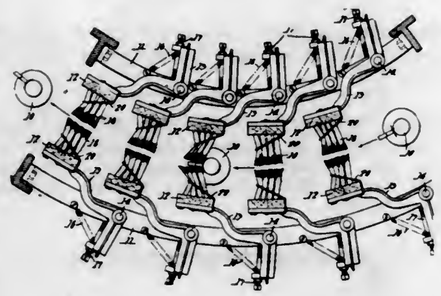


1. In a combined card support and display stand, the combination with a card support member, of a display stand member comprising a back portion, wing portions adapted to be bent at an angle to the back portion, and a top platform portion, the back, wing and platform portions being formed integrally one with the other, and said display stand member being detachably interlocked with the card support member.

1,806,908. LOCKING DEVICE FOR SPRING HOOKS. SPENCER WILLIAM LONG, Redondo Beach, Calif., assignor, by mesne assignments, to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 21, 1930. Serial No. 445,946. 5 Claims. (Cl. 294—82.)

1. In a rotation lock for well casing hook, the combination of a lock bolt, a cap having a longitudinally extending groove formed therein, into which the lock bolt is adapted to be adjusted, means for adjusting the lock bolt in position, and means adapted to engage the latter said means and hold the lock bolt in adjusted position.

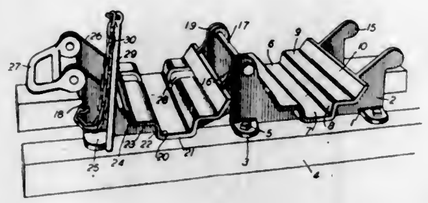
1,806,909. SUSPENDERS. CLIFFORD L. MEYER, Bellevue, Pa. Filed Sept. 5, 1930. Serial No. 479,914. 3 Claims. (Cl. 241—12.)



1. In a suspender for supporting garments from the shoulders of the wearer, the combination with the front forks and the rear fork and a bar connected to each of the front forks, of shoulder straps formed of a plurality of lengths of material doubled through said bar and braided together, the rear ends of the shoulder straps being connected to the rear fork.

1,806,910. PROCESS FOR THE PRODUCTION OF SYNTHETIC DRESSING OR TANNING MATERIALS. ALEXANDER MICHAILOWITSCH NASTUKOFF, Moscow, Union of Socialist Soviet Republics. Filed Nov. 1, 1928, Serial No. 316,613, and in the Union of Socialist Soviet Republics June 28, 1927. 7 Claims. (Cl. 260—3.)

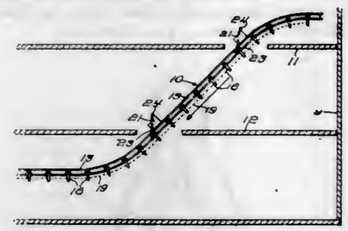
5. In the process of producing synthetic tanning material, the step which consists in oxidizing by means of an oxidizing agent formolite obtained by condensing petroleum hydrocarbons with sulfuric acid and formalin, said oxidation being conducted at a super-atmospheric pressure.



6. A tanning material, consisting of formolite oxidized by an oxidizing agent and dissolved in an alkali solution.

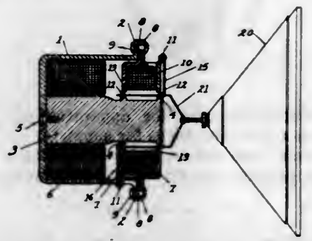
1,806,911. LABEL WIPING DEVICE. CHARLES H. OSLUND and JOHN EMANUEL JOHNSON, Worcester, Mass., assignors to The O & J Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 17, 1928. Serial No. 300,258. 2 Claims. (Cl. 15—168.)

1. As an article of manufacture, a label wiping brush comprising a back with rows of bristles projecting from the front thereof and a wire loop extending at an angle from the front edge of the back to engage the rear bristles at an intermediate point between their ends and hold them forward, the ends of said loop extending around on the back and held thereto.



1,806,912. BIT OR LIKE VISE. FRANK M. OWEN, Oklahoma City, Okla., assignor of one-half to American Iron and Machine Works Co., Oklahoma City, Okla., a Corporation of Oklahoma. Filed Apr. 19, 1930. Serial No. 445,733. 3 Claims. (Cl. 81—17.)

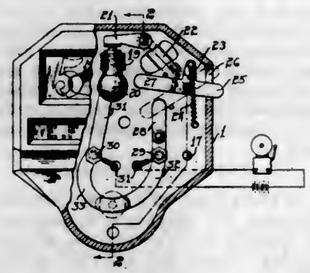
1. A bit or like vise including a base having a seat conforming substantially to the contour of one half of a bit, a clamping member having a socket conforming substantially to the contour of the other half of said bit including wings provided with apertures registrable with an aperture in said other half of the bit, and means insertable in said registering apertures for securing the clamping member to said apertured half of the bit.



1,806,913. CONVEYER SAFETY DEVICE. CYRIL D. PAQUETTE, Detroit, Mich., assignor to Kurth & Knapp Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 21, 1930. Serial No. 437,805. 16 Claims. (Cl. 104—251.)

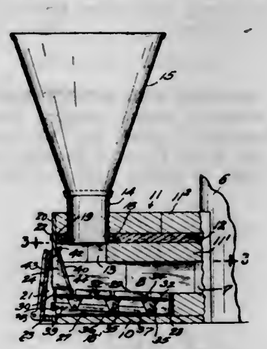
1. In a traveling chain conveyer, a safety mechanism comprising a member normally in the path of the conveyer and a stop device normally out of the path thereof and actuated by said member, said member being

adapted to shift said stop device into position to stop the conveyer upon predetermined increase in the speed of travel of the conveyer.



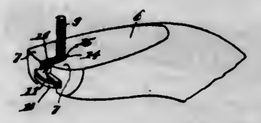
1,806,914. LOUD SPEAKER MOTOR. CHARLES W. PETERSON, Cincinnati, Ohio. Filed Mar. 7, 1930. Serial No. 433,958. 7 Claims. (Cl. 179—115.5.)

4. An armature structure designed for movement axially within two magnetic air gaps of annular shape under influence of an oscillatory flux in the poles about said gap, comprising permeable rings, a frame joining said rings in proper spacing, and means for damping vibrations self-accentuated in the said armature.



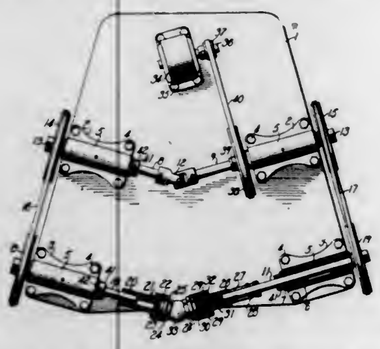
7. In a motor structure for the purpose described, a flanged cup, a cylindrical center pole secured to the base of the cup, a field coil housed in the cup around said center pole, a pair of plates shaped so that when set together a chamber is left between them, said plates having centrally located apertures, the walls of which form outer poles adjacent the cylindrical surface of the center pole, an energizing coil housed in the chamber between the plates, said plates being secured to the flange of the cup and in magnetic relation thereto, an armature comprising spaced rings located in the annular air gaps so established, and guiding elements secured to the armature.

1,806,915. ILLUMINATED SIGN. EUGENE PINKUS, Toledo, Ohio. Filed Jan. 23, 1930. Serial No. 422,939. 4 Claims. (Cl. 40—32.)



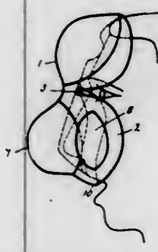
1. In a device of the class described including a bell circuit and source of current supply, a casing having an open inner end, said casing having an opening formed in the front thereof to receive an indicia plate, a mounting plate closing the inner end of said casing, means detachably connecting said mounting plate to said casing, said mounting plate comprising a plurality of layers of insulating material, a lamp bracket of conducting material carried by said mounting plate, a lamp carried by said bracket positioned in rear of said indicia plate, a pair of terminals, leads for said terminals adapted to be connected to said bell circuit, a connection between one of said terminals and said lamp bracket, means connecting the other of said terminals to said lamp bracket including a manually operable switch having a portion projecting through and operable from the outside of said casing, and a connecting strip leading from said switch and disposed between said insulating layers, a pair of normally separated spring contact plates connecting said terminals and a push button operable from the outside of said casing engaging one of said plates, whereby said plates may be moved into contact for energizing the bell circuit.

1,806,916. FURNACE. MARK M. REQUA, Seattle, Wash. Filed Mar. 7, 1928. Serial No. 259,709. 3 Claims. (Cl. 110—29.)



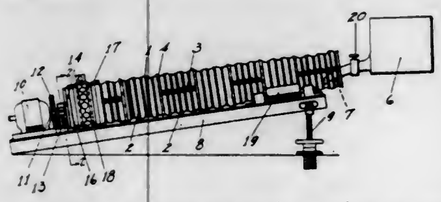
3. A furnace of the character described, comprising a structure having a tunnel extending through its entire length, a door at the front end of the tunnel, a grate arranged for longitudinal movement in the tunnel, a plate pendantly hinged to the tunnel structure disposed above and at the front end of the grate, said plate being adapted to serve as a partition to divide the tunnel into an air space in front of the partition and a combustion chamber to the rear thereof, and a fuel hopper provided with a delivery spout located above the front portion of said combustion chamber.

1,806,917. CLEAT STUD HOLDER. JOHN T. RIDDELL, Evanston, Ill. Original application filed Dec. 29, 1926, Serial No. 157,670. Divided and this application filed Sept. 7, 1928. Serial No. 304,457. 2 Claims. (Cl. 1—19.)



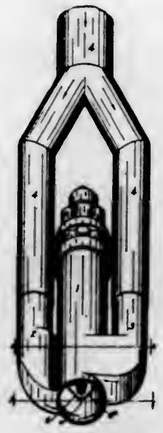
1. A stud support, comprising a horn having a recess adapted to receive the head of a stud, a notch opening laterally from the recess and adapted to accommodate the body of such stud, and a notch of reduced dimensions opening into the first mentioned notch and adapted to accommodate a fillet extending from the head and the body of said stud, and a table adapted to be engaged by the surface of the head of the bolt opposite said body.

1,806,918. VALVE SEAT LAPPING MACHINE. ARTHUR E. RIGGS, Sapulpa, Okla. Filed May 10, 1930. Serial No. 451,955. 6 Claims. (Cl. 51—27.)



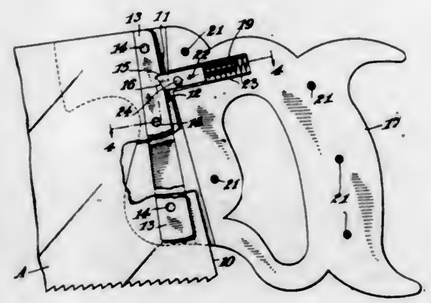
2. In a device of the character described, angularly disposed shafts, means on each shaft for receiving a valve seat collar, means for yieldingly retaining a ball valve between said collars, and means for rotating the shafts in opposite directions.

1,806,919. METHOD AND DEVICE FOR VOICE CULTURE. SEMEN D. ROBEN, Moscow, Union of Socialist Soviet Republics. Filed Oct. 16, 1929, Serial No. 400,137, and in the Union of Socialist Soviet Republics Dec. 28, 1928. 5 Claims. (Cl. 84—466.)



3. A device for training voice, consisting of a mask with cavities and projections conforming to the upper portion of the singer's face, the lower portion of said mask being adapted to support the singer's lip in a raised position.

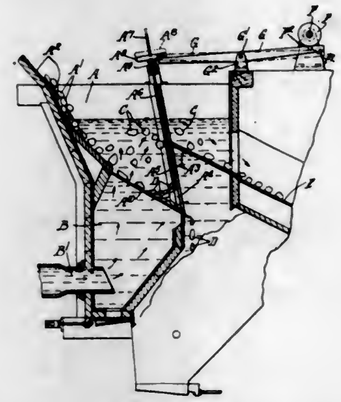
1,806,920. CORRUGATED CONDUIT. HOWARD SEE, Atlanta, Ga., assignor to The Dixie Culvert & Metal Company, Atlanta, Ga., a Corporation of Georgia. Filed Dec. 27, 1927. Serial No. 242,945. 3 Claims. (Cl. 91—70.)



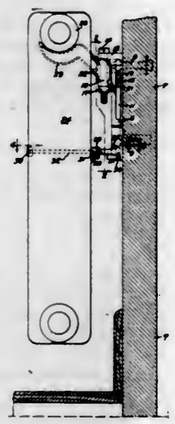
1. A process for providing a smooth interior for corrugated sheet metal conduits, which consists in rotating the conduit while holding the same at a slant, and at the same time pouring heat liquefied bituminous material into the upper end of said conduit, whereby gravity and centrifugal force act simultaneously to provide a smooth interior coating that fills the corrugations.

1,806,921. COMBUSTION TUBE FOR OIL BURNERS. HARRY F. SMENNER, Fort Wayne, Ind., assignor to The Wayne Home Equipment Company, Baltimore, Md., a Corporation of Maryland. Filed Sept. 24, 1928. Serial No. 307,988. 6 Claims. (Cl. 158—1.5.)

1. In a combustion tube for apparatus for burning liquid fuel, non-adjustable means for supplying air through the wall of said tube substantially tangentially thereof and means for dividing the air current so supplied.



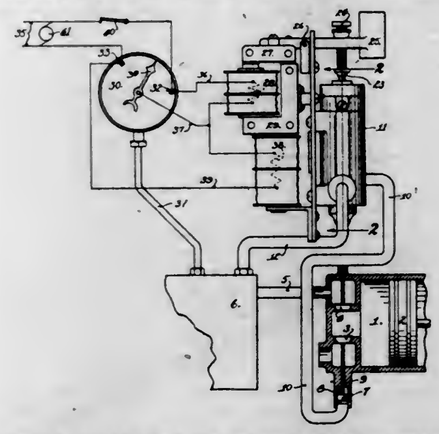
1,806,922. REMOVABLE SAW HANDLE. CESARE STEINHILBER, North Bergen, N. J. Filed Dec. 20, 1930. Serial No. 503,717. 3 Claims. (Cl. 145—108.)



1. In a device of the character described, a saw-blade, having a recess in the butt end portion thereof, a truncated pyramidal clamping member attached to each side of the butt-end portion of said blade and opposite to each other; a recess in the rearward portion of each clamping member; a removable handle having a spaced portion therein through which said blade is slidable and having a passage-way through which said clamping members are slidable; and means capable of insertion within said recesses of said blade and clamping members, preventing the removal of the blade from the handle when said means is thus inserted.

1,806,923. HYDRAULIC CLEANER CONTROL. EARL STUMP, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 13, 1929. Serial No. 413,716. 2 Claims. (Cl. 209—496.)

1. In combination in a hydraulic separator having a stationary separating chamber, means for supplying mixed materials to said chamber and means for forcing a current of water through said chamber, said chamber provided with a discharge for the refuse and a discharge for the cleaned material, a gate member adapted to control the discharge of refuse, axially movable adjustment members for said gate to vary the size of the discharge opening including a handle, and means engaging said handle and operable to impart vibratory movement to said gate.

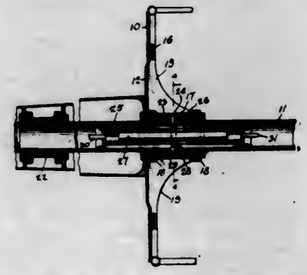


1,806,924. RADIATOR HANGER. FREDRICK A. THING, Oakland, Calif., assignor to Chas. M. Bailey Co., San Francisco, Calif., a Corporation of California. Filed Feb. 9, 1929. Serial No. 338,645. 1 Claim. (Cl. 248—17.)

A radiator hanger comprising a frame adapted for mounting on a wall, a bracket for supporting the radiator adjustably mounted on said frame, a distance post engageable with said frame in fixed relation thereto, a transverse bar on said distance post having a trough-shaped opening in the top thereof and an elongated slot in the side of said trough, a clamp-bar for engaging the radiator, a screw extending thru the clamp-bar and the slot and a nut disposed within the slot and threaded onto the screw.

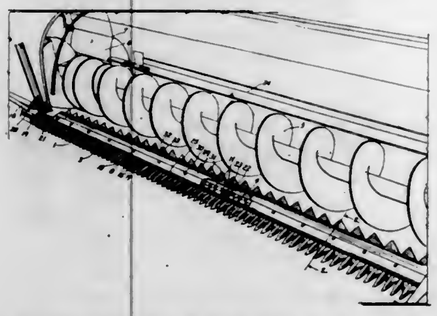
1,806,925. COMPRESSOR UNLOADING DEVICE. WILLIAM TRAPPER, Sacramento, Calif. Filed May 14, 1928. Serial No. 277,541. 4 Claims. (Cl. 137—139.)

1. An apparatus for controlling fluid operated compressor unloaders, comprising a valve for controlling the admission of fluid to said unloader; and electrical means for controlling said valve comprising an electromagnet, a resistance in series therewith, a source of electric current connected normally with said magnet and said resistance, a switch for short-circuiting either said magnet or said resistance, and pressure actuated means for operating said switch.



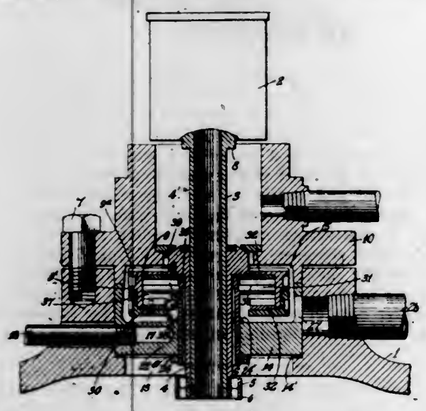
1,806,926. GUARD FINGER AND LEDGER PLATE CONSTRUCTION FOR MOWERS AND REAPERS. ERNEST A. WASHBURN, Los Angeles, Calif. Filed July 12, 1927. Serial No. 205,156. 3 Claims. (Cl. 56—311.)

1. A device as described comprising a flat face and a rear shoulder extending downwardly from said flat face, a recess being formed on the forward end of said face, a lug formed partly on said flat face and partly on said shoulder, a ledger plate formed at its rear end with a depending portion and provided with an opening partly in the rear end thereof and partly in said depending portion, said plate being fitted on said flat face with its forward end fitted in said recess, and its depending rear portion engaging said shoulder, and with said lug fitted in said opening, the forward edge of said lug on said flat face engaging the forward edge of said opening in the plate and the lower edge of said lug on said shoulder engaging the lower edge of said opening in said depending portion.



1,806,927. WING CONTROL FOR AIRCRAFT. BENJAMIN F. ALDRICH, Milwaukee, Wis., assignor of one-half to Edward M. Carey, Milwaukee, Wis. Filed May 14, 1930. Serial No. 452,455. 6 Claims. (Cl. 244—12.)

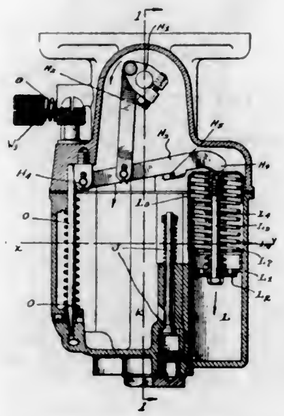
1. Aircraft provided with wings mounted for partial rotation, comprising a fuselage, a transversely extending tu-



bular shaft supported by the fuselage and forming the support for the wings, and means located within the shaft for rocking the wings about the shaft.

1,806,928. GRAIN CUTTING UNIT. ELMER L. BARTELS, Independence, Mo., assignor to The Gleaner Combine Harvester Corporation, Independence, Mo., a Corporation of Delaware. Filed Jan. 20, 1930. Serial No. 421,888. 10 Claims. (Cl. 56—466.)

1. In combination with a sickle and a screw conveyor associated therewith, a feeder positioned longitudinally of the screw for preventing material cut by the sickle from bridging across the screw conveyor.



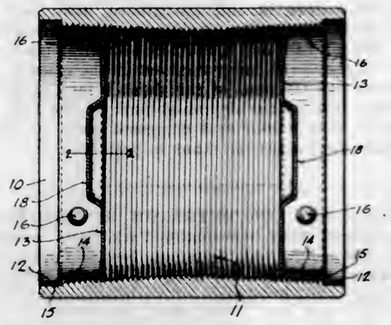
1,806,929. LIQUID SEAL. WILMER H. BATH, West Conshohocken, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 6, 1925. Serial No. 20,981. 15 Claims. (Cl. 286—9.)

1. In a sealing device, a rotating member, a cooperating member, an inwardly opening annular chamber mounted for rotation with said rotating member and adapted to contain sealing liquid, a circular outwardly extending member carried by said cooperating member and having its outer circumferential edge within said chamber, a cooler, means for withdrawing liquid from said chamber to said cooler and supplying liquid from said cooler to said chamber during rotation of said chamber while maintaining the outer surface of said chamber substantially liquid-free.

1,806,930. CARBURETOR. BERT BEARD, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Feb. 11, 1929. Serial No. 338,934. 3 Claims. (Cl. 261—341.)

1. In a carburetor, a mixing chamber, a constant level fuel supply chamber, a mixture outlet, a throttle valve therein, an air vented fuel nozzle discharging into said mixing chamber comprising a cylindrical chamber, a tube in said chamber forming inner and outer concentric chambers, three horizontal shoulders on said tube engaging with the walls of said outer chamber dividing the outer chamber into three sections, passages connecting each of said sections with the inner chamber, an air connection for the upper section, means for intermittently connecting the middle section with the fuel supply chamber, when the

throttle is opened more than a certain minimum degree, said lower section being in constant communication with said fuel supply chamber, a high speed fuel nozzle discharging into the central chamber at a point slightly below the level in said fuel supply chamber, an unobstructed fuel passage connecting said fuel supply chamber to said nozzle, pump means mechanically operated by the throttle and located in said passage so as to accelerate the flow through said high speed fuel nozzle when the throttle is rapidly opened.

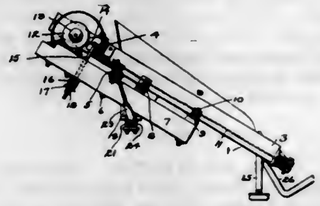


1,806,931. HEADLIGHT INDICATING DEVICE. WILBUR F. BROWN, Toledo, Ohio. Filed June 20, 1929. Serial No. 372,312. 2 Claims. (Cl. 88—1.)

1. A vehicle having a wind shield and a reflecting surface mounted on the vehicle at approximately the height of the windshield, said reflecting surface being mounted at such an angle as to reflect rays coming from a lower point and approximately in line with the direction of movement of the vehicle into a substantially horizontal direction in approximately the same vertical plane as the oncoming rays.

1,806,932. PIPE COUPLING THREAD PROTECTOR. HOWARD J. BURNISH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Sept. 12, 1927. Serial No. 219,021. 6 Claims. (Cl. 137—91.)

1. A thread protector for closing the end of an internally threaded tubular article comprising an annular shell adapted to be entirely inserted within the end of the article and to shield the internal threads thereof, and soft metal

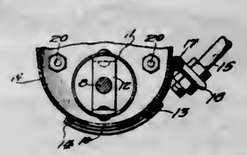


plugs inserted through perforations in said shell and adapted to engage a portion of the treads to retain said shell in position within the article.

1,806,933. CUTTING OIL. ORVILLE E. CUSHMAN and THEODORE W. DOELL, Berkeley, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Jan. 21, 1929. Serial No. 334,134. 6 Claims. (Cl. 87—9.)

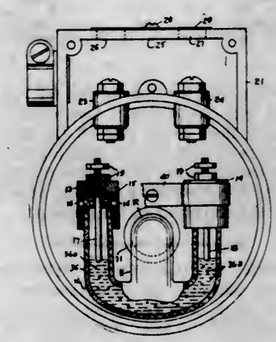
1. A cutting oil including mineral oil soluble in liquid sulfur dioxide, and sulfur.

1,806,934. SCREEN. EMIL DEISTER, Fort Wayne, Ind. Filed Nov. 19, 1926. Serial No. 149,324. 3 Claims. (Cl. 209—346.)



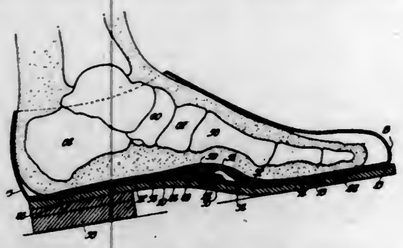
1. The combination of a support, a marginal frame mounted on the support, a screening medium mounted in tension on the frame, a lever resiliently supported beneath the medium and connected at one end to the medium, a vibrating mechanism mounted on the opposite end of the lever to positively vibrate the lever, a resilient transverse member secured at its opposite ends to the opposite sides of the frame and means intermediate the ends of the lever rigidly securing the lever to the central portion of the resilient transverse member.

1,806,935. LIGHT VALVE. PHILO T. FARNSWORTH, Berkeley, Calif., assignor, by mesne assignments, to Television Laboratories, Inc., San Francisco, Calif., a Corporation of California. Original application filed Jan. 7, 1927, Serial No. 159,540. Divided and this application filed Nov. 7, 1927. Serial No. 231,689. 5 Claims. (Cl. 88—61.)



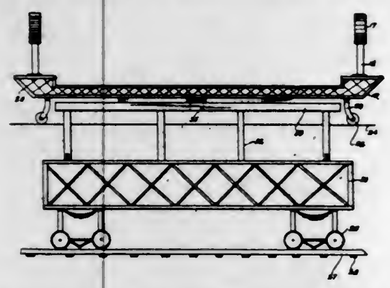
1. A shutter for polarized light comprising gratings positioned transverse the path of the light, a bi-axial crystal interposed between the gratings and positioned so that the refracted rays are along an optical axis, said gratings and crystal having the property and being positioned with respect to the light beam whereby the light is transmitted in accordance with the angle of its plane of polarization.

1,806,936. POWDER DISTRIBUTOR. WALTER S. FINNELL, Hannibal, Mo., assignor to Finnell System, Inc., Hannibal, Mo., a Corporation of Delaware. Filed July 1, 1927. Serial No. 202,908. 4 Claims. (Cl. 275—2.)



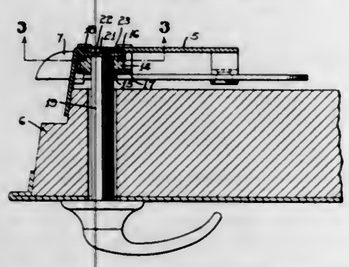
1. In a powder distributor, a container having a bottom portion semi-circular in cross section with a series of centrally located discharge slots along its lowermost part adapted to discharge directly to the floor, a shaft rotatably mounted in and passing through said bottom portion, wheels mounted on the outer ends of said shaft for supporting and moving said container along the floor, and a feeder operated by said shaft as said container is moved along the floor, said feeder comprising oppositely arranged and flat spirally-shaped blades fixed upon said shaft in cylindrical relation thereto, each of said blades having its edge surface adapted to wind toward and pass over said slots successively and in close proximity thereto to positively and uniformly deliver the powder to and through the same in definite quantities as said container is moved along the floor.

1,806,937. ELECTRICAL SWITCH IN OIL BURNING EQUIPMENTS. ORVILLE ALDEN FOGARTY, Montreal, Quebec, Canada, assignor to Vilas Oil Burners Limited, Cowansville, Canada. Filed Jan. 24, 1927. Serial No. 163,136. 1 Claim. (Cl. 200—141.)



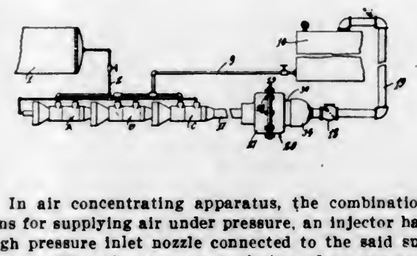
A U-shaped tube having an upwardly projecting extension from the centre thereof, a stack tube secured to said extension, caps closing the ends thereof of said U-shaped tube having lining pads of fibrous material, terminal contacts adjustably screwed through said caps and extending through said pads, a casing enclosing said tube, terminals fixedly secured at the upper end of said casing and adapted to be connected to said terminal contacts, straps securing said tube in a permanent position in relation to said casing terminals, a cover plate closing in said casing terminals, said casing having a tubular rear opening through which said stack tube extends and wires from said casing terminals forming a coil encircling an acetone tube member.

1,806,938. FOOTWEAR. SAMUEL GOODMAN, Chicago, Ill., and WILL N. SECHLER, Fort Scott, Kans. Filed Apr. 15, 1927. Serial No. 184,024. 17 Claims. (Cl. 36—71.)



16. In a shoe the combination comprising a metal arch support having a forward part provided with a convex metatarsal arch support lying under the anterior metatarsal arch and behind the heads of the metatarsal bones, a metal rear portion extending toward the heel of the shoe, a hinged connection between said forward and rear parts and constructed and arranged to permit said parts to flex upwardly, and limiting means associated with said hinged connections to limit the downward flexure of said parts so as to provide a support for the longitudinal arch.

1,806,939. STARTING AND LANDING DEVICE FOR AIRSHIPS OF THE LIGHTER THAN AIR TYPE. ALBERT GRAMPP, Corona, N. Y. Filed Sept. 26, 1929. Serial No. 395,342. 4 Claims. (Cl. 244—2.)

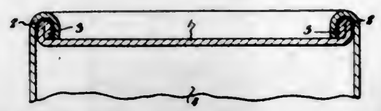


4. In a starting and landing device for airships of the lighter than air type comprising underground tunnels, communicating track slots or grooves in the ground, electrically operated cars in said tunnels running on tracks, posts on said cars extending above the ground through said track slots, and means for preventing a lifting of said cars from their tracks by the buoyancy of the airship.

1,806,940. DOOR LATCH DEVICE. FLETCHER D. GAUND, Weston, Ohio, assignor to The American Swiss Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 7, 1929. Serial No. 330,850. 2 Claims. (Cl. 292—359.)

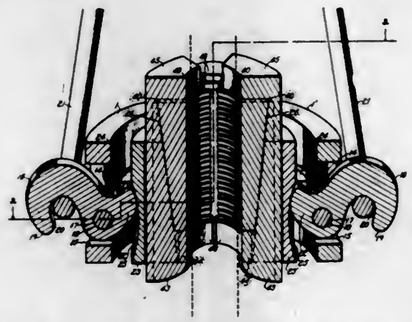
1. In combination with a case plate having a depressed portion formed with an opening, a latch bolt slidably associated with the plate, a roll back disposed inwardly of the case plate, means to connect the roll back to the plate, and a handle shank having a peripheral groove and a non-circular head beyond the groove, said head being insertable in the opening of the case plate only when the shank and roll back are in full bolt retracting position, the groove of the shank being received in the opening of the case plate and the head of the shank being engaged with the outer face of the depressed part of the case plate, and lying flush within said depressed part, whereby the case plate itself holds the shank in position.

1,806,941. AIR CONCENTRATOR OR COMPRESSOR. WILLIAM B. HALE, Huntington Park, Calif., assignor to Hale Pneumatic, Ltd., Lovelock, Nev., a Corporation of Nevada. Filed Oct. 27, 1928. Serial No. 315,384. 6 Claims. (Cl. 230—104.)



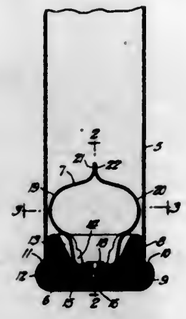
1. In air concentrating apparatus, the combination of means for supplying air under pressure, an injector having a high pressure inlet nozzle connected to the said supply means for liberating a current of air under pressure and having a free-air inlet associated with the high pressure inlet for entraining free air into the liberated air current, said injector having an outlet, a second injector nozzle receiving air from the last named outlet, having an inlet for entraining free air into the air current, an accumulator for air under pressure, means for injecting the air current from the second injector into the said accumulator, and means for admitting air directly into said injectors from said accumulator and for entraining free air into said injectors.

1,806,942. FUEL OIL HEATER. BENJAMIN A. HENDRICKS, Seattle, Wash. Filed Sept. 12, 1927. Serial No. 218,993. 2 Claims. (Cl. 219—38.)



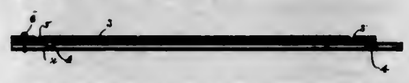
1. An electric oil heater consisting of a horizontally disposed cylindrical casing having its opposite ends centrally apertured, a cylindrical oil receptacle of uniform diameter throughout its length extending through the apertures of the respective ends, said receptacle being of a length exceeding that of the casing to project exteriorly of both ends, oil supply and discharge pipes of less diameter than the receptacle connected to respective extremities and axially of the same, tubular members comprising sheets of electric insulating material disposed concentrically about the outer periphery of the receptacle and in spaced relations, one with another, an electric heating device comprising a coil of resistance wire provided in the space between said tubular members, and a mass of insulating material surrounding the outer of said tubular members, said oil receptacle being unobstructed to permit a free circulation to the oil passing therethrough.

1,806,943. MANUFACTURE OF PAPER CONTAINERS. LYDIA B. KOCH and JOSEPH BUCHINA, New York, N. Y., assignors to The Reinforced Paper Bottle Corporation, New York, N. Y., a Corporation. Filed Nov. 16, 1929. Serial No. 407,718. 1 Claim. (Cl. 93—55.)



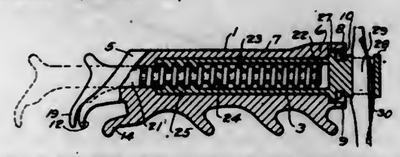
The method of closing and sealing containers in which the top is formed with a vertical circumferential flange, consisting in coating the top with an adhesive of the width of the flange previous to its being formed up, then allowing the adhesive to dry, then forming up the top so that the outer periphery of the flange fits tightly within the top edge of the container, then moistening the flange and then inserting the flanged top into the top of the container so as to cause the adhesive thereon to recede from the bottom edge of the flange of the top towards the top edge of the flange of the top and top edge of the container.

1,806,944. PIPE CLAMP. GEORGE KRELL, Sapulpa, Okla. Filed Oct. 7, 1929. Serial No. 397,901. 11 Claims. (Cl. 294—102.)



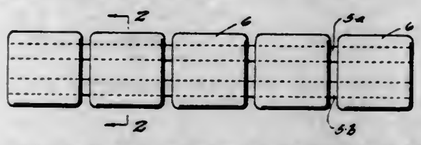
1. A clamp of the character described, including elevating means, slip carriers operably connected with the elevating means for lateral movement in response to initial vertical movement of said means and slips movably mounted in the carriers.

1,806,945. FURNITURE POST END FITTING. FRANK KUSTERLE, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 16, 1929. Serial No. 347,496. 5 Claims. (Cl. 16—42.)



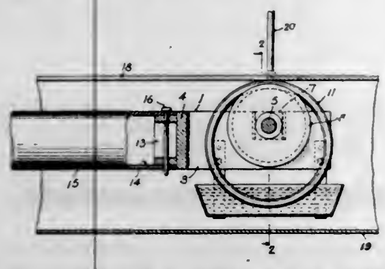
1. In a fitting of the class described, the combination of an end member having a recessed plug portion, a part secured to said end member in said recess and projecting from said plug adapted to yieldingly engage the inside of a hollow post for maintaining said member on the end of said post, the inner end portion of said end member being of a size and shape to snugly fit inside of said hollow post and the outer end portion being enlarged to form a shoulder for receiving the end of the post to position said end member thereon.

1,806,946. INSULATION. FRANK R. LESLIE, White Bear Lake, Minn. Filed Aug. 26, 1929. Serial No. 388,371. 2 Claims. (Cl. 20—4.)



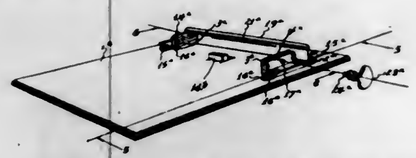
1. An insulation consisting of a plurality of sheets of superimposed board of varying widths and with the edges of the sheets on one side in alinement when positioned together, means for securing the sheets together along the aligning edges, with the sheets unsecured at the opposite edges, and bending lines upon the sheets varying distances apart upon adjacent sheets, whereby the edges of the sheets may be bent into alinement holding the central portions of the sheets separated.

1,806,947. TIRE REMOVING TOOL. INGVALD MJELVA, Seattle, Wash. Filed Aug. 13, 1929. Serial No. 385,568. 3 Claims. (Cl. 157—6.)



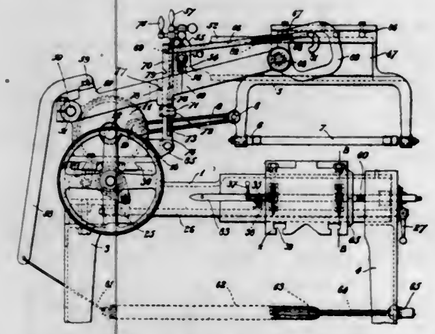
1. In a portable, self-contained tire removing tool, a tubular outer casing forming a handle by which the tool may be held in one hand, a rotatable tubular sleeve extending into the said casing and having threads on the interior of the inner end, a handle extending through the outer end of the said sleeve, a square shank extending through a square opening in the opposite end of the casing and having a downwardly extending curved prong at the outer end thereof, said shank having a screw on the inner portion and screwed into the inner end of the said sleeve, downwardly extending curved prongs at the end of the casing corresponding with and parallel to the prong of the said shank, said casing being relieved behind the said prongs forming a recess to receive a flange at the edge of a rim upon which a tire may be held, a projection at the opposite side of the said recess corresponding with the shape of the prongs, and a plurality of opposed lugs adapted to cooperate with the said projection and prongs to spread a tire and also spaced on the said casing to facilitate gripping.

1,806,948. TILE PANEL STRIP CONSTRUCTION. CARL DAVE NILSEN, Los Angeles, Calif. Filed Nov. 11, 1929. Serial No. 406,290. 1 Claim. (Cl. 72—23.)



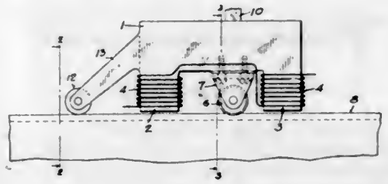
A tile veneer strip comprising a fastening strip adaptable for nailing to a foundation, tiles mounted on said fastening strip and spaced from one another to expose said fastening strip for convenience in nailing, said strip being of substantially less width than said tiles and cementitious material bonding said tiles to said fastening strip.

1,806,949. ARC WELDING CHILL. FREDERICK PALM, Shorewood, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Jan. 6, 1930. Serial No. 418,951. 5 Claims. (Cl. 219—6.)



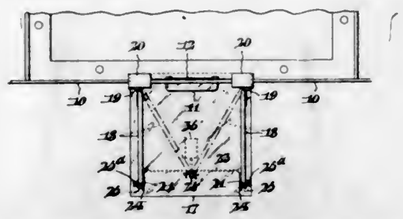
1. An arc welding chill comprising a chill ring, means for rotatably supporting said ring, and means for moving said ring along the seam to be welded.

1,806,950. PAD AND HOLDER THEREFOR. IRWIN E. PRATT, Los Angeles, Calif. Filed Dec. 19, 1927. Serial No. 241,029. 11 Claims. (Cl. 281—15.)



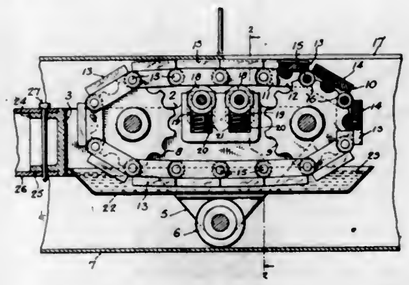
1. A pad holder including a base, a pair of jaws mounted upon said base, and means secured to the base for pressing said jaws toward each other to compress the leaves of a pad edgewise between the inner side faces of said jaws, said jaws being imperforate and having a plurality of fine teeth formed by irregularities confined to the surfaces of the jaws.

1,806,951. MACHINE TOOL FOR METAL WORKING PURPOSES. ROBERT PRICE, Putney, London, England. Filed Sept. 20, 1926, Serial No. 136,435, and in Great Britain Sept. 21, 1925. 3 Claims. (Cl. 29—73.)



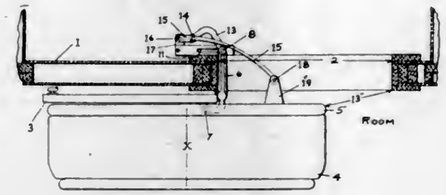
1. A machine tool for metal working purposes comprising a fixed support, an arm pivotally secured to said support, a guide pivotally secured to the free end of said arm, means for adjusting said guide about its pivotal connection to vary its angular relationship to said arm and for fixing said guide in adjusted position, a reciprocating tool holder mounted to slide in said guide, and means on said fixed support for reciprocating said tool holder, the angular relationship between the said arm and said guide being substantially retained throughout the operative movements of said tool holder.

1,806,952. ELECTRODE FOR ELECTRIC WELDING. WALTHER RICHTER, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed May 13, 1929. Serial No. 362,712. 6 Claims. (Cl. 219—4.)



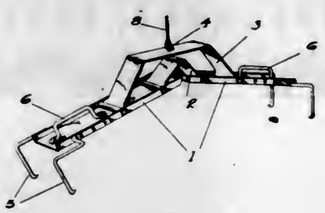
4. In a welding apparatus, a roller electrode adapted to engage the article to be welded and to move progressively therealong, and magnetic means adjacent said electrode to maintain the same in desired electrical contact with the article.

1,806,953. BURGLARY PROTECTION SYSTEM. WALTER SACHS, Lancaster, Pa. Filed Apr. 10, 1928. Serial No. 268,924. 3 Claims. (Cl. 20—1.01.)



1. The combination in a burglary protection system for banks and the like of opposingly-swingable bullet-proof doors at opposite sides of the front of a teller's enclosure, means tending to swing the doors toward each other, means to normally hold the doors in open position, trip devices controlling the door holding means, an associated trip normally retaining a bullet-proof sash elevated at the inner side of the teller's window, and overhead electric contact means within the teller's enclosure in circuit with the trips aforesaid and operative to release both doors so as to form a triangular trap and concurrently release the sash for gravity closure.

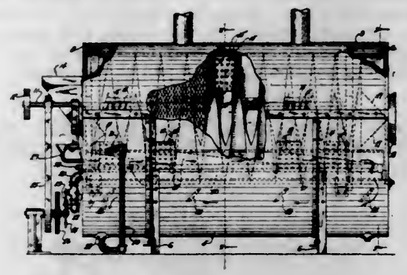
1,806,954. ARC WELDING CHILL. HENRY A. SCHMITZ, Jr., Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Dec. 23, 1929. Serial No. 416,059. 11 Claims. (Cl. 219—6.)



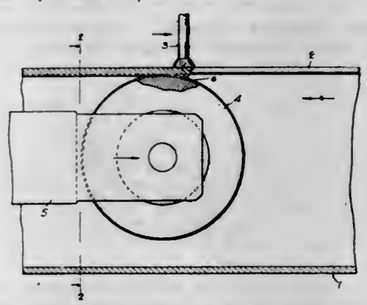
1. In a welding chill, a plurality of chill members, and means for guiding the same successively into contact with the seam being welded.

1,806,955. SHIFTING NARROW DOOR WALL BED. NEIL SINCLAIR, Oakland, Calif., assignor to Rip Van Winkle Wall Bed Company, Inc., Oakland, Calif., a Corporation of California. Filed June 27, 1929. Serial No. 374,040. 5 Claims. (Cl. 5—172.)

4. In a wall bed adapted to swing through a doorway from one side of a wall to the other side of the wall, a pair of vertically spaced supporting brackets fixedly secured in place adjacent one jamb of the doorway, said brackets provided with guides extending along the wall away from the doorway, a pair of arms pivoted at one end each to one of said guides so as to be movable along the guides and pivotal thereon, a bed frame, means pivotally connecting the bed frame with the other ends of said arms for swinging through the doorway from one side of the wall to the other, a controlling lever for each bracket pivoted at one end thereto and at the other end to the bed frame for controlling the path of travel of the same, and a second lever at each bracket pivoted at one end to said controlling lever and at the other end to a point on one of said arms arranged and adapted for shifting said arms along the guides as the bed is swung.



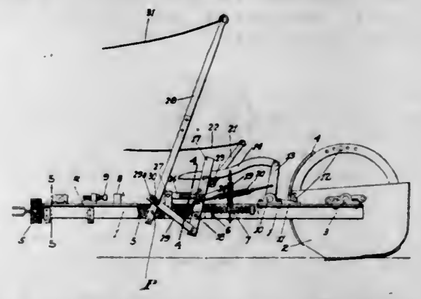
1,806,956. BOX HANDLING TONGS. WALTER SMITH, Malaga, Calif. Filed Aug. 23, 1929, Serial No. 387,941. Renewed Oct. 18, 1930. 6 Claims. (Cl. 294—106.)



1. A box handling tongs comprising a pair of rigid members longitudinally alined with each other, a rigid arched bail upstanding from the bars and pivoted thereon at points closer to their adjacent than to their outer ends, whereby the bars when lifted normally tilt down toward their outer ends, hooks depending from the outer ends of the bars and facing each other, and means connecting the bars to cause their tilting movement to be equalized relative to each other and to the bail.

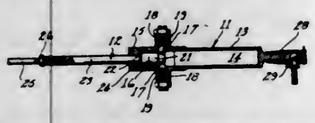
1,806,957. APPARATUS FOR WASHING VEGETABLES AND FRUITS. GEORGE E. STOCKING, Rochelle, Wis., assignor of one-fourth to Berlin Chapman Company, Berlin, Wis., a Corporation of Wisconsin. Filed Aug. 8, 1928. Serial No. 298,287. 3 Claims. (Cl. 146—194.)

2. An apparatus for treating food material comprising an outer water holding receptacle, a foraminous drum rotatably mounted in said receptacle and having an opening for receiving food material, spiral means for moving said material through said drum, and perforated lifting members carried by convolutions of said spiral, each of said lifting members in one position being entirely clear of the water in the outer receptacle, and in another position being entirely submerged therein to enable said lifting members to carry the food material in and out of the water as the material is being moved through the drum.



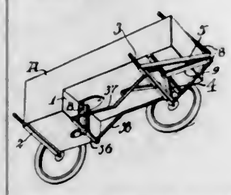
1,806,958. METHOD OF ELECTRIC ARC WELDING. KARL STROBEL, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed June 3, 1929. Serial No. 368,087. 2 Claims. (Cl. 219—6.)

1. In electric are welding the steps which comprise passing an electric arc along juxtaposed metal edges to heat the same to welding temperature and simultaneously therewith passing a chill in contact with the bottom of the metal being welded at a predetermined distance behind the arc and at substantially the same rate of speed as the travel of the arc to control the penetration of the welding heat through the metal.



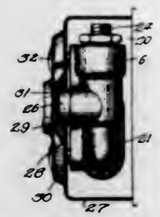
1,806,959. AUTOMATIC REVOLVING SCRAPER. DAMON R. THROOP, Stockton, Calif. Filed July 15, 1929. Serial No. 378,240. 9 Claims. (Cl. 37—140.)

7. A scraper including a rotatable bowl, a frame supporting the bowl in a manner to cause the same, when the frame is drawn forwardly, to assume a scraping



position; a draft tongue forwardly movable relative to the frame, a spring normally resisting such movement of the tongue, connections between the tongue and bowl for turning the latter to a non-scraping position when the resistance of the spring is overcome and the tongue moves forwardly relative to the frame, and means including a forwardly moving lever for restoring the bowl to a scraping position against a pull on the tongue.

1,806,960. SAFETY THROTTLE CONTROL. FRANK VAN VRANKEN, Los Angeles, Calif. Filed May 19, 1928. Serial No. 279,083. 4 Claims. (Cl. 74—81.)

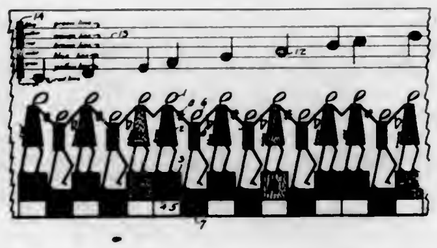


1. The combination with an automobile motor provided with a throttle valve and with an arm to operate said valve, of an accelerator, and a collapsible means connecting the arm and the accelerator, said collapsible means including a tension member yieldingly holding the collapsible means against collapsing, said tension member yielding when pressures above a predetermined amount are applied to the accelerator.

1,806,961. CHILD'S WAGON. CHARLES W. WAAS, St. Paul, Minn. Filed Oct. 17, 1929. Serial No. 400,388. 3 Claims. (Cl. 280—87.5.)

1. In a child's wagon, a steering mechanism comprising a forwardly extending frame connected to the front axle to turn therewith, a squared housing in the forward end of said extension, a rotatable member mounted rearwardly of said front axle and having laterally extending arms connected thereto, said rotatable member having a squared opening therein, link means connecting the laterally extending arms connected to said member to the front axle and a handle member having a squared lower end and an upper portion hingedly connected thereto, said squared lower portion being of a size to fit closely in the squared housing on the forward extension of the front axle and to fit within the squared opening in said rotatable member.

1,806,962. PLUMBING FITTING. EARL G. WATROUS, Chicago, Ill. Filed May 31, 1929. Serial No. 367,381. 6 Claims. (Cl. 137—69.)



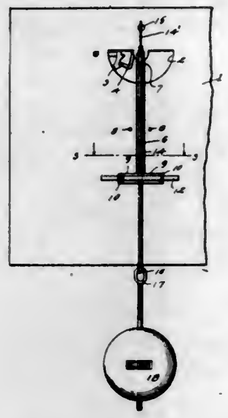
1. A new article of manufacture comprising a combined shut-off valve and faucet support having a plurality of passageways therethrough, and valves for controlling said passageways.

1,806,963. SELF-SUPPORTING HOSE. LEONARD WOODS, St. Louis, Mo. Filed June 6, 1929. Serial No. 368,803. 2 Claims. (Cl. 2—240.)

1. The combination with a hose leg having double wall side portions of the fabric forming V-shaped connected passages diverging from the ankle to the top and having a transverse slit in the inner wall near one end, of a plurality of stiffening strips insertable through said transverse slit into both said passages and hidden by stretching the hose fabric over the projecting end of each strip so that said strips will bear on both ends of the passages and be detachably secured therein, substantially as described.

1,806,964. APPARATUS FOR TEACHING MUSIC. CLARA MIGHELL LEWIS BUNDY, Tacoma, Wash. Filed Dec. 18, 1929. Serial No. 414,961. 6 Claims. (Cl. 84—479.)

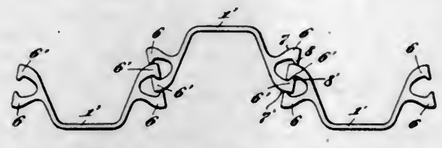
2. A chart for teaching music comprising a representation of each key of an octave by a picture representing a clothed human figure, the clothes of the figures representing the keys of the natural scale being colored distinct and different colors, and the clothes of the figures representing the black keys being black.



1,806,965. INK FOR CELLULOSE ESTERS. JOHN H. CLEWELL, Arlington, N. J., assignor to Du Pont Viscoloid Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 12, 1928. Serial No. 269,595. 4 Claims. (Cl. 134—28.)

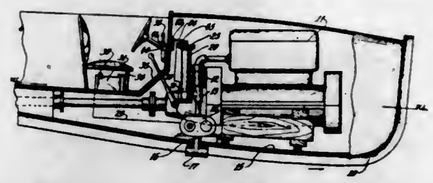
1. Ink for cellulose ester bodies comprising a cellulose ester solvent having a boiling point substantially between 140° C. and 225° C., a nigrosine base soluble therein, and a thickener.

1,806,966. SELF LEVELING CLOCK ESCAPEMENT VERGE ROD. LE ROY COPELIN, Jacksonville, Fla. Filed Apr. 2, 1929. Serial No. 351,949. 7 Claims. (Cl. 58—134.)



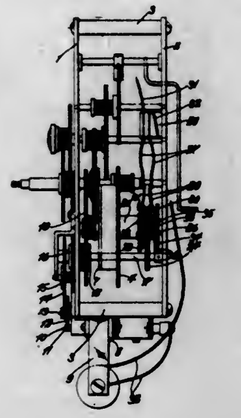
2. A self leveling clock escapement verge rod, comprising a rod body, spaced substantially right angularly

extending arms carried by said body, and a plate shiftably carried by the arms, said plate having an opening



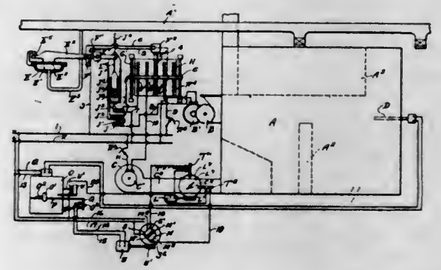
intermediate the ends thereof for receiving a clock pendulum wire, said opening being positioned between said arms.

1,806,967. SHEET PILING. ROBERT S. A. DOUGHERTY and RODERICK J. MCINTOSH, Bethlehem, Pa., assignors to Bethlehem Steel Company. Filed Dec. 29, 1926. Serial No. 157,655. 2 Claims. (Cl. 61—62.)



1. A piling section comprising a web provided at each of its vertical edges with two similar hook-like flanges defining a groove, the outer surfaces of each of the flanges having an arcuate formation and the inner part of each of the flanges having an angular hook-like portion.

1,806,968. PUMP PRIMING DEVICE. EMERY H. FAHRNEY, Chicago, Ill. Filed Jan. 26, 1929. Serial No. 335,254. 2 Claims. (Cl. 103—113.)

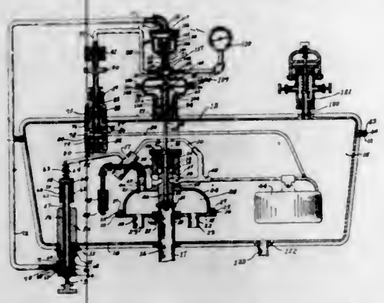


1. In combination, a liquid circulating pump, a supplemental pump for priming the circulating pump, the outlet of the supplemental pump being connected with the inlet of the circulating pump, a closed reservoir having an inlet connected with the communicating passage between the outlet of the supplemental pump and the inlet of the circulating pump, a diaphragm constituting a part of the said reservoir, a motor for operating the said priming pump, a circuit for controlling said motor, and a switch device for controlling the said circuit, said switch device being operable in one direction by the direct action of the diaphragm under the pressure created in the said reservoir by the liquid in the reservoir.

1,806,969. CLOCK WINDING MECHANISM. ARNO W. FOWLER, Highland, Ill. Filed May 23, 1928. Serial No. 279,885. 9 Claims. (Cl. 185—40.)

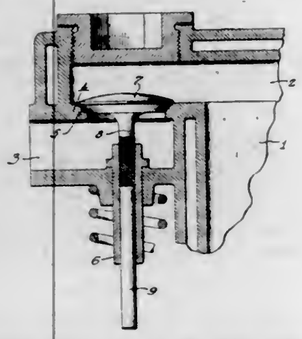
1. A device of the character described comprising a rotary shaft, a pair of resilient contact members, a metallic disc mounted for rotation about said shaft as an axis and arranged to contact with said members and close the circuit between them, insulating means mounted on said disc for breaking the circuit between said contact members, two independently rotatable concentric members, an element rotative about said shaft for rotating one of said members, a device pivoted on and operated by said one member for moving said disc a distance sufficient to carry said insulating means beyond said contact members, an arm pivoted co-axially with said shaft, and means operated by said shaft for causing said arm to rotate said disc a distance sufficient to interpose said insulating means between said contact members.

1,806,970. COMBUSTION REGULATION. GEORGE H. GIBSON, Upper Montclair, N. J. Filed July 22, 1929. Serial No. 380,121. 22 Claims. (Cl. 236—14.)



1. The method of operating a furnace which consists in normally exerting a draft changing effect, regularly alternately in direction on any decrease in furnace temperature, until the furnace temperature begins to increase, and thereafter continuously in the same direction.

1,806,971. BOTTLING MACHINE. SAMUEL GREENHOUSE, Brooklyn, N. Y. Filed Jan. 7, 1929. Serial No. 330,869. 11 Claims. (Cl. 226—118.)

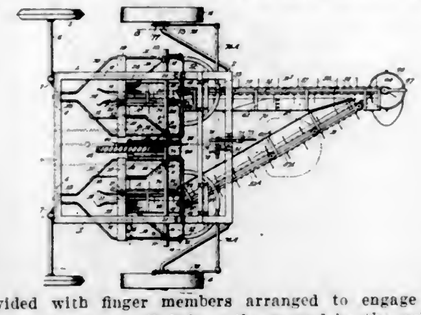


1. In a bottling apparatus of the class described, an enclosed tank, an inlet pipe leading thereto, a delivery pipe leading therefrom, a valve controlling said inlet pipe, a float arranged to operate said valve, additional

means to positively close said valve, said means operable by a fluid pressure, means operable by said float to admit fluid pressure to said additional closing means and fluid

pressure operated means to release the pressure from said additional closing means said releasing means controlled by said float.

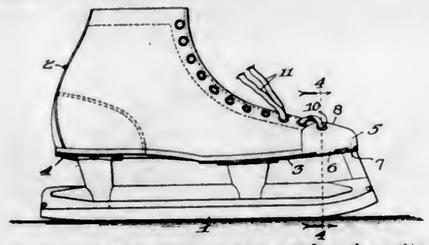
1,806,972. VALVE CONSTRUCTION. ADOLPH GREINER and CORNELIUS J. LONG, Milford, Mich. Filed Aug. 6, 1927. Serial No. 211,075. 4 Claims. (Cl. 123—188.)



1. A puppet valve having a cast metal head and a cast metal neck extending therefrom, a valve stem guide for said valve, said neck being of such length as to remain at least partially in the valve stem guide at all times during its operation in a motor.

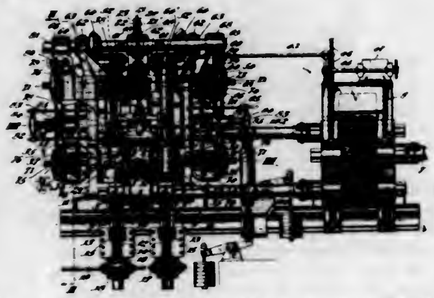
1,806,973. METHOD FOR PRODUCING HIGH GRADE ROSIN. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 24, 1927. Serial No. 228,501. 11 Claims. (Cl. 87—2.)

1. The method for producing a high grade rosin which includes subjecting impure rosin to treatment with a liquid paraffin hydrocarbon boiling below about 15° C. at atmospheric pressure in sufficient quantity to dissolve substantially pure rosin therefrom, separating the hydrocarbon-rosin solution formed from the undissolved components of the rosin and then separating the hydrocarbon from the rosin dissolved therein.



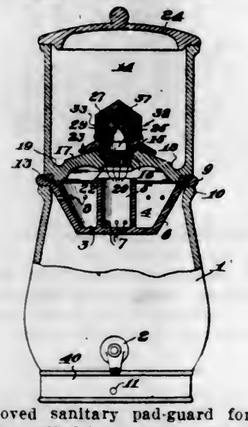
1,806,974. TWO-ROW PULLING AND SIX-ROW PILING APPARATUS FOR HARVESTING SUGAR BEETS. BENJAMIN P. IRVINE, Denver, Colo. Filed Feb. 21, 1930. Serial No. 430,250. 9 Claims. (Cl. 55—108.)

1. In a two row beet puller and a six-row beet piler, the combination with the wheeled frame, of two pairs of beet puller blades straddling each of the two rows of beets and each blade of each pair of beet pullers being inclined inwardly to engage the downward tapering sides of the beets; endless conveyors supported on said frame and arranged to receive the beets from each pair of pullers, each pair of pullers being provided with a conveyor and the two conveyors being arranged to intersect each other at their discharging ends, each conveyor being



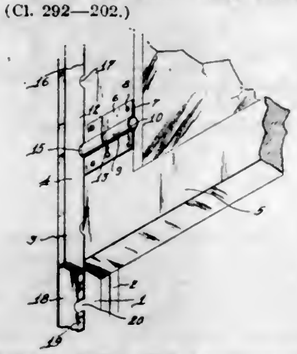
provided with finger members arranged to engage the beets as they are pulled from the ground by the pullers and a chute at the end of the conveyors arranged to discharge the beets in the center of the space between the two inside rows of the six rows.

1,806,975. TOE GUARD FOR ICE SKATES. CHARLES I. JOHNSON, Chicago, Ill., assignor to Nestor Johnson Manufacturing Company, a Corporation of Illinois. Filed May 23, 1929. Serial No. 365,379. 9 Claims. (Cl. 208—183.)



1. The combination with a skate and a shoe attached thereto, of a guard fitting over the toe portion of the shoe to protect the same, said guard being slit so as to fit shoes of different sizes and shapes, and lugs on the guard to engage between the sole of the shoe and the skate.

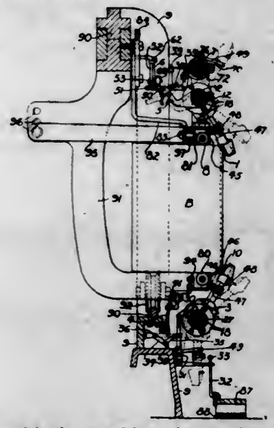
1,806,976. UNIVERSAL ROLLING MILL. ALBERT T. KELLER, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Jan. 21, 1928. Serial No. 248,324. 14 Claims. (Cl. 80—38.)



13. In a universal mill, vertical formative rolls, laterally adjustable housings supporting the vertical rolls, an upper horizontal formative roll, backing rolls operatively engaging the upper formative roll, means for positively driving the backing rolls, carriers for said upper horizontal formative roll, guide elements on said carriers slidably engaging guideways on the laterally adjustable housings, blocks slidably mounted in openings in the laterally adjustable housing abutting the guide elements on said carriers, adjustable means for said blocks, whereby the upper horizontal formative roll may be laterally adjusted and held in an adjusted position against lateral movement.

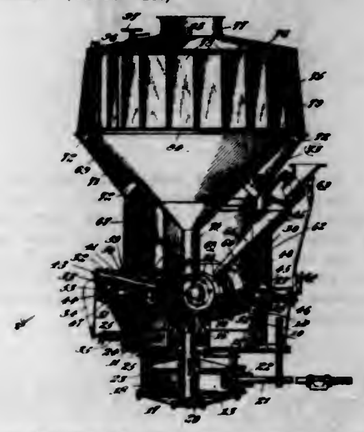
1,806,977. FILTER DEVICE. FRANCIS L. M. KENNEY, Los Angeles, Calif., assignor, by mesne assignments, to Frank L. Manion. Filed Aug. 23, 1928. Serial No. 301,485. 7 Claims. (Cl. 210—105.)

1. An improved sanitary pad-guard for filters, comprising a hollow cylindrical member having a closed top and an open bottom, said pad-guard having a detached, ring base-means positioned beneath the side-walls of said cylindrical member, said side-walls being provided with openings for the ingress of water, and an outwardly extending skirt-flange at the bottom of said side-walls.



1,806,978. WINDOW LATCH. FRANK KILBERG, Detroit, Mich. Filed Nov. 26, 1928. Serial No. 321,859. 4 Claims. (Cl. 292—202.)

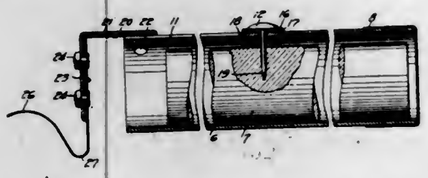
1. In combination with a frame structure and a member slidable therein, said frame structure having a semi-cylindrical notch in one of the sides thereof along which said member slides, a bolt rotatably supported by said member, said bolt having a semi-cylindrical end portion adapted for insertion in and removal from said notch by rotation of said bolt.



1,806,979. SHINGLE MACHINE ATTACHMENT. MATT W. KOSKI, Hoquiam, Wash. Filed Dec. 29, 1928. Serial No. 329,103. 20 Claims. (Cl. 143—12.)

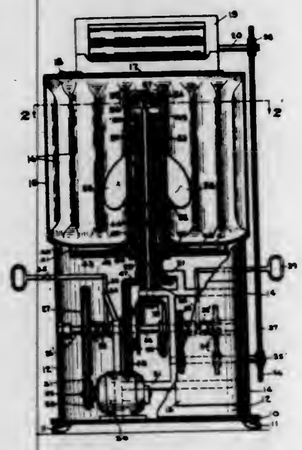
1. In combination with a shingle machine including a movable carriage, and means for holding a shingle block thereon, a cutter head disposed adjacent the path of movement of the carriage, and located to bevel an edge of the shingle block, and a common means for shifting said block-holding means and cutter head to accommodate blocks of random lengths.

17. In a shingle machine, in combination with a frame, a carriage guided thereon for transverse movement, means including a spur roll and a shiftable supporting block therefor for supporting a shingle block upon said carriage, and a saw positioned at one end of the carriage's travel to cut shingles from such a block, a rotary bevel cutter positioned to act upon a shingle block supported in said carriage as it moves towards the saw, an oscillatable support for said bevel cutter disposed parallel to the direction of movement of the carriage, a telescoping guide tube and plunger disposed generally parallel to the direction of movement of the carriage, one thereof being anchored to the frame and the other supported upon the tiltable spur roll support, and the assembly having mobility in the plane of shifting of the spur roll, said oscillatable support for the bevel cutter being suspended from the anchored member of said assembly, an arm fixed to said oscillatable cutter support, a fixed cam member engageable with said arm by movement of the spur roll support transversely of the normal direction of the carriage's movement, to be depressed thereby, toggle links connecting said arm and said tube and plunger assembly to maintain the arm in depressed position, and two cooperating cam means engageable prior to re-engagement of the shingle block and saw to release said toggle links.



1,806,980. PULVERIZER. OTTO A. KREUTZBERG, Bethlehem, Pa. Filed Nov. 5, 1926. Serial No. 146,321. 8 Claims. (Cl. 83—45.)

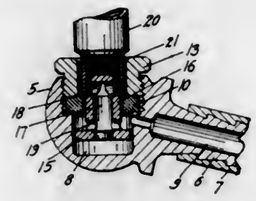
1. In a pulverizer, the combination of a rotatable table having a conically dished portion and a flat border



portion, crushing rolls cooperating with the dished portion, means for passing a current of air about the edge of the table, and a deflector member extending inwardly, over, above and substantially parallel with respect to the flat portion of the table for deflecting air inwardly and directly over the latter.

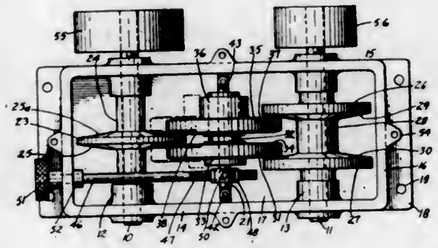
1,806,981. DISPENSER. LEWIS M. MCCORMICK, Palo Alto, Calif. Filed Mar. 5, 1929. Serial No. 344,366. 4 Claims. (Cl. 91—67.4.)

1. A dispensing device for an adhesive in stick form comprising a retainer within which an adhesive stick is movable, and a member joined to said retainer and having a contact surface in spaced relationship to the retainer so that the adhesive stick may be advanced into contact therewith, a portion of said member continuing beyond said surface and being disposed with respect thereto to provide an application surface, said portion continuing to form a lip for receiving and supplying heat to the application surface and to the contact surface.



1,806,982. WASHING MACHINE. LEROY R. MCKERCHER, California, Iowa, assignor of one-half to James E. McKercher, Valparaiso, Nebr. Filed Dec. 11, 1929. Serial No. 413,214. 3 Claims. (Cl. 259—99.)

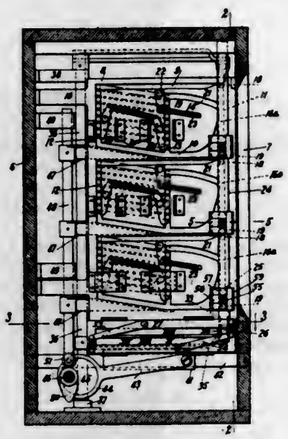
1. In a washing machine comprising operative and supporting means for the machine, a tub, a revolvable water-agitator provided with an upright sleeve within the tub, a drive shaft for the agitator journalled in the bottom of the tub, a revolvable sleeve provided with a dolly carried by the first named sleeve, a dolly-sleeve drive shaft journalled in the first named shaft, and a reversing mechanism for the dolly drive shaft.



1,806,983. AIR CHUCK. CARL A. NORGREN, Denver, Colo. Filed Feb. 4, 1929. Serial No. 337,498. 4 Claims. (Cl. 284—17.)

1. In an air chuck having a chamber, and means to connect the chamber with a source of air supply, an annular gasket projecting into the chamber and a valve engaging the gasket within the chamber and having a stem projecting through the gasket, the stem having an interior duct and ports at opposite ends thereof, said stem between the ports being of a length greater than the thickness of said gasket whereby to locate the ports

on opposite sides of the gasket when the valve is opened there being a space around the stem through which a nipple may be admitted into the chuck, and means comprising an annular shoulder on the stem below the outer ports, and engageable with the nipple to prevent entrance of foreign matter into the nipple.



1,806,984. VARIABLE SPEED TRANSMISSION. HERBERT L. PROUT, Villa Park, Ill. Filed Apr. 16, 1930. Serial No. 444,732. 9 Claims. (Cl. 74—24.)

1. In a power transmitting mechanism, a driving shaft, a driven shaft extending substantially parallel thereto, a friction wheel secured to said driving shaft, said wheel having conical friction surfaces formed on its outer faces, a pair of friction wheels secured to said driven shaft and having conical, friction surfaces formed on their inner faces, a pair of idler power transmitting friction wheels mounted in parallel relation between said driving and driven shafts, and having beveled friction surfaces adapted to engage the surfaces of said driving and driven friction wheels, and means for moving said idler wheels over the faces of said driving and driven friction wheels so as to vary the speed ratio between said driving and driven wheels.

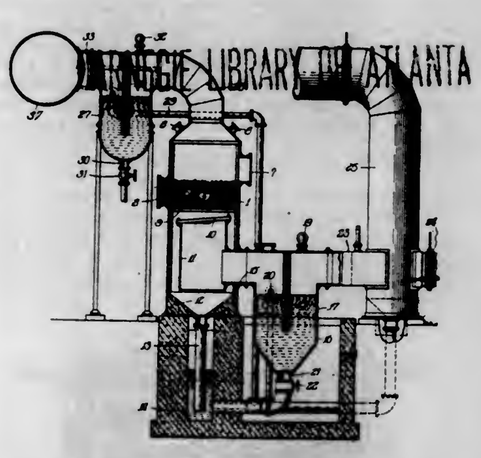
1,806,985. DISPLAY MECHANISM. CHARLES ROBERTS, New York, N. Y. Filed July 19, 1928. Serial No. 295,884. 26 Claims. (Cl. 40—36.)

1. In a display mechanism, a movable display frame, means to support said display frame initially in a substantially horizontal position and to guide the same in its movement, means movable in one direction to impart movement to said display frame and to cause the same to assume an upright position, and means movable

in another direction to withdraw said display frame from said upright position and restore the same to a horizontal position.

1,806,986. SHEET METAL BRAKE. GEORGE H. RUCKER, Stockton, Calif., assignor, by mesne assignments, to Caterpillar Tractor Co., San Leandro, Calif., a Corporation of California. Filed July 20, 1927. Serial No. 207,118. 6 Claims. (Cl. 153—16.)

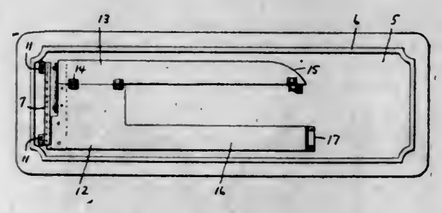
1. A sheet metal brake comprising a frame, a table horizontally adjustable on said frame, an apron hinged to said table, a leaf hinged to said frame, and fingers on said leaf adapted to cooperate with said table to hold a metal sheet.



1,806,987. HONEYCOMB AND COMB FOUNDATION. CHARLES F. STRAHAN, Linwood, Nebr. Filed Dec. 30, 1927. Serial No. 243,718. 2 Claims. (Cl. 6—11.)

2. Comb foundation having cell bases with vertical side walls longer comparatively than the diagonal walls.

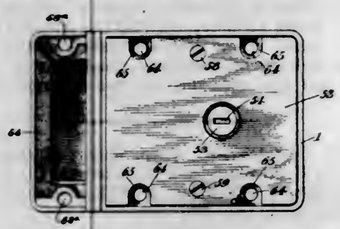
1,806,988. PROCESS FOR PURIFYING PIGMENT MATERIALS. WILLIAM H. TEST, Redondo Beach, Calif. Filed Nov. 8, 1927. Serial No. 231,995. 5 Claims. (Cl. 23—203.)



1. The process of purifying a pigment material to eliminate iron oxides including treating the material to reduce the iron oxides to the metallic state and then subjecting it to carbon monoxide under conditions to form iron carbonyl and then removing the iron carbonyl by heat.

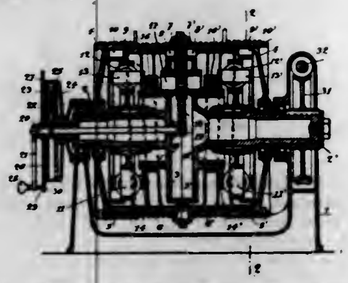
1,806,989. GAS DRIER. FRED. WILLE, Chicago, Ill., assignor to H. A. Brassert & Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1929. Serial No. 330,574. 3 Claims. (Cl. 183—40.)

CARNEGIE LIBRARY OF ATLANTA



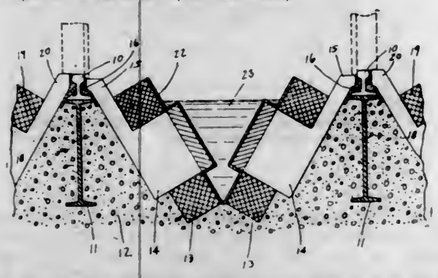
1. In a continuous gas drier, walls forming a pair of vertical passages, water eliminating means comprising a layer of loose material in each of said vertical passages, inlet and outlet passages for the gas connected to each of said vertical passages, means for flushing the loose material in either vertical passages as desired, and means for closing the inlet passage to the vertical passage which is being flushed while the remaining inlet passage and vertical passage are open to the flow of gas.

1,806,990. BODY SUPPORT FOR COFFINS. EDWARD A. BEILER, Dubuque, Iowa. Filed June 19, 1930. Serial No. 462,345. 2 Claims. (Cl. 27—13.)



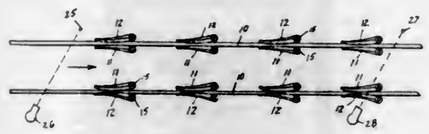
1. A body support for coffins comprising a board hingedly connected to the coffin at one end thereof, a toothed upright on the coffin at the opposite end of the board, means on the board for adjusted engagement with the teeth of the upright, said board comprising a pair of hingedly connected sections, means whereby said sections may be maintained in inclined relation with respect to each other, and comprising a pivotally mounted toothed bar on one of the sections and a pin on the complementary section, with which the toothed bar is engageable.

1,806,991. LOCKING MECHANISM. JOSEPH F. FETYK, New York, N. Y., assignor to Francis Keil & Son, Inc., a Corporation of New York. Filed June 6, 1925. Serial No. 35,275. 21 Claims. (Cl. 70—46.)



1. A lock having a bolt, a keeper, and means for moving the bolt into the keeper, comprising a plate and a rotary member for moving the same, said rotary member being arranged to cooperate with said plate by moving to a dead center position when the bolt is in final locking position to normally oppose the initial movement of withdrawal of the bolt from locking position by external force applied to the bolt.

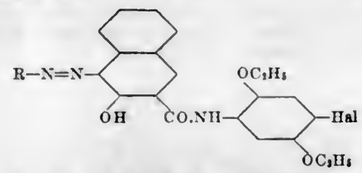
1,806,992. DEVICE FOR BRINGING A MOVING BODY TO REST. JEAN FIEUX, Paris, France, assignor of one-half to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Nov. 9, 1928, Serial No. 318,203, and in France Jan. 25, 1928. 3 Claims. (Cl. 254—172.)



1. In a device for gradually bringing a moving body to rest, the combination of a cable, a drum upon which said cable is wound, a brake acting to check the unwinding action of said drum, and a non-reversible control connected to said brake and moving as an integral unit with the brake during the winding action of the drum.

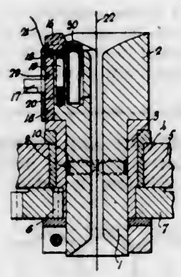
1,806,993. APPARATUS FOR CONTROLLING VELOCITY OF WHEELED VEHICLES. EMMETT E. FISHER, Indianapolis, Ind. Filed Apr. 2, 1930. Serial No. 440,935. 2 Claims. (Cl. 188—62.)

1. Apparatus for controlling the velocity of wheeled vehicles, including a pair of electromagnets positioned to exert a retarding force upon the opposite wheels of said vehicle, said magnets being positioned with respect to each other to form a substantially V-shaped trough therebetween for the passage of cooling water.



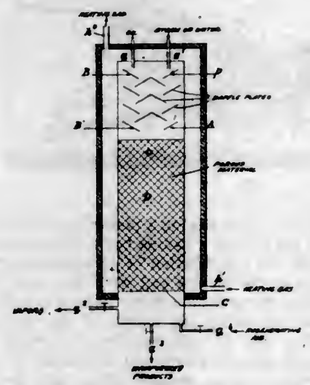
1,806,994. TRACK BRAKE. EMMETT E. FISHER, Indianapolis, Ind. Filed July 21, 1930. Serial No. 469,603. 6 Claims. (Cl. 188—62.)

1. In combination with a rail upon which a wheeled vehicle may travel, a brake shoe adjacent said rail, and an electromagnet, said shoe and rail being adapted to form a closed magnetic circuit for said electromagnet and said shoe being mounted and shaped to permit movement thereof for the entrance of a portion of a wheel of said vehicle between said shoe and rail.



1,806,995. AZO-DYESTUFFS INSOLUBLE IN WATER. WILHELM FITZKY and ERWIN THOMA, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 17, 1930, Serial No. 445,195, and in Germany Feb. 18, 1929. 5 Claims. (Cl. 260—95.)

2. As new compounds, the azo dyestuffs of the following constitution:



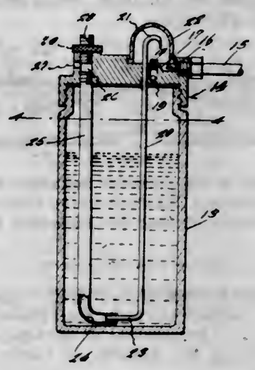
wherein R stands for a phenyl nucleus which is free from any group capable of rendering the dyestuff water-soluble which compounds are when dry colored powders, insoluble in water, yielding when mixed with substrata valuable color lakes and when prepared on the fiber dyeings and printings of very good fasteness properties, especially to light.

1,806,996. CIRCULAR KNITTING MACHINE. THOMAS SCOTT GRIEVE, Leicester, England. Filed June 28, 1928, Serial No. 288,909, and in Great Britain Sept. 2, 1927. 8 Claims. (Cl. 66—144.)

1. The combination with a circular knitting machine of the superposed rotary needle cylinder type, of splicing mechanism comprising a vertically disposed tubular member through which a main yarn passes to the needles, a driven sleeve within which the tubular member is normally held stationary, and means on the tubular member for trapping and severing a splicing yarn, said tubular member being driven by the sleeve, when required, to twist the splicing yarn round the main yarn, so that the latter carries the splicing yarn in with it.

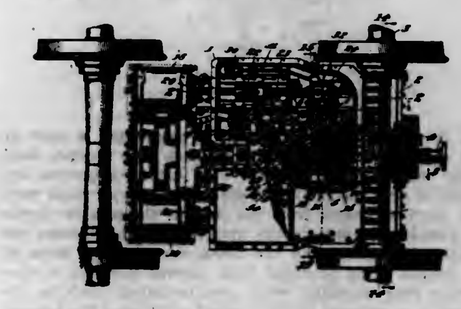
1,806,997. VAPORIZATION OF HEAVY HYDROCARBONS. ALFRED JOSEPH, Enghien, France, assignor to Compagnie Internationale pour la Fabrication des Essences et Petroles, Paris, France, a Limited Joint-Stock Company of France. Filed July 16, 1929, Serial No. 378,788, and in France July 30, 1928. 6 Claims. (Cl. 196—79.)

1. Apparatus for the vaporization of heavy hydrocarbons comprising a vessel having in one portion thereof a series of separated baffle plates and in another portion thereof a mass of porous material, means for heating said vessel externally, means for conducting hydrocarbons to be vaporized to said vessel and for evacuating the same therefrom, said hydrocarbons passing first through said baffle plates and then through said porous material, and means for conducting regenerating gases to said vessel.



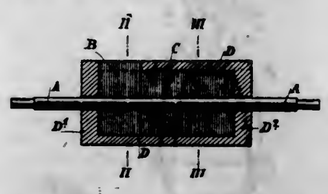
1,806,998. MEANS FOR TREATING AND PROTECTING CORNS. MORRIS P. KAUFMAN, Juneau, Territory of Alaska. Filed Apr. 15, 1929. Serial No. 355,222. 3 Claims. (Cl. 128—153.)

3. A corn protector comprising a soft, slightly compressible member, a fastening strip secured to said member and to a foot for allowing a rolling movement of the member, and a strip secured to the underside of the member for contacting with the foot and preventing a sliding movement between the member and the foot.



1,806,999. AUTOMATIC VALVE LUBRICATOR. STEPHEN G. LING, Los Angeles, Calif. Filed July 23, 1930. Serial No. 470,046. 6 Claims. (Cl. 261—121.)

1. In a structure of the class described, an oil container, a cover therefor having an air port, a regulating valve for said port, an air pipe connected to and in communication with the port and depending into said container and terminating in a laterally directed discharge end, an oil delivery pipe connected with said cover, an oil elevating pipe extending upwardly through the cover and terminating in a gooseneck dropper in communication

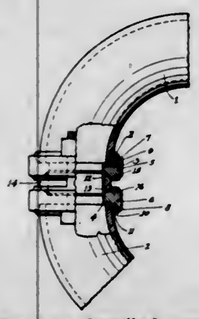


with said delivery pipe, the lower end of said elevating pipe depending into the container and telescoping into the adjacent end of said discharge pipe.

1,807,000. GEARING. RICHARD J. MCCARTY, Jr., Bethlehem, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Aug. 2, 1929. Serial No. 382,930. 32 Claims. (Cl. 74—7.)

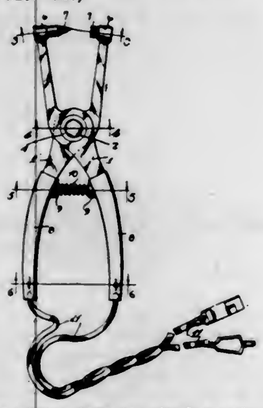
1. In an entrainment mechanism, a driven gear, a driving train including an idler gear which is normally out of engagement with the driven gear, a jack-shaft with fixed axis, and means mounted on said jack-shaft responsive to the operation of the driving train to produce the engagement of said idler and driven gear.

1,807,001. SYNCHRONOUS MOTOR. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Oct. 15, 1927, Serial No. 226,355, and in France Nov. 17, 1926. 5 Claims. (Cl. 172—120.)



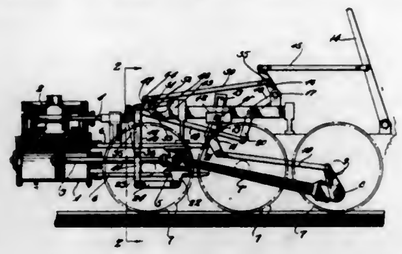
1. In a synchronous motor, a rotor of magnetic material having axially related portions, one portion having substantially circular cross section, and another portion having polar projections formed thereon, and a squirrel cage winding extending substantially the length of said rotor.

1,807,002. ROADBED EQUIPMENT AND METHOD OF USING THE SAME. SVERRE ALFRED MORK, Washington, D. C. Filed Oct. 31, 1929. Serial No. 403,849. 12 Claims. (Cl. 238—115.)



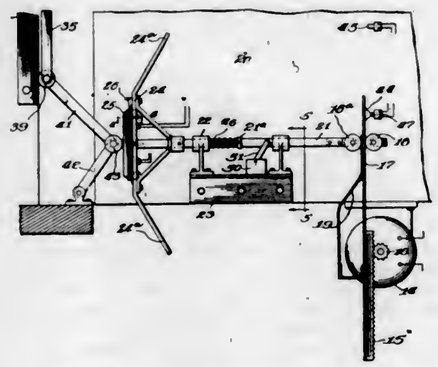
1. In a device of the character described, a molded concrete body, and means imbedded in the body easily fusible under the influence of heat for anchoring fastening elements.

1,807,003. METAL TO METAL JOINT. OLLIE T. NELSON, Bristol, Pa., assignor to Pacific Steel Boiler Corporation, Detroit, Mich., a Corporation of Michigan. Filed Nov. 18, 1927. Serial No. 234,188. 1 Claim. (Cl. 285—137.)



A device of the type described comprising a pair of pipe sections, a flange carried by each pipe section, each flange comprising an annular ring having a portion arranged to abut the end of the pipe and being provided with bead portions spaced from the sides of the pipe for forming annular recesses, means disposed in said recesses for welding said flanges to the pipes, the opposite faces of the flanges being provided with tapered surfaces, a connecting ring provided with arcuate-shaped surfaces arranged to be engaged by the tapered surfaces of the flanges, and bolts carried by the flanges for drawing said flanges toward one another, whereby the ring is pressed tightly against the arcuate surfaces, thus forming a tight joint.

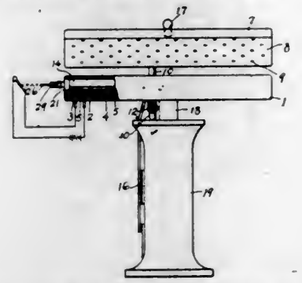
1,807,004. SOLDERING PLIERS. ROY NELSON, Minot, N. Dak. Filed Apr. 25, 1929. Serial No. 358,094. 2 Claims. (Cl. 219—12.)



1. In a device of the class described, a pair of pivotally connected pliers, comprising jaws and operating arms, means for supplying electricity to the pivoted arms of the pliers comprising leads connected to the ends of the handles of the pliers, carbon points on the soldering ends of the pliers, insulation hand grips on the handles of the pliers, and a compression spring between the insulation grips normally to separate the carbon points.

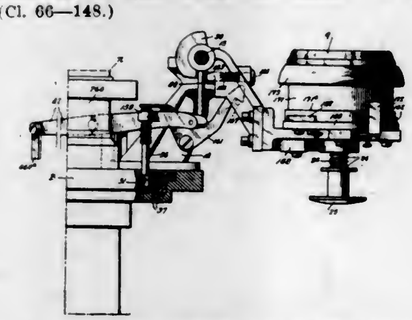
1,807,005. STEAM ENGINE VALVE GEAR. JOSEPH OLSON, Houston, Tex. Filed Jan. 12, 1929. Serial No. 332,171. 4 Claims. (Cl. 121—163.)

4. In a steam engine having a piston, a piston cross head connected to the piston, a radius bar and controlling valve and valve rod, the combination of an extendible transmission lever connected at one end with the cross head, the said extendible transmission lever having relatively moving parts for extending the length of the same, a lever connected with one of said relatively movable parts, a slidable member engaging said last mentioned lever, means for sliding said slidable member along said lever to lift and lower said lever to adjust the length of said extendible transmission lever, a lap and lead lever pivoted at one end to the transmission lever at an intermediate point, said radius bar and valve rod being pivotally connected, one to the other end of said lap and lead lever and the other to said lap and lead lever at an intermediate point of said lap and lead lever.



1,807,006. ELEVATOR DOOR CONTROL. THOMAS J. OSINGA, Chicago, Ill. Filed Dec. 5, 1927. Serial No. 237,889. 10 Claims. (Cl. 187—52.)

1. A means for opening an elevator door comprising a set of links breakable to draw the door open, a pusher effective on one of the links, a guide for the pusher, and a set of break links at the base of the pusher and expansible to operate the latter.

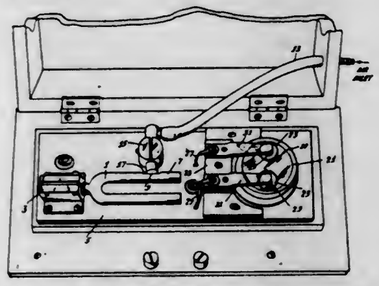


7. An elevator door control comprising a pressure-actuated door-opener installed in proximity to the door, a pressure-imparting element carried by the car and operative upon said door-opener, an actuator for said element energized by the operating control of the car, a de-energizer for said actuator rendered effective when the element has made a partial movement, and a re-energizer for said actuator rendered effective when the element engages said door-opener.

1,807,007. STEAM FINISHING APPARATUS. KANICHI OTSUKA, Uchisaiwai-Cho, Kojimachi-Ku, Tokyo, Japan. Filed Mar. 5, 1930, Serial No. 433,379, and in Japan Apr. 11, 1929. 2 Claims. (Cl. 68—9.)

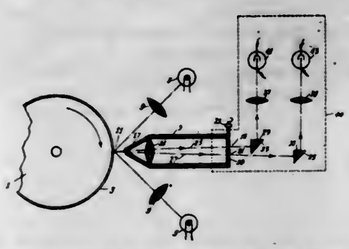
1. Steam ironing and finishing apparatus of the character described, comprising a steam generator having an upper plate constituting the lower member of an ironing and finishing press, an electric heating unit for heating said generator, a steam box constituting the upper member of an ironing and finishing press, and movable into and out of contact with the lower member, and a flexible pipe connecting said boiler and steam box, said upper member being perforated in its under side for the escape of steam.

1,807,008. TRANSFER MECHANISM FOR CIRCULAR KNITTING MACHINES. ALBERT E. PAGE, Brooklyn, N. Y., assignor to Scott and Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed May 8, 1929. Serial No. 361,418. 12 Claims. (Cl. 66—148.)



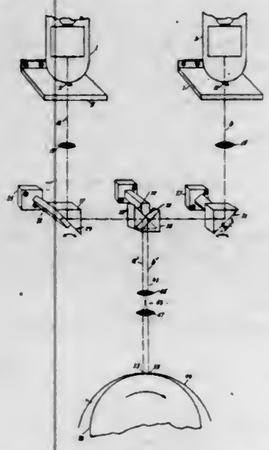
1. A circular knitting machine having a revoluble needle cylinder, stitch transfer mechanism adapted to be moved into and out of operative relation with the cylinder, and a pin to lock the cylinder against rotation, in combination with a spring to press said pin into locking position, a lever to put said spring into operative position and means adapted to hold said spring in said position.

1,807,009. CONVERTIBLE IMPLEMENT. DONATO PINNELLI, Orange, N. J. Filed June 7, 1930. Serial No. 459,783. 2 Claims. (Cl. 107—50.)



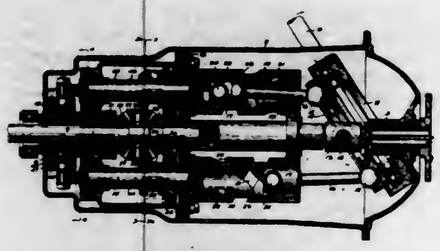
1. A device of the character described comprising an elongated cylinder having at each end a reduced straight cylindrical portion from which axially extends a handle, a pair of concentric rings placed one outside of the other on said reduced portions and confining ball bearings therebetween providing for relative rotation of the outer ring over the inner ring, a sleeve formed with peripheral cutting ribs and having enlarged counter-bores at the ends thereof constituting receses adapted to snugly receive the outer rings, the interior of said sleeve being spaced from the cylinder to provide for free relative rotation of the sleeve over the said cylinder, and a removable roller attachment for disposition over said sleeve comprising a hollow cylinder having an interior flange at one end for abutting one end of the sleeve when the attachment is in place.

1,807,010. QUARTZ TUNING FORK DRIVE. RICHARD HOWLAND RANGER, Newark, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 3, 1929. Serial No. 360,061. 14 Claims. (Cl. 84—409.)



13. The method of producing constant frequency electric impulses from quartz tuning forks rigidly mounted upon a suitable supporting base which comprises projecting air against one tine of the tuning fork, continuously vibrating the fork from said projected air at the natural period of vibration of said fork, transferring the vibrational pulses from the fork to the base member, electromagnetically picking up the vibrational pulses imparted to the base member, and converting the picked up vibrational pulses into electric currents of a frequency corresponding to the fork frequency.

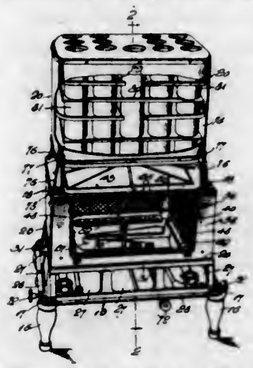
1,807,011. ANALYZING SYSTEM FOR MULTIPLEX FACSIMILE TRANSMISSION. RICHARD HOWLAND RANGER, Newark, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 3, 1929. Serial No. 360,066. 6 Claims. (Cl. 178—5.)



1. A system for analyzing pictures to be transmitted including a record surface, means for illuminating the record surface, means for separating the light beams reflected from the record surface by virtue of said illumination into a plurality of independent and distinct light beams, a plurality of independent photoelectric bodies, and a series of prisms in the path of said reflected light beams for causing each of said reflected light beams to influence said photoelectric bodies in accordance with the intensity of light and shadow on elemental areas of the said surface.

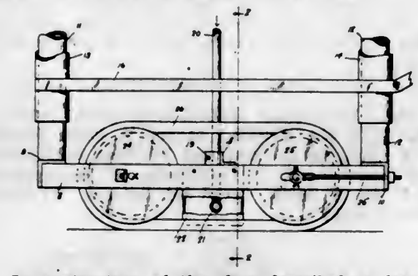
1,807,012. MULTIPLEX REPRODUCING. RICHARD HOWLAND RANGER, Newark, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 3, 1929. Serial No. 360,068. 5 Claims. (Cl. 178—5.)

1. A system for reproducing pictures in multiplex transmission systems which includes a plurality of glow lamps, means for producing a glow in each of said lamps in accordance with the intensity of light and shadow on elemental areas of a transmitted picture, means for projecting the light issuing from each of said glow lamps along predetermined paths, condensing means for collecting the light beams issuing from each of said sources and confining the said beams to a predetermined illuminated area, and means for projecting each of said light beams at different adjacent points on a received record surface.



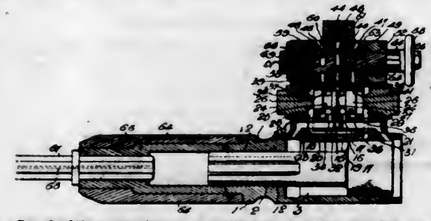
1,807,013. VARIABLE SPEED POWER TRANSMISSION. ELWYN M. RAYBURN, San Francisco, Calif. Refile for abandoned application Serial No. 676,989, filed Nov. 26, 1923. This application filed Jan. 29, 1931. Serial No. 512,185. 6 Claims. (Cl. 74—34.)

1. In a variable speed power transmission, a driving shaft, a plurality of elements adapted to be reciprocated by rotation of said shaft, a counter-shaft associated with each reciprocating element and adapted to be oscillated by the reciprocating movement thereof, a driven shaft, a differential gear associated with the driven shaft, gears on the counter shafts engaging said differential gears and means for securing the gears to the countershafts during rotation thereof in one direction.



1,807,014. CABINET GAS HEATER. HENRY H. SANFORD, Mansfield, Ohio. Filed June 23, 1930. Serial No. 463,189. 8 Claims. (Cl. 126—90.)

1. A cabinet gas heater comprising a rectangular combustion chamber having a discharge opening for products of combustion, an air heating drum mounted over said combustion chamber and having conducting means for the products of combustion communicating with said opening, an air conducting casing around said combustion

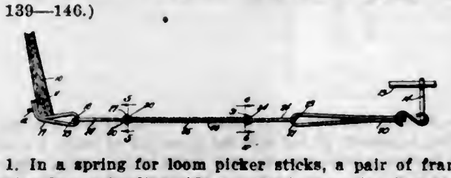


chamber and drum, fire-backs and radiants mounted at the back and sides of said combustion chamber, registering doors in the fronts of said combustion chamber and casing, and gas burners mounted under said radiants.

1,807,015. HIGHWAY MARKER. FERD SCHULTZ and RUEBEN KUNTZ, Juneau, Wis. Filed Apr. 26, 1930. Serial No. 447,653. 3 Claims. (Cl. 91—48.)

1. In a structure of the class described, a frame, a tapered depending shield rigidly mounted between the side bars of the frame and embodying a relatively narrow discharge mouth located in close proximity to the highway surface, a paint delivery pipe, a distributing apertured head carried by the discharge end of the pipe and confined within said shield, and edge confining means on said frame associated with the discharge end of the shield and including two pairs of grooved rollers provided with a belt mounted in the grooves, said belt being of endless form and serving to prevent the flowing paint from spreading beyond predetermined limits, whereby to restrict the width of the mark on the highway surface.

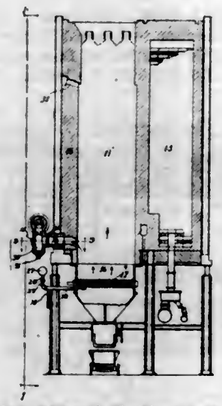
1,807,016. ROCK DRILL. GEORGE W. SMITH, Ottumwa, Iowa, and ALBERT E. DIETERICH, Washington, D. C., assignors to Hardsocg Wonder Drill Co., Ottumwa, Iowa, a Corporation. Filed Dec. 31, 1929. Serial No. 417,770. 4 Claims. (Cl. 121—6.)



1. In drilling engines, a cylinder having a drill chuck to receive a drill steel having a passage through the same,

a hammer piston in said cylinder, an automatic distributing valve unit associated with said cylinder and having inlet and exhaust ducts in communication with said cylinder and having kicker passages between said cylinder and said distributing valve unit, said distributing valve unit including a live fluid inlet passage, exhaust outlet passages and bleeding ports, combined with a manually controlled valve unit associated with said distributing valve unit and including a valve proper, live fluid exhaust and bleeding passages cooperating with those of said distributing valve unit and having provisions which when the manually controlled valve is in one position said distributing valve will be caused to function normally, and when the same is in another position the said distributing valve will be held inactive, said manually controlled valve serving to by-pass live fluid around said automatic valve from a live fluid source into the fore end of the cylinder while said piston is held inactive for the purposes described.

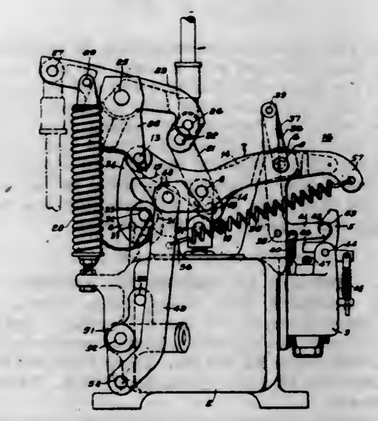
1,807,017. TREATING GLASS ARTICLES. ROWLAND D. SMITH, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Mar. 5, 1929, Serial No. 344,592. Renewed Apr. 6, 1931. 2 Claims. (Cl. 41—42.)



1. The method of treating glass articles which includes washing them in water containing simple aluminum fluoride.

1,807,018. PICKER CHECK FOR LOOMS. FRANK SZCZESNY and ANDREW PRZEKOP, Norwich, Conn. Filed Feb. 6, 1930. Serial No. 426,366. 4 Claims. (Cl. 139—146.)

1. In a spring for loom picker sticks, a pair of frames having legs extending side by side in opposite directions, frame spacers fixed to the legs of respective frames adjacent their ends and having the remaining legs slidable therethrough, and coiled compression springs surrounding said legs between said spacers, said spacers having open notches wherein the legs of one frame are received.

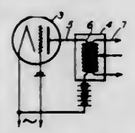


1,807,019. METHOD OF COOLING OF COKING RETORTS AND APPARATUS THEREFOR. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1925. Serial No. 1,717. 20 Claims. (Cl. 202—31.)

1. In a continuous vertical retort oven, in combination: a vertical coking chamber each having distillate-gas offtake means communicating therewith for offtake of gases of distillation therefrom and having a coke extractor magazine therebelow and communicating at the top of said magazine with the lower portion of the chamber, said magazine being provided with coke extractor means; means for introducing a fluid cooling medium into said magazine below said coke extractor means; a heat recovery device; an insulated flue communicating with said heat recovery device and communicably connected with the coking chamber at a point above said magazine and below said distillate-gas offtake means of said coking chamber for off-flow of fluid cooling medium from said magazine through said coking chamber separately from and at a lower level than said distillate-gas offtake means to said heat recovery device; a return flue for conveying the fluid medium from the heat recovery device back to the fluid introducing means; said return flue communicating with said fluid introducing means and having a pump whose speed may be regulated; and means for selectively proportioning the relative quantities of spent cooling medium flowed off from the coking chamber through said insulated flue to modify the quality of the gases generated in the coking chamber and drawn off through said distillate-gas offtake means; and means for selectively proportioning the relative quantities of recirculated medium returned to the magazine from the insulated flue.

8. The method of operating a by-product coking plant to regulate the quality of the distillation gases produced thereby and to cool the coke, which comprises: coking a descending mass of solid carbonisable fuel in a retorting space so that completion of coking of the mass increases progressively from top to bottom thereof and thereby producing distillation gases therefrom; discharging finished coke from the bottom of the mass; introducing into the discharging hot coke a fluid cooling medium and thereby cooling the discharging coke; drawing the distillation gases off from said coking mass above the bottom thereof; flowing spent cooling medium off from the discharging coke into the substantially completely coked portion of the coking mass in the bottom of the retorting space; and drawing off spent cooling medium from the substantially completely coked portion of the coking mass separately from and without mixture therein with off-flowing distillation gases concurrently being drawn off above the bottom of the mass.

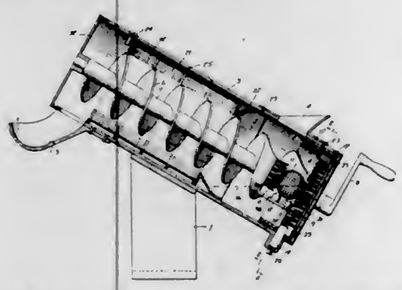
1,807,020. OPERATING MECHANISM FOR OIL CIRCUIT INTERRUPTERS. ROSWELL C. VAN SICKLE and STANLEY T. SCHOFIELD, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 9, 1927. Serial No. 238,756. 18 Claims. (Cl. 200—89.)



1. In a circuit-closing device, the combination with two pivotally mounted members, of a floating link hingedly

supported at one of its ends to one end of a pivotal member, latching means for each end of the said floating link and a link member for uniting the floating member to the other said pivotal member.

1,807,021. MAGNETIC PRODUCT AND METHOD OF MAKING THE SAME. TAYGVE D. YENSEN, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 29, 1924. Serial No. 702,897. 27 Claims. (Cl. 175—21.)



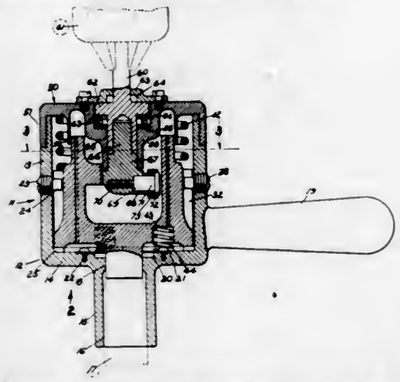
1. A magnetic product of an alloy of nickel and iron in approximately equal proportions, having a maximum permeability greater than 40,000.

1,807,022. RADIO TRANSFORMER. TAYGVE D. YENSEN, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Mar. 29, 1924, Serial No. 702,897. Divided and this application filed Feb. 15, 1930. Serial No. 428,660. 8 Claims. (Cl. 175—356.)

1. A radio transformer having a core comprising an alloy of iron and nickel in approximately equal proportions, said alloy having a permeability of from 20,000 to 100,000 at magnetizing forces ranging from H=.1 to H=1.

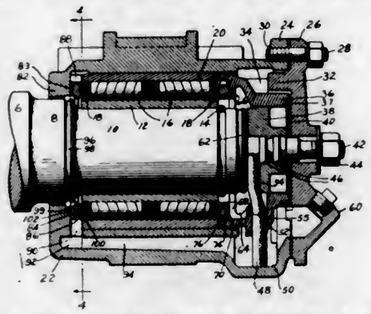
1,807,023. GOLF BALL CLEANER. ANDREW P. YOUNG, Pleasantville, N. Y. Filed Nov. 2, 1929. Serial No. 404,307. 14 Claims. (Cl. 15—21.)

1. A ball cleaning apparatus comprising, in combination, a tubular casing provided with a closed end and an inlet opening in the upper wall near that end and an outlet in the lower wall near the other end, a rotary conveyor mechanism extending through said casing from a point near said inlet toward said outlet, a fixed brush located at and substantially parallel to the end wall adjacent said inlet, another brush operatively connected to the rotary conveyor and facing said first mentioned brush, and means for rotating said conveyor in either direction.



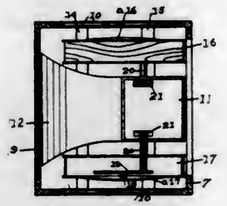
1,807,024. METHOD OF EMBOSSING RUBBER. ROLAND G. ANDERSON, New Haven, Conn., assignor, by mesne assignments, to Wellman Company, Medford, Mass., a Corporation of Maine. Original application filed Mar. 6, 1923, Serial No. 623,141. Divided and this application filed Oct. 18, 1927. Serial No. 227,001. 2 Claims. (Cl. 18—44.)

2. The method of embossing unvulcanized sheet rubber which comprises arranging the sheet rubber on a smooth surfaced support, moving a female embossing die into contact with the surface of the sheet rubber, applying pressure through the die in excess of 400 lbs. per sq. in. to areas



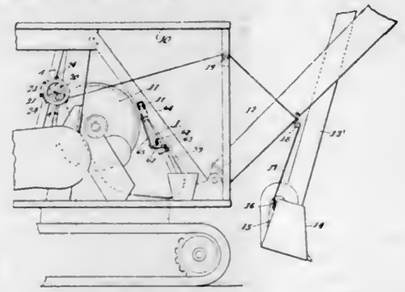
outlining the configuration of the mark to be formed so as to cause the unvulcanized rubber to flow into the recesses of the die and to be stretched beyond its elastic limit.

1,807,025. ROTARY DRIVE TRIP HAMMER. SAMUEL J. BOYD, Los Angeles, Calif. Filed Jan. 11, 1928. Serial No. 246,074. 8 Claims. (Cl. 78—38.)



1. A trip hammer comprising in combination a casing having a passage at one side for insertion of tools, a hammer having lateral grooves with studs in the casing engaging said grooves and having a hammer end to strike the tools in said passage, said hammer having a cored-out section with a helically curved cam extending partly thereabouts, a cover having an inwardly extending journal section with a rotary shaft mounted therein, a compression spring between the hammer and the cover, an arm secured to said shaft and having a roller, the roller engaging the said cam, and reacting springs between the hammer and the casing, and a spindle connected to the shaft, extending outwardly beyond the cover and adapted to directly engage a driving device, the hammer having an annular shallow recess in the base with a lower annular edge, the casing having a washer to engage said edge.

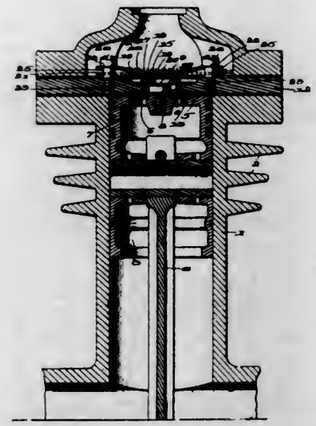
1,807,026. JOURNAL BOX. RICHARD J. BRITTAIN, Jr., Newark, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 21, 1928. Serial No. 263,301. 7 Claims. (Cl. 308—41.)



1. In a device of the character described, a shaft, a journal box, an antifriction bearing having a cage between the shaft and the box, an annular abutment member spaced from the cage and having a surface forming a wall of an oil collecting groove, a floating ring interposed between the abutment member and the cage, and the ring having a series of slots for conveying lubricant through the floating ring from the groove; substantially as described.

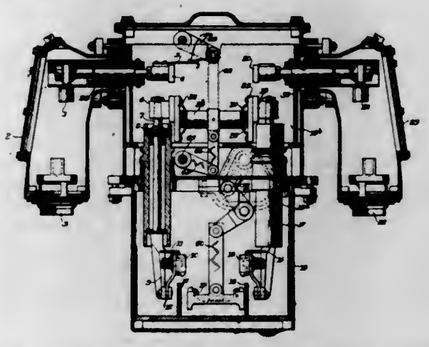
1,807,027. HORN FOR RADIO SPEAKERS. WILLIAM A. BROCKWAY, Marietta Township, Whatcom County, Wash. Filed Aug. 18, 1930. Serial No. 476,025. 5 Claims. (Cl. 181—27.)

1. A radio loud speaker including a non-resonant horn, and two connected sounding boards one of which is disposed within the horn and the other of which is disposed exterior to the horn.



1,807,028. POWER DIPPER DOOR LATCH TRIP. LAGAR R. CULVER, Los Angeles, Calif., assignor of one-half to John W. Prillaman and Elia F. Prillaman, Vista, Calif. Filed July 16, 1929. Serial No. 378,758. 10 Claims. (Cl. 214—146.)

1. In a power dipper door latch releasing device, a shaft, a winding drum secured to said shaft, a cable secured to and adapted to wind unto said drum, which cable is connected to the dipper door latch of the shovel with which the device is associated, a constantly rotating gear wheel mounted for rotation upon said shaft, a friction disc adapted to engage said gear wheel, a supporting arm secured to said shaft, a clutch carried by said supporting arm for engaging the gear wheel and means carried by said friction disc for actuating said clutch, said friction disc, clutch and clutch actuating means providing a slip drive connection between said shaft and gear wheel, whereby said shaft tends to rotate so as to wind the cable on the drum carried thereby and maintain said cable under a tension insufficient to withdraw the latch.

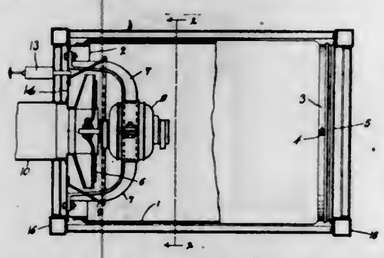


1,807,029. VALVE MECHANISM FOR COMPRESSORS. ELMER D. DUNNING, Stonehurst, Upper Darby, Pa., assignor to Kulair Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed June 19, 1928. Serial No. 286,691. 6 Claims. (Cl. 251—119.)

1. In a valve, the combination with a member provided with a port, of a metallic plate-like valve member for controlling said port, a metallic spring for normally holding said valve member in closed position, a point contact between the intermediate portion of said spring and valve member and means passing through the superimposed ends of the valve member and spring for anchoring

said parts in operative relation in such a manner as to permit a limited reciprocation of the valve member and the flexing of the spring without increasing the bearing contact between the spring and valve.

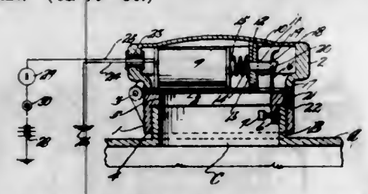
1,807,030. DISTRIBUTION SWITCH. GEORGE P. EDMONDS, Chicago, Ill., assignor to G. and W. Electric Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1927. Serial No. 190,433. 5 Claims. (Cl. 200—50.)



1. In a device of the character described, the combination of inlet and outlet contact means, an isolating switch including fixed contacts and a movable member for electrically connecting said contacts, a slidable switch for electrically connecting said inlet and outlet means each to one of said fixed contacts, and means for successively operating said movable member to break contact with said fixed contacts, and said slidable switch to break contact with the inlet and outlet means comprising independent levers connected to said movable member and said slidable switch, and a rotatable quadrant having shoulders for engagement with the levers.

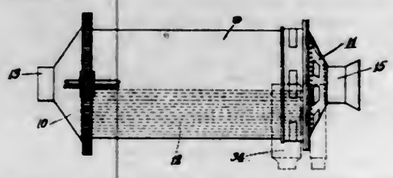
1,807,031. PROCESS FOR MODIFYING VULCANIZABLE MATERIAL AND PRODUCT. WILLIS A. GIBBONS, Grent Neck, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Mar. 11, 1927. Serial No. 174,716. 13 Claims. (Cl. 18—50.)

6. The process of modifying the properties of vulcanizable material which comprises heating normal latex above



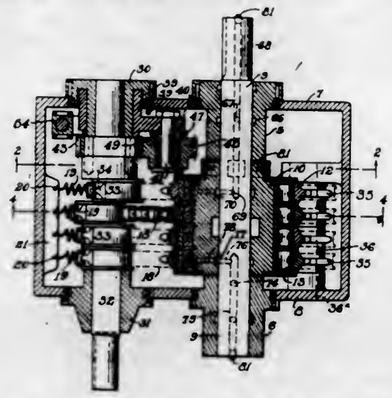
212° F. for 2–3 hrs. without substantial change in its water content, removing part of its water content to form a concentrated latex, and subsequently removing the balance of the water after fabrication of the concentrated latex.

1,807,032. APPARATUS FOR REMOVING POLLEN FROM AIR. GEORGE A. GIESELER, Cleveland, Ohio, assignor, by direct and mesne assignments, to The Pollen Filter Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 5, 1928. Serial No. 267,687. 7 Claims. (Cl. 183—73.)



1. Apparatus for removing pollen from air, which comprises a cylindrical air-pervious capillary septum closed at one end, and a motor-driven intake fan mounted internally of the other end of the septum.

1,807,033. CLOSURE LOCK. HARRY J. HANSEN, La Junta, Colo. Filed Aug. 1, 1930. Serial No. 472,228. 3 Claims. (Cl. 70—50.)

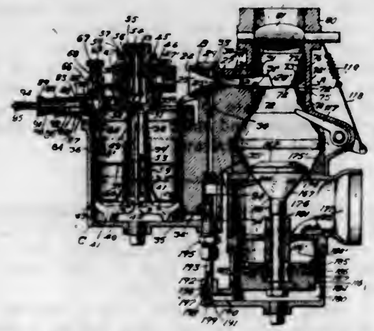


1. In a device of the kind described, in combination with a receptacle having an annulus, an attaching ring adapted to fit over the said annulus, means for securing the attaching ring on the annulus, a catch extended from the attaching ring, a cap hinged to the attaching ring, a lock plunger slidably mounted in the cap and spring set to normally engage the said catch, and electromagnetically operated means for disengaging the said lock plunger from the catch.

1,807,034. UNIVERSAL ROD MILL. HARLOWE HARDINGE, York, Pa., assignor to Hardinge Company, Incorporated, York, Pa., a Corporation of New York. Filed Feb. 25, 1927. Serial No. 170,763. 12 Claims. (Cl. 83—9.)

1. A grinding mill comprising in combination, a grinding compartment having an end wall at its discharge end pierced by a plurality of ports, a main discharge passage in open communication with said grinding compartment through said end wall, and means for controlling the level of discharge from said mill, said means including a plurality of closures for closing certain of said ports at will and removable apertured rings for variously controlling the discharge level through said main passage.

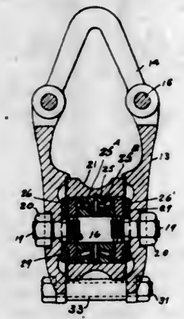
1,807,035. REVERSIBLE VARIABLE SPEED TRANSMISSION MECHANISM. WALLACE C. HERMAN, Oakwood, Ohio. Filed Apr. 12, 1930. Serial No. 443,707. 5 Claims. (Cl. 74—55.)



1. In a mechanism of the type described, a driving shaft, a driven shaft, a roller clutch surrounding the latter, an eccentric cam on the driving shaft, a third shaft rotated by the driving shaft, an eccentric cam on the third shaft, followeres for said cams, chains connected between said cam followers and the roller clutch to communicate a reciprocating movement to the latter, and means for adjusting the relation between the eccentric cams to cause a desired movement of the chains when the driving shaft is rotated, for the purpose specified.

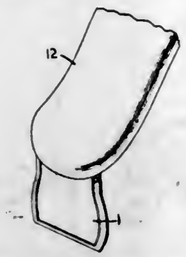
1,807,036. TREATMENT OF CELLULOSE SOLUTIONS. CHARLES E. HETZEL, Glenbrook, Conn., assignor to Zeloid Products Corporation, Holyoke, Mass., a Corporation of Delaware. Filed Sept. 24, 1926, Serial No. 137,463. Renewed Apr. 8, 1930. 24 Claims. (Cl. 18—57.)

1. The step in a process of the treatment of cellulosic materials which comprises interaction between a solution of cellulose and another solution containing both a sodium acid salt and glue.



1,807,037. CARBURETOR. CASPAR E. HOFBAUER, New York, N. Y., assignor to Paramount Carburetor Corporation, New York, N. Y., a Corporation of New York. Filed May 2, 1928. Serial No. 274,428. 4 Claims. (Cl. 261—72.)

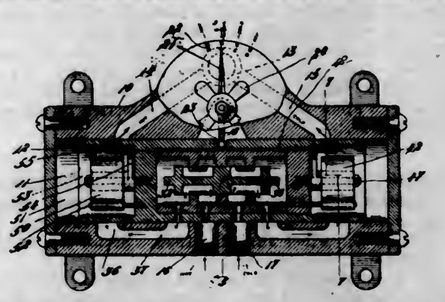
1. In a fuel feeding and carbureting device, in combination, a primary fuel mixing and evacuating device



operable by the engine induction, passages thereto, one of which serves to feed fuel from an intermediate fuel storage chamber, the other of which serves to form a diminished pressure head within said chamber whereby fuel from a low level storage tank may be caused to flow into said chamber and a float controlled valve for intermittently shutting off the fuel supply to said chamber, and air valves in said chamber for limiting the diminished pressure head in said chamber within predetermined amounts.

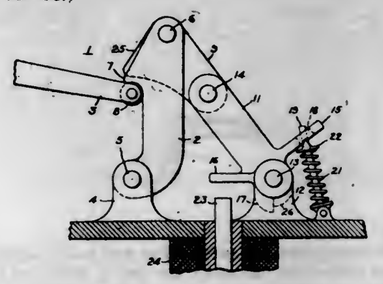
1,807,038. LOGGING BLOCK. JAMES E. HOLDEN, Oswego, Oreg. Filed Oct. 21, 1926. Serial No. 143,029. 7 Claims. (Cl. 254—192.)

1. A logging block having, in combination, a pair of block sides; a shackle joining said sides; a pin projecting through both of said sides, said pin having shouldered flattened ends against the inner faces of said block sides; roller bearings on said pin; a sheave around said bearings; a nut near each end of said pin for adjusting said bearings; and a locking plate on each flattened portion of said pin for preventing the rotation of the adjacent nut after adjustment as long as said sides engage the ends of the flattened portion of said pin.



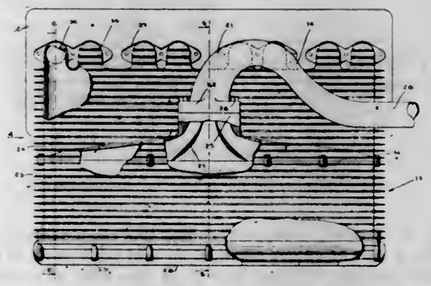
1,807,039. SPLASH GUARD. HAROLD KEIZER, Concord, Mass. Filed Nov. 8, 1929. Serial No. 405,659. 4 Claims. (Cl. 280—152.)

2. A device of the class described comprising a splash guard for vehicles, means supporting the same from the mud guard of a vehicle, and a resilient stop having means engaging the mud guard and splash guard operable to prevent said said splash guard from assuming an ineffective position due to the pressure of air upon the splash guard when the vehicle is in motion.



1,807,040. MIXING VALVE. FREDERICK C. LEONARD, Providence, R. I., assignor to Leonard-Rooke Co., Providence, R. I., a Corporation of Rhode Island. Continuation of application Serial No. 157,525, filed Dec. 28, 1926. This application filed Mar. 1, 1928. Serial No. 258,260. 23 Claims. (Cl. 236—12.)

1. In a mixing valve, a casing, a mixing chamber therein, separate conduits in said casing for fluids of different temperatures leading to said chamber, a thermal element positioned to be affected by the temperature of the fluid in one of said conduits before it reaches said



chamber and a valve mechanically actuated by said element for controlling the quantity of flow through its conduit to said chamber.

1,807,041. TOGGLE LATCH. HARRY J. LINGAL, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1927. Serial No. 190,712. 10 Claims. (Cl. 74—93.)

1. The combination with a latch arm, of a trigger adapted to restrain it, a fixed fulcrum for supporting the trigger, a toggle mechanism for locking the trigger in engaging position and a spring for actuating the toggle mechanism to locked position.

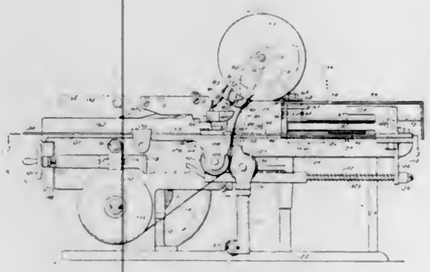
1,807,042. COOLING INTAKE FOR INTERNAL COMBUSTION ENGINES. FRANK S. LOCKHART, Cincinnati, Ohio; Frederick E. Moskovics, administrator of said Frank S. Lockhart, deceased, assignor of one-half to J. R. Burgamy, Cincinnati, Ohio. Filed June 13, 1927. Serial No. 198,676. 9 Claims. (Cl. 123—52.)

1. A cooling intake for an internal combustion engine comprising a U shaped structure having an internal passage, said passage in width being substantially the length of a multi-cylinder engine, in transverse measurements be-

ing materially less than the width, the inner section of the U shaped structure being adapted for location adjacent the cylinders of a multi-cylinder engine but spaced laterally therefrom, having a plurality of fins thereon, the outer section having a plurality of fins, the structure providing a clear, substantially unobstructive air passage between same and an engine, also between the two branches of the U shaped structure, and on the outside thereof, to allow air to flow in the direction of the width of the intake.

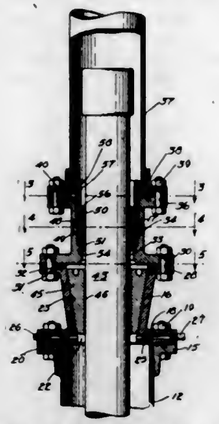
1,807,043. PREPARATION OF LIVESTOCK FEEDS. CHARLES R. MABEE, Vittoria, Ontario, Canada, assignor by mesne assignments, to Charles H. Donaldson, Buffalo, N. Y. Filed June 11, 1926. Serial No. 115,233. 11 Claims. (Cl. 99—11.)

10. A composition for use in a process for the fermentative conversion of farm roughage, comprising magnesium hydrate, calcium hydrate, sodium chloride and sulphur.



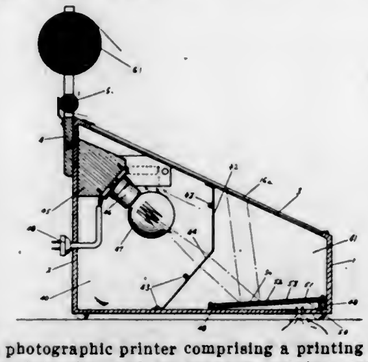
11. In the art of producing an improved livestock feed by the fermentative conversion of farm roughage in a moist condition, the process which comprises subjecting the roughage to fermentative activity in the presence of a medium which beneficially influences the conversion of the roughage, said medium comprising a lime-magnesia component.

1,807,044. FENDER AND GUARD. FLOY C. MERRILIES, Oak Park, Ill. Filed Apr. 21, 1930. Serial No. 445,932. 3 Claims. (Cl. 280—152.)



1. A mud guard for automobiles and made entirely of a flexible rubber-like material, the guard comprising upper and lower members connected together with side walls, said members being spaced apart a sufficient distance to provide a relatively large interior air space forming a cushion to retard an impact when said guard comes in contact with an object.

1,807,045. CANDY WRAPPING MACHINE. CLARENCE C. PAGE, Portland, Oreg. Filed Mar. 29, 1926. Serial No. 98,105. 6 Claims. (Cl. 93—2.)

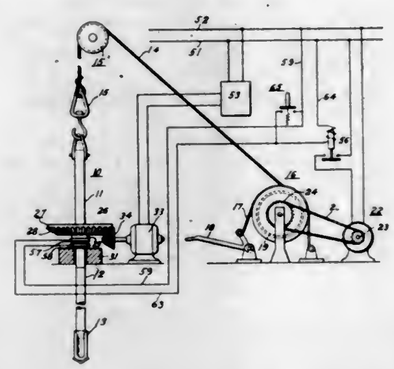


1. In a candy wrapping chute, the combination of a table; a pair of guides mounted on said table, each of said guides having a recess formed in one side, said recess having a sloping undercut roof, said undercut portion having a floor under said sloping roof, said floor having an upturned flanged wall sloping in opposite directions, one of said slopes being parallel with said roof and slightly spaced therefrom.

1,807,046. CASING SUPPORT. CHESTER A. RASMUSSEN and CHARLES R. BUTLER, Long Beach, and WILLIAM A. TROUT, Los Angeles, Calif. Filed Jan. 5, 1927. Serial No. 159,066. 2 Claims. (Cl. 166—14.)

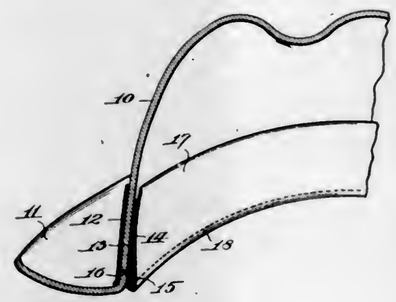
1. In combination: a well casing; an inner casing extending through said well casing; a casing-head body attached to the upper end of said well casing, said inner casing extending through said casing-head body, said casing-head body providing a lower slip receiving chamber, a slip retaining wall above said slip receiving chamber, and an upper packer receiving chamber above said slip receiving chamber; slips in said slip receiving chamber for supporting said inner casing, said slips being retained in place by said slip retaining wall; a packer in said packer receiving chamber for forming a seal around said inner casing; and means for placing said packer under compression.

1,807,047. METHOD AND APPARATUS FOR MAKING PHOTOGRAPHIC PRINTS. JOHN J. RISDON, Binghamton, N. Y., assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Sept. 20, 1927. Serial No. 220,768. 12 Claims. (Cl. 95—75.)



3. A photographic printer comprising a printing light of constant intensity, and an exposure opening, means for reflecting the rays from said light through said opening, and means on said reflecting means for varying the intensity of said reflected rays.

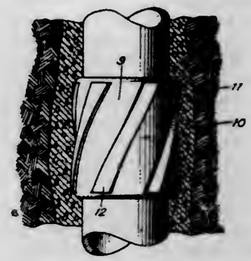
1,807,048. EARTH BORING SYSTEM. JOHN G. RITTER, Norwood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 6, 1928. Serial No. 259,441. 8 Claims. (Cl. 255—19.)



1. In an earth-boring system, in combination, a gravity-feed boring tool, a motor for operating the boring tool,

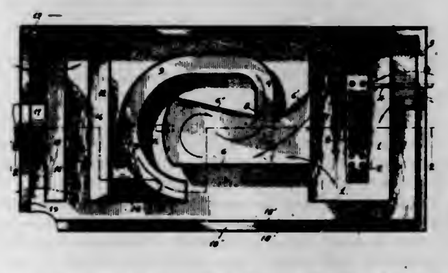
a drive member connected to the boring tool, a second drive member connected to the motor, said drive members being concentrically related resilient connecting means interposed between the drive members for transmitting power, said drive members being thereby relatively movable, the relative angular movement of the drive members

being a function of the torque transmitted, means for controlling the feeding of the boring tool, means actuated by the drive members for controlling the operation of the feed-control means, said control means being responsive to a predetermined relative angular movement of the drive members, thereby to limit the torque transmitted to the boring tool.



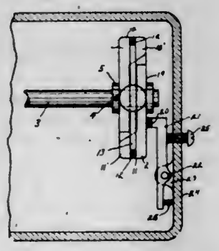
1,807,049. SWEAT BAND. LESTER L. SHERWOOD, Los Angeles, Calif. Filed Oct. 8, 1930. Serial No. 487,167. 9 Claims. (Cl. 2—181.)

1. A sweat band for hats comprising an inner member, composed of thin flexible moisture and oil proof material, the material forming said inner member being folded double to provide an inner wall and an outer wall, the lower portion of the outer wall overlying and extending a short distance below the lower edge of the inner wall, the lower portion of the inner wall of said inner member being folded upwardly so as to lie between the lower portions of said inner and outer walls and an outer member of thin flexible material positioned against the outer face of the outer wall of the inner member and overlying said inner member.



1,807,050. METHOD FOR CEMENTING WELLS. HARRY P. STOLZ, Glendale, Calif. Filed Dec. 26, 1928. Serial No. 328,565. 3 Claims. (Cl. 166—21.)

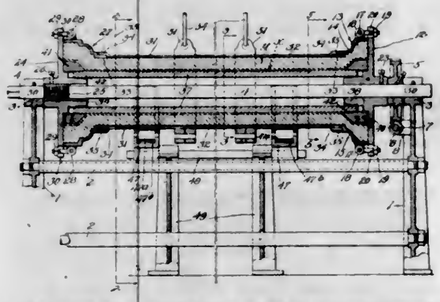
1. The method of cementing a casing in a deep well, which consists in passing liquid cement down the casing and permitting the same to escape near the bottom of the well, so that the cement flows upwardly outside of the



casing, and developing a circumferential movement in the flowing cement successively at different levels as the same flows upwardly.

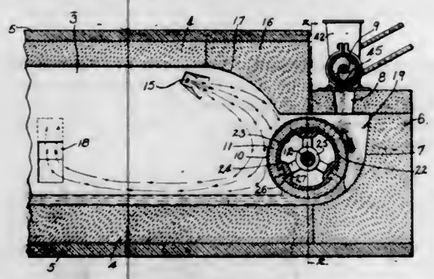
1,807,051. GAS FURNACE. GEORGE A. TUCK, San Francisco, Calif. Filed May 6, 1930. Serial No. 450,218. 18 Claims. (Cl. 126—116.)

1. A gas furnace comprising a combustion chamber provided with a burner mounted within the bottom thereof; an expansion chamber extending laterally from the combustion chamber and communicating with said combustion chamber through an opening having the greatest dimension vertically disposed in the side of the combustion chamber to translate a normal upward movement of gases of combustion within the combustion chamber to a lateral movement in a plane substantially at right angles to said normal upward movement; and a tortuous passage connected into the expansion chamber to conduct the gases to a stack.



1,807,052. GOVERNOR. FRITZ VAN DER WOUDE, Elyria, Ohio, assignor to The General Industries Company, Elyria, Ohio, a Corporation of Ohio. Filed Aug. 20, 1929, Serial No. 387,143. Renewed Aug. 23, 1930. 10 Claims. (Cl. 188—187.)

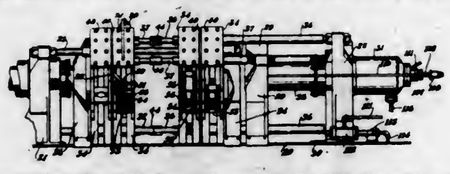
1. In a speed governor, in combination with a rotatable shaft of a device to be governed, a pair of plates carried by the shaft, one of said plates being secured to the shaft,



the other plate being adapted to float axially and rotationally within limits relative thereto, a resilient centrifugal element, portions of said plates, said plates having inner faces cooperatively formed for canning inter-engagement, whereby varying relative rotational movements of the plates will effect correspondingly varying relative movements of the plates axially of the shaft against the resilient effort of said centrifugal element, constantly tending to move said plate portions relatively rotationally and relatively axially closer together, and a friction element adapted for engagement with an axially movable outer surface of one of said plates.

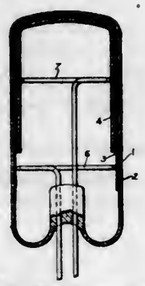
1,807,053. MOLDING APPARATUS. JOHN J. VICENZI, Boston, Mass. Filed Dec. 12, 1929. Serial No. 413,457. 4 Claims. (Cl. 25—30.)

1. An apparatus of the character described comprising a collapsible core provided adjacent each end thereof with a removable head; means rotatably supporting said core in a horizontal position; means for rotatively adjusting said core; a flexible apron having one end thereof separably attached to said heads and means yieldingly supporting the opposite rear end portion of said apron in an upwardly extending position so that as said core is rotatively adjusted and a filling of plastic material is deposited between said core and apron the latter is wrapped around said filling.



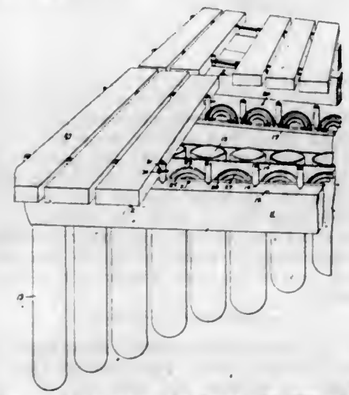
1,807,054. METHODS OF AND APPARATUS FOR MAKING GLASS. HAROLD A. WADMAN, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Nov. 17, 1928. Serial No. 320,086. 17 Claims. (Cl. 49—63.)

4. The method of melting glass which comprises maintaining a supply of the batch adjacent a moving element continuously moving the element to move a continuous sheet of glass batch into a melting zone, melting the batch to form glass and delivering the glass into a glass bath.



1,807,055. MOLDING PRESS. PARK E. WELTON, Cuyahoga Falls, Ohio. Filed Nov. 4, 1929. Serial No. 404,604. 38 Claims. (Cl. 18—17.)

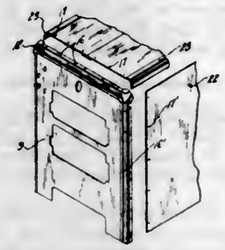
30. A tire press having a horizontal group of tire-mold sections, fixed and movable platens at opposite ends of the group, a horizontal ram device at one end of the press acting on said movable platen to close the group, horizontal push and pull rods parallel with the group, locks for selectively connecting the mold sections respectively with said push and pull rods, an operating cylinder and piston at the opposite end of the press, a horizontally-movable head



supporting the cylinder and connected with the pull rods, a second horizontally-movable head connected with the piston between said cylinder-supporting head and the fixed platen, and a rod-slacking piston and cylinder having one member connected with the operating cylinder and the other member connected with the second head for drawing said heads together to free said locks.

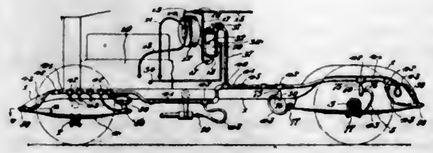
1,807,056. LIGHT SENSITIVE ELEMENT. VLADIMIR K. ZWORYKIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 6, 1928. Serial No. 317,598. 7 Claims. (Cl. 201—63.)

1. A light sensitive device comprising a transparent supporting medium, a metallic film thereon so thin as to transmit a substantial fraction of radiation incident thereon, a translucent film on said metallic film comprising a conductor the resistivity of which varies in response to the intensity of radiation incident thereon, and a reflecting conductor in contact with said translucent film.



1,807,057. BAR MOUNTING FOR XYLOPHONES OR THE LIKE. HARRY A. BOWERS, Hollywood, Calif. Filed Feb. 12, 1930. Serial No. 427,794. 17 Claims. (Cl. 84—403.)

1. A musical instrument having a plurality of note bars, a plurality of springs supporting each bar and additional springs positioned to engage and support the bar when depressed by a percussion stroke, the said springs permitting vibration of the said bars.

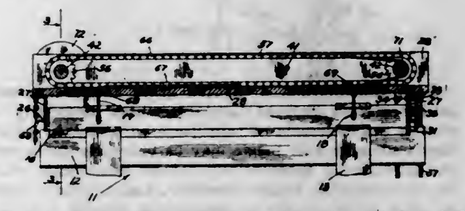


CARNEGIE LIBRARY OF ATLANTA

1,807,058. BOILER COVER. ROBERT F. CARPENTER, Cleveland, Ohio, assignor to The Sanymetal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 15, 1929. Serial No. 363,321. 1 Claim. (Cl. 220—75.)

A boiler cover structure, comprising a cover top member having plain front and rear edge portions and side edge portions curved downwardly as side edge molds and terminating in depending flanges, a cover front end member having its side and top edge portions curved rearwardly as side and top edge molds and terminating in rearwardly extending flanges, a cover rear end member having its side and top edge portions curved forwardly as side and top edge molds and terminating in forwardly extending flanges, cover side members having plain end and top edge portions, and means for securing the cover top, end and side members in assembled relation with the side flanges of the end members overlapping the end edge portions of the side members, with the flanges of the top member overlapping the top edge portions of said side members, and with the top flanges of said end members overlapping the plain and edge portions of said top member, said assembly maintaining means including transverse slots in the flanges of the cover end members and threaded openings registering with said slots in the plain end edge portions of the cover side members and in the plain end edge portions of the cover top member, with bolts extending through said slots and secured in said threaded openings, the arrangement being such that the cover structure is longitudinally adjustable and such that there is an edge mold along the eight edges of the cover structure.

1,807,059. LUBRICATING SYSTEM. YOUEL V. CARPENTER, Essington, Pa., assignor to Ideal Lubricator Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 25, 1929. Serial No. 334,912. 4 Claims. (Cl. 184—7.)

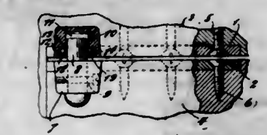


1. A system of lubrication for lubricating the bearings of an automobile or other like vehicle, which automobile or other like vehicle includes means for causing oil to flow continuously from the crank case of the engine thereof through a circulatory system provided in the engine structure and back to the said crank case, the said lubricating system comprising a central container for holding grease, a system of pipes having connection with the said container and also having connection with the bearings to be lubricated, the said pipes including devices for regulating and distributing the grease to the said bearings, a plunger located in the said container, and a pipe connection between the said container and the outlet side of the oil circulatory system of the engine through which oil is conveyed to the said container under pressure during the operation of the said engine and maintained under pressure for causing movement of the plunger within the said container for causing discharge of the grease therefrom into the said system of pipes by which it is conveyed to the said bearings.

1,807,060. CABLE OIL. WALTER CLAYPOOLE, Forest Hills, N. Y., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1929. Serial No. 356,315. 4 Claims. (Cl. 87—9.)

3. A cable oil comprising about 85 to 90% of mineral oil, 10 to 15% of rosin, and 0.5% or less of rubber.

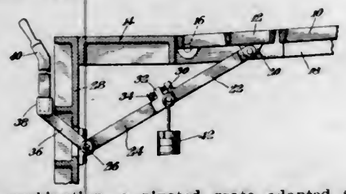
1,807,061. VENETIAN BLIND OPERATING MECHANISM. JOHN W. DUNN, Los Angeles, Calif. Filed Feb. 26, 1930. Serial No. 431,408. 12 Claims. (Cl. 156—17.)



1. A mechanism for operating a Venetian blind including a plurality of horizontally extending slats, said mechanism comprising a horizontally disposed bar, a shaft journalled adjacent each end of said bar, a flexible band passing around both of said shafts, a cord secured adjacent each end of the lowermost of said slats, each cord extending upward and being joined to said band, and means for rotating said shafts.

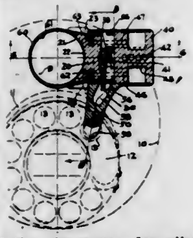
1,807,062. TIE PLATE. RAYMOND W. FRAWLEY and GEORGE C. BRUNER, Birmingham, Ala. Filed July 1, 1930. Serial No. 465,206. 4 Claims. (Cl. 238—298.)

1. A tie plate comprising a top portion having a rail seat and a rail abutment, a bottom tie engaging portion having a plurality of blunt rounded ribs with shallow arcuate grooves between them and transversely extending pointed ribs bridging said grooves.



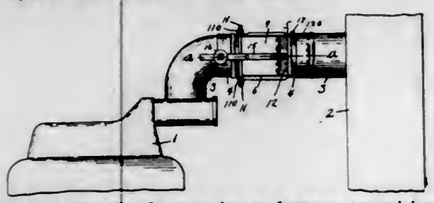
1,807,063. PIVOT HINGE. FORREST C. GARRISON, Evanston, Ill., assignor to The Oscar C. Rixson Company, a Corporation of Illinois. Filed Apr. 3, 1929. Serial No. 352,149. 2 Claims. (Cl. 16—171.)

1. In a hinge of the kind described, a plate adapted to be secured to the underside of a door lintel and having an



angular portion projecting laterally therefrom, a hollow boss projecting upwardly from the offset portion and opening downwardly through the plate, a second plate similarly offset and adapted to be secured on the top edge of a door, a tubular boss projecting downwardly from the offset of the second plate, a pin extending up through the boss of the second plate and into the first boss and having a head on its lower end, a retaining screw extending diametrically through the second boss and pin, said pin being of less diameter than the opening in the first boss, and a ball bearing in said boss loosely surrounding the pin.

1,807,064. INCINERATOR GRATE. HENRY GINNEL, Scarsdale, N. Y., assignor to Hiler Engineering & Construction Company, Inc., a Corporation of New York. Filed June 15, 1929. Serial No. 371,081. 5 Claims. (Cl. 126—162.)



2. In combination, a pivoted grate adapted to swing downwardly, a pair of toggle members diagonally connecting the underside of said grate with a fixed support, means whereby said toggle may be prevented from breaking downwardly substantially beyond dead-center, means for breaking said toggle upwardly, and a weight tending to resist such upward breaking and thereby tending to counterbalance the weight of the grate.

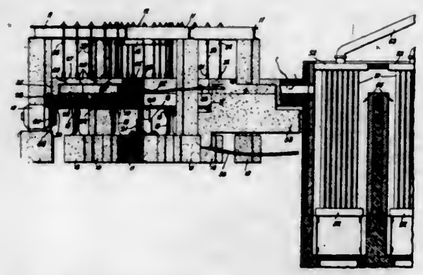
1,807,065. TELEPHONE DIAL LOCK. IRVING GREENBERG, Brooklyn, N. Y. Filed Nov. 30, 1929. Serial No. 410,719. 4 Claims. (Cl. 179—189.)

1. In a device of the character described, the combination with a dial telephone of a supporting member clamped to the pedestal of the telephone and disposed alongside of the dial; an arm for engaging and locking the dial of the telephone mounted rotatably upon the said supporting member and mechanism for locking and unlocking the said rotating arm for the purpose set forth herein.

1,807,066. AUTOMATIC DAMPER. WILLIAM D. LUCE, Haverhill, Mass., assignor of one-half to Joseph E. Dube, Haverhill, Mass. Filed Mar. 17, 1930. Serial No. 436,323. 10 Claims. (Cl. 236—45.)

2. An automatic damper for a furnace comprising a casing having a smoke passage therethru adapted for connection at its inlet end to the furnace and its outlet end to a chimney, and having a side opening to said passage between its ends, a damper plate arranged to swing freely inwardly and outwardly within said side opening and to close said opening and to be approximately balanced against the action of gravity in all positions thereof, and means movable with said plate arranged to close said passage as the plate is swung inwardly and to permit atmospheric pressure on the outer side of the plate to move the same to close the passage when it overbalances the pressure within the passage, and to permit the pressure at the inlet end of the passage to move the plate to open the passage when it overbalances the pressure against the outer side of the plate.

1,807,067. MANUFACTURE OF LIVE STOCK FEED. CHARLES R. MABEE, Buffalo, N. Y., assignor, by mesne assignments, to Charles H. Donaldson, Buffalo, N. Y. Filed June 20, 1925. Serial No. 38,565. 14 Claims. (Cl. 99—11.)

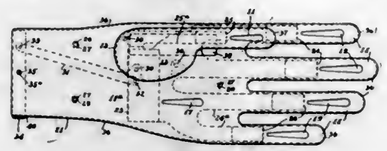


5. In the art of producing an improved live stock feed from farm roughage by subjecting the roughage to fermentative activity, the process which includes admixing calcium hydrate, sodium chloride and calcium acid phosphate with the roughage and thereafter subjecting the roughage to fermentative activity.

6. A composition for use in the processing of farm roughage including calcium hydrate, sodium chloride, sulphur, a phosphate of calcium and malt.

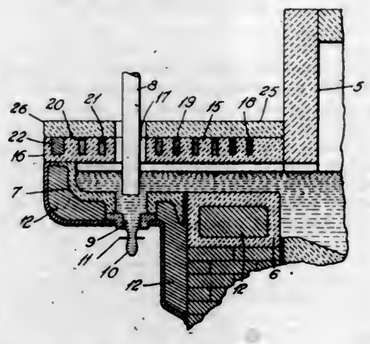
1,807,068. DENTAL ALLOY FOR SWAGED DENTURES. FREDERICK MAULEN, East Orange, N. J., assignor to Baker & Company, Inc., a Corporation of New Jersey. Filed Nov. 18, 1929. Serial No. 408,159. 2 Claims. (Cl. 32—4.)

1. A metal base for a denture formed of an alloy consisting of from ninety-five percent (95%) to ninety-nine percent (99%) palladium and from one percent (1%) to five percent (5%) rhodium, respectively.



1,807,069. PAN ROTARY KILN. LEVI B. MCDANIEL, Concrete, Wash. Filed Mar. 7, 1930. Serial No. 434,105. 11 Claims. (Cl. 222—7.)

2. A cement kiln comprising a rotatable pan member, a cover for the pan member, means associated with the cover for depositing slurry on the pan, and means for directing flames on the slurry.

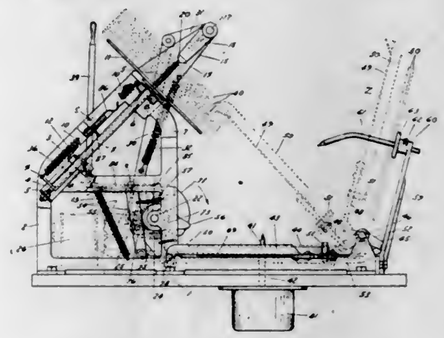


1,807,070. GLOVE STRETCHING DEVICE. ALBERT MERHAN and EDWIN GRAY, New York, N. Y. Filed Jan. 29, 1930. Serial No. 424,195. 10 Claims. (Cl. 223—19.)

1. In a glove stretching device a palm plate, a back plate, finger portions and thumb parts on said plates, an expanding member, enclosed therebetween, inwardly extending elevations on the inner faces of one or more of said plates, said portions and said parts and projections on said member, to cooperate with said elevations to move said plates in opposite directions with relation to each

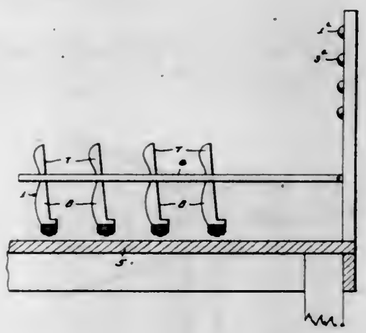
other and in a direction transversely to the planes thereof, said member with said projections thereon being formed substantially of an integral sheet of material wrought to the required shape.

1,807,071. ELECTRICALLY HEATED CONTAINER FOR MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 30, 1922. Serial No. 547,991. 11 Claims. (Cl. 49—55.)



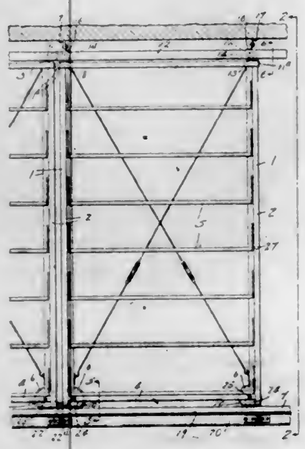
1. Apparatus for feeding molten glass, comprising a container having a discharge outlet, a cover plate for the container, heating means located in said container out of contact with the glass and adjacent to the cover plate, said heating means including refractory members provided with laterally extending channels in their upper surfaces, independently controlled electrical heating elements located in the channels for heating the glass at the discharge outlet, said cover plate being removable to permit access to the heating elements.

1,807,072. READY-MADE CUSP. LOUIS RAYMOND, New York, N. Y., assignor to Baker & Co. Inc., a Corporation of New Jersey. Filed May 22, 1929. Serial No. 365,038. 2 Claims. (Cl. 32—9.)



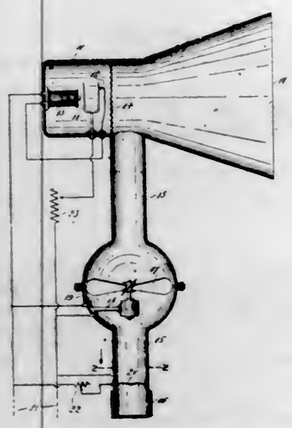
1. As an article of manufacture an artificial tooth cusp comprising a sheet of metal shaped to simulate the occlusal surface of a tooth and having a projection on the lingual side thereof to be imbedded in a plaster mold during the soldering operation in making an artificial tooth to hold said cusp against movement in the plaster and reenforce the edge of the cusp against distortion.

1,807,073. RECORD CHANGING MECHANISM. PAUL H. SCHULZ, Moline, Ill. Filed May 31, 1929. Serial No. 367,848. 5 Claims. (Cl. 274—10.)



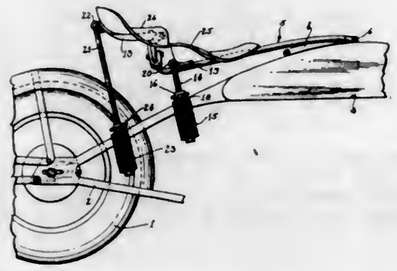
1. In a record changing mechanism, a storage device comprising a fixed rod, a tubular member slidable thereon and provided with a record support at its upper end, means for impelling the tubular member in a given direction, means for holding said tubular member from movement, means for limiting the movement of records on said support, movable to permit the release of one thereof, and means for the momentary release of said means for holding said tubular member, to permit a predetermined movement thereof.

1,807,074. GAME. JAMES H. SHEARS, Oklahoma City, Okla. Filed Mar. 19, 1928. Serial No. 262,910. 2 Claims. (Cl. 273—41)



1. A device of the character described, comprising a group of two-part pins transversely of the alley and above the level of the pins arranged in the usual triangular relation common to the game of bowling a bed or alley at one end of which said group of pins is located, the upper portions of said pins being fixed, and the lower portions of said pins being hinged with respect to the upper portions, a group of lights arranged in a substantially vertical plane in juxtaposition to the pins, and corresponding in triangular formation to the formation of the pins, and electrical connections between the pins and the lights of a nature to cause the illumination of the lights when the lower portions of the pins are moved to circuit closing position by the contact of a ball therewith, the connections being so arranged that each pin is connected to that light to which it corresponds, in the triangular disposition of the pins and lights.

1,807,075. STORAGE SYSTEM. JOHN G. L. SKAR, Jamestown, and HAROLD J. SYREN, Buffalo, N. Y., assignors to Art Metal Construction Company, Jamestown, N. Y. Filed Mar. 12, 1929. Serial No. 346,346. 19 Claims. (Cl. 104—121.)



1. In a storage system for articles such as books and the like, a room having parallel trackways along the ceiling and floor, a plurality of carriages arranged side by side closely to one another in rows running crosswise of the tracks, and each mounted on a floor track, and guided by a ceiling track, whereby any carriage may be pulled laterally from its row to make both side faces easily accessible for storage or removal of articles.

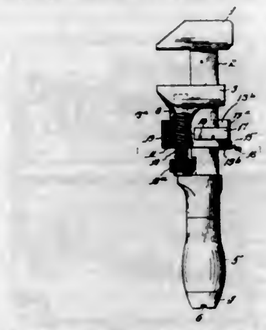
1,807,076. INSECT EXTERMINATOR. HENRY N. SWEET, Boston, Mass. Filed Oct. 16, 1930. Serial No. 489,063. 2 Claims. (Cl. 43—139.)

1. The method of exterminating insects which consists in creating and radiating sound waves having a pitch approximating that of the note produced by the vibrating wings of said insects, and pneumatically drawing the insects attracted by such radiated sound waves into a receptacle.

1,807,077. TANDEM SEAT CONSTRUCTION. CARL ALFRED VAN PAPPELENDAM, Keokuk, Iowa. Filed Sept. 20, 1929. Serial No. 393,992. 6 Claims. (Cl. 208—24.)

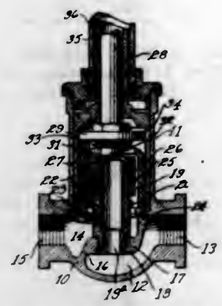
1. In a vehicle having a frame supported on front and rear wheels, the combination of means for mounting a plurality of seats upon said frame, a hinge connection between the seats, and means cooperating with said hinge connection for rigidly connecting the seats.

1,807,078. INSECTICIDE. HAROLD W. WALKER, Edgewood, Md., and HOWARD S. MCQUAID, Lakewood, Ohio. Filed May 10, 1926. Serial No. 108,110. 6 Claims. (Cl. 167—15.)



1. As a new insecticide, a very fine powdered material of adsorptive nature containing a small amount of an adsorbed soluble compound of arsenic compound; the proportion of such adsorbed arsenic being insufficient to give solutions of any substantial strength on contact with water.

1,807,079. SMOKER'S STAND. CHRISTOPHER WILMANNS, Indianapolis, Ind., assignor to Liberty Electric Company. Filed Apr. 25, 1928. Serial No. 272,784. 4 Claims. (Cl. 131—51.)

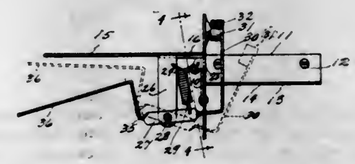


1. A smoker's stand comprising a hollow base, a detachable waste receptacle carried by said base, and means connecting the base and receptacle operable for releasing the receptacle from the base only when the receptacle is supported in a substantially horizontal position, substantially as set forth.

1,807,080. NUT WRENCH. HERBERT A. WOOLEVER, Orange, Pa. Filed Apr. 29, 1929. Serial No. 358,924. 2 Claims. (Cl. 81—156.)

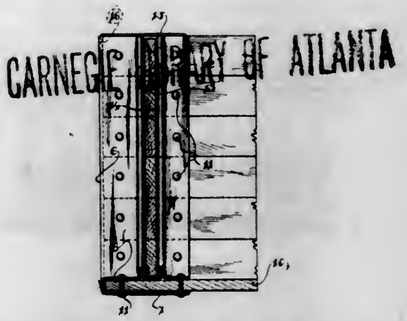
1. A wrench comprising an elongated shank having a handle at one end and a fixed jaw at the other end, a movable jaw slidable on the shank with respect to the fixed jaw, and cooperating threaded members one of which is carried by the shank and the other by the slidable jaw, the member carried by the jaw being movable to and from the companion member for engagement therewith to slide the movable jaw on the shank; together with means for operating the movable threaded member consisting of a metal strap secured thereto and embracing the movable jaw with a connecting portion at the rear ends of the strap beyond the rear end of the movable jaw and the sides of said strap provided with slots, a strap extending around the rear end of the movable jaw to which it is attached and having the ends thereof located in the aforesaid slots to form guides for the strap carrying the movable threaded member, a spring interposed between the connecting portion of the first mentioned strap and rear end of the movable jaw to move the parts to normal position with the threaded members of the wrench in engagement with each other, and a spring catch secured to the movable jaw and engaging the connecting portion of the strap carrying the movable member of the nut to hold said strap in either position to which it is shifted.

1,807,081. VALVE MECHANISM. RALPH E. BLETCHER and ERNEST H. BUCKNELL, Los Angeles, Calif. Filed Oct. 31, 1927. Serial No. 230,035. 15 Claims. (Cl. 277—7.)



1. Valve mechanism comprising a body having hot and cold water inlet connections, respectively, the said body provided with a plurality of outlet connections, means for opening or closing either or both of the outlet connections, means in communication with the cold water inlet, means in communication with the hot water inlet, a plurality of rotary valves in co-action with the respective second and third named means adapted to be progressively controlled to admit of the discharge of hot or cold water or hot and cold water from either of said outlet connections, and a rotary stem common to all of said valves for rotating the valves together.

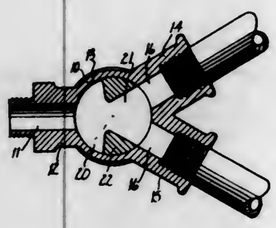
1,807,082. METHOD OF DRILLING WELLS. ALEXANDER BOYNTON, San Antonio, Tex. Filed Oct. 19, 1926. Serial No. 142,781. 1 Claim. (Cl. 255—1.)



In well drilling operations, the method of protecting producing strata from the undue incursion of mud circulation, which comprises, introducing mud circulation into the well-hole, introducing mica flakes into the mud circulation when a zone of a producing stratum is reached, coating the wall of the well-hole in the zone of the producing stratum with said flaky material through the medium of the mud circulation, and, maintaining said coating in position on said wall at said zone, by the superior pressure of the mud circulation over the pressure of the fluid in the producing stratum.

1,807,083. COMBINATION TUBE AND BRUSH HOLDER. WILLIAM E. BRACEY and LYTUS W. BRAMBLETT, Dallas, Tex. Filed Feb. 18, 1928. Serial No. 255,865. 5 Claims. (Cl. 248—20.)

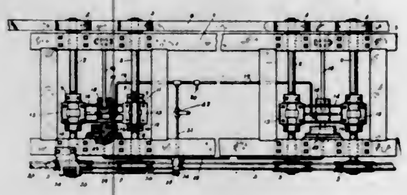
1. In a tube holder, a bracket having a tube-supporting table and adapted to be rigidly mounted, whereby said table is supported in a horizontal position, automatically closing clamping jaws carried by the bracket in a vertical plane at one end of the table for receiving the neck of a tube mounted on said table, a lever pivotally supported intermediate its ends under the table and having a handle underlying said table, an arm carried by the lever, and a cap mounted on the arm in position for engaging the end of the neck of the tube.



1,807,084. WAGON END GATE MOUNTING. ZOTIQUE CHEVRIER, Mazenod, Saskatchewan, Canada. Filed Apr. 16, 1927. Serial No. 184,318. 1 Claim. (Cl. 296—30.)

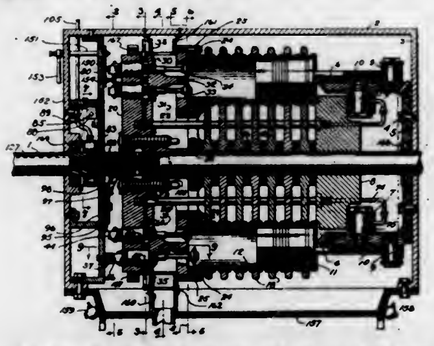
CARNEGIE LIBRARY OF ATLANTA

As a new article of manufacture, a single U-shaped plate wagon end gate mounting fitting over the end of the wagon bottom as well as the ends of the wagon upstanding sides and covering both the inner and outer faces of said wagon bottom and upstanding sides; said plate having a pair of full length spaced parallel ribs extending longitudinally of the plate and struck out from the inner face thereof to accommodate the lower edge and the upstanding edges of the wagon end gate insertable and removable vertically; and angular plates adapted



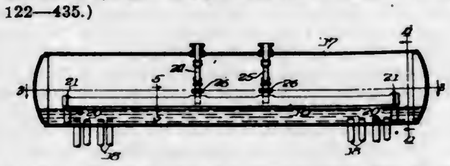
to be mounted on the upper edges of the said wagon upstanding sides at the rear ends thereof and having their downturned angles extended into and held by the first mentioned plate.

1,807,085. TWO-WAY VALVE. CHARLES S. CRICKMER, Dallas, Tex., assignor to Tridex Corporation, Dallas, Tex., a Corporation of Delaware. Filed July 25, 1928. Serial No. 295,207. 1 Claim. (Cl. 251—109.)



In a two-way valve, a valve casing having a single conductor entering one side and diverging distributors extending from the opposite side of the casing, a rotatable valve plug within the casing having a segmental opening of circumferential area equal to substantially one half of the diameter on the plug and communicating with the single conductor in all positions of the plug and also provided with a divergent opening extending from the segmental opening for spanning both distributors, said plug having webs on each side of the divergent opening separating the divergent and segmental openings and of a circumferential area less than the combined distributor openings, and a hand lever on the plug having a cooperating stop means to limit the travel of the webs to always maintain one distributor opening, in communication with the conductor.

1,807,086. OFFSET FOR LOG CARRIERS. ERVIE A. FERRIS, Westwood, Calif. Filed Mar. 31, 1928. Serial No. 266,250. 5 Claims. (Cl. 143—109.)



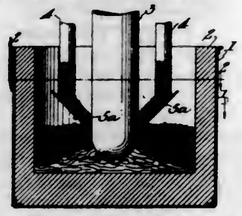
1. A device of the type described comprising a plurality of shafts, wheels supporting said shafts, a carrier mounted on said shafts and having a lateral movement with respect thereto, cylinders carried by said shafts, pistons mounted in said cylinders, and being connected to said carrier, means for maintaining a constant pressure of air upon said pistons, auxiliary cylinders, auxiliary pistons mounted in said cylinders of a larger size than said first named pistons, means controlled by the longitudinal movement of the carrier for directing air into said auxiliary cylinders during a part of the movement of said carrier, whereby said auxiliary pistons will move said carrier laterally upon said shafts.

1,807,087. INTERNAL COMBUSTION ENGINE. HERMAN A. FINKE, St. Louis, Mo. Filed Jan. 12, 1928. Serial No. 246,213. 28 Claims. (Cl. 123—43.)

1. In an internal combustion engine provided with a shaft the combination of a plurality of cylinders mounted for rotation with said shaft; a head for said cylinders; valves for each cylinder carried by said head; and stationary means to actuate all of said valves in predetermined and reversible sequence.

1,807,088. EQUALIZING FEED MEANS FOR WATER TUBE BOILERS. FREDERICK C. GEDGE, Plainfield, Ill. Filed Oct. 5, 1927. Serial No. 224,077. 5 Claims. (Cl. 122—435.)

1. Water supply means for boilers comprising in combination, a feed pan extending longitudinally of the boiler above the normal water line thereof, having slots in the upper side thereof extending substantially the entire length of the feed pan, brackets upon which said feed pan is mounted, and a feed water pipe extending into said feed water pan and terminating adjacent the bottom thereof, the said feed water pipe extending into said feed pan in a vertical direction.

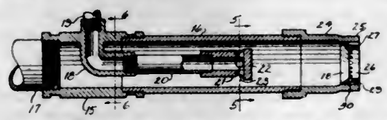


1,807,089. GOLF COURSE MARKER. JAMES B. PARSONS and JOSEPH J. KING, Indiana, Pa. Filed May 6, 1929. Serial No. 360,786. 1 Claim. (Cl. 273—84.)

The herein described construction of golf course markers comprising a pole, outwardly extending right-angularly

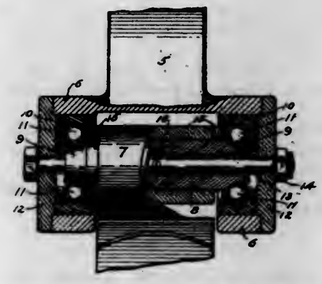
arranged bars having their inner ends fixed to the pole, inclined plates having angle upper ends which are fixed to the pole and having their lower ends fixed to the respective bars and having their outer edges extending beyond said bars, and their said outer edges approximately in a line with the bars being provided with semi-cylindrical depressions and a cross sectionally round elastic ring arranged over the inclined plates received in the said depressions.

1,807,090. CHARGING MEANS FOR ELECTRIC FURNACES. GUSTAV PISTOR, Leipzig, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 17, 1928, Serial No. 278,463, and in Germany May 18, 1927. 3 Claims. (Cl. 266—1.5.)



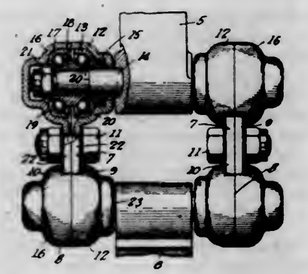
1. An electrical furnace comprising, in combination, an electrode extending into the lower part of the furnace, means for passing the charge towards the electrode, said means comprising at least one distributing surface slantingly protruding towards and into close proximity of the lower part of the electrode, so as to allow the charge after having passed over the distributing surface to descend into the reaction zone in contact with the electrode through the gap, thus formed, and means for withholding the charge from the upper part of the electrode, said means being placed within the furnace at a moderate distance above said distributing surface.

1,807,091. DOLL'S EYES AND MOUNTING THEREFOR. LAZURUS W. POLLOCK, Brooklyn, N. Y. Filed Mar. 16, 1929. Serial No. 347,645. 13 Claims. (Cl. 46—40.)



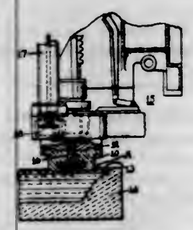
1. In a device of the class described, the combination of a hanger of flexible material arranged to be inserted in a doll's head and having means at its upper end for anchoring in the top portion of the head, and its lower end bent forwardly and enclosing the lower edge of the doll's head, and doll's eyes movably supported from said hanger.

1,807,092. GAS BURNER. WERNER SCHWAN, Dallas, Tex. Filed Aug. 1, 1928. Serial No. 296,775. 7 Claims. (Cl. 158—99.)



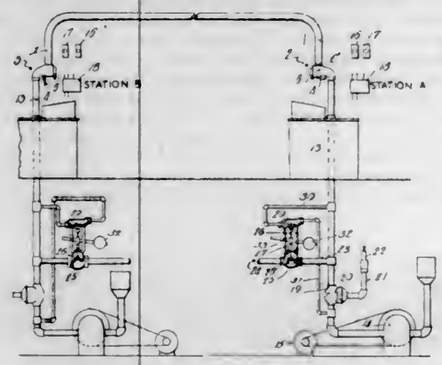
3. In a gas burner, a T having a reduced elbow extending radially and axially thereof, a mixer tube connected to one end of the T, an air supply pipe connected to the opposite end of the T, a deflector within the tube connected with the elbow and disposed laterally to deflect air and gas into contact with the tube and having a single series of radial ports at the inner face of the deflector, and a head mounted on the outer end of the tube and having a reduced tip located remote from said ports to form a mixing chamber beyond the deflector.

1,807,093. ANTIFRICTION SPRING CONNECTION. RAYMOND R. SEARLES, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 29, 1925, Serial No. 5,623. Renewed Oct. 7, 1930. 18 Claims. (Cl. 267—54.)



1. In a spring connection, a frame having spaced apart bosses, said bosses having bores therein, pin means to be secured to a spring between said bosses, said pin means having antifriction bearing member raceways at opposite sides of said spring and spaced a single definite minimum distance apart, end caps for closing the outer ends of said bores in said bosses and extending over the outer ends of said pin means, said end caps being in abutting relation to and being spaced a definite minimum distance apart by said bosses, means for rigidly securing said end caps to said bosses so spaced apart, antifriction bearing member raceways in abutting relation to and spaced a definite maximum distance apart by said end caps, and antifriction bearing members interposed between said last mentioned raceways and the complementary raceways of said pin means.

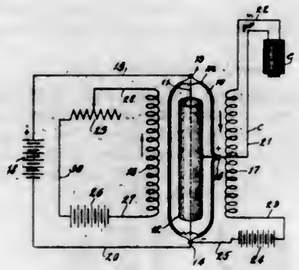
1,807,094. SPRING END CONNECTION. JOHN W. SMITH, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 3, 1928. Serial No. 316,890. 9 Claims. (Cl. 267—54.)



1. In a spring end connection for connecting a frame and spring of a motor vehicle, shackle members independent of each other, each of said shackle members being provided with a bearing housing at opposite ends thereof, said shackle members being divided longitudinally and separable along the longitudinal line of division and means for detachably securing said separable parts of each link together.

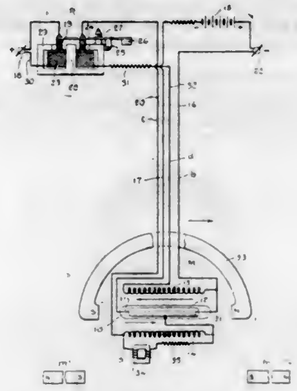
1,807,095. GLASSWARE FORMING MACHINE. JESSE H. TREECE, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed Jan. 16, 1930. Serial No. 421,143. 11 Claims. (Cl. 49—5.)

9. The method which consists in causing a mold to traverse the surface of a supply body of molten glass, applying suction within the mold to the mold and a portion of the lower end thereof to fill said mold with glass and maintain sealing contact between the supply body of glass and mouth of the mold, lifting the mold out of contact with the supply body while maintaining application of vacuum to the cavity and bottom of the mold, discontinuing application of vacuum after the mold has been lifted and prior to moving beyond said supply body, and severing excess glass from the lower end of the mold.



1,807,096. PRESSURE RELIEF MEANS FOR PNEUMATIC TUBE SYSTEMS. ARNOLD A. ZIMMER, Chicago, Ill., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Dec. 28, 1929. Serial No. 417,093. 23 Claims. (Cl. 243—38.)

1. A pneumatic despatch system of the kind having a transmission tube provided with a despatch and a delivery terminal, means for supplying air under pressure to the tube at the despatch end of the latter, means for closing the despatch terminal during transit of a carrier, means for initiating and stopping the supply of air to the transmission tube, and relief means responsive to cessation of the air supply for quickly releasing the pressure within the despatch end of the tube while the despatch terminal remains closed.

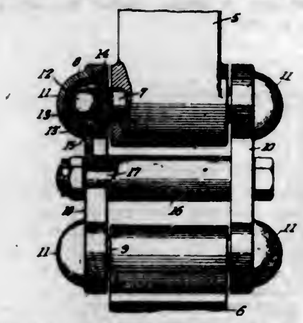


1,807,097. MAGNETRON CIRCUIT CONTROLLING APPARATUS. THEODORE BODDE, Niagara Falls, N. Y., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed July 11, 1923. Serial No. 650,803. 25 Claims. (Cl. 250—27.)

1. In combination, an electron discharge device having a cathode and an anode, a circuit controlled thereby, means producing a magnetic field active on said device and effective for establishing a given condition therein and in said circuit, means in said circuit for producing a magnetic field active in opposition to said first mentioned magnetic field for establishing a different condition in said device and in said circuit, and means active for neutralizing the

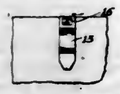
effect of said opposing magnetic field so as to render the first mentioned magnetic field effective for producing the first mentioned condition.

1,807,098. MAGNETRON CIRCUIT CONTROLLING APPARATUS. THEODORE BODDE, Niagara Falls, N. Y., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1924. Serial No. 731,694. 6 Claims. (Cl. 250—27.)



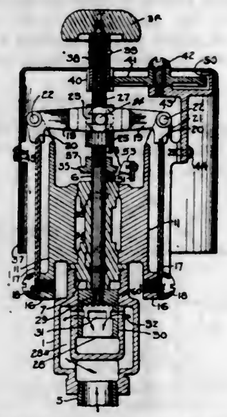
1. In combination, an electron discharge device having cathode and anode electrodes, a circuit connected to the electrodes and controlled by the electron flow therebetween, mechanism for changing the condition of said device to modify the condition of the controlled circuit including a solenoid in said circuit for producing a magnetic field influencing the said device, and a relay having two coils one of which is arranged in circuit with said electrodes.

1,807,099. SPRING END CONNECTION. ELISHA H. COOPER, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 3, 1928. Serial No. 316,899. 13 Claims. (Cl. 267—54.)



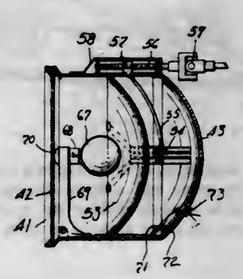
1. In a spring connection for connecting a frame and spring, one of said members having means at opposite sides thereof and provided with cup-shaped bearing recesses, means supported by the other of said members and

having cup-shaped bearing recesses complementary to said first mentioned recesses, and a single ball between the



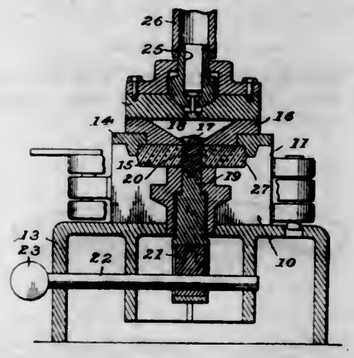
complementary cup-shaped bearing seats at opposite sides of one of said members said seats being of a size to permit a limited rolling of said balls.

1,807,100. SIGNAL DEVICE. GEORGE B. GRAFF, Newton Center, and ROBERT A. STEWART, Watertown, Mass., assignors to George B. Graff Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 19, 1930. Serial No. 476,290. 3 Claims. (Cl. 40—23.)



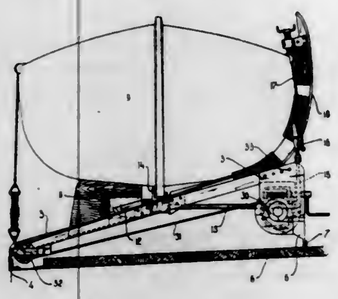
1. A signal device for index systems, comprising a pair of legs of thin resilient material adapted to receive and grip a card therebetween, said legs being connected together at one end of said clip and in contact adjacent their free ends, said device having two longitudinally spaced indentations and each of said indentations adapted to grip a card against the inner face of the opposing leg, said indentations being spaced apart and with one indentation sufficiently close to the free end of said leg to permit the intermediate portion of the device between said indentations to be pinched between the fingers to sufficiently separate the normally contacting free ends of said legs to readily permit the insertion of a card therebetween, the indentation adjacent the free end acting as a fulcrum for such purpose.

1,807,101. AUTOMATIC TEMPERATUE CONTROL. ERNEST J. LEES, Shaker Heights, Ohio. Filed Aug. 9, 1929. Serial No. 384,588. 13 Claims. (Cl. 236—43.)



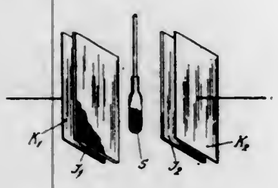
1. A control valve for heating units including thermally responsive means for operating the valve, and a second thermally responsive means for delaying the beginning of movement of the valve in one direction, whereby forces tending to move the valve in said direction may be accumulated and then quickly released to instantaneously move the valve in said one direction.

1,807,102. AUTOMOBILE HEADLIGHT. PAUL I. A. RUNGE, San Francisco, Calif., assignor to William H. Galvin, San Francisco, Calif. Filed Jan. 23, 1929. Serial No. 334,425. 2 Claims. (Cl. 240—41.)



1. An automobile headlight, comprising a casing, a removable glass in the front of said casing, a bracket pivoted to said casing and having an arm projecting to the center of said casing, a lamp socket on said arm projecting toward the back of the casing, a resilient pad on said arm adapted to bear against said glass, and a horizontal arm on said bracket adapted to bear on the wall of the casing to limit the forward movement of the bracket.

1,807,103. METHOD OF AND MEANS FOR MAKING GLASS ARTICLES. WILLIAM HOWARD SAID, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Feb. 21, 1929. Serial No. 341,724. 7 Claims. (Cl. 49—80.)

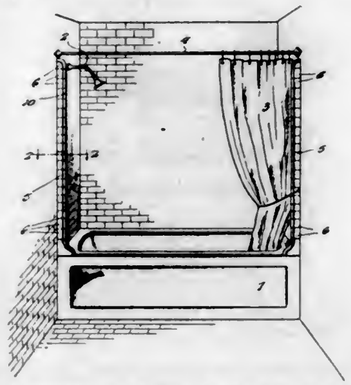


1. The method of making glass articles which includes pressing molten glass in a mold, exerting fluid pressure on the glass in the mold and ejecting excess glass from the mold against the pressure of the fluid.

1,807,104. BOAT CHOCK. ANE PIETER SCHAT, Utrecht, Netherlands. Filed Mar. 17, 1930, Serial No. 436,558, and in the Netherlands May 24, 1929. 6 Claims. (Cl. 9—22.)

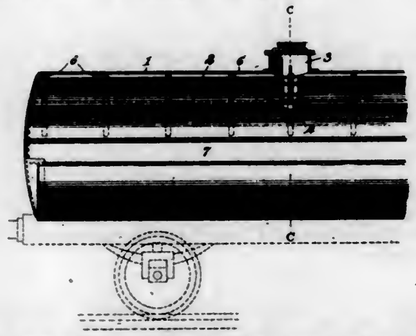
1. Boat chock, consisting of an outwardly sloping section iron, which at its outer end only is directly secured to the deck and which is supported at its inner end by an upright section iron likewise secured to deck at one point only.

1,807,105. APPLIANCE FOR DIATHERMIC TREATMENT BY MEANS OF HIGH FREQUENCY. EWIN SCHLIEPHAKE, Jena, Germany. Filed July 18, 1930, Serial No. 468,821, and in Germany July 25, 1929. 1 Claim. (Cl. 174—177.)



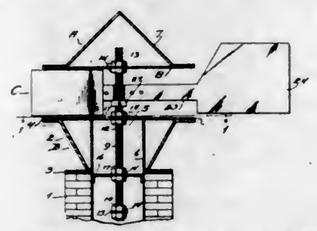
Apparatus for diathermic treatment by means of high frequency of the character described comprising a condenser, two condenser electrodes of larger size and a smaller at least partly metallic body, which is brought close to the point to be treated and by means of which body the condenser field is drawn to the place to be treated.

1,807,106. RIM END CONNECTER. JOHN WILL STARK, Bowling Green, Ky. Filed Nov. 2, 1928. Serial No. 316,830. 11 Claims. (Cl. 301—33.)



2. The combination of a transplit demountable rim, a narrow shackle member fixed to the rim adjacent the split and extending inwardly from the rim base, a rim-operating lever permanently pivoted on said shackle and confined thereby to pivotal movement, said lever having, in the opposite end thereof, a slot inclined at an angle to the outer edge of said lever, and a member fixed to and projecting inwardly from the opposite rim end and having a pivot removably received in said inclined slot.

1,807,107. SPLASH GUARD AND TILE FOR FORMING THE SAME. LAYMAN M. STERNBERGH, Ocean Grove, N. J. Filed Apr. 9, 1930. Serial No. 442,914. 8 Claims. (Cl. 4—145.)

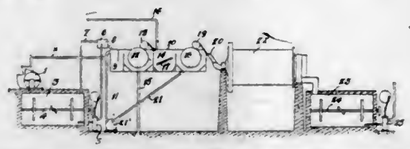


1. The combination with a shower structure including a chamber having a side wall, and a splash curtain, of a vertically extending rib projecting from the wall and being of sufficient depth to overlap a side portion of the curtain and having its outer portion formed with a hand grip.

1,807,108. TANK FOR THE TRANSPORTATION OF VOLATILE LIQUIDS. GEORGE VINCENT TONTET, Buenos Aires, Argentina. Filed June 20, 1929. Serial No. 372,415. 2 Claims. (Cl. 220—85.)

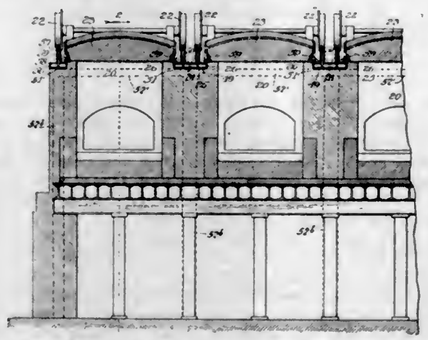
2. In a cylindrical tank for the transportation of liquids, a receptacle having a crescent-shaped cross-section and arranged at the top of the tank and fitting conformably with a slight clearance, said receptacle being adapted to prevent the loss of the liquid from the tank by evaporation.

1,807,109. EXHAUST VENTILATOR. FRED L. WAGAR, Wagar, Ala. Filed Dec. 28, 1928. Serial No. 329,069. 4 Claims. (Cl. 98—71.)



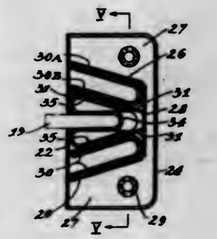
1. The combination in an air exhausting device, of a fixed frusto-conical air deflector having a horizontally disposed cover plate 4 with a central opening, a fixed conical air deflector with a horizontal plate 8, a rotary arrow headed vane air deflector located between the two said plates 4 and 8, said arrow headed vane air deflector comprising an arrow head with its sides 18, 19 obliquely disposed to each other in vertical planes and a shaft extended horizontally beyond the plates 4 and 8, and fixed means with a bearing for the rotary arrow headed vane air deflector.

1,807,110. CARRIER SUPPORT FOR RECIPROCATING CONVEYERS. RAYMOND A. WALTER, New York, N. Y., assignor to Conveyor Sales Company, New York, N. Y., a Corporation of New York. Filed June 11, 1927. Serial No. 198,116. 2 Claims. (Cl. 198—220.)



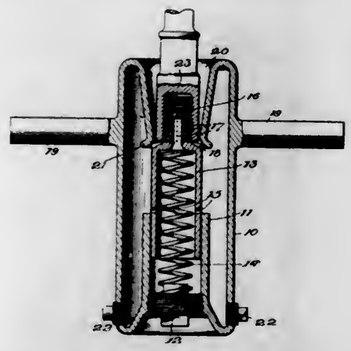
1. A carrier support for the reciprocating conveyer comprising flanged support members having upturned ends, angular bottom ball races mounted on the sides of the upturned ends, ball bearings seated in the bottom races, angular top races on the ball bearings and a flanged support member having upturned ends mounted on the conveyer, the upturned ends being mounted on the angular top races.

1,807,111. PROCESS FOR PRODUCING FIBROUS MATERIAL. SIDNEY D. WELLS, Quincy, Ill., assignor, by mesne assignments, to The Mine & Smelter Supply Company, Denver, Colo., a Corporation of Colorado. Filed Sept. 27, 1927. Serial No. 222,353. 14 Claims. (Cl. 92—20.)



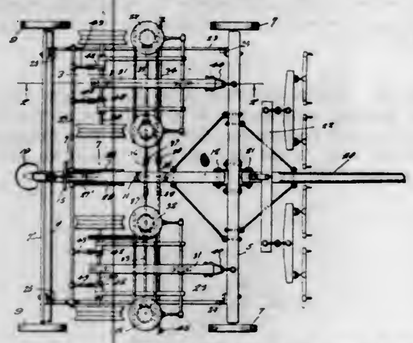
1. The process of producing fibrous material which consists in treating the material to a mild chemical digestion to the point where the bond between the fibers and cells is reduced but not completely removed, subjecting the softened material to a preliminary mechanical disintegration in the presence of water, washing the material, and subjecting the washed material to a final mechanical disintegration.

1,807,112. FURNACE. FRANK J. WERNER, Portage Township, Porter County, Ind. Filed Feb. 21, 1925. Serial No. 10,803. 6 Claims. (Cl. 110—176.)



1. In soaking pits, a heat storage chamber, means for supplying heat thereto, a removable cover for the chamber, a hollow rail comprising a rail tread and a base, a pair of such rails being positioned along each of the side walls of the chamber, rolling supporting means for the cover movable on said rails, and means for admitting a cooling agent into the base first and thereafter into the tread portion of the rail.

1,807,113. DOOR BUFFER AND RETAINER. DANIEL M. WINANS, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Mar. 20, 1930. Serial No. 437,504. 4 Claims. (Cl. 16—85.)

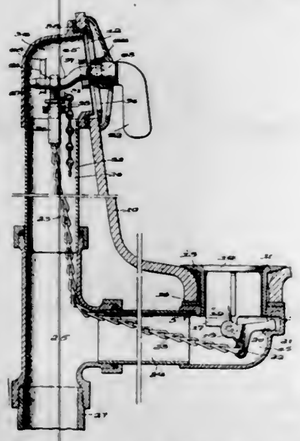


1. In a buffer fixture of the all-metal type, the combination of complementary spaced abutments, a faced inherently resilient clamping member of the metallic leaf-spring type for each of the abutments and which members have their respective faces placed inwardly to cooperatively provide for a laterally expansible wedge-shaped spacing therebetween, wedge-like clip means mounted wholly within said spacing and having oppositely disposed surfaces adapted to be shifted lengthwise of the respective member faces, and means serving to forcibly wedge the clip between said clamping members.

1,807,114. SUCKER ROD BOX CLEANER. ROBERT L. WRIGHT and HUBERT D. COLLINS, Tulsa, Okla., assignors to Gypsy Oil Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Feb. 24, 1930. Serial No. 430,895. 5 Claims. (Cl. 141—1.)

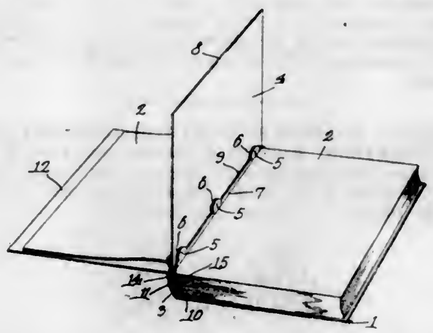
1. In a sucker rod box cleaner, a container for the cleaning fluid, a sleeve projecting into one end of said container, a cylinder of larger diameter than the inner end of said sleeve projecting into the other end of the container, said cylinder being closed at its outer end and communicating with said container, a hollow plunger having one end slidably engaging the interior of said cylinder and its other end normally yieldingly positioned in said sleeve, the end of said plunger in said sleeve being of reduced diameter and having orifices therein.

1,807,115. FOUR ROW CORN PLANTER. WILLIAM C. YOUNG, Atlantic, Iowa. Filed Apr. 5, 1929. Serial No. 352,757. 7 Claims. (Cl. 111—62.)



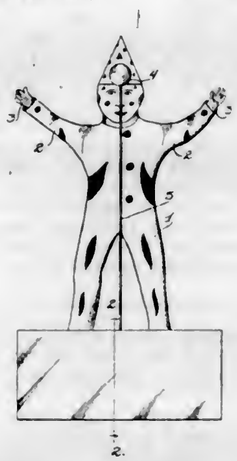
1. In a machine of the class described, a main wheeled frame, a pair of two row corn planters mounted in the frame one to each side thereof, means operatively connecting the planting mechanisms of the two row corn planters, and means for raising the two row corn planters from engagement with the ground, rear wheels for the main frame being dirigibly mounted and means for controlling said rear wheels to steer the main frame.

1,807,116. METHOD OF COMPACTING, FINISHING, AND CURING CONCRETE PAVEMENTS. PERCY A. HIPPLE, Atlanta, Ga. Filed Aug. 26, 1929. Serial No. 388,636. 6 Claims. (Cl. 25—154.)



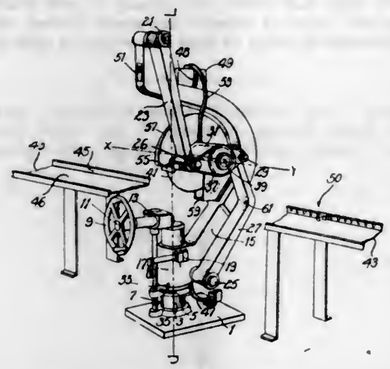
4. The process of indurating concrete which consists in partially compacting the solids in the mass thereby producing a top layer of buoyant water ladened plastic mortar, then impelling solid material through said layer of plastic mortar into the interior of the mass, and then applying to said mass a low pressure blast of pure cement mixed with water to compensate for the reduction of cement ratio in the original concrete mix effected by the injection of said solid particles into said mass.

1,807,117. WASTE AND OVERFLOW FITTING. TOBIAS J. KAUFMAN, Chicago, Ill. Filed Feb. 24, 1930. Serial No. 430,942. 17 Claims. (Cl. 4—203.)



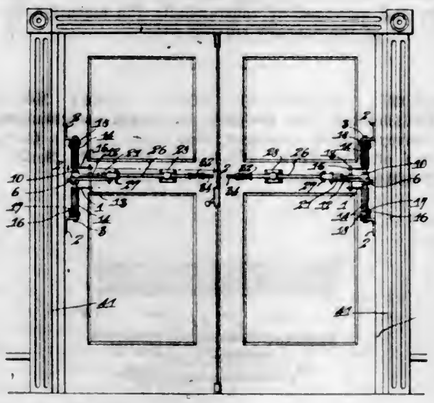
1. The combination with a sanitary fixture, of a waste opening, a waste pipe or chamber communicating with said opening, a plug for closing said opening, a lever pivotally supported by said plug, means for anchoring one end of said lever and means secured to the other end of the lever for operating the lever and plug.

1,807,118. LEAF HOLDER FOR BOOKS. ERNEST M. KENNA, New York, N. Y. Filed Apr. 18, 1928. Serial No. 270,961. 2 Claims. (Cl. 129—15.)



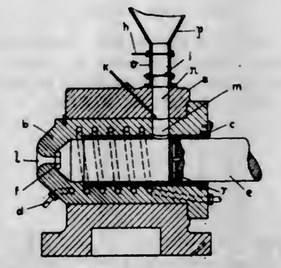
2. In a device of the class described, a book having main leaves and a binding connecting the main leaves, supplemental leaves between divers of the main leaves and having projections, and a flexible element wrapped in a single length around the binding in a plurality of convolutions, the convolutions extending longitudinally of the outer surface of the binding and between the main leaves, the convolutions being engaged with the projections, and the flexible element constituting a one-piece retainer for a plurality of supplemental leaves.

1,807,119. TOY PERFORMER. PETER LAZZARI, Pittsburgh, Pa. Filed Apr. 24, 1928. Serial No. 272,510. 1 Claim. (Cl. 46—40.)



A toy comprising in combination the representation of a figure of an animal having two stationary outstretched arms extending before it, a rod pivoted at a distance below said outstretched arms and near the base of said figure and adapted to oscillate before said figure and at one end of its path of oscillation approaching the end of one of said outstretched arms and at the other end of its path of oscillation approaching the end of the other of said outstretched arms, a body attached to said rod and so positioned on it that oscillation of the rod about its pivot causes said body to move from the positin of one outstretched arm to the other, and means carried by said toy operable to store energy for oscillating said rod and means for bringing about the oscillation of said rod by said stored energy.

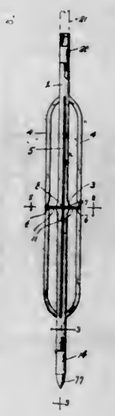
1,807,120. SAW. HAROLD LACEY LEWIS, St. Louis, Mo., assignor to Hall & Brown Wood Working Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 11, 1929. Serial No. 346,091. 4 Claims. (Cl. 143—6.)



1. A saw mechanism comprising a table, a co-operating C-frame, a pair of swing links pivoted at substantially opposite ends of said frame and extending substantially toward one another, a connecting link pivoted to the juxtaposed ends of said swing links such that a predetermined point thereon moves in a substantially straight line when the swing links are moved, a motor mounted on the connecting link, a circular saw driven by said motor, the center line of the circular saw passing through said point, one end of the C-frame extending beyond the other end thereof, the pivot point of one swing link on said extending portion being spaced beyond the pivot point for the other link, said other link having an elbow shape permitting the saw to swing forward without interference from said table.

1,807,121. DOOR OPENING APPARATUS. JOSEPH M. LOEFFLER, Philadelphia, Pa. Filed Aug. 7, 1930. Serial No. 473,618. 5 Claims. (Cl. 16—80.)

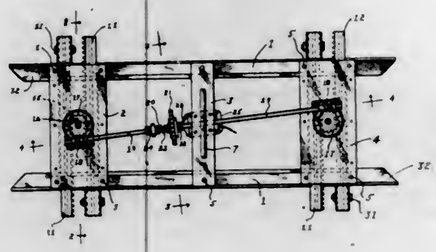
1. In door openers, a rod fixed to the door jamb, an articulated arm freely pivoted to one end of said rod, a sliding connection between said arm and the door, a compound arm pivoted at one end adjacent said rod and having its other end pivoted adjacent said arm between its articulation and its point of connection to the door, and a spring for moving said arm.



1,807,122. METHOD OF PRODUCING LIQUID HYDROCARBONS AND APPARATUS THEREFOR. JOHANNES MARUHN, Berlin-Friedenau, and LUDWIG TÜBBEN, Berlin-Nicolassee, Germany. Filed Mar. 10, 1930, Serial No. 434,695, and in Germany Dec. 16, 1925. 3 Claims. (Cl. 196—53.)

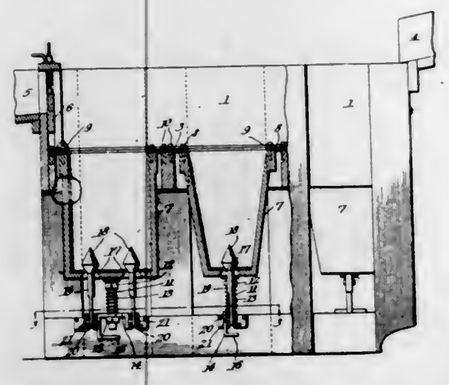
1. A method of producing lower boiling liquid hydrocarbons by hydrogenating and converting carbonaceous substances selected from a group comprising finely pulverized coal, heavy oils and mixtures of pulverized coal and oil at an increased temperature and under high pressure of hydrogen-containing gas; said method consisting in feeding to a reaction zone a mixture of hydrogen-containing gas, said carboneaceous substances and a catalyst, heating and gradually compressing the mixture in said zone until the maximum reaction pressure is reached, and finally removing the product from said reaction zone.

2. An apparatus for producing liquid hydrocarbons by hydrogenating carbonaceous substances selected from a group comprising finely pulverized coal, heavy oils and mixtures of pulverized coal and oil at an increased temperature and high pressure with hydrogen-containing gas; comprising a heated cylinder acting as a reaction chamber and having an inlet and an outlet, a plunger adapted to reciprocate in the bore of the cylinder, the inlet passage communicating with said bore and adapted to supply said substances and the hydrogen-containing gas into said bore, a gate in the cylinder adapted to regulate the outlet from the cylinder, the relative position between said inlet passage and the plunger being such that the plunger automatically during its reciprocation acts as a valve for closing the inlet passage at the beginning of the stroke.



1,807,123. PARAFFIN GOPHER. ROLEY C. MCCARTER, Rising Star, Tex. Filed Oct. 16, 1930. Serial No. 489,195. 5 Claims. (Cl. 166—18.)

1. A tool of the character described comprising an elongated tube, guide runners mounted longitudinally on

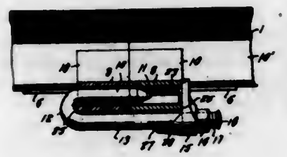


the tube and having intermediate portions disposed in spaced parallelism to the tube, and a pair of scrapers hingedly mounted for swinging movement on the tube within the guide runners and having their scraping edges disposed substantially concentrically with the outer edges of the guide runners.

1,807,124. LIFTING GRAPPLE. FREDERICK H. MEYER, Grand Rapids, Mich., assignor to Leitelt Iron Works, Grand Rapids, Mich., a Corporation of Michigan. Filed July 10, 1929. Serial No. 377,134. 3 Claims. (Cl. 294—67.)

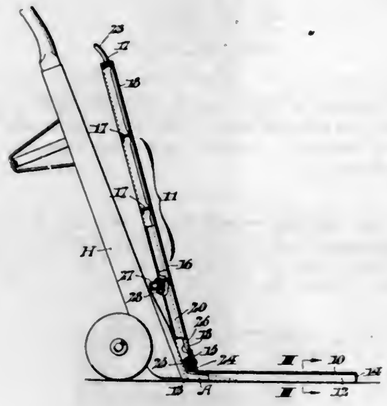
1. In a lifting grapple, a frame member, twin parallel bars mounted adjacent one side of said frame member and another set of twin bars mounted adjacent the opposite side of said frame member, said bars being horizontally arranged, means between each set of twin bars for moving the bars of each set in opposite directions, a pair of work supporting members disposed transversely to said pair of twin bars, each work supporting member being secured to and depending from one twin bar of each pair of twin bars, and common means for simultaneously moving the first-mentioned means.

1,807,125. APPARATUS FOR SETTLING AND CLASSIFYING SAND. JAMES MACDONALD MITCHELL, Flushing, N. Y. Filed Feb. 27, 1929. Serial No. 343,189. 1 Claim. (Cl. 209—208.)



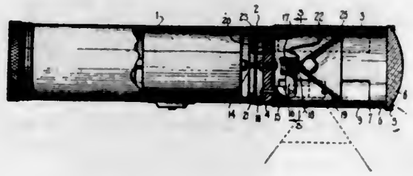
In a sand settling and classifying apparatus, a frame, a receiver for liquid and sand mounted on said frame, a settling pocket communicating with said receiver and slidably mounted in said frame, flexible means connecting said pocket to said receiver, said pocket being provided with a discharge opening, a stationary valve mounted on said frame and seating in said discharge opening, a counter-balance lever pivoted on said frame and contacting at one end with said pocket, and means on said frame engaging said lever to prevent movement thereof until a predetermined quantity of sand has settled in said pocket.

1,807,126. BIT. BYRON F. MORRILL, THOMAS COOKSON, and SCOTT SLOANE, Lebanon, N. H. Filed Mar. 25, 1930. Serial No. 438,840. 6 Claims. (Cl. 145—119.)



1. A bit for drilling long bores in wood, comprising a tubular body portion provided at its forward end with a blade extending across a portion of a bore of the tubular body portion and affording a passage leading into the tubular body portion, said blade having a concave cutting edge, said blade being inclined longitudinally of the concave cutting edge, and said blade having an edge disposed circumferentially opposite the concaved cutting edge and arranged at substantially the elevation of the low end of the concave cutting edge.

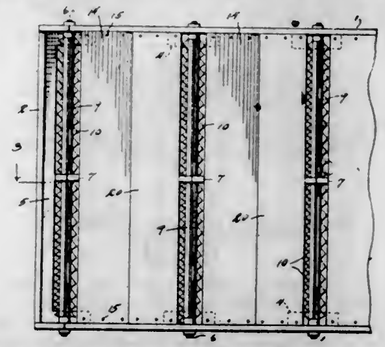
1,807,127. CONNECTER BOLT. ALBION MOULTON, Philadelphia, Pa., assignor, by mesne assignments, to Conveyor Sales Company, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1928. Serial No. 303,014. 8 Claims. (Cl. 198—220.)



1. A conveyor mechanism comprising a plurality of troughs having eyelets adapted to be aligned secured thereto, and means to connect the troughs comprising a member having relatively slidably aligned parts adapted to engage the eyelets.

1,807,128. RACK FOR HAND TRUCKS. GONZALO C. MUNOZ and RUSSELL H. BOWEN, Philadelphia, Pa., assignors to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1928. Serial No. 321,237. 7 Claims. (Cl. 214—65.)

1. A device of the character described comprising a sheet-metal platform with rigidly secured sills having upturned shanks, an all-metal back including upstanding channels with said shanks engaged between their flanges, and means at the rear side of the platform to prevent the device from slipping-off a truck during transportation.

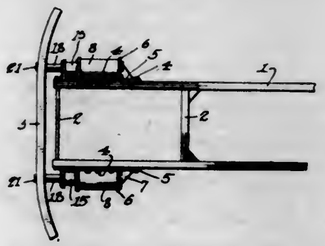


1,807,129. PORTABLE ELECTRIC LAMP. SAMUEL H. NUCKOLLS, Stone Mountain, Ga., assignor to George Francis Willis, Atlanta, Ga. Filed Apr. 26, 1930. Serial No. 447,629. 4 Claims. (Cl. 240—10.67.)

4. A portable lamp including a tubular casing having a tubular extension threaded to its fore end, said extension having a lateral opening therein, a lens carrying cap on the outer end of the extension, a sleeve rotatable on said extension and having an opening adapted to be brought into and out of registry with the opening in the extension, an insulating block in threaded engagement with the outer end of the casing proper, a bracket having a pivoted arm fixed to the outer face of said block, a central terminal stud in said block connected to said bracket, a lamp socket and a reflector fixed to said arm, a switch on the casing, and a conductor between the switch and the lamp socket.

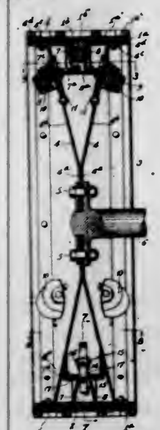
1,807,130. CATTLE GUARD. CLEOTRA OSAKO, Worland, Wyo. Filed July 22, 1930. Serial No. 469,863. 4 Claims. (Cl. 256—14.)

2. A cattle guard comprising a frame adapted to be placed upon the ties of a trackway and having side members, plates supported by and bridging the space between the side members of the frame, said plates being arranged



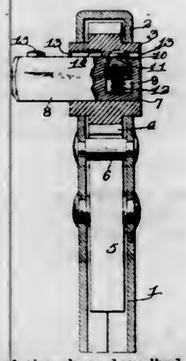
in pairs with the plates of each pair inclined one toward the other, and rotatable sleeves supported by the frame and positioned between adjacent pairs of plates.

1,807,131. IDENTIFYING MEANS FOR ROPES. JOHN A. PALMER, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a Corporation of New York. Filed Apr. 5, 1927. Serial No. 181,268. 9 Claims. (Cl. 40—1.)



1. An identifying means for fibrous material, including rope, fabrics or similar material, consisting of an element in said material having incorporated therein a substance having characteristics indicative of the origin of the material or rope, said substance being capable of manifesting its presence when subjected to chemical change.

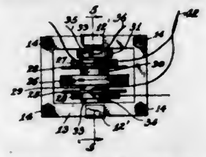
1,807,132. BUMPER SYSTEM FOR TRUCKS AND AUTOMOBILES. PETER PAPPAS and THEODORE PATROU, Webster City, Iowa. Filed Sept. 27, 1930. Serial No. 484,876. 6 Claims. (Cl. 293—55.)



1. In a bumper system, the combination of a bumper bar, pistons affixed to the bumper bar, cylinders in which said pistons are mounted, springs against which said pistons bear, a second and larger set of cylinders, pistons for said larger cylinders and against which the first mentioned springs bear, and a second and larger set of springs in said larger cylinders.

1,807,133. BELT DRIVE MECHANISM. GORDON R. PENNINGTON, Cleveland Heights, Ohio. Filed Feb. 7, 1923, Serial No. 617,431. Renewed Mar. 21, 1929. 7 Claims. (Cl. 74—21.)

2. In a friction drive mechanism, the combination of a notched belt and a wheel over which the belt passes, said wheel comprising parts having tread surfaces to engage the inner side of the belt and lateral surfaces to engage opposite lateral surfaces of the belt, one of said wheel parts with lateral surfaces being mounted to turn circumferentially relative to the body of the wheel and having positive connection with the notches of the belt to move circumferentially therewith, and means operable by the said relative turning movement for causing the wheel parts with lateral surfaces to grip the belt.

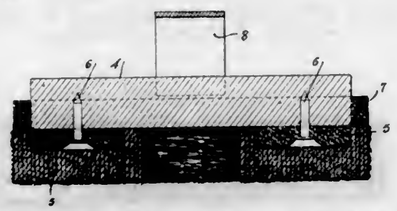


1,807,134. SOCKET WRENCH. EDWARD M. PEAUSER, Milwaukee, Wis., assignor to The Blackhawk Manufacturing Company, Milwaukee, Wis. Filed July 30, 1930. Serial No. 471,710. 3 Claims. (Cl. 81—61.)

1. A wrench of the class described including a ratchet head having an axial opening therethrough, a movable element positioned within the opening, said head having longitudinal grooves extending inwardly from opposite sides thereof at one side of the opening and yieldable members carried by the movable element and positionable within said grooves to provide stops to limit the movement of the movable member axially in either direction.

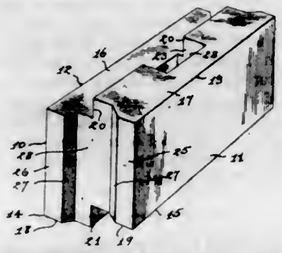
1,807,135. COUPLING TRANSFORMER. JOHN ALBERT PROCTOR, Lexington, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Sept. 12, 1928. Serial No. 305,869. 8 Claims. (Cl. 175—361.)

1. A transformer of the character described, including, in combination, a casing, an insulating cover upon the casing, a plurality of terminals on the cover, a transforming unit comprising a closed core member and a demountable core member associated with the closed core member, and a plurality of separately wound and separately removable



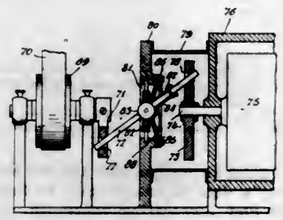
coils arranged in inductive relationship to each other, and assembled upon said demountable core member, and means passing through the closed core member for securing said unit to said cover.

1,807,136. STEEL WOOL PAD. WILLIAM H. ROBBINS, Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Filed Feb. 7, 1927. Serial No. 166,475. 5 Claims. (Cl. 15—210.)



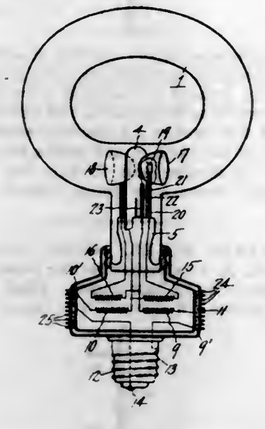
1. In combination a pad having a working face formed of a plurality of alternate laminations of parallel strands of textile material interspersed with layers of steel wool.

1,807,137. STEEL WOOL PAD AND HOLDER. WILLIAM H. ROBBINS, Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Filed May 23, 1927. Serial No. 193,487. 4 Claims. (Cl. 15—98.)



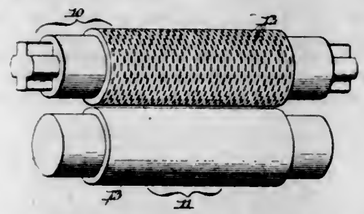
2. In combination, a holder, a plurality of spaced resilient projections and a plurality of cup-shaped steel wool members mounted on said projections.

1,807,138. BUILDING BLOCK. LOUIS L. SPELSHOUSE, Baltimore, Md. Filed July 22, 1929. Serial No. 380,166. 2 Claims. (Cl. 72—39.)



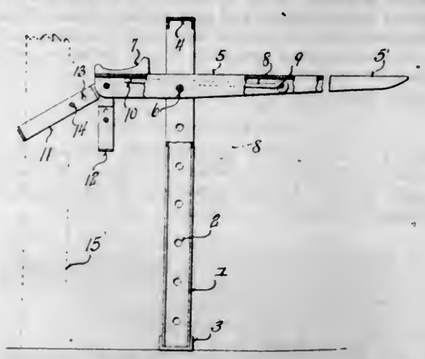
1. A building block having two opposite vertical side faces with a top extending crosswise of the block from one side face to a longitudinal shoulder and another top face extending crosswise of the block from said longitudinal shoulder to the opposite side face whereby said block-top from said shoulder to one side face will be higher than from said shoulder to the opposite side face, the bottom of the said block also having a longitudinal shoulder with a bottom face at one side of the shoulder higher than the bottom face at the opposite side of said shoulder and the top and bottom longitudinal shoulders on said block being of less length than the length of either side face.

1,807,139. FLEXIBLE PACKING. NICHOLAS N. VOLODIMIROV, Richmond Hill, N. Y. Filed Sept. 13, 1926. Serial No. 135,011. 1 Claim. (Cl. 286—29.)



In an apparatus wherein fluid under pressure is utilized, the combination with a stationary element having a securing surface, and a movable rod extending angularly to said surface; of a flexible tube-like packing capable of expansion and contraction in accordance with the movements of said rod, said packing having one end secured directly to said rod and its other end extending angularly from the rod and attached to said surface, said packing snugly fitting said rod between its point of attachment to the latter and the point where the packing extends angularly from the rod.

1,807,140. DISCHARGE TUBE. CARL J. R. H. VON WEDEL, Berlin, Germany, assignor, by mesne assignments, to Electrons, Inc., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 259,715. 9 Claims. (Cl. 176—122.)

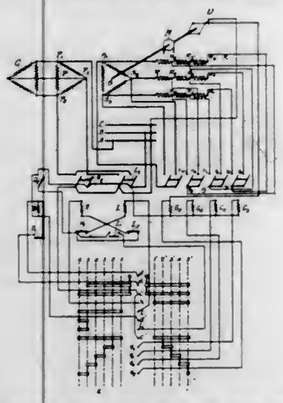


1. A discharge tube having a single stem portion, a stem in said portion, a pair of electrodes erected on said stem, a hollow toroidal envelope mounted upon said stem portion and forming a continuous elongated discharge path extending in two directions from said stem portion, and a discharge preventing shield between said electrodes whereby discharges therebetween are confined to said elongated path.

1,807,141. EMBOSSING METALLIC PLATES. ALAN D. WOOD, Lower Merion Township, Montgomery County, Pa. Filed Sept. 15, 1928. Serial No. 306,108. 9 Claims. (Cl. 80—24.)

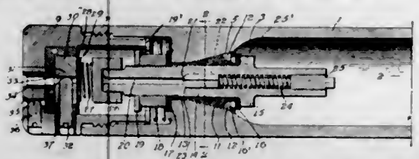
4. The method of embossing metallic plate by concurrently subjecting several blank sheets in superimposition to the action of a pair of opposing rotary elements—one of such elements having a plain surface and the other an impression surface—with production of one plate characterized by sharply defined embossments through direct contact with the impression element and others with embossments less distinct; and in the next operation subjecting the latter plates, together with a new blank sheet, to the action of the aforesaid elements in such relation that one of said latter plates in turn receives a sharply defined impression through direct contact with the impression element; and repeating the last procedure in each succeeding operation.

1,807,142. COMBINATION JACK AND POST PULLER. CHARLES ACHENBACH, Manitowoc, Wis. Filed May 31, 1928. Serial No. 281,793. 1 Claim. (Cl. 254—119.)



A device of the class described including spaced upright channel irons having their intermediate portions arranged in opposed relation and provided with a plurality of aligned apertures, a channelled lever arranged between the spaced uprights, having aligned apertures in the side portions thereof, a pivot pin adapted to be passed through the apertures in the lever and spaced apertures in the uprights, a bracing horisontal member pivotally connected at one end within the channelled lever, and having a hook at its other end adapted to engage in any one of the apertures in the uprights, said locking bar in its inoperative position being housed within the channel and supported by the removable pivot pin for the lever.

1,807,143. INDUCTION-MOTOR CONTROL SYSTEM. FERDINAND ANGERSTEIN, Mannheim, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Apr. 14, 1927, Serial No. 183,656, and in Germany Apr. 24, 1926. 2 Claims. (Cl. 172—152.)



2. In a motor system comprising an induction motor having primary and secondary windings, an alternating-current line, primary switching means for connecting said

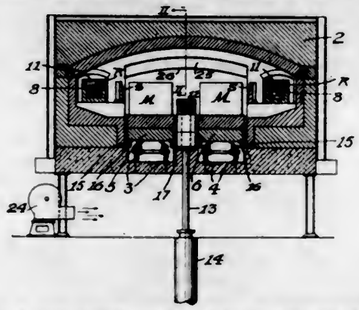
line to said primary winding, resistor elements close-circuiting said secondary winding, secondary switching means for short-circuiting said resistor elements, and a load connected to said motor, a control apparatus comprising a control member movable from a datum position at which said motor is disconnected from said line to a short-circuiting position at which said secondary winding is short-circuited and said primary winding is connected to said line to regeneratively brake the movement of said motor, said control apparatus having a plurality of con-

trol steps between said zero position and said short-circuiting position to gradually short-circuit said resistor elements, the return movement of said control member from said short-circuiting position normally causing said resistor elements to be reinserted, and means rendered effective upon movement of said control member to a predetermined position beyond said short-circuiting position for causing opening operation of said primary switching means in response to return movement of said control member from said short-circuiting position.

1,807,144. BLASTING CARTRIDGE. FRANK H. ARMSTRONG, Chicago, Ill., assignor to Safety Mining Company, Chicago, Ill., a Corporation. Filed Apr. 19, 1929. Serial No. 356,360. 8 Claims. (Cl. 102—6.)

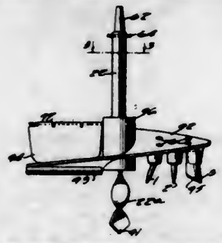
1. A blasting cartridge comprising a casing, an electrode projecting axially through an end of said casing and insulated therefrom, a metallic disc secured to said electrode, a second metallic disc carried by said casing and movable axially into and out of contact with the first said disc, spring means tending to establish and maintain contacting relation of said discs and manually operable means for breaking said relation.

1,807,145. ELECTROLYTICALLY FORMED ARTICLE. BLASIUS BART, East Orange, N. J. Filed Mar. 11, 1925. Serial No. 14,645. 12 Claims. (Cl. 204—1.)



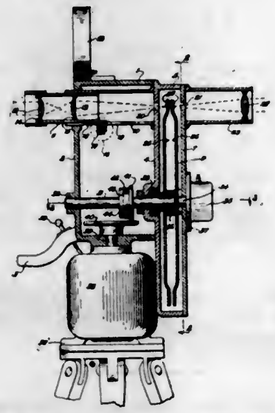
1. In the art of forming hollow metal articles, the method which consists in temporarily securing to opposite sides of a sheet of insulating and acid proof material, the two split parts of a form or model of the article to be formed, one surface of which form is provided with a recess, confining said model within the outlines of the separating sheet, filling said recess with an insulating material, electrolytically depositing on the mold so formed a layer of metal to form a hollow metallic shell on each half of the mold, removing the shells so formed from the separating sheet and assembling the shells to form the desired hollow article.

1,807,146. INDICATOR FOR PASTRIES AND THE LIKE. WILLIAM BROAD, Beaver Falls, Pa., assignor of three-fourths to Harry E. McLain, Pittsburgh, Pa. Filed Dec. 10, 1927. Serial No. 239,246. 3 Claims. (Cl. 146—150.)



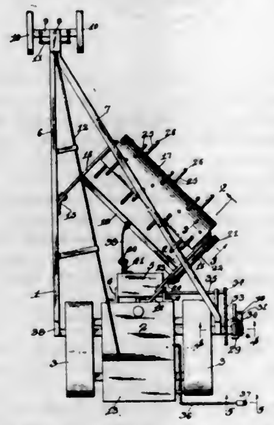
1. In an indicator for pastries and the like, a U-shaped frame having a dial on one leg and an indicator pivoted to the dial and cooperating therewith to indicate desired divisions for cutting a pastry.

1,807,147. FURNACE. FRANK W. BROOKE, Pittsburgh, Pa., assignor to William Swindell & Brothers, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 9, 1928. Serial No. 284,065. 6 Claims. (Cl. 266—15.)



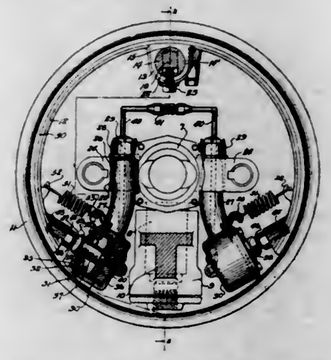
1. In a continuous, direct, electric resistance heating furnace, a plurality of material conveying means arranged in substantially parallel horizontally extending paths, a support mounted between the paths and extending through the bottom of the furnace, an electric resistance heating unit mounted on the support, and means for lowering the support with the heating unit thereon clear of said material conveying means to a point without the furnace.

1,807,148. EARTH AUGER. HUGH STEWART BROWN, Roselle Park, N. J., assignor to The Hubron Company, Inc., a Corporation of New Jersey. Filed Apr. 3, 1926. Serial No. 99,445. 4 Claims. (Cl. 255—70.)



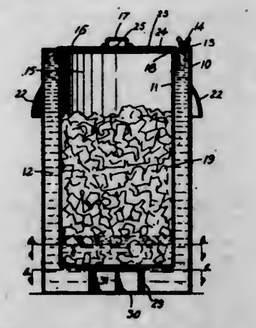
1. An earth auger having in combination, a helical mold-board of at least one helical convolution, a cutting knife mounted on the lower edge of said helical mold-board, and a series of scarifier teeth mounted on the under side of said mold-board and pointing downward to an extent such that they project below the level of the knife edge to points which would lie approximately in the surface of the helical mold-board, if it were extended that far.

1,807,149. STROBOSCOPIC APPARATUS. EDWARD A. BUTLER, Buffalo, and THEODORE R. OLIVE, New York, N. Y., assignors, by mesne assignments, to Robert Donner, Buffalo, N. Y. Filed May 26, 1928. Serial No. 280,805. 4 Claims. (Cl. 88—14.)



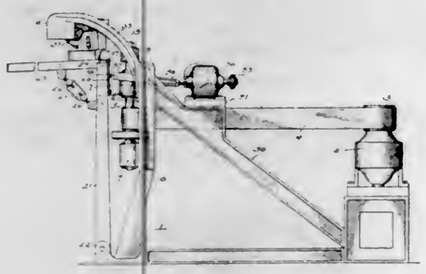
1. A stroboscopic apparatus for examining rapidly moving objects and for indicating the cyclic frequency thereof comprising a pair of movable members disposed in overlapping relation with respect to each other and each having a plurality of openings of different sizes provided therein, said members being adapted to be assembled in different angular positions to selectively cause an opening of a certain size in one of said members to register with an opening of corresponding size in the other of said members at a predetermined point, means for varying the speed of movement of said members, and means for observing the object through the openings in said members at their point of registry.

1,807,150. LAND CLEARING MACHINE. JOHN H. CALDWELL, Milwaukee, Wis. Filed Feb. 5, 1930. Serial No. 426,007. 3 Claims. (Cl. 97—34.)



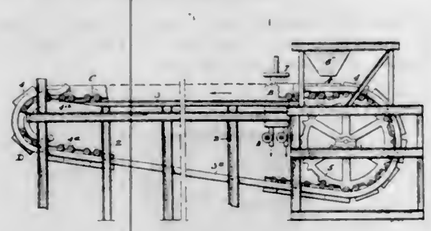
1. A machine of the class described including a frame, a traction element supporting said frame, a drum frame pivotally mounted upon the first frame and disposed at an angle with respect thereto, a rotatable drum carried by the drum frame and extending diagonally across the direction of travel of the traction element, means forming operative connection between the drum and the traction element, a plurality of fingers projecting radially from the drum and arranged spirally thereof, and a digging element supported at one side of the traction element and operatively connected thereto.

1,807,151. BRAKE APPARATUS. NIELS A. CHRISTENSEN, Milwaukee, Wis. Filed June 17, 1925. Serial No. 37,703. 2 Claims. (Cl. 188—152.)



2. In brake mechanism of the character described, the combination with a vehicle wheel and its brake drum, of a support for the wheel provided with laterally extending arms, a brake member engageable with said drum, fluid-pressure-operated motors associated with the ends of said brake member and acting directly thereon, each motor including a brake cylinder and an arm integral therewith and rigidly attached to one of the arms of said wheel support, and release means for said brake member.

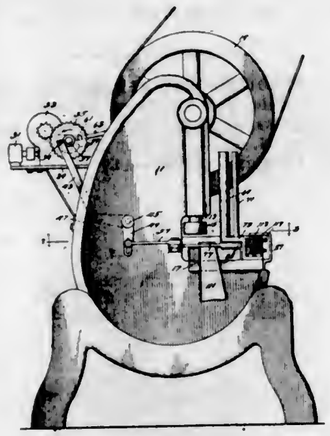
1,807,152. REFRIGERATING UNIT. CARR D. CONDON, Des Moines, Iowa. Filed July 2, 1928. Serial No. 289,850. 2 Claims. (Cl. 62—69.)



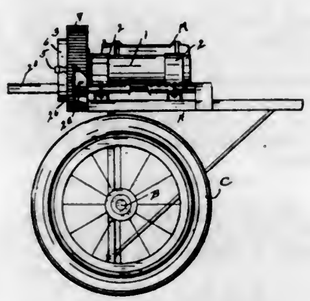
1. A refrigerating unit comprising a double-walled container, whereby a jacket space is provided substantially surrounding an inner compartment, a filling opening for said jacket space, means for tightly closing said filling opening and the jacket space, and a lid for tightly closing the interior compartment, which compartment is capable of being entirely closed to atmospheric air, the jacket space containing a freezing solution and the interior compartment containing a mixture of cracked ice ad salt, said unit being entirely self-contained so that it is capable of being transported from place to place and of being readily removed and replaced relative to a refrigerator.

1,807,153. HEEL BREASTING MACHINE. FRED A. DAY, Columbus, Ohio. Filed Aug. 15, 1928. Serial No. 299,839. 6 Claims. (Cl. 12—47.1.)

4. In a heel breasting machine, a frame, a cutter mounted for rotation in connection with said frame and revoluble about a stationary vertical axis, a pivotally mounted table movable relatively to said frame and cutter, gauge means arranged at one end of said table for determining the position of a heel blank thereon, means for oscillating said table to present the breast surface of a heel blank carried thereby to said cutter, automatic means for clamping the heel blank to said table when the heel blank is engaged by said cutter, and means for positively moving the gauging means to an inactive position during engagement between the heel blank and cutter.



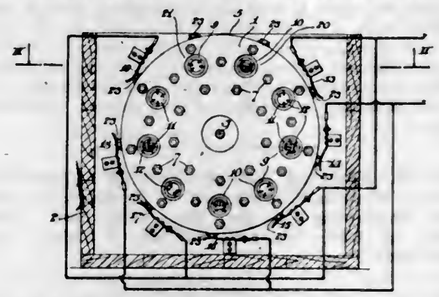
1,807,154. SINTERING MACHINE CAR AND GRATE BAR THEREFOR AND THE LIKE. ERNEST D. EKSTEDT, East St. Louis, Ill., assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 20, 1923, Serial No. 626,269. Renewed July 13, 1928. 14 Claims. (Cl. 266—21.)



1. In sintering machines, a travelling carrier comprising a frame with spaced apart ribs supporting grate bars, the grate bars extending in the direction of travel of the carrier, securing mechanism for attaching ends of the grate bars to one end of the carrier and a locking bar for securing the opposite ends of the grate bars to the opposite end of the carrier.

1,807,155. MEANS FOR AND METHOD OF MOLDING MATERIALS. LOUIS T. FREDERICK, Valparaiso, Ind., assignor, by mesne assignments, to Continental Diamond Fibre Company, Newark, Del., a Corporation of Delaware. Filed Mar. 15, 1928. Serial No. 261,759. 20 Claims. (Cl. 18—20.)

1. In a device for molding blocks of plastic material, a forming die, means forming a treating zone, a mold member having a plurality of portions each adapted to cooperate with the forming die to form a closing mold, means for successively moving said portions through said treating zone and for arranging said portions in co-operating position, and means for introducing material to be molded into a said portion before the same is arranged in co-operating position.



1,807,156. CHUCK. JOSEPH B. GALBRAITH, Kaysville, Utah. Filed Aug. 23, 1927. Serial No. 214,833. 1 Claim. (Cl. 279—114.)
